FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, JANUARY 22, 1891.

VOL. XXXVI.—No. 1.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 80 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS.

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

THE ZOOLOGICAL PARK.

THE management of the National Zoological Park in Washington has recently been attacked in one or two papers of Washington and New York, and apparently on wholly insufficient grounds. A resolution, recently introduced in the House by Mr. Enloe, of Tennessee, serves as a text for a disquisition on bad management and misapplication of funds, but no facts justifying the attack are brought to light.

It is true as stated that the bill for the organization of the Park became law May 1, 1890, but as has been duly set forth in the FOREST AND STREAM, there was required a long time to acquire title to the lands selected for the Park, for it was owned by a number of persons, some of whom refused to sell, so that the land had to be condemned. It was therefore impossible to begin the necessary improvements until late in the fall, and the winter weather has made building operations progress but slowly.

It is certainly to be desired that the work should go on as rapidly as possible, for the animals are now suffering greatly from their cramped quarters, and one of the rarest of the animals—the mountain sheep—has died from lack of exercise. It is clear, however, that the animals cannot be removed until quarters are provided for them, and it is stated that it was impossible to provide these last autumn. Moreover, the arrangement of a great zoological park is something that has to be carefully planned. The Park is to be occupied not for one week, but for all time, and care and deliberation are required in making permanent arrangements.

The claim that about three-quarters of the Park is to be devoted to purposes other than the care of the animals is not, so far as we can learn, supported by facts. If large animals, like buffalo, elk and deer are to thrive, they must have plenty of room, and we understand from

high authority that the portion "reserved," or a large part of it, is to be pasture and range for these large animals. If this is the case it is well that it should be reserved. The average citizen would perhaps like to have all the animals shut up in small cages, and wishes to get close enough to them to poke them with his cane, but if the animals are to do well they must have a good deal of liberty so that they can get exercise, and be healthy.

All the facts connected with this Park will probably be brought before Congress before long. Meantime we may have something more to say on the subject.

THE YELLOWSTONE PARK.

THE end of the last session of the Fifty-first Congress is at hand, and as yet no action has been taken by the House of Representatives on the Senate bill for the protection and maintenance of the Yellowstone Park.

This bill, as it passed the Senate, deserved the support of every citizen. After it reached the House, however, it was amended in Committee and had a rider attached to it, which authorizes the granting of a right of way to a railroad through the Park. The amendment has met with unsparing condemnation from press and public, and has made the whole bill unpopular, giving to people who know but little about the subject an impression that the whole measure is a railway grabbing scheme.

This is not true. As we have repeatedly said, the bill is a thoroughly good one, except for the proposition to grant the right of way to a railroad. If this amendment were cut off the bill ought to pass. Those who feel an interest in the Reservation should understand that this greedy railroad corporation is trying to use this much-needed bill in order to carry through the House its scheme procuring a monopoly of railroad traffic in the Park.

In the upper House of Congress there is but one feeling as to this matter. Senators regard the passage of this bill as of great importance. Senator Carey, of Wyoming—in which State the Park for the most part lies—is said to be heart and soul in favor of the bill without the amendment. In the House the volume of business is so large that it is difficult to bring up this bill. If it could come to a vote, and if members generally could be shown how good the measure was as it came from the Senate, and how bad is the amendment which has been attached to it, we have no doubt that the change would be rejected and the bill passed in its original shape.

In another column we report the action of the Boone and Crockett Club on this subject. The feeling expressed by this organization is shared by similar associations all over the country. The newspapers—so far as we know, without exception—are on the side of law and order within the Park and of the preservation of its forests, its natural wonders and its game. A very large proportion of the more important newspapers have said that the passage of this bill is an urgent necessity.

At this very moment the Park is practically unguarded. Capt. Boutelle, the superintendent, has been ordered into the field on account of the Indian troubles, and Lieut. Edwards, with ten or a dozen men, is left alone to guard the Park.

It is greatly to be desired that this bill in proper shape may pass the House during the present session, but members should see to it that the Senate bill is not used to carry through the railroad amendment. If the railroad company wishes to secure a monopoly of traffic in the Park, it should go to Congress and ask for this privilege on the merits of the question.

The chances of the bill coming up between now and March 4 depends largely on the feeling of the chairman of the Public Lands Committee. It is earnestly to be hoped that he can be induced to bring up the measure.

For about ten years the FOREST AND STREAM has been urging the passage by Congress of a bill to provide proper protection for the Park. We have printed on this subject hundreds of columns from the pens of the men who know most about the Park and its needs. Although the legislation for which we have been hoping has not yet come, our efforts have not been without result. It has been a long campaign of education, enforced—as to a small proportion of the public—by object lessons drawn from the pages of nature's book which lie open in the National Park. A general interest has been awakened in this beautiful spot, and the newspapers of all classes now call frequent attention to its needs. Thus the work

that we have done has told, and we may hope that the day is not far distant when such a bill as is desired by the real friends of the Park may become a law.

THE SUNAPEE TROUT.

IN this number of FOREST AND STREAM will be found a valuable contribution to the history and relations of the golden trout, or Sunapee trout (*Salvelinus aureolus*). It is gratifying to find that so eminent an ichthyologist as Dr. Jordan, after a study of the materials first discussed in this journal by Dr. Bean, agrees with the latter in considering *aureolus* as probably native to New England lakes and not introduced from Europe. Dr. Bean finds the gill rakers in saibling from Bavaria precisely as in the Norwegian specimens. Col. Hodge has pointed out the difference between the two trout in spawning habits and adaptability to domestication. The saibling, however, is said to spawn in lakes as well as streams.

Now we incline most strongly to the belief that the saibling and the golden trout have been sufficiently talked about in technical phrase and we prefer to let these two Dromios rest in their respective haunts unless some brother of the angle will tell us how he went fishing for one or the other or both together.

SNAP SHOTS.

JUST as we go to press the news comes to us from Washington that Capt. Geo. Anderson of the Sixth Cavalry has been appointed Superintendent of the National Park. It is stated elsewhere that Capt. F. A. Boutelle was ordered several weeks ago to take the field on account of the Indian troubles, and it has been supposed for some time that in the spring he would probably be sent to join his regiment in the South, as he would then have served two years as Superintendent of the Park. These two years have been eventful ones for the reservation, and the friends of Captain Boutelle may well look back with pride and satisfaction on what he has accomplished since his appointment. He has worked hard to render the visiting public more comfortable, and has done a vast deal for the protection of the forests and the game. Through his efforts the barren waters of the National Park have been stocked with valuable food fish, and future generations of anglers for all time will rise up and call Captain Boutelle blessed. Captain Anderson, the new Superintendent, is a brave and good officer with a fine record. His service has been mainly in the Southwest against the Apaches and other hostile tribes there, but he has many of the qualifications needed in a Superintendent of the Park.

It is hardly fair to criticize the idea of traveling and seeing the world, but when one attempts to crowd traveling and seeing the world into his fishing vacation he is pretty likely to be disappointed in the one way or the other; either his trout is naught, or he goes to the streams, the lakes and the woods where he knows the ground. In short, it is with trouting as with everything else, it takes a good part of a lifetime to become familiar with even a small part of the world. Then there is the homelike feeling which begins to cling around even the lean-to in the woods or the tent; we hate to see it torn down, and we all want to see it again next year. Then there is the stream and the pools, the lakes and the bold, rocky shores, where "the trout do hide." There is the very spot where we hooked that large one last year. There is no new spot just like it. Permanent camps are getting to be the fashion, and a good and comfortable fashion it is.

There is an incident of one of the late Dr. Ferber's fishing excursions to Florida, which admirably illustrates the kind heart and unselfishness of the man. On an island in Charlotte Harbor one time Dr. Ferber found a man very ill with typhoid fever, contracted during a cattle hunt in the Everglades. Dr. Ferber devoted himself assiduously to his patient, and by his skill and attention brought him safely through. The grateful man insisted upon the Doctor's acceptance of a small island in the harbor as a reward for his services, but this Dr. Ferber would not hear to. "That island," said he afterward, "came to be worth a thousand dollars. It is not every angling doctor that can pick up thousand dollar islands when he goes fishing."

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

IV.—NICATOWIS.

EVERYBODY knows where Nicatowis is, how to reach it, and what he can get when he is there; but why is it that so few know how to spell it? It is Nicatowis, not Nicatous, nor Nickertous—as may easily be demonstrated. Nicatow, in Indian, is the fork, and primarily the junction of the east and west branches of the Penobscot at Medway, which itself was formerly called Nicatow. "I asked the fellers down there if that was the place called Nigger-town," said old Derb, the Kennebec cook on the survey of '61, "and they laughed at me." Nicatowis is the diminutive—the Little Fork. It was formerly applied to the confluence of the main stream Passadumkeag and what is now called the Nicatowis Branch. The lake above was Giassobee, or Clear Water Lake, into which flowed Giassobees—Little Clear Water Lake—now corrupted into Gassobeis. This latter name is evidence on its face that a larger lake of the same system, which could have been nothing but the present Nicatowis, must have been called Giassobee, for *is* or *sis* is strictly a comparative term, exactly equivalent to *lesser*. So that not only is Nicatowis a misnomer in its root meaning, but we can prove that another name must necessarily have been applied to the lake, which name was Giassobee. It is now too late to correct the error in names, but the spelling should be reformed to Nicatowis, which is good Indian and represents the correct pronunciation.

Not that hundreds of people do not say *Nicatous*, but they mean to use the other form. A clear cut and elegant pronunciation is not characteristic of Maine people; they clip and slur their words whenever possible. Strangers usually make too hard work of their Indian, like the one who called Mattawamkeag, Matwampumpkeahac; the native-born soften Passadumkeag to Passy-dunky or even to Parsdunky. Olamon becomes Old Lemon, Nesowadnehunk, Sourdymunk; Chesuncook is Suncook, and Caucumgomocissis, familiarly known as "The Sis." No wonder there is difficulty in deciding the proper form. Again sometimes three or four names for the same place are in current use, as Little Telos Lake, which is called Telosilis, Telosinis and Tellisannis, as well as Patagoungamis and Round Pond. Abol also is known by four or five different names. There is no standard authority for either spelling or pronunciation. The State maps and reports are hopelessly incorrect; the pronunciation of the people is hard to catch and often corrupt or abbreviated beyond recognition; most of the Indians themselves do not know what the names mean; and most of the well-intentioned people who have tried to help us out of the mud have only made matters worse by becoming mired themselves. The notable exceptions have been Thoreau and Mr. Hubbard, who have probably done more than all others taken together to give permanence to some of our Indian names and secure for these a uniform orthography. Yet, now and then, though rarely, an error has crept past even their vigilance. For example, to the rounded hill with one sheer side which rises above the wooded level east of Chesuncook, Mr. Hubbard gives the name Sowbunge Mountain, probably copying, and undoubtedly copying correctly, the form given by some lumberman or hunter; but where in Sowbunge does one find the beauty and the elegance of the original Sowangawas, the Eagle's Nest? Who shall say what Mattagoodus and Pattygumpus once were, or whether there ever was any poetry in Crosshuttie?

For sins of ignorance and sins of omission no doubt there is pardon; but what shall be said of people who deliberately rename us; who come on trips of exploration, and, going home, announce themselves the discoverers of lakes which were lumbered and hunted on before they were born; who, perceiving that our ponds are lakes, wrench away the name which some pioneer had left to the pond of his choice as his only memorial, to dub it Echo Lake, or Eagle Lake, or Green Lake? Aren't there enough such prosy names in the world already without prosy people being allowed to make more of them? Better Shin Pond, Tumble-down-Dick, Pollywog and Poke-Moonshine to the end of their days than to be added to the list of Echo Lakes, Long Lakes and Mud Ponds which already exceeds in length the line of Banquo's progeny. Two names, supplanted by accident it may be, should be restored in the next edition of Hubbard's map. Both lie in Seven in Fifteen—Rowe Pond of the map, which is Ross's Pond, named for John Ross, the Bangor lumberman; and Poland Pond so called, which is by good rights Island Pond, as the large island in it shows. The Sapompeag of the map is the Napompeag of the white hunters, but the Indians call it Labombic and say that it means *rope*. These are most likely printers' errors and excusable; but when it comes to malicious rechristening—why, how would you feel if your name were St. Vincent and a stranger told you that it was Robinson, or if not that it ought to, and he would see to it that you came when he called you?

In a country where all communication must be by water, those places are most important which command the routes between the most rivers. Nicatowis does this preëminently. From it, by short carries, one may reach Brandy Pond on the head of Union River, the Sabao Lakes on the West Machias, and, by way of Gassobeis, the Middle Machias Lakes; through these the St. Croix waters are easily accessible. Nicatowis is also not far distant from the head of the Narragagus. Thus it is the highway to all the principal canoeing waters in eastern Maine. Chamberlain in the north and Nicatowis in the east are the two strong points in the Maine woods—and Darling holds the latter, not by accident let us believe.

But Nicatowis itself, though the principal feeder of the Passadumkeag, is on the shorter of the two branches. The other, known as the Main Stream, wanders down a general southwesterly course through broad meadows, rising in ponds, but principally dependent upon its brooks—Brown, the two Taylors, Wyman and others—until it receives the Nicatowis Branch at the Fork about twelve miles below the lake, thence it flows westerly, still through low land and meadows, enlarged by the tribute of the two Lord Brooks, the Matagascal, Scootahzin and Cold Stream—a placid course, little broken by rapids and only once expanding into a lake, emptying into the Penobscot about thirty-five miles above Bangor.

Last year when Darling was arrested, several news-

papers published the statement that Nicatowis is "fifty miles from the nearest railroad station, and to reach it one must travel over a rough road." Without attempting to state the actual distance, it may be said that we hauled from Enfield to the Gilman House, seven miles from the lake, in four hours and a half, including stops, and the road was as good as any of equal length in eastern Maine. Those who gave the information may take either horn of the dilemma on which they prefer to hang themselves; but these are the facts: it is not a very long nor a very hard day's walk to go from the railroad to Nicatowis.

Though neither a handsome nor an ugly lake, the friends of Nicatowis are safe when they praise its good looks. It has features, and some lakes have none. It is a wooded lake, surrounded by low swells which nowhere approach the dignity of mountains; very irregular in shape, indented with long points and further broken by islands; bounded by hard shores, which, though sheer and without sunken rocks, are nevertheless forbidding to the canoeist and afford camping places only where interrupted by some little beach of gravel or disintegrated granite. It is a granite lake—shores of loose granite, ledges of granite, islands with solid foundations of the best of granite, and a back country full of it. Now granite never has any suggestions of soft corners and cosiness; it is rugged and downright—real New England stuff; on the other hand, it always presents a tidy appearance. It may be because granite abounds that the first impression of Nicatowis upon a stranger is that it is rough but clean. Of its irregularity nothing need be said, for such matters are not made clearer by description. For one item, two sets of narrows divide it into three parts of almost equal length, and these are further subdivided by points into bays and coves, one of which, West Lake, is recognized by a name of its own, while others, like Duck Cove, though smaller, are still of considerable extent. When we went up the lake I attempted to map it, and succeeded fairly well in getting in most of the islands and curves as far as Norway Point, by aid of all the information I could extract from the others as to which were islands and what main land and what was out of sight; but when from Darling's we saw the lake spread out with all its bays and islands, and knew that there was much more unrevealed, my map terminated suddenly with the remark, "And so on, to infinity."

V.—"TO GASSOBEIS AND CAMPED."

When we started Wednesday morning the loons were flying overhead, which we usually account a sign of wind, but we made the run to Darling's with only a light breeze following. We stopped there a moment for old acquaintance sake, but, as Mr. Darling was in Lowell, stayed only long enough to get a view of the lake and to look at the establishment which has been built since father was there last. It seems superfluous to write any description of Darling's—a log house of one room, a lean-to and a loft; situated on a rocky promontory running out between West Lake and the main Nicatowis; clean and comfortable within, and well supplied with tables and benches; but we greatly admired the strong strategic value of the place and in the selection recognized Darling's well-known astuteness. Surrounded on three sides by water it commands an extensive view of every avenue of approach by water, while on the fourth side a cleared field, extending back many rods, is well defended, if one can judge from the lay of the land, by thick and tangled woods, difficult to penetrate.

Gassobeis Stream, for which we were heading, lies about east from Darling's behind the long point which runs out from the east shore, forming part of the upper narrows. The stream is usually rather shallow, so that in several places the passengers commonly have to get out and "farm it" while the guide "waits on her," to use technical terms. But this year the water was high and had been raised artificially by putting in two little dams which flowed out part of the rapids. One of these caused no trouble, but concerning the other there is a tale.

Father is better than a guide book to tell you in advance what you are coming to, for he never forgets a place once having seen it, and he knows Gassobeis Stream perfectly, every rock and turn in it. Accordingly, before we reached the place, he told us of some shoal water ahead, past which he and I must walk. There was a steep bank at the lower end of the carry, he said, and at its head an old dam with a sluiceway built high for gates; below it was a hollow log which Sebattis used to call his cannon. We came to the foot of the quick water. The bank was there with a path running up it through plenty of buckhorn brakes nearly waist high and as wet as rain could make them. We went up the hill and down it, and then the carry dived under water for a space. Father was amazed; that carry never had been flowed in his day. Then I told him that from the top of the hill I had seen a small dam just round the turn below which we got out. "But the dam was not there," objected he, as willing to believe that the water was running up hill as that he was mistaken. Nevertheless a dam I had seen, and this was the flowage of it. So we struck out for the stream, through "squaw bush" (*Cornus stolonifera*), alders and blue joint grass, all very wet and sufficiently thick, got loganned, backed out and tried again, found a place at last where, by venturing on some old, slimy, and presumably rotten, sticks, I got across dry-footed and he with one boot full of water; at last got to the canoe again, Father still insisting that the place wasn't natural. Soon we met bubbles floating down. "That means quick water," said he, "but there can't be any above this, for the dam is the head of things." Then, suddenly, round a turn, as if to speak for itself, up rose the old dam, shining and black as of yore, with the water running through the old sluiceway and Sebattis's "cannon" still there. The dam below, which Father had not seen at all, was one of the temporary affairs, and as Job and I were both strangers to the place our testimony had not served for his enlightenment.

Gassobeis is pretty as such streams go. All navigable streams are apt to be disappointing to those whose ideas are drawn entirely from pictures and their own fancies, who look for noble forests free from underbrush, traversed by clear streams with gravelly beds on which lie "silver scalit fishes."

"With fynnys schynand broun as synopar
And chysell talys."

Such are seldom met in real life. Real streams are apt to run through meadows, bogs or flowed land; or if otherwise it is usually the worse for the canoeist. Their banks are thick with alders and scrub growth; were it

not so that would be the worse for the hunter. And their dark waters suggest bullfrogs and mud turtles instead of the red-finned trout which actually inhabit them. The lower part of Gassobeis Stream runs through alder ground and birches; the upper part is a bog brook and must have been a famous beaver country in the old days. Lambkill, sweet gale, leather-leaf, rhodora and all the heaths grow in abundance along the banks, giving a soft and pleasant tone to the landscape. I like bogs; they are very restful to look at, and always mean "plain sailing."

When we reached Gassobeis Lake we found that Father's old camp ground among the Norways on the left had been burned over, and the rain recommending, we were forced to take the first spot available. Yet not even camping in the rain is a hardship; it only makes work more the livelier. All help in unloading and covering the goods, one looks for the ridgepole, one for the crotches, tent pins are cut from the nearest bush and in how short a time the tent is up. No matter if it is damp at first, it soon dries. And the water shakes off the boughs so thoroughly that the bed is not very damp. It is one of Father's fancies always to have some splits of cedar or a piece of spruce bark or canvas to lay down along the sides of the tent for the double purpose of preventing small articles being lost and keeping the camp stuff dry. We always carry something of the kind in the canoe with us, abandoning it only when we come to a carry. He also leaves on the back tent-pole an inch or two of the side limbs, which make strong and convenient hooks for hanging clothing and guns.

We carry as little baggage as we can and then always have too much. The tent and blankets, a firkin for small groceries and a box for flour and bacon, cooking utensils and clothing make up considerably more than the bulk of the outfit. There is no room in one canoe for three people and the luxuries of camping out, if by these one understands folding camp-stools and rubber air beds, adjustable tables and patent camp stoves, frying-pans with hinged handles and all the other folding and unfolding nuisances which are advertised to make miserable the lives of sportsmen. Place your load with a two-mile carry always in mind, and there's many an indispensable will stay at home in the corner without being missed. When the books and opera glasses and sun umbrellas begin to appear, the old stager knows you are green and pities your guide. Don't take too many clothes. You are persuaded into it in the vain belief that you will want to change now and then, or that when you come out you will want to put on something different from the clothes you have worn and slept in for a month. It is a delusion. Cleanliness is no more natural to the uncivilized man than godliness. You will find that you can always pick out the guide because he is the best dressed man in the party; and, on the other score, after four weeks' jaunting in a rubber bag, your best suit might very well be mistaken for your worst; in either case, all you have on smells of smoke and fir boughs, and will smell of it for weeks to come, though you may be unconscious, so that you need not suppose that your fellow travelers do not know where you have been. If you take extra clothing on chances of getting wet the chances are ten to nothing that if you are wet enough to shift it will be by a general capsize and your spare clothes will be as wet as the others; or you may be drowned and so not need them after all. But if you persist in carrying what you do not want, don't take old ones. "The woods is the worst place in the world to wear out old clothes," say the hunters. For myself I shall never again take an extra dress. With a short skirt for the woods and a long one for occasions, a woman can go into the woods and return as far as Bangor in safety if not without shame. I have tried it.

We do not carry any canned provisions except condensed milk. They are heavy and inconvenient to pack, and we would rather have simpler fare and fewer turns on the carries. Flour and potatoes will preserve life, and the Spartan discipline of being obliged to procure your luxuries or go without them, adds flavor to them. Father declares that when his pole and gun will not supply him something with bones in it, he will no longer go in the woods. So far, for the first day or two, we never have failed at a single meal to have meat or fish of some kind in the kettle, though sometimes thrift has caused the remnants or the supper to coldly furnish forth the breakfast table. But we are not too proud to accept a gift, which helps out sometimes.

FANNIE P. HARDY.

Natural History.

THE WOODCOCK'S WHISTLE.

Editor Forest and Stream:

Woodcock shooting has been my particular and favorite sport for now nearly seventeen years, and never for an instant have I doubted the ability of the bird to produce the whistle with his bill, or correctly speaking, with his throat, which explains why some who have held the live bird up by the bill, and hearing it whistle, have naturally thought that the sound was caused by the flapping of the bird's wings. But if you stop to consider, the whistle is one continuous quivering sound, made ever so much faster than the wings of the bird are at the time moving. To produce this continuous unbroken whistle they would have to move with such rapidity that the eye could not follow them. Imagine a kingfisher being able to move his wings quick enough to produce that long shrill chuckle which he gets off just after having darted down and picked up a minnow. This whistle, chuckle or yell of his is done while the fish is being carried in his bill, and we all know that his laugh is not caused by the wings; and the bill being closed to hold the fish the sound must come from the throat.

I turn to my record of woodcock shooting and note that on Sept. 22, 1885, Mayor Brodcock and myself were at Nine-Mile River, and that we brought to bag twenty-two cock and five grouse; and on that occasion I recollect perfectly, as we were coming out of the cover to the open field to lurch one of my spaniels put up a cock. I just caught a glimpse and let go, and on picking the bird up found that I had broken one of his wings; so I carried him out to the field, and while we were eating lunch let him run about, as I was interested in getting the position of his tail and wished to see him spread it out and turn it up over his back since I desired to mount one in a correct woodcock position. If I went near the bird up would go his tail, down would drop his uninjured wing, and he

would make an attempt to spring from the ground, at the same time uttering a quick tremulous whistle. I held him up by the bill, when he would make the same sound, and this little chap had only one wing to flap.

I have seen a cock jump up in front of my spaniels and go off without a sound; I have marked him down, put him up again and he has whistled "like a house afire." I have watched them evening after evening coming out of the covers to the roadside to feed. Some would come along quietly without a sound, others again would keep up a continuous whistle. In the May and June evenings, when I have been coming home from a day's trouting, I have watched them start up from the roadside and go slowly up into the air, circling round and round, going higher and higher, and all the time going *two, two, two*, (a noise very similar to a sandpiper's when you start him first from a lake shore). The woodcock would go round and round, making this noise faster and faster, until at last he would burst out into his sharp, long, tremulous whistle, and then come darting down to the ground, and when he would alight down he would squat and then you would hear him—*s-p-e-a-k, s-p-e-a-k, s-p-e-a-k*—a sound like that of the night hawk; and you would hear the other cock round about answering him. After a little while up he would jump and go through the circling performance again, beginning his *two, two, two*, going faster and faster until the sound was merged into his long, quivering whistle, when down he would come to the earth again. Any one who has seen and watched the cock doing as described would never doubt how the sound was produced, and would give them credit if able to make one sound with their throat to be able to make them all. No one believes the *sneep* of the snipe is made by the wings, nor is the booming notes they utter when circling around in the air overhead of a spring evening, as their actions then are similar to those of the cock.

Here is an experiment that was tried some twelve years ago in this city by the late Robt. Narrow, president I think of the association at that time called the Natural Science Association, and by which name it is known at the present day. A woodcock hen was killed, so as not to injure the throat, and brought to the meeting. Two or three of the first large quill feathers were cut off close to one of the wings. The stumps of the quills left in the wing were put into the mouth and blown into hard; result was a sound coming from the throat of the hen similar to that made by the bird when alive, proving conclusively the existence of an air passage from the quill feathers of the wing to the throat of the bird.

HALIFAX, N. S.

H. AUSTIN.

Editor Forest and Stream:

Being interested in birds, and more or less of a sportsman, I have followed this discussion with more than passing interest. According to my small experience, both may be in the right, though I think one more than the other; for, as shown below, it has vocal notes which resemble somewhat the sound produced by a flushed bird.

While walking through a small piece of woods in the middle of May, I flushed a woodcock which flew only about fifteen feet and settled down in the dry oak leaves, which had fallen the previous fall. In her short flight the sharp whistling sound was absent, and instead she produced a twittering which was lower, softer and without that peculiar metallic sound about it; these sounds must have been vocal as they were still continued after she had alighted among the leaves, in plain view, where no motion was noticeable. After looking around in the leaves I found four young birds, so these twitterings may be resorted to only when flushed in some such peculiar circumstances, and may or may not be produced every time the bird is flushed. Even if they were, would be drowned by the whistle, which I take to be produced by the wings, although the twitterings were loud enough to be heard some distance, and resembled the sound produced by a strong-flying bird, lacking the peculiar whistling character.

One day last fall in a game of foot-ball the ball was kicked high into the air, and while in its flight produced a whistling sound which resembled exactly that of the woodcock. On examining as to the cause, I found that the lace had come untied and the ends, some 4 to 6 inches, were hanging loose, which, together with the rapid twisting of the ball, produced the delusive sound.

LAURENCEVILLE, N. J.

A. H. P.

Editor Forest and Stream:

In my opinion Mr. Henry B. Nicol, in his article on woodcock, comes about as near to the mark as any of your gentlemen writers. I have killed many of these birds and have watched them in close season for days and weeks, but only once did I hear what I supposed to be a male bird make any noise with his bill when flushed. It was on a very warm day in July, about 10 A. M., and when the bird made the noise he was within 6 or 7 ft. from where I was standing. It was a plaintive cry, something like the *scaipe* of a snipe, as loud, but not as sharp or decisive; it sounded more like *cre-ek, cre-ek*. To emit the sound the bird opened the bill quite wide and was flying at about medium speed, his wings were silent at the time. How can any one doubt that the twitter of a flushed woodcock is produced by his wings?

NEWARK, New Jersey.

J. GANTZ.

Editor Forest and Stream:

As a wing vs. mouth whistling, has none of your correspondents noticed the fact that common doves make a round, full, musical whistling note in flying? This they certainly do, both when starting on and alighting from a flight. I have noticed that it is or seems to be coincident with the closing or downward motion of the wings. This indicates that it is made with the wings. Might not an investigation and comparison of this bird throw light upon the woodcock controversy? More anon.

KENTUCKY.

A GIANT SQUID.—The Halifax Recorder, of Newfoundland, of recent date, contains the following item of the capture of a giant squid: "A huge squid or cuttlefish, 32 ft. in length, was stranded on the beach at Island Cove, N. F., a few days ago. The tentacles were 2 ft. in length and the body larger than that of a horse." By reference to the Fishery Industries of the United States we find that the giant cuttlefishes, which inhabit the North Atlantic and are occasionally stranded upon the beaches of Newfoundland, represent two species the genus *Architeuthis*.

teuthis. Each of these species has a maximum length of 50 ft. and its weight is measured by thousands of pounds. Large individuals are rightfully dreaded by the fishermen on account of their prodigious strength and great ferocity. The sharp curved teeth of even the common squid are formidable weapons of attack and in cuttles—with tentacles upward of 20 ft. in length—the seizing and tearing capacity must be terrific. These giant animals are very useful to the fishermen for bait.

CALIFORNIA ACADEMY OF SCIENCES.—Officers elected for 1891: President, H. W. Harkness; First Vice-President, H. H. Behr; Second Vice-President, Geo. Hewston; Corresponding Secretary, Frederick Gutzkow; Recording Secretary, J. R. Scupham; Treasurer, L. H. Foote; Librarian, Carlos Troyer; Director of Museum, J. G. Cooper; Trustees—Chas. F. Crocker, D. E. Hayes, W. C. Burnett, Geo. C. Perkins, E. J. Molera, Irving M. Scott, John Taylor.

BOONE AND CROCKETT CLUB MEETING.

THE annual meeting and dinner of the Boone and Crockett Club took place at Washington on Wednesday, Jan. 14, and was an unusually interesting and pleasant occasion.

At the meeting, which was held before the dinner, certain routine business was transacted, new members were elected and resolutions—to be given later—with regard to the Yellowstone Park were passed.

The dinner was held at the Metropolitan Club, and the president of the club, Hon. Theodore Roosevelt, of the Civil Service Commission, occupied the chair. On his left sat Mr. Proctor, the Secretary of War, and on his right Speaker Reed. Mr. Grinnell sat at the foot of the table, with Mr. Noble, Secretary of the Interior, on his right and Secretary Langley, of the Smithsonian Institution, on his left. Among others present were Congressmen Breckenridge, Lodge and McComas, Mr. Arnold Hague, of the U. S. Geological Survey; Mr. W. Hallett Phillips, of Washington; Mr. Brown, of Providence, Mr. Nichols, of Boston; Mr. Deering, of Chicago; Mr. Gordon Cumming, of Virginia, and Mr. Chanler, of New York.

After the cigars had been brought on the president rose, and in a few well chosen words explained the objects of the club and the special reasons which brought this delegation to Washington at this time. This was, he said, to urge the passage by the House of Representatives of the Senate bill for the protection of the Yellowstone National Park. He then read the resolutions which had been passed at the business meeting, which were as follows:

Resolved, That the Boone and Crockett Club, speaking for itself and for hundreds of clubs and associations throughout the country, urges the immediate passage by the House of Representatives of the Senate bill for the protection and maintenance of the Yellowstone National Park.

Resolved, That this club declares itself emphatically opposed to the granting a right of way to the Montana Mineral Railroad or to any other railroad through the Yellowstone National Park.

Resolved, That this club heartily approves of the efforts now being made to preserve the groves of big trees in California and desires to express its thanks to the Secretary of the Interior for his interest in this matter.

Mr. Roosevelt then asked Mr. Phillips, of the U. S. Supreme Court Bar, to state to those present what had been done toward securing adequate legislation for the protection of the National Park and what the present condition of the bill is.

Mr. Phillips's presentation of the case was clear, concise and telling. He called attention to the fact that the organic act establishing the National Park provided no laws nor rules for its government, but while placing it under the charge or the Secretary of the Interior and authorizing that officer to make regulations for its government and protection, it prescribed no means for enforcing the regulations which the Secretary might lay down. Persons interested in the National Park have for eight years been endeavoring to obtain from Congress the legislation which would afford protection in this reservation to life and property, and would prevent the destruction of the forests, natural wonders and the game found within its borders. At four sessions of Congress bills embodying these provisions have passed the Senate, on the last two occasions by unanimous vote. But in the House a stumbling block has always been found in the efforts of a lobby to attach to the bill a rider which provided for the granting a right of way to a railway through the Park. The friends of the Park have fought this amendment from the beginning. It is not so much this particular railroad that they are fighting as the principle involved. If one railroad is permitted to run its lines through the Park in any direction this same privilege cannot be denied other corporations, and it would not be long before this National reservation would be grid-ironed by tracks. The danger of such a state of things to the forests is well known by all who have traveled among the pine clad mountains of the West and need not be enlarged on here. The importance of passing a bill which shall protect the Park and the equal importance of preventing railroads entering it is felt by every one who has visited that beautiful region, but it is now so late in the session, and there is so much business before the House of Representatives, that it is difficult to see how the bill now in the hands of the Public Lands Committee can be brought up. We desire, however, to interest members of the House in this matter, and if possible to get a vote on the bill, and if among the gentlemen present there are any who can suggest the best means for doing this we shall be glad to hear them.

Some desultory conversation followed, during which a number of questions relating to the Park were asked by gentlemen present, and were answered by Messrs. Roosevelt, Hague and Phillips. Mr. Roosevelt explained very clearly the way in which the fires in the National Park are started and spread, and called attention also to the function performed by the forest floor, which being entirely made up of decaying vegetation retains and gives forth gradually the moisture which it receives from the rains and the melting snows.

Mr. Gordon Cumming spoke of a similar condition of things in Scotland, where pine forests when burning

burn down to the rock, all the organic matter of the forest floor being consumed and nothing being left which will give sustenance to a subsequent growth of timber. He spoke also of the disastrous consequences to the Scotch trout streams which have followed the draining of the peat bogs and meadows through which they flowed. Recently, since the land has become so valuable for farming, such bogs and meadows have been drained with the result that the streams that used to maintain an equable current are now, during times of rain or melting snow, flooded for a day or two and then become almost dry, so that but few fish are obtained where before this draining took place salmon were abundant. Such a condition of things would prevail there were the forests of the Yellowstone Park to be destroyed.

At the request of the president, Secretary Noble spoke somewhat briefly on the lines of his annual report, expressing his personal conviction that the Yellowstone Park ought to be guarded with the utmost care. The vast increase of population in this country, and the way in which the portions formerly uninhabited are now filling up, shows that within not very many years there will be left within our borders no spot where cultivation and improvement by man shall not have taken place. It is quite certain that if such breathing spaces and preserves as the Yellowstone and Yosemite parks are to be retained, legislation necessary to accomplish this object must come at once. Mr. Noble spoke of the value of the forests in protecting the streams which furnish water for irrigation over a vast tract of country on either side of the main range of the Rocky Mountains; of the fact that our large game is rapidly disappearing, and of the necessity of protecting the natural wonders which in the Yellowstone Park are collected in such wonderful profusion. Allusion was also made to the importance of protecting the forests everywhere, and incidentally to the action taken recently for the preservation of the groves of big trees in California. He spoke also of the good service performed by the troops authorized by the Secretary of War to guard the National Park, and of Capt. Bontelle's interest in the matter and good work that he had done. Secretary Proctor, with a good deal of humor, complimented the Secretary of the Interior on his excellent judgment in coming to the War Department for help in this matter.

The president called upon Professor S. P. Langley, of the Smithsonian Institution, to give his opinion with regard to the rapidity with which the larger indigenous animals of the United States are being destroyed. Mr. Langley stated briefly that so far as he could learn from consultation of the best authorities, the large game of the United States would be practically extinct within the life of the present generation of men.

The president then asked Mr. Grinnell to relate some of his experiences with regard to large game in the West during the years that he had spent there, and the latter gave some facts showing the enormous abundance of buffalo just after the completion of the first of the Pacific railroads, and of the great numbers of elk to be found in much more recent days in isolated localities of the Rocky Mountains. On the other hand, at the present day there is scarcely a place where any one can go with a certainty of finding elk abundant except on, or near, the borders of the Yellowstone Park. The buffalo have been for years practically extinct, so far as the United States goes, the only bands of any importance being in the National Park. Antelope, blacktail deer, mountain sheep, and other species of large game must follow in the footsteps of the buffalo and the elk, although their extinction will be much more gradual.

The discussion of this and kindred subjects was continued to a late hour, when the meeting broke up.

MASSACHUSETTS ASSOCIATION.

THE annual meeting was held at the United States Hotel, Boston, Wednesday evening, Jan. 14, 1891, being present.

The following gentlemen were elected members of the association: Geo. Bruce, Wm. Henry Hutchinson, Chas. S. Stearns, De Forest W. Chase, Geo. A. Cooper, Frank Keene, Francis Tufts, James O. Gray, Erwin R. Graves, Geo. H. Moore, James H. Lake, Dr. J. W. Ball, Dr. W. Hunt, John B. Farrell, Fred B. Rice, Morris F. Whiton, Francis G. Benedict, Geo. H. Kimball, Henry B. Weston. Twenty-nine applications for membership were received.

The committee on game importation reported the fitting up of a large room in which to keep the large number of birds which are expected very shortly, where they can be cared for until distributed in different parts of the State.

It is proposed to engage a room which will be a headquarters for the association, in which a library will be placed and where the members and friends can meet, and in which the different committees can hold their meetings.

Officers for 1891 were elected as follows:

President, Edward A. Samuels, 86 State street, Boston. Vice-Presidents, Hon. Jas. F. Dwinell, Augustus Hemenway, John T. Stetson, Warren Haggood, Edw. E. Hardy, Edw. J. Brown and Geo. W. Wiggins.

Treasurer, Frederick R. Shattuck, 44 Kilby street, Boston.

Secretary, Richard O. Harding, 304 Washington street, Boston.

Librarian, John Fottler, Jr.

Executive Committee, John P. Woodbury, Henry H. Kimball, Chas. G. Gibson, Ivers W. Adams, John N. Roberts, Edw. E. Small, Heber Bishop, Edward Brooks, Outram Bangs, W. F. Keith, John E. Thayer and Rollin Jones.

Membership Committee, Edw. T. Barker, Waldron Bates and Wm. O. Blake.

Fund Committee, Benjamin C. Clark, Samuel Hanson and Daniel T. Curtis.

ANTOINE'S LITTLE CORNER.—Framingham, Mass., Jan. 18.—*Editor Forest and Stream:* I have read with so much enjoyment Antoine Bissette's letter in your issue of 15th inst., that I must say a word about it. I think it overlays anything he has written previously, and that is saying a good deal. Full-charged with keen points and apt illustrations it has the merit—not a small one—of being wit and wisdom combined and condensed. That you will give him his "letty corner" every time he asks for it, and that he may apply often, I guarantee is the wish of thousands of your readers, including—F. C. BROWNE.

WILDFOWL IN OREGON.—I.

Editor Forest and Stream:

While the gunners of the Eastern, Middle and Prairie States are putting their guns away, regretfully bidding the wildfowl shooting of 1890 a farewell, we of the Web-foot State are just beginning to load shells and whistle up our dogs for ducks.

It is true that the game is annoyingly tardy in putting in an appearance this fall, but this is in consequence of the unusually pleasant weather which still continues. But they are beginning to arrive, and while their Eastern cousins have bade you good-bye for the more genial climate of the Gulf these are coming to spend the winter with us. Our best shooting is generally about the holidays, but from the first of November until the following April good shooting may be looked for whenever the weather is favorable. Seldom do our lakes freeze over. When such a misfortune does overtake the migratory feathered game here they simply drop down to the tide flats or go up the Willamette Valley to the stubble fields and patiently await the "thaw." It is, however, unusually severe weather for Oregon when the mud hens fail to keep a good air hole open for their lords and masters, the canvasbacks. By the way, a pension should be awarded the man who invents an active mud hen decoy, for canvasbacks will decoy to a bunch of energetic mud hens when nothing fashioned by the hand of man will induce them to come down.

Not only the woodduck, but mallard and even canvasbacks hatch and rear their young about the grassy sloughs and wapato ponds along the lower Columbia on Sauvie's Island, Sauvie's Island or Sofa's Island for short, who that ever hunted wildfowl in western Oregon has not heard of it? The small boy's ambition and dream and the duck hunter's paradise. The name is as familiar to the hunters of the Northwest coast as that of Chesapeake Bay is to those of the East.

It is an island, as its name would imply, and yet not an island. It is a strip of low land lying in Multnomah and Columbia counties, Oregon, about 17 miles long by 5 miles in width, bounded on the east by the Columbia and lower Willamette rivers, and otherwise an arm of the Willamette known as the Willamette Slough, a deep, turbid river itself that leaves the Willamette proper about seven miles below Portland and empties into the great Columbia at St. Helens. It is a labyrinth of sloughs, wapato ponds and small lakes, the largest, Big Sturgeon Lake, being about five miles long by two in width. If ever nature exerted herself to make a perfect resting and feeding place for wildfowl it was when she got to that part of her labors commonly known as Sauvie's Island. It derived its name from an old French Canadian who settled there in the early days of the Hudson's Bay Company.

Hark! hark! what music! from the rampart hills,
How like a far-off bugle, sweet and clear,
It searches through the listening wilderness!
A swan! I know it by the trumpet tone;
Winging her pathless way in the cool heavens,
Piping her midnight melody, she comes.

Every thoughtful sportsman sorrowfully recognizes the fact that the days of game, whether fish, flesh or fowl, are numbered. There is not much said or written about it because it is a painful subject, but it is nevertheless a settled fact, and the more's the pity. Among the first feathered game to disappear from the face of the earth will be that most notable, majestic and beautiful of them all, the American swan and his cousin, the trumpeter swan. In many places where they were moderately plentiful a quarter of a century ago they are now unknown. Some people pretend, by way of explanation, that they have simply changed their path of migration to less settled districts, but that does not explain the fact there is no place on the American continent now where they are really plentiful, and these good friends of the noblest of all the feathered tribe are called upon to explain their explanation.

The fact is that the swan, like the bison, is a large bright target, and death loves a shining mark. That most graceful, most beautiful and emblematic of royal purity of all water fowl will soon be known only in tradition—a tradition of those other days of hunter life in the half-forgotten past.

Many of the States have undertaken the enactment of laws for the protection of swan, but those laws accomplish no good. The Oregon statutes inform us that it shall be unlawful for any person between the first day of May and the first day of September of each year to take, kill, injure or destroy, or have in possession, sell or offer for sale any wild swan, etc. That sounds like lots of protection; but Great Guns! what hunter ever had the opportunity to do any of those terrible things to a swan in Oregon between the first day of May and the first day of September.

But let us "fiddle while Rome burns" and enjoy the fun while it lasts. We may not be able to do as some of the army officers of Vancouver barracks did on Green's Lake several years ago—stuff pillow cases with straw and with these decoys shoot thirty-five swan by moonlight in one night, but we will do our best toward annihilation.

There is no doubt that a swan is easily fooled. I know hunters that can turn a swan in his flight and bring him within easy range by imitating his call, and when one of a band is downed, the others are easily bagged as a rule. The words of Leffingwell in "Wild Fowl Shooting" coming from the Mississippi Valley are suggestive. He says: "In the Western States this noble bird is almost extinct; they have been comparative strangers, except at rare intervals. Not far in the distant past they were annually seen with us on the lakes and rivers and frequently feeding in immense bayous."

No doubt the swan are more plentiful west of the Cascade Range than anywhere else on this continent. In midwinter Big and Little Sturgeon lakes, Morgan's Lake, Foley Lake and the Big Willot Lake on Sauvie's Island, Green's Lake in Washington (opposite Sauvie's Island) and Willow Bar in the Columbia River are resorted to for feed and rest by swan in considerable numbers. They belong to the duck family, and as is well known, that entire family is very partial to the tender, juicy, nutritious wapato; and while the swan, like the mallard, will not dive deep for food (as do the canvasbacks), they are enabled by the aid of their long, muscular necks and strong bills, to tear the wapatos out of the soft mud of their favorite feed lakes, and thus satisfy their rapacious appetites. A wapato lake used during a moonlit night by swan has the appearance next morning of having been subsoiled by a

drove of ravenous hogs. A full-grown swan will easily devour a peck of wapatos in a single night, and leave a good breakfast of the smaller tubers floating in the turbid waters for the widgeon.

One of the most beautiful of sights is to witness the arrival of their spectral squadrons at Big Sturgeon Lake from the north. This lake is a great resting or loafing place for all kinds of water fowl. The swans have been pursued, abused and deviled so much that they are getting educated. As the winter sets in earnest (i. e., when the rains come) the swans come trooping down from the north and gather at this lake. I have often watched them. The storm clouds and wind give the lake a gloomy appearance. You hear the distant bugle calls, but so far away that the birds, notwithstanding their whiteness and immense size, are not discernible. At last you see a faint, wavering streak of white away in the north among the clouds, more like a glance of the sun through a rift in the clouds than a moving mass of life. They maintain their lofty flight until over the lake, and then with a grand flourish of trumpets suddenly set their wings and descend straight into the center of the lake. Then follows a lot of light talk and a general brushing up. Soon there comes another flock in the same way. As the late arrivals hear their incoming friends, they answer, and then such whooping and trumpeting as makes one's ears ring.

So each succeeding flock is received by those already arrived; and during all this time any observing person can discern more in their whooping and yelling than simply a disposition to make noise.

Swan, like all other water fowl, have undoubtedly a language of their own. Listen to the flute-like tones from the snowy throats of the glad birds, that, possibly, have not seen each other since they left that same lake on their long pilgrimages to the North, telling of their wanderings, their joys and sorrows among the crystal lakes around the pole. When they come in or go out of a lake, it is with a general hue and cry; but while resting or feeding their tones are the purest, sweetest and most melodiously tender imaginable.

May not theirs be a life of love as pure and spotless as their robes of white, jeweled with the most perfect grace and melody.

MULTNOMAH.

PORTLAND, Oregon, Nov. 18.

CHICAGO AND THE WEST.

CHICAGO, Ill., Jan. 17.—It was the misfortune of the writer to miss among other good things last week the big game dinner given by Billy Werner to the Possum Club. Report runs that this was a screaming success. The tables were handsomely decorated, two peacocks, a fine wild turkey, the nicely mounted heads of a deer and an elk being among the furnishings of the board. Above the antlers of the elk there towered to the ceiling of the room a genuine persimmon tree, and from a branch of this and suspended by his tight-curved tail there hung a real possum. The menu, nicely lithographed, set forth among other things, "Suckers from the Kow River, 5 ground traps, sauce à la 443," "Kleinman ducks, Elliott (in the sauce)," "chicken from Felton's farm—you may tie it, but you can't beat it," etc., etc. Toasts of the evening were "Sports of the Field," Dr. N. Rowe; "Chicago Sportsmen," H. D. Nicholls; "The Higher Aims of the Sportsman," Wolfred N. Low; "Trap Shooting, Past, Present and Future," Chas. E. Felton; "Sports in General," Harry C. Palmer; "The Anatomy of the Possum," Dr. J. M. Hutchinson. "The Rod and Gun" reply fell to the FOREST AND STREAM representative, but the latter was absent. The Possum Club is flourishing to the point of aggressive prosperity. Mr. Werner is certainly to be complimented upon the success of his banquet.

Mr. C. E. Willard, well known among the shooters of the West, has severed his relations with the Standard Cartridge Co., and this week enters upon his duties as agent in the West for the Colt Patent Fire Arms Co., of Hartford. Chicago will be his headquarters, and he will not travel further west than Omaha.

Mr. C. D. Gammon and Mr. Harry Loveday leave next Monday for a duck shooting trip on the sunk marsh of New Madrid and will shoot there till Feb. 8, when they meet at Cairo the excursion of Northern shooters, now arranging to shoot some matches with Southern shooters at New Orleans and Pensacola.

The removal of the great cattle herds from the Cherokee Strip, I. T., has caused the invasion of lower Kansas by numbers of gray wolves, which are proving destructive to stock.

Buffalo Jones is in the city this week. He has a new overcoat. It looks like dull chinchilla, but in reality it is made of buffalo cloth, woven altogether from buffalo fur or wool. The coat is faced with dark buffalo fur: There is no coat like this in the world. Buffalo Jones also has some photographs of members of his herd, including some nice half-breeds a few months old. The crosses are all doing well. The moving of part of the herd to Salt Lake City was disastrous, and there are only 7 full-blood calves this year against 21 last. This big herd will be exhibited at the World's Fair here in 1893. Three syndicates are figuring about it now. Buffalo Jones is telegraphing Buffalo Bill to-day, out at Pine Ridge Agency, and they are to meet soon and talk over some sort of a scheme for 1893 and the Fair.

The Nee-pe-nauk Shooting Club met at the Grand Pacific and elected the following officers for the ensuing year: President, Morris Sellers; Vice-President, Edward E. Flint; Treasurer, James F. Casler; Secretary, Edward J. Rowley. Directors, Morris Sellers, E. E. Flint, Ira F. Younglove, Charles P. Troego and James F. Casler.

Mr. S. N. Leek, the Rocky Mountain guide mentioned not long ago in these columns, who lives at Jackson's Hole, via Kaintuck, Idaho, writes me, under date of Jan. 12: "We are having a very light winter here, and all kinds of game are doing well. The elk have not yet been driven out of the mountains, and if we do not have any heavy storms before long they will recruit up somewhat. Last winter was very hard on the elk. I would estimate 30 or 40 per cent. of them were winter killed."

The winter in this region continues very mild. The quail will do well.

Mr. Paul North, of the Cleveland Target Co., was in the city last Saturday on a brief business trip.

Jan. 8.—There have cropped out the facts concerning a little affair which the upper circles of Grand Calumet Heights Club have for some time tried to keep suppressed.

Indeed, up to the very last moment, the most frantic efforts have been made to that effect by friends of the interested parties, so much so that only duty to the public could lead me to give the facts at all. The affair occurred last fall, and the actors therein were Dr. H., a prominent dentist on State street, and his friend Mr. Kossuth M. It may be I ought to give the full names, but if the gentlemen don't act just right about this, I can do that later on, so it doesn't make much difference. Well, Dr. H. and Mr. M. were going on an exploring voyage one day last fall. They intended to explore the Grand Calumet River, clear down to its mouth in the briny deep of Lake Michigan. Of course this meant a long trip, and a long trip meant abundant supplies, and that necessitated crowding their boat a good deal, but by careful arrangement they managed to get along. The fishing rods, and the Winchester rifle and the Apollinaris water they put in the stern of the boat, and after throwing some old coats and things over them they made a pretty fair seat for Dr. H., who occupied that end of the boat. It is a reprehensible practice, this way of throwing guns loose into a boat, and though these men may resent the censure, it is only just to say that the accident which ensued was just what might have been expected.

The heavily loaded boat made its way slowly down the stream. Mr. M. was rowing, Dr. H. was steering and paddling. The hurriedly arranged seat in the stern was not altogether comfortable, but not much attention was paid to this for some time. The morning wore away. A point was reached five miles below the club house.

Dr. H. became a trifle weary from his cramped position. He reached behind him to arrange more comfortably the articles upon which he was sitting. There was a sudden lurch of the boat. And then, in that way, no one ever knows just how, there occurred the accident which might have been expected. These sickening accidents always are occurring, but they do not seem to teach more caution.

There was a loud explosion, muffled by the covering of coats, etc., which lay uppermost in the stern of the boat. Dr. H. threw his hand behind him.

"My God, I'm shot!" cried he. His face was pale from the sudden shock and pain.

"Are you hurt much, Doctor?" asked Mr. M., himself pale with fright. "Where is it?"

"Here," said Dr. H., setting his teeth firmly together to control the pain, "I can feel the blood running. Pull ashore. I don't know whether you can get me to the club house or not. It is terrible to die here in these sand hills, away from my wife and children!"

Mr. M. pulled the boat ashore and helped his companion out. He was pale, but bore his suffering manfully. "Terribly careless of me!" he murmured.

Mr. M. removed his friend's coat and vest. The remaining garments were indeed wet as he had said.

"Did you—did you say blood, Doctor?" asked Mr. M. "Yes," whispered Dr. H., holding up his hand, "see?" But his hand was white, not red!

A strong revulsion passed over Dr. H. He gulped a little in his throat and sat up.

"Bring that d—d gun up here," he said.

So Mr. M. got the gun. There was no shell, empty or otherwise, in the barrel.

"Count the Apollinaris!" hissed Dr. H. between his teeth.

So Mr. M. counted the bottles. He found one bottle empty. The coats were all wet. The heat of the day, the motion of the boat, or something, had caused one of the bottles to "go off." On discovering this Mr. M. sat right down in the mud, on the edge of the river, and shouted, screamed and yelled, and rolled over and over with laughter. If he had only held still, Dr. H. would have shot him, right there; but after a while he too began to laugh, and soon both were helpless.

The voyage of exploration was abandoned. Dr. H. pleaded with Mr. M. for hours, and the latter promised faithfully never to say a word. But you know how such things are. Three weeks after this, as Dr. H. was sitting at dinner with several members, down at the club, a voice behind his chair exclaimed, "My God, I'm shot!" That settled it. The worthy doctor sprang from his chair as if he had really been shot. Since then he has had no peace at the club, and now this is the latest and the public story of Dr. H.'s adventure with the Apollinaris bottle.

Jan. 19.—The late little trip to the Antioch lakes, though taken for the serious purpose of finding out something about the ice fisheries, was not devoid of its amusing features. We numbered four, a cigar man, a newspaper editor, another newspaper man, who ever since the late Indian troubles has been longing to go out as a war correspondent, and that bronzed and rugged-looking genius of 108 Madison, aged anywhere from 35 to 80, who is generally spoken of in that establishment as "Old Man Hirth." Mr. Hirth was a color-bearer in the late war, but he has not been doing much fighting lately, and we all sized him up for a tenderfoot, and concluded we would freeze him, lose him, and beat him shooting with his own rifle. Indeed, our charitable designs in this matter went so far that, upon the gentleman's expressing his willingness to enter into a little target shooting arrangement, on a jackpot basis, 5 cents a corner, we informed him cheerfully that we would by this means compel him to pay all the expenses of the trip. We were going to have some fun with the "old man." Our backboard ride, three miles or so at midnight, was pretty tough, but somehow the old color-bearer didn't seem to mind it. He was getting along all right. It was a little cold out on the ice the next day, but the rest of us seemed to notice that more than the "old man," and when we heaved the big pickerel out of the hole in the ice he had more fun than anybody. After shooting it full of holes with a .22 pistol, he appropriated the fish and ever after claimed to have caught it by himself, on a pearl spoon. And then he wanted to go rabbit hunting, out in the cold, cold snow, and was disappointed because we wouldn't all go out and ramble with him in the woods. And after that he wanted to shoot at a target, 5 cents a corner, as per our first agreement. We thought we had him then, but it was just the other way, and instead of his paying our expenses we paid his. Never was so disappointing a man to have fun with, though he looked innocent enough, too. We didn't have any fun at all with him, to speak of. He developed an alarming familiarity with a good many kinds of gaits. This week the cigar man is reserved and taciturn about ice fishing, the newspaper editor has a terrible cold, and the war correspondent is sick in bed with pneumonia; but

the old color-bearer, the one we were going to have the fun with, is still selling goods at the old stand, and placidly telling everybody about a pickerel, of constantly increasing size, which he caught on a spoon through the ice, and had to shoot to keep from overpowering him. Mr. Hirth's story of his desperate wrestle on the ice with that pickerel is, I am told, growing to be a weird and thrilling affair, and there is no telling where it will end, for the rest of us are all too sick to go down-town to contradict him. I can't help thinking that the "old man" had more fun than we did on that trip. E. HOUGH.

OHIO'S OLD-TIME HUNTING GROUNDS.

WE here print the first pages of extracts from the hunting diary of a well-known Ohio sportsman, copied and sent to the *FOREST AND STREAM* by the late Dr. E. Sterling, of Cleveland. In his notes accompanying the extracts Dr. Sterling wrote: "He began the diary when in his eighteenth year, and it contains much of interest relating to the early days of this (at that time) western country, the abundance of game and ways of the pioneer's life. These extracts extend, as you see, to 1842, and relate to hunting in this State. —, the author of the diary, belonged to an old family here, his grandfather coming to the Reserve in 1798, his father in 1800 and himself born here. His father was a regular Indian trader, keeping his stock of goods here and dealing with the red men for a hundred miles around. —, you might say was born in the wilderness. His early education was with the old smooth-bore rifle. He was the best woodman and deer hunter I ever met with; and like an Indian an ordinary shot.

"I inclose a pen and ink sketch, made from memory, of one of the camps on Cass River, Mich., which I would like to have you insert in *FOREST AND STREAM*. Although it was made from memory, a friend who saw it the other day recognized it immediately. The place is nine miles above the county town of Tuscola, and at the time was almost an undisturbed forest. From the cabin the river for a mile downstream was straight as a canal. Above and below the cabin on either side for two miles the river ran through dense hemlock lowlands and swamps, save where a narrow ridge of pine land intervened, on which the hunting lodge was built, as shown in my sketch. It was the best runaway in all creation. It would only take half the eye of the common hunter to see what a glorious crossing place for game the camp stood on. — informed me that one day in October he counted 27 elk cross the river where the dugout is tied in one drove. This 'Thumb of Michigan,' as this point between Saginaw Bay and Lake Huron was called in those days, was really overstocked [as civilization advanced north with its clearings. They were here really hemmed in; from here there was no escape, and only the many dense swamps and swales continued the existence of game as long as it did."

THE OLD CAMP ON CASS RIVER.

CLEVELAND, Dec. 3, 1836.—Started this morning in a sleigh for Avon, eighteen miles west, on a deer hunt. Arrived at the Kinney Tavern on French Creek, about 3 P. M., where I made preparations for a hunt. The next morning was clear and tracking in the snow excellent. I started into the woods and soon found many fresh tracks which I followed, but being inexperienced in deer hunting I got no shots, although I saw quite a number. So toward night I returned to the tavern with a live possum I picked up on the way. At night a serenading band of some twenty persons came to the tavern to drink and prepare themselves for the purpose of greeting and doing honors to Mr. F., an old bear hunter, who had just returned from the Columbus State Prison, where he had been serving the State for some time to make amends for passing counterfeit money.

The next morning I started into the woods at the break of day in company with an old hunter; we came to a place in the woods where he said an old buck lived, and if we worked it cunning we might get him; he told me to go to a certain place on a ridge and stand, and make as much noise as I liked in going there, and he would go to another place and stand, I went to the place designated, but made as little noise as possible, and taking my station behind a large chestnut, waited to see what would happen. A short time after being there I discovered an old buck bounding along to the very spot where I stood. After coming within about six rods of me he stopped and looked back on his back track. I took advantage of the opportunity and fired. Immediately he wheeled and ran off into the woods again. I loaded my rifle and went to where he had stood, found blood and followed his track on for about half a mile. I found him between two logs, dead. The old hunter having heard me fire came up, and assisting me we soon hung up the old buck. During the day we saw two bucks fighting, but did not get a shot at them. It now commenced raining, so we hurried back to the tavern. The next morning it was very cold, and as all the snow was gone we returned home to Cleveland, with directions to send our buck after us. The next morning getting up quite early, on going to the kitchen door the first thing I saw was my old buck standing up as straight and natural as life. I took him to my workroom, thawed him out, skinned him and prepared his hams for drying. This was the first deer I ever shot. I felt very much elated at my success in killing him.

Dec. 20, 1836.—I returned to "Avon Center" for another

deer hunt. The next morning after arriving at Fuller's tavern, we struck into the woods and soon came on the tracks of ten deer, all in one drove. After following them a long way we succeeded in killing a fine doe crossing their tracks in front of me. She fell at once, and upon going up to it I found that I had broke its back. I cut its throat, took out its entrails, and cutting a crotch stick, hooked it into its jaw and drew it in the snow some four miles to the tavern. The second day I saw several deer and got three good shots but no deer. My sights, I think, are too fine for the woods, or something else is the matter. However, I killed five porcupines. I found them on the tops of trees eating the bark; they made a very tempting and beautiful mark. The third day I saw great numbers of deer and got several shots, but owing to my bad sights got none.

On the fourth day, the snow still being good, I went out again and soon struck the track of a very large buck. I followed him for five or six hours, saw him several times, but always with his flag hoisted, until luckily I discovered him very carefully coming toward me on his back track. I let him come within eight rods of me when I fired. At the report of my gun he suddenly stopped, looked around a moment, and then bounded off. I had the buck fever when I shot at him, my arms and legs trembled violently, and that, no doubt, was the reason I missed him. I felt so vexed and mortified at not hitting him, I went home the next day, though the snow and weather were favorable. [In the last hunt of the year to "Avon Center" we note from the diary a great similarity to the former expeditions, but we extract a few notes of the most interest.] The deer are commencing to collect in great droves; to-day we saw 10 in one and 16 and 19 in another, but succeeded in getting none. However, toward night we started two does out of a tree-top and shot one, a fine fat animal. The next day started a drove of over twenty deer. After a while, seeing the whole drove only twenty rods ahead of me, getting down in the snow and resting my rifle on my knee, I singled out one of them and fired. Going to the spot where the deer

stood that I shot at I found hair and blood. Following the track up, I at last saw the deer lying down and as I supposed was dead. I placed my rifle beside a tree and was going toward him to cut his throat, when he jumped up and ran off at full tilt. I followed his track two miles or more when I again discovered him lying down. I took good sight this time and finished him. After cleaning him I passed my handkerchief through a hole in his neck, looked at my compass and commenced dragging him in the direction of the tavern. A violent snow storm coming on, I got bewildered and wandered about in the woods till night, when I came out on a road one mile from Beebe's tavern, on the south ridge, eight miles from where I started in the morning. I staid here over night and made arrangements for sending my deer to Cleveland.

On my way back to Fuller's Tavern in the morning I saw many deer and several flocks of turkeys, one of over two dozen, but got none. This day a hunter killed a large buck within fifty rods of the tavern, and not thirty rods from where a collection of some twenty people were burying a man who had been accidentally killed a few days before.

On the 5th day I followed a large drove from daybreak until 2 P. M. without getting a shot. After consulting with myself for a while I concluded to return to the tavern and recruit for the morrow. The next day I started for the south woods. When less than eighty rods from the tavern I started six deer, fired and missed them entirely, three of them standing in a lump, so in the dim morning light as to look like one huge animal. Following in their direction I soon came on the tracks of two together, and in a short time saw one of them standing twenty rods off. I immediately drew up my rifle and fired at it. It never moved. Loading as soon as possible I took aim, low down its side as I supposed, and again fired. This time it jumped and ran off like lightning. Going up to where it stood I found plenty of hair, and following the track a short distance found blood. From the way it tracked in the snow I saw that I had broken its hip. It ran pretty smart for a mile or more, when getting exhausted from loss of blood it lay down very often; jumping up at last very near me I fired and missed, when, being vexed at my ill-success, I took after it without taking the trouble to load my gun, and out-running it caught it by the head and ears and cut its throat with my knife. It proved to be an old doe in middling order.

A rain in the morning gave unmistakable signs of no sleighing and a very bad road home, so we packed up at once and left. So ended our hunting for 1836, and so our first deer hunts.

TRAMPS OF A TENDERFOOT.

II.—MY FIRST ELK.

IT was my first hunting trip to the mountains. We had had a hard trip across the Laramie Plains, as we had walked most of the 125 miles, and now we had been hunting some ten days with but poor success.

It is true we had killed a few deer; and one of the party had even killed two cow elk; and another had scared and been scared by a mountain lion; but game had been scarce and we came back to camp from many a weary tramp empty handed.

I wanted to kill an elk with a fine pair of antlers, and to that end I worked industriously, but only a fleeting vision of three elk at a distance as they disappeared in the brush late one evening had so far rewarded my quest.

We moved camp several miles, hoping to have better success, but no game of account fell to our rifles. Then the boys began to talk of starting home. One afternoon I went to the old camp to get a deer head and scalp that I had forgotten when we moved. The sky was overcast with heavy-laden clouds and occasional gusts of snow whirled around the mountain peaks.

I reached the old camp in due time and secured the head, and started to return. When within about two miles of camp I saw a band of six or eight elk feeding in an open space about half a mile above me on a small stream. Quickly getting into the willows I waded, crawled and worked my way through the dense brush as quietly as possible, until when within about 250 yds. of the band I came to an open space from which they were in full view.

It was a fine sight as I sat there in the brush and watched them as they quietly fed on unconscious of danger. Selecting out the largest one I carefully sighted my rifle, and with a slight pressure of the trigger there was a flash and a roar and the .45 90 bullet had sped on its mission.

Away went the entire band, and the one I had shot at turning squarely around made for the brush opposite.

As he went into the timber with a rush, with head up and antlers laid back, it was a fine sight. Apparently he was untouched, and he moved with proud and even defiant step, worthy the brush of a painter.

I followed quickly, and had not gone fifty yards until I came on him lying prostrate. He was a magnificent specimen and of unusual size.

Quickly dressing him, as it was now nearly dark, I hastened to camp for help to hang him up. We were soon back, and before midnight had his head off and the carcass hung up. This was a proud evening for me. Reader, have you after long and tedious hunting met with like success when about to give up? Then you can realize my feelings.

In my "den" at home there hangs on the wall one of my most prized trophies of the hunt, the mounted head of this "my first elk."

EDGAR, Neb.

THOSE NOVA SCOTIA LICENSES.—Halifax, Dec. 20.—*Editor Forest and Stream:* I am in receipt of your letter of 4th inst., together with copies of your paper of same date, including communication respecting Nova Scotia game licenses, also a copy of your *Book of the Game Laws*, for all of which accept my thanks. The Nova Scotia laws as published in your book are quite correct, and I will notify you of any changes important for you to know. The Digby hotel keeper has been obliged to refund the money taken by him for the bogus licenses, and the same is now in the hands of the Government, where it belongs. No such thing will be attempted in the future. From a remark in your letter I infer that you think that this man had some authority to issue licenses by reason of having formerly been a game warden and a magistrate. But you must distinctly understand that this is not so. There is no pretense of any such right, and he does not for a moment make such a contention. All licenses are issued at Halifax and sold in the different counties by the clerk of the county. The papers issued by the Digby man are purely worthless. All non-residents are obliged to get them before hunting. It cannot therefore be said that the imposing of licenses is not impartially carried out, since the law requires all to have them. The only difference between one man and another is that one may escape before capture, while another may be caught and fined. But this will always be, to some extent at least.—C. S. HARRINGTON.

KANSAS GAME.—Emporia, Kan.—I think that the Chinese and Japanese pheasants would do well here, and I would thank any of your readers to tell me through the *FOREST AND STREAM* where I can procure some of the birds to put out here next spring. We have fine bottom lands along the rivers, and on the uplands heavy, fine timber and plenty of cover on the bottoms and plenty of feed also; the majority of bottom farms have fine hedges. We have plenty of prairie chickens, and I think as fine quail shooting as could be asked for. I was out for about four hours on Dec. 20 and got a bag of twenty-six Bob White quail, ten rabbits and one fox squirrel. We have worlds of rabbits, both the little gray fellows and the jack rabbit. We were to have a grand chase to-day with the jacks and greyhounds, as we have some of the finest running dogs to be found; but this morning finds everything covered with ice.—G. C. J.

THE MYSTERIOUS TENANT OF A TREE.—Within the limits of the city of New York is a great swamp dense and treacherous the year round. It lies in a tract of country lately set aside by the city and called Van Cortlandt Park. One afternoon in the early spring of 1887, I was poking about among the trees and bushes on the outskirts of this swamp watching a wary hawk and some restless noisy crows that were perhaps beginning to build their nests in the tops of the swamp oaks. Several old crows' nests were found; also one composed of large sticks high among the upper limbs of a swamp oak. I carefully scrutinized the latter through my field glass, and I saw that it was not a new one, yet it was occupied, and the occupant's feathers or fur seemed to wave in the light breeze. I threw sticks at it, but could not see signs of life. A bird would surely have left. Then I pounded the trunk of the tree, thrashed about the tops of saplings and beat the bushes, but still there was no movement. Then I cut a stout stick, a yard long, and determined to climb the tree and find out its tenant. The tree was one of a bunch of four or five that sprung from a common base, and the group was surrounded by water. Small limbs had grown pretty thickly from butt to top, so that climbing could not be difficult. The platform of sticks, evidently a deserted crows' nest, was supported close to the main stem by several limbs and many others grew above and around it. My first impulse was to strike the bunch of red fur with my stick, but the limbs prevented that. All the while it had not stirred. If I could only make it move, perhaps I could deal an effective blow at it. So, reaching out at arm's length, I gave a strong poke into the mass of fur. It instantly arose upon its forelegs, stared a moment in bewilderment and surprise, and the very next instant, with a wild leap, went tumbling over the side of the nest into a pool of water fully 40 ft. below. Then, slowly dragging its tail, it crawled away, wet and forlorn, into a dense growth of brambles out of sight. The mysterious creature was a red fox. Not 40 yds. from this very tree was a railroad track upon which many trains a day had been passing. The home had not been hard for him to reach on account of the numerous limbs which served as rounds to his ladder. Here, he had, doubtless, slept day after day in the midst of civilization, with a feeling of such security that he would not deign to move until a stick was thrust rudely against his ribs. It is commonly believed that foxes resort only to burrows in the ground or holes among rocks. But this individual, with danger on so many sides, was, no doubt, driven by some great necessity to attempt the almost incredible feat of sleeping in a tree-top.—*E. T. Adney in Independent.*

KENTUCKY.—Spencer Co., Ky., Jan. 12.—The shooting season just past has been a very good one. Quail have abounded, and a pheasant has been picked up in the eastern portion of the county, in the hills of Beech and Crooked Creeks, where there is still vast, almost unbroken, forest. Hares have been plentiful, but the sport is so little appreciated that only market hunters have enjoyed it. There is not a beagle in the county. If their merits were known it would be but a short time before hare-hunting would be the most popular of sports. There can be few amusements more interesting than that of having the little trailers drive the hares out of cover where a good shot could pick them off *ad libitum*. The big fish-pond and game-preserve scheme has not materialized. Senator Gilbert has gone hunting a State office, and no one seems now to be pushing the enterprise. I am certain the plan was practicable, and would pay stockholders big interest on their money.—*J. S. M.*

FOREST AND STREAM POWDER TESTS.—New York, Jan. 19.—*Editor Forest and Stream:* In reply to the letter of Messrs. Von Lengerke & Detmold in last week's issue, and also to the complaint of the manager of the American Wood Powder Co., that my Colt gun, which was used in the powder tests at Claremont under your management, was a large 12-gauge, I beg to state that the gun was tested by Mr. J. Dannefer, No. 9 Chambers street, and myself, and it was found a very small 12-bore. A No. 12 was required considerable pressure to go from chamber to choke. I hope this will satisfy those interested in that test as being fair to all concerned, as I did the shooting with my gun on that day without any interest other than a record for my gun.—*EDWIN A. SUMMERS.*

SNOW AND RIFLE SIGHTS.—*Editor Forest and Stream:* A couple of items, one by "Hunter" and the other by Mr. Lyman, remind me that I have also been troubled when hunting deer in the timber, when the snow adheres to the branches and underbrush, by having the sights of my rifle, both front, open and the Lyman, choked with falling snow, or the view of the front sight obstructed by snow lodging on the barrel, especially so if the snow be damp. I overcome the difficulty by reversing the usual method of carrying the gun; that is to say, by carrying it bottom side upward.—*H. L.*

A SIGHT ATTACHMENT.—Let "Ahmeek" (issue Jan. 8) take a small rubber ball, such as is used by children as a plaything, cut it in half, or allow two-thirds in one position. In the part used make a small hole to tightly fit over projection in sight. Place in position, and the larger portion being toward face will serve to obviate the trouble complained of. The mode of application, etc., will suggest itself applicable to all peep sights.

At Hagen, in Prussian Westphalia, the attention of an official was aroused by the barking of a dog on the railway. Thinking there was something amiss the man followed the animal, and found that its master, a sportsman, while walking homeward on a low railway embankment, had been seized with a giddiness and had fallen in a state of insensibility on to the metals. Guided by the dog the man soon reached the spot where its master lay and succeeded in removing him. A few minutes later a train passed.—*London Daily News.*

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Ado.*

FOREST AND STREAM. Box 2,532, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Glean," "Dick Swiveller," "Syllilene" and other competent authorities to be the best treatise on the subject extant.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE SUNAPEE TROUT.

Salvelinus alpinus aureolus.

FOR some time past ichthyologists and anglers alike have been deeply interested in the question of the name and origin of the splendid trout of Sunapee Lake. Is it a distinct and peculiar species which has always been with us, or is it simply the European charr or saibling which has been lately brought over from Europe? Two of our highest ichthyological authorities have expressed themselves with some positiveness in regard to this matter. Dr. Tarleton H. Bean, of the U. S. Fish Commission, has described the fish in question as a distinct species, under the name of *Salvelinus aureolus*, while Mr. Samuel Garman, of the Museum of Comparative Zoology, has declared it to be fully identical with the European *Salvelinus alpinus*, the charr, saibling, *saibling* or *ombre chevalier* of the rivers and lakes of northern Europe. On the supposition of the identity of the Sunapee trout with the European form, its occurrence in the lakes of Maine has been attributed to a recent plant of saibling eggs brought from Germany by the U. S. Fish Commission. The possibility that this trout is a hybrid between the saibling and the European trout or "brown trout" (*Salmo fario*), has been also suggested.

The study of the species of charr is a very difficult one. The specific differences are slight and the individual variations surprisingly great. The presence of a large amount of material is necessary in order to reach any conclusion. Those conclusions which now seem to me probable I wish to present in the most modest manner possible, for they are liable to be wholly overturned when the waters between Maine and Greenland are more fully explored.

For the purposes of the present study, Dr. Bean has very kindly lent me a considerable amount of material, from the National Museum, by consent of Dr. Goode. This consists of the following specimens:

Salvelinus alpinus—10,249, from Europe; 17,456 (two specimens), Bergen; 39,924, Sterling Lake, N. J. (introduced).

Salvelinus aureolus—From Sunapee Lake, 37,408, 37,409, 37,410, 39,384, 39,385, 39,900.

Salvelinus—A hybrid of *Salvelinus alpinus*, male, with *Salmo fario*, female, 2 years old, received from Norway, 17,451.

Salvelinus (nitidus)—34,384, Disco, Greenland.

Salvelinus (arcturus)—36,097, mouth of St. Lawrence River; 37,670, lake near Quebec.

Besides these specimens I have received several specimens of *Salvelinus aureolus* from Sunapee Lake and Dan Hole Pond through the kindness of Mr. A. N. Cheney and others. From Dr. Bean I have also specimens of *S. oquassa* from Rangeley Lake, and of *S. fontinalis agassizii* from Monadnock Lake. There is, however, no present question of the distinctness of the Sunapee trout from either *fontinalis* or *oquassa*, though its relations to the latter are very close.

From the material in hand the following conclusions seem justifiable, and I am pleased to find that these results agree in the main with the observations both of Dr. Bean and of Mr. Garman.

1. In comparing the specimens of *aureolus* with those of *alpinus* I find a very close agreement in all external respects, some of the specimens in hand coinciding, as Mr. Garman has noticed, in almost every detail with one of Dr. F. A. Smith's colored figures of *alpinus* from Sweden. I find, however, the following distinctions constant in these specimens, these differences being substantially those already pointed out by Dr. Bean.

In *aureolus* the gill rakers, 6+11 or 6+12 in number, are quite short, less than one-third diameter of eye, and angularly bent outward, the oldest specimens having them shortest in proportion and most curved.

In *alpinus* the gill rakers are 7+15 or 7+14 in number, longer and straighter than in *aureolus*, two-fifths length of eye in specimens of the same length as those of *aureolus* measured. In form of gill rakers and in all other respects the specimen from Sterling Lake introduced (from Germany) agrees fully with the Norwegian saiblings.

In *aureolus* the pectorals are shorter ($1\frac{1}{2}$ in head) and the dorsal lower than in *alpinus*. In the latter the pectoral is $1\frac{1}{2}$ to $1\frac{1}{4}$ in head.

Other apparent differences, which may depend wholly or in part on the condition of the specimens are these: The hyoid (hypobranchial) teeth in *aureolus* are smaller and in a broader series than in *alpinus*, the stomach a little thicker and the pyloric coeca smaller. I doubt the constancy of these characters. The specimens of *aureolus* are also a little more robust in form, a character of trifling value among trout.

Dr. Day has recently maintained, and he has shown good cause for his opinion, that the six or eight nominal species of charr ascribed to the waters of Great Britain are all forms of one—*Salvelinus alpinus*. Recent continental writers seem to share this view, long ago advanced by Agassiz, who placed all the charrs of Europe, including Iceland, in a single species, *alpinus*. Dr. Day has shown that the species is subject to great variation in the development of the pectorals. None of the European writers have paid much attention to the gill rakers. Dr. Günther has counted in English specimens 9 and 11 gill rakers on the lower limb. If these counts are correct, the number would vary from 6+9 to 9+15. But this count may be questioned, as it is not unlikely that some of the smaller ones have been omitted in Dr. Günther's enumeration. When all these facts are taken into consideration, the only character left to distinguish the Sunapee charr from the saibling is the curved form and perhaps lesser number of its gill rakers.

This problem is complicated by the existence of other saibling-like charrs in lakes of Canada and Greenland. It is evident, too, that some of these are even more like the saibling than the Sunapee trout is, a fact which Dr. Bean has already pointed out in a letter to me.

The specimen above mentioned from Disco, Greenland, is a fine trout, 15 in. long, wholly silvery in color, a fact which shows that it was taken in the sea. This specimen

has the gill rakers slender and straightish, 9+15 in number, the longest $2\frac{1}{2}$ in eye. In this respect it agrees perfectly with the saibling, but in the form of the body and the shortish fins (the pectoral $1\frac{1}{2}$ in head) it more resembles the Sunapee trout. This Greenland fish represents the species called *Salvelinus nitidus* (Richardson). This has been thought to be simply the female of a long-finned Greenland trout called *Salvelinus stagnalis* (Fabricius). Perhaps *nitidus* is the female and *stagnalis* the male, or perhaps *stagnalis* is based on river and *nitidus* on sea-run specimens. Apparently the two are not distinct species and I do not see how either can be separated from *alpinus*. Apparently, also, *nitidus* only differs from *aureolus* in having the gill rakers of the *alpinus*. An unpublished engraving of another Greenland trout (*nitidus*) agrees perfectly in form and color with *aureolus*, but the gill rakers are not shown.

In view of all these facts, I have no hesitation in regarding these Greenland charrs as forms of the saibling. That the saibling should extend its range across to Greenland need not surprise us. It is found in all the mountain lakes of Europe from Austria to Spitzbergen. It enters the northern seas and swarms in the ponds of Iceland. In late autumn, in the North Pacific, black-spotted trout (*Salmo mykiss*) and the Dolly Varden charr (*Salvelinus malma*) freely enter the ocean, and they inhabit alike both sides of Behring's Sea. The saibling could as easily reach Greenland from Iceland as to cross to Iceland from the Scottish coasts.

Two other specimens before us are also of interest in this connection. One of these, a young trout, 10 in. in length, with parr marks and without red spots, is from a lake near Quebec. The other, 9 in. long, was taken in the Gulf of St. Lawrence. This specimen is very dark in color, almost like a blueback. It has no red spots and its scales have the silvery lustre which is acquired on entering the sea.

These two specimens seem to agree with each other in essentials. They have straightish gill rakers like the saibling, but their number of these appendages (7+12 and 7+14) is intermediate between the saibling and the Sunapee trout. The pectoral fins are also intermediate in length, $1\frac{1}{2}$ in head in one specimen, $1\frac{1}{4}$ in the other. The opercular bones seem more straight than in any other specimens examined, but this appearance may be due to the fact of the partial drying of the skin over the bones before the fish was put into alcohol. These specimens are apparently intermediate between the saibling and the Sunapee trout, and again intermediate between the Greenland *nitidus* and the Sunapee fish. The specimen from Quebec agrees in all respects, waiving non-essentials, with Dr. Günther's figure of *Salvelinus arcturus*, the "northernmost Salmonoid known," from the northern limit of British America. Dr. Bean has suggested to me that this specimen may be the unrecognized *Salvelinus rossi* of Richardson. This view may be correct, but Richardson's description is so vague that we can only be sure that his fish was some one of the *alpinus* set, with red spots and a red belly, perhaps a *nitidus* or *stagnalis*.

The Sunapee charr is certainly not a hybrid between the saibling and any other species, European or American. The hybrid *alpinus fario*, examined by me, has the scales adherent as in *alpinus*, but almost as large (135 series) as in *Salmo fario*. Its gill rakers, 6+11 or 12, are stiffish and nearly straight; there are a few teeth on the shaft of the vomer (*fario* has many), the species of *Salvelinus* none at all) and the color is very eccentric. The body is dark and is clouded all over with sharply defined yellowish reticulations, which extend on the head and fins. Its coloration somewhat resembles that of a pike. It has neither the red spots of *alpinus* nor the black spots of *fario*.

In this connection we may briefly notice the other nominal species of charr described from British America and Greenland. *Salvelinus arcturus* seems to be a form or variety of *S. alpinus* as already noticed. The same is true of *Salvelinus nitidus* and of *Salvelinus stagnalis*. *Salvelinus alipes* is the same as *stagnalis* and *rossi* probably identical with *nitidus*, as is also *Salvelinus hearnii*. *Salvelinus hoodi* was based on a mixed lot of *Salvelinus fontinalis* and *S. namaycush*. *Salvelinus hudsonicus*, *canadensis* and *immaculatus* are *fontinalis*, the latter name given to sea-run specimens. But for all we know the *alpinus* may run out to sea as well and become *immaculatus* too. *Salvelinus naresi*, from the Arctic regions, seems to be the same as *oquassa*.

If these views be correct we have in America five species of charr, each highly variable and running into many local varieties.

1. *Salvelinus namaycush*.—The Great Lake trout, from Maine to Wisconsin, and Idaho, northward to Alaska.

2. *Salvelinus malma*.—The Dolly Varden trout, from the Sacramento Basin to Siberia, west of the Cascade Mountains.

3. *Salvelinus alpinus*.—The charr or saibling or *ombre chevalier* of Europe, from Maine to Boothia and across to Greenland, Iceland and all Europe; a well marked variety being the Sunapee charr (*Salvelinus alpinus aureolus*). Other varieties of doubtful standing are *alipes*, *nitidus* and *arcturus*.

4. *Salvelinus oquassa*.—The blueback, Rangeley Lakes to Boothia.

5. *Salvelinus fontinalis*.—The brook trout or speckled trout, from the Saskatchewan country to Labrador, and south in the mountains to Georgia; its range more southerly than that of the others and not crossing the Rocky Mountains.

As for the Sunapee charr itself we may say that it seems to be distinguished from all the other forms of charr by its gill rakers. It is probably not a distinct species, and it is probably native to the waters in which it is now found, and not an importation from Europe. Should it appear, however, that the saibling in that part of Germany from which specimens have been brought to America have gill rakers like those of the Sunapee trout, this opinion would be reconsidered. Other lakes of Maine, Quebec, Labrador and Boothia must be explored before these questions can be definitely settled.

It is interesting to notice that just as the right of the saibling to be regarded as a native American has been questioned in this country, so has its citizenship in England been also denied.

Dr. Day tells us that in olden times the people were "taught that three sons of the church introduced these fishes into Wales from Rome, and placed two in each of the lakes of Llanberries, Llynnumber and Trevenny,"

Perhaps we are justified in supposing that by the same persons and at the same time two were placed in Sunapee Lake, two in Dan Hole Pond, and two in the sea at Disco.
DAVID STARR JORDAN.
THE UNIVERSITY OF INDIANA, Bloomington, Ind., Jan. 7.

FOX RIVER FISH AND GAME ASSOC'N.

CHICAGO, Ill., Jan. 15.—As many readers of FOREST AND STREAM know, the large and small lakes of what is known as the Fox Lake system, lie about fifty miles to the north of Chicago. The Fox River drains these lakes for the most part, and also supplies them with fish. The Fox River runs into the Illinois River, and the Illinois again into the Mississippi. These lakes, if left unsupplied with other than their natural increase of fish, would in time probably become quite exhausted. The keeping open of the great waterway from the Mississippi up to the lakes is therefore a great desideratum for the Chicago anglers, and for those anglers who live yet closer to these waters. To stock the lakes and streams, and to prevent illegal and wasteful methods of taking the fish from them, is a question of equal or greater importance. Briefly, to do these very things is the mission of the Fox River Fish and Game Association. Time and again attention has been called to this organization in these columns. It is the one and only protective society in the State of Illinois which amounts to a row of blue beans in actual protection of fish or game. It deserves credit. It works. It performs. It does something besides talk. Singular, unique, peculiar, almost startling it is in this regard. What it has done by way of opening up the dams on the Fox, of breaking up netting on the Illinois, and otherwise helping the Fox River chain of waters, has already been recounted duly in this journal.

The Fox River Association held its third annual meeting Thursday, Jan. 14, at 3 P. M., at the Sherman House of this city. There was a good attendance. The association is not composed of a union of clubs, but of a union of individuals. Its success is the success largely of private effort, though it is growing constantly by accessions from sportsman's clubs lower down the rivers. As might be expected, therefore, the proceedings were marked by their informal simplicity and directness. The Fox River Association has no style about it to speak of, no pomp, pride and circumstance of glorious war, but as a certain steamed friend would say, it is "with 'em at every station of the road." The brevity and businesslike character of this meeting was delicious. The auditing of accounts was short, the reading of the minutes of the last meeting was short, and the address of President Cole was short, likewise to the point. Mr. Cole said:

To the Members of the Fox River Fish and Game Association: GENTLEMEN—I can think of no better introduction of our annual report than by quoting from the fly leaf of our book of by-laws: "The objects of this Association are to help in the enforcement of fish and game laws, to press for the enactment of new statutes for the preservation of fish and game, and to see that proper fishways are put in all the dams in the river. How that difficulty was overcome you will learn from the treasurer's report."

During the first two years our efforts were directed mainly to the first and second objects mentioned above; of the success of said objects you were informed a year ago.

The situation that confronted your directors at their first meeting of the past year was a depleted treasury, and an apparent indifference or neglect on the part of the members generally that was very discouraging to say the least. How that difficulty was overcome you will learn from the treasurer's report. Not to bore you too much with details we have to report that all the dams in Fox River are provided with efficient fishways, built according to plans and specifications furnished by the Fish Commissioners, except one small dam at South Elgin, where there is an unused canal or sluiceway that has been left intact experimentally with the understanding that if it does not work satisfactorily a regular fishway will be substituted.

On March 21 last we employed F. L. Buck, of Elgin, and obtained for him an appointment as warden. He covered all the ground from Fox Lake to the mouth of Fox River at Ottawa, and as a result of his work we can report seventeen convictions for the violation of the fish laws and seven convictions for the violation of game laws. He also distributed copies of the laws, posted notices, etc., etc., and warned persons all along the line. And best of all he seized and destroyed thirty-four nets which he found set in different parts of the river. Mr. Buck resigned Nov. 1 to accept another position, after a summer's work that accomplished more for the advancement of fish and game protection than we could have anticipated at the beginning of the season.

We have been told repeatedly by the Secretary of our State Fish Commission, Dr. Bartlett, that our work on the Fox River has been of great help to him all over the State, in that it has aroused a sentiment for the cause that is resulting in the formation of clubs that are giving their attention more and more to this matter of protection.

Before closing we wish once more to revert to the matter of finance. We can do very little without funds. If all persons interested in our organization would make even a slight effort this fund could easily be obtained. Our annual dues are but \$1 and a life membership costs but \$10. All that is necessary is to send the cash with name and address to the treasurer, as all are eligible and there is no initiation fee. If each member of the Association will make it his special effort to procure one or more members, the comparative small amount of cash needed will soon be forthcoming. Respectfully submitted for the board of directors,
Geo. E. Cole, President.

The report of the meeting of the Board of Directors was then made, briefly detailing the committees and the work they had done. Mr. John Wilkinson, minister of the exchequer, then made his report, in many ways the most important of any. Mr. Wilkinson showed the budget to be as follows:

CREDITS.	
Cash on hand, beginning of year.....	\$153 35
Annual dues.....	57 00
Life memberships.....	250 00
Contributions.....	229 70
Total.....	695 05
EXPENDITURES.	
Prosecuting cases.....	25 00
Pat. warden F. L. Buck.....	478 57
Printing and postage.....	25 00
Expanding dams.....	35 67
Hauling fish for planting.....	8 00
Total.....	603 19
Balance on hand.....	91 86

The report offers quite a good showing. The "contributions" named among the sources of income contain among them the following: James W. Nye, \$5; White & Wills, sporting goods dealers, \$5; James H. Fisk, sporting goods dealer, \$5; H. N. May, \$5; A. G. Spalding & Bros., sporting goods dealers, \$25; Hibbard, Spencer, Bartlett & Co., \$25; the Jenney & Graham Gun Co., sporting goods dealers, \$25; the John Wilkinson Co., sporting goods dealers, \$25; E. J. Lehman, \$25; the Fox Lake Fishing Club, \$101 (which shows the prominence of this club in the work); C. F. Hills, \$10; through C. F. Hills and Geo. E. Cole, \$30; Geo. E. Cole, \$24.70, and others. In return for above, memberships in the association were issued to the extent of \$95, but the total available cash from this source amounted to \$229.70. Thus it may be seen that in some instances at least, both firms and indi-

viduals have given cash as help in a worthy project to help preserve fish and game.

The Fox River Association, however, does not claim to do much in the way of protecting game. The less it does the better. It is doing some work on fish. It ought to stick to this, especially in its own younger and weaker days. All conservative business thought shows the folly of branching out into many lines of business. One business well pushed is better. In a beautifully worded resolution the Illinois State Sportsmen's Association resolved to "conjoin" with the Fox River Association, in courtesy to its committee present. The "conjoin" business ceased when the meeting of the Illinois State Sportsmen's Association adjourned, just as everybody knew it would cease. The State association is an admirable body in its own way and for its own purposes, but it does not genuinely and honestly class game protection among those purposes. Since it does not and cannot claim such purposes, what has the Fox River Association to gain by acting with it, since its own purposes are those of protection and nothing else? The union would be only one of courtesy, and not one of practical and mutual interest. Let the Fox River Association saddle itself with no complicating responsibilities, but run free in its own field of practical results. Beyond its own feeling of courtesy in the matter, none will see the force of this quicker than the State Sportsmen's Association. Indeed, it would be better if the Fox River Fish and Game Association should strike the word "game" quite out of its name as well as out of its purposes. Let others pay for wardens to watch for illegal ducks, and let this association attend to the fish. The sense of this is apparent. The only wish behind it is to see this association go on and not go back, and present at least one decent chance to a newspaper wanting to chronicle an occasional bit of success in practical protection.

Directly bearing on all this was the report of the committee on game, Messrs. Baird, Burket and Hamburger. Mention was made some time ago of the cases brought by Messrs. Baird and Bartree against the South Water street men, Henry Sloan and J. B. Brousseau, for selling illegal game. In his report Mr. Baird told how he and his assistant didn't do anything in these cases. He scored the fat-witted Brusewitz, the Chicago warden, roundly, as did others also.

Mr. Hills, reporting for the committee on fish, tersely announced "There was pretty good fishing last season in the Fox Lake country."

The committee on legal and political action had little to report. Mr. Hertz spoke at some length upon the advisability of having a bill introduced prohibiting the abominable practice of fishing through the ice. Mr. Hertz told of one Elgin party who in three days caught 2,800 lbs. of fish in Pistakee Lake last December. The extent of the outrages was not generally known, but if known the Legislature might pass a prohibitory law. Mention was however called to the fact that previous efforts in this direction had been unavailing.

Messrs. Prussing, Burkett and Glenn, appointed committee on election of the board of directors, retired to confer, and in their absence the president called upon State Commissioner Bartlett. Dr. Bartlett was received with enthusiasm. He stated that the Fox River Association was the first organization that ever gave him any help in his work, and its help had been notable. He complimented the association highly. "Dr. Bartlett had found that usually the men who complained the most about game violations were the most ready to object when he came to enforcing the law in their neighborhood. There had, however, been some work done, and thanks to this conjoint work we could now look upon a waterway open to fish from the Mississippi up to the lakes, no dam in the whole distance being now an obstacle to the fish. On the Illinois River nothing could ever be done till the last year. In that time over 500 nets had been destroyed and seventy convictions secured. It was deplorable that the Legislature had given an appropriation of only \$2,000. The fish wardens had to depend solely on fines for revenue. One warden, failing to make his case in justice court, had been arrested himself and nearly thrown into jail. Proceedings in justice courts had been found useless, and the Commissioner had adopted the plan of seizing the nets and letting the other fellow do the suing, which brought the cases into the Circuit Courts. Thanks to the aid of the president of the association, the Commission had been enabled to buy a little steamer of its own, and it now patrolled the Illinois River very thoroughly. In the work of propagation, 40 carloads of matured fish had been distributed, besides fry. Dr. Bartlett deplored the putting in power of such idiots as the Chicago warden, Brusewitz, but had no doubt that a petition to Gov. Fifer would lead to his prompt dismissal. The system of district fish wardens was working very well, the Quincy warden doing especially well. Replying to a question from Mr. Hills in regard to the cutting off and netting of fish that had run out in high water into the Illinois River sloughs, Dr. Bartlett replied that this was formerly practiced largely. The Commission had taken up one net so employed whose wings were 1,200 ft. long. Another net was 1,000 ft. long. "You must get hold of the net," said he, "and confiscate that, by holding it for storage" pending suit. He had seen four acres covered as a drying ground by the hoop-nets of one firm. Market-fishing is carried on in the Illinois to a terrible extent." Dr. Bartlett also favored a law against ice fishing.

Dr. N. Rowe, president of the Illinois State Sportsmen's Association, was called on, and contrasted the history of game protection with that of fish protection. The way of the game protector he had found a thorny one. He would favor a bill to put the matter of game protection in the hands of the Fish Commissioner. He favored a condensation and concentration in the work. Instead of many bills and measures we should unite, both associations standing on some plain and simple measures.

Mr. Cole pointed out the obviously unwise and impractical features of an effort suggesting any such double work for the Fish Commission under that or any other name. Co-operation might do, but amalgamation would be highly unwise, and would defeat the purposes of both fish and game protection. The suggestion met with no favor.

The FOREST AND STREAM representative detailed the extent of the ice fishing in Lake Maria, Lake Catharine and Channel Lake as witnessed on a recent trip and mentioned the outrageous fish pens of Lake Senachwine, on the Illinois River, where masses of diseased and half

dead fish are crowded together for weeks at a time and laded out for shipment as the market dictates. It was suggested that the association make members of the summer resort men along the upper lakes and then induce them to stop their ice fishing.

The committee on election reported and recommended the following to constitute the board of directors for the ensuing year: From Pistagua Lake region, Coroner Henry L. Hertz and Clarence A. Knight; from the Northwestern Pleasure Club, John Stephens; from Fox Lake Fishing Club, Chas. F. Hills and Geo. E. Cole; from Crabapple Island region, John Wilkinson; from Mineola Club, L. M. Hamburger; from the East Shore region, Geo. R. Davis and O. J. Weidner; from the North Shore region, Jas. Gardner.

The board of directors will early meet and elect the officers of the association for the ensuing year.
E. Hough.

FISH AND GAME IN WEST VIRGINIA.

Editor Forest and Stream:

Hunting this season was pretty good here. Some of my friends who joined me were very successful. The greatest drawback on those from a distance was the mild weather; when they killed a deer or two they had to cut short their hunt to save the game. Turkey were unusually plentiful. I attribute it to the favorable winter of '89-'90. We had some bear this fall, but none of my party had the luck to bring down any. I have had the good fortune to kill three nice bears since you were with us; one weighed 226 lbs. My eleven-year-old boy killed a very large wildcat near my deer park during the month of December. My brother John also came across a wildcat killing a small deer this last hunting season. We have some good trout streams, or at least they are considered so by all the anglers who have tried them. Mr. A. F. Rees and Mr. Ripley Hitchcock, of New York city, have tested our streams to their satisfaction. One is known as Wate's Run. The largest fish are never longer than 15 or 16 in. A stream called Trout Run, about three miles west of me, is noted for its good trout fishing. I don't know what the best specimens taken out weighed, but a friend and myself on one occasion took out of a pond, or hole as we call it, 23 nice trout in one day, the largest 16 in. long. There are two more trout streams only a few miles from my place. One is styled Stony Creek and the other is known as Pond Run; both are beautiful, cold and clear streams. Capon River, four miles distant, is a splendid black bass stream; it contains a vast number of fine bass, the largest weighing 54 to 61 lbs. I hope it will be our luck to have you visit us another hunting season. Should you have any friend who wishes to catch trout send him here and I will give him good attention. I have built a new and comfortable dwelling since you were with us, and am better prepared to entertain my friends.
T. B. Wilson.

CAPON IRON WORKS, West Va.

[The home of the Wilson brothers, in Hardie county, has long been noted as a hunting locality, and we can testify, from personal experience, to the hospitality of the people and the abundance of deer, turkeys and pheasants. Capon Iron Works is best reached by the B. & O. Railroad to Woodstock and thence 13 miles by horse over easy mountain trails. The cost of boarding is merely nominal. Deer are driven to guns posted on their runways.]

A CARP'S DINNER.

MIRABILE DICTU! Strange things happen in far-off places. It is not uncommon in opening fish to find various and divers sundries within their maws. On Lake Superior the great lake trout, the *namaycush* of the Ojibbewas, seem to always be ready and willing to accept any of such things as are thrown from the cook's galley of the steamers and sailing vessels which plow its pellucid waters. It is not uncommon to find a fork or spoon, beef bones, potatoes, broken wine glasses, corn cobs, and even a bunch of keys are among the treasure trove from their omnivorous collection bags. But now a carp comes to the front as a container of the neatest outfit of anything yet seen on the great unsalted sea. On Christmas morning Capt. McCormick, an old salt and fish man, saw two fine large German carp on sale in Duluth. Struck with their appearance, and thinking to please his friend, the Doctor, he purchased one and sent it to him with the compliments of the season. Of course the Doctor was pleased with the gift and ordered it tabled. You can imagine the astonishment of all when it was opened to find within a silk-lined case containing a large meerschau pipe and cigar holder, all in good order, too. It was a genuine carp, imported from Germany, of the variety called *papier maché*. The Doctor has it yet carefully preserved, and the smoker's apparatus, too, which he shows to his friends with very great pleasure.

DULUTH, Minn.

SUSQUEHANNA RIVER FISHING.

Editor Forest and Stream:

In September, 1888, the Messrs. Hanlon, Prof. Siler, of Harrisburg, and Mr. C. H. Sangrey, of Washington Borough, in eight hours' fishing caught 93 "salmon," or pike perch, and 10 bass. One of the salmon weighed 84 lbs., another 61 lbs., and a number ranged from 3 to 5 lbs. The largest of the bass tipped the beam at 4 lbs.

In September, 1889, near Creswell Station, Messrs. John Yeley and W. B. Charles took from a small area of water (not more than 300x40 ft.), 68 "salmon" in a few hours, the largest weighing 5 lbs., and the entire catch averaging 4 lbs.

During the season of 1889, a royal specimen of the Susquehanna "salmon" was taken with rod and line near Mud Island, by Mr. John Keech. This fine fish was one of the largest of its species ever taken from the river, in this locality, and weighed 11 lbs. 3 oz.

In July, 1889, Messrs. Sangrey and Brush caught, in two and a half hours, 22 "salmon," the largest ranging from 3 to 5 lbs. in weight.

June 15, 1890, Mr. Harvey Brush took in about three hours fishing, 16 bass, one individual weighing 3 lbs.

In the month of July, 1890, after being out one day for about eight hours, Messrs. W. B. Charles and John Myskin caught 20 "salmon," the largest 2 lbs. in weight.

STATE NORMAL SCHOOL, MILLERSVILLE, Pa., Jan. 13.

ANGLING NOTES.

It is a well known fact that fish are not half as particular about tackle as fishermen themselves. A trout will sometimes rise to a bit of red flannel or white rag as quickly as to the most careful imitation of a natural insect. While it would no doubt be better to have our flies more correctly named, particularly those which are copies of insects, we all know it would not add one particle to their killing qualities.

A correspondent in one of the weekly papers asks why the imitations of natural flies are not scientifically named, and mentions the General-Hooker as an example. This fly, wrongly called Seth-Green, was first tied by John McBride, of Caledonia, N. Y., who died many years ago and therefore cannot give us an explanation; but the probabilities are he did not know the proper name, and we take it there are few, if any, of our anglers sufficiently posted in natural history to give the correct appellation of the many flies to be found along a trout stream. If there are such we should be glad to have a list, and will do all we can to bring it into use.

With the exception of the white-miller, gray and green drakes, black-gnat, stone-fly, coudung and a few others, the correct scientific names are unknown to most of us.

Then again the names of these flies have been known and accepted by anglers and dealers all over the country for many years, and a change would naturally create much confusion.

Unfortunately for the "school of exact imitation," the majority of flies that the trout prefer are what are called fancy flies and have received fancy names from the individual who first tied them. Take for instance the scarlet-ibis, grizzly-king, queen-of-the-lake, Jenny-Lind, blue-jay, silver-doctor, Montreal, Abbey, and a host of others which are known everywhere as the most taking flies in use, what do they represent and why do trout prefer them nine times out of ten to the closest imitations?

And with bass and salmon it is still worse. With these fishes it seems to be more a question of color than anything else and the flies they prefer are made up of the most startling combinations of all the hues of the rainbow, and pages have been written trying in vain to explain why they take them and what they take them for.

There are now several anglers trying to obtain natural flies for the purpose of having them imitated and we may be able later on to give the result of the experiment. One of the greatest difficulties will be the fact that each section of the country will be found to have its own variety of flies, to say nothing of the variation in size on different sized waters.

In the meantime trout and bass will go on taking the old favorites notwithstanding the absence of the big Latin and Greek names. One step in the right direction would be to educate people to mention fishes by their right names and thus correct the confusion that now exists. In own part of the country a big-mouth black bass is called a trout, while a few miles from there the same fish is called a chub. In Florida a spotted weakfish goes under the name of sea trout, and in some sections wall-eyed pike are known as salmon, and so on. Writers to the various papers and magazines are to blame for this, if they would call "rabbits" by the correct name of hares, and not speak of "partridges" when talking of ruffed grouse, etc., people would soon adopt the correct nomenclature of fish and game. SCARLET-IBIS.

ANGLING RETREATS OF MAINE.—I.

GENERALLY those who have written about the Maine forests, streams, lakes, ponds and softly-running brooks have been visitors from abroad and not residents of our own Pine Tree State.

In attempting to inform the readers of FOREST AND STREAM of the certain retreats in the woods of Maine, where large numbers have and many more may enjoy the pleasures of camp life, trout and landlocked salmon fishing, and the shooting of large and small game, I have no apology to offer. Being a near resident to the places and scenes which I shall attempt to describe "I know whereof I affirm," and I hope these lines may lead others to these green and sylvan woods, grand old mountains and charming ponds, lakes and rivers, there to enjoy the delights which I have myself experienced.

The immense throng of city denizens who are vacationists for weeks and months, and who are devoted followers in their annual pilgrimages of Peter the Apostle and the sainted Walton, are assuredly multiplying in the American nation. Many seek the seashore and yet numberless others the mountains and quiet nooks of the hill country. Others are charmed by green fields, clear skies and fine scenery, but all of them are fascinated by the aluring trout and gamey salmon in the remote forest lakes, around which dwell the fleet deer and where the moose has his own abiding place.

Owing to the fact that more than one-half of the area of the State of Maine is yet covered with a verdant forestry, that one-tenth of its broad domain is inland waterways; that its vast forests are inhabited by the game of primitive times, and its waters by the fish of the aborigines, and that nature has fashioned within our realm some of the grandest scenery in the world, we are rapidly becoming the summer home for countless dwellers in the great marts of the republic.

In all of northern Maine there is no portion that is more entirely a beautiful lake country than is the north-western part of Piscataquis county. Within a radius of ten miles of Munson are some thirty or more lakes and ponds where spotted and lake trout are abundant.

Here the tourist can select just such an outing as his health will permit or his tastes and inclinations may dictate. He can tarry at a modern and well appointed hotel and drive over pleasant country roads, feasting his eyes upon delightful landscapes, to a different trout pond each day for weeks, or he can penetrate the lone wilderness and camp beside the still waters in nature's own lodges and repose upon cedar "twigs" and spruce branches under aged forest trees, amid the

Music of birds and rustling of young boughs,
And sound of swaying branches and the voice
Of distant waterfalls.

It is occasionally suggested by visitors and strangers that we who are domiciled amid all this wealth of grandeur and wild beauty, among these lakes of trout and near the stealthy retreats of the moose, deer and bear, do not entertain a just appreciation of what has been so lavishly bestowed upon us. But this is, I believe,

an imputation without foundation. From the rough old hunter and weather-beaten trapper, whose homes are among the spruce trees, to the more favored sons and daughters who are "to the manner born" all have an abiding love for the mountains, lakes and forests. As evidence of this I cite the following lines from the pen of a Piscataquis writer of some note, Anna Boynton Averill:

My native wilds! For years untold
The morning touched your hills with gold,
The north wind swept your fragrant glooms,
And bore the larch and pine perfumes
Across your lakes of lily blooms.

The fir, the hemlock and the pine
Sang on the heights—and moss and vine
Made many a far, dim valley sweet
And shadowy, for the shy fawn's feet.

In silvery solitudes, the loon
Laughed with the echoes, and the moon
Made splendor on the mountains, when
The Storm King slept, unseen of men.

O woods, and lakes, and wandering streams!
Ye have awakened from your dreams.
Your sweet breath blew abroad. Beware!
The gay world comes and finds you fair.

Will all wild things take wing away?
I ween I would an' I were they.
Up these deep waterways I'd fare,
If I were wolf, or moose, or bear,
Or bird, or fawn, or fox, or hare!

O Northern wilds! you surely hold
In your great heart some refuge old,
Safe hid and far and deep and dumb,
Where the gay world will never come.

J. F. S.

MUNSON, Me.

OTSEGO BASS TAKE THE HOOK.

OTSEGO Lake has lately closed. Upon the ice, about six inches thick, and within fifty or one hundred rods of the village may be seen already a solid clump of fishermen's huts, twenty-five or thirty in number, each having one or two occupants. All are busy from morning till night, though the sport is very unequal, and, as the "shorts" aver, very inequitably divided. About half a dozen "experts" seem to get the bulk of the dainty spoil. The huts are huddled together, not because the bass are confined to any particular locality, for the lake is full of them, but because they are lured to this spot by immense numbers of the tiny lake-shiners, which are set free in each hut under the ice, and upon which, contrary to all former theories, they seem chiefly to subsist.

The fish, some of which reach a weight of three or four pounds, but average less than a pound, are taken partly on the bottom, but mostly near the surface, and in plain sight, which fact, as they are hard pullers and lightning-like in their movements, adds greatly to the fascinating sport.

As they are now biting freely, the daily capture amounts to about one hundred and fifty fish. Although at times hundreds may be seen at once, not one will touch the bait. The very next instant, perhaps, or if moved by a common impulse, they will dart after it, almost en masse, like a school of perch.

To watch their strange gymnastics during their wanton moods produces an excitement as agreeable in itself as it is impossible to describe.

The fish all find a ready market at fifteen to twenty cents per pound.

Only yesterday afternoon I purchased five, weighing together six pounds, from a young man who had twenty-four in his basket, all of them taken within a few hours previous.

In reply to the question, "Did you see many more than you caught?" he said promptly, "About a million." To save my reputation, as well as that of FOREST AND STREAM, I have, on careful reflection, decided to make a deduction of one hundred and ten, which would leave the number that he actually saw nine hundred and ninety-nine thousand eight hundred and ninety! This is the exact truth—but let it not be forgotten that even "truth lies in the bottom of the well!" ELIHU PHINNEY.

ANTE BELLUM OYSTERS.—In a book entitled "Our Twin Cities," published at Norfolk, Va., we find the following characteristic reminder of the superior size of Lynnhaven oysters in the "good ole times befo' de wah." A visitor has been commenting upon the excellence of some oysters placed before him by a sable cook in a Norfolk restaurant, and to him the cook replies: "But, Mas' Boss, you had orter seen them Lynnhavens befo' de wah. I use ter cook fer Mas' Bray Walters—him dat died in de great pestilence. 'Jerry,' he said to me one day, Mas' Bray did, 'dere's a Baltimo' man done bet me a basket ob champagne he could eat a dozen Lynnhavens fer lunch any day. Now, I want you to fix him. Then he whispered in my ear, Mas' Bray did. So I sent him up a nice dish fried in crumbs, and by'm bye Mas' Bray called me up in de dining-room, and dere sot de Baltimo' gentleman stalled at eleven, and one piece still left, and acknowledging de corn. Mas' Bray said, 'Jerry, tell the gentleman what he has eaten; he says he has only eaten eleven oysters, and is ready to pay the bet.' 'Mas' Boss,' says I, 'you ain't eaten no oysters!' He jumped up with a big 'dam!' and say, 'You black rascal, what in the botheration you been feeding me on?' 'Sot down, Mas' Boss,' I said, 'sot down. Nothing gwine ter hurt ye. You only done eat eleven pieces ob one ob dem big Lynnhavens.'"

POTOMAC RIVER FISHES.—Yellow perch are moderately common in the Potomac, but there is a scarcity of eels and catfish. The Evening Star reports the capture of more than thirty barrels of white perch near Lower Cedar Point under peculiar circumstances. The fish appeared to have come to the surface to bask in the sun and were chilled and blown ashore by a sudden change of wind to a gale with low temperature. Schools of white perch are benumbed in this way not infrequently, but in regions further to the southward, as, for example, in the Gulf of Mexico and the West Indies, the baleful influence of cold winds is a common and fruitful cause of mortality among fishes.

PROTECTOR HAWN.—Syracuse, N. Y., Jan. 14.—Editor Forest and Stream: The Anglers' Association of Syracuse have had three victories in one day. One, the appointment of Harrison Hawn as State Game Protector; and the others convictions of two of the worst illegal fishermen on Oneida Lake who run from ten to eighteen trap nets; they were fined \$100 each. We have another important case this week which is a test case and every means will be taken to defeat us. The members are wild with joy to-day. Should not think Mr. Blackford would appoint such a man as Mr. Hawn if Mr. Collins's words were correct. The Commissioners know what they are doing; they mean protection. You will see clearer waters than ever in Central New York. The fact is, a certain few have not wanted to give the Association credit for what they have done. We claim we have accomplished more than any other association for the short time we have been engaged in this work. Three cheers for the Commissioners, also for Pres. Blackford and J. Warren Pond.—ONONDAGA ANGLERS' ASSOCIATION.

PENNSYLVANIA NOTES.—Sullivan County, Pa.—Only a few deer have been taken during this winter. They are like the shadows of the past, here to-day, gone to-morrow. I celebrated my 66th birthday in that region trout fishing. Three of us caught about 200 small ones and they gave us rare enjoyment notwithstanding their small size. I have not yet been able to satisfy myself as to whether the wall-eyed pike and our yellow bass are identical. The resemblance between them is very great. Mr. T. F. Brown caught a yellow bass, which measured 31 in. in length and weighed 13 lbs., at Browntown, in October last. I did not have time to fish for black bass, but went out twice with a spoon hook for pickerel, I caught 13, and one of them was 24 in. long. He gave me exquisite pleasure in landing him. Altogether the spoon fishing is exhilarating, for success depends upon vigilance and activity.—GEO. W. LUNG.

WASHINGTON ANGLING ASSOCIATION.—At a recent meeting of this association the election of officers for the ensuing year resulted in the choice of Dr. Smith Townsend as president; W. K. Mendenhall, vice-president; Theo. Friebus, secretary; W. P. Pearson, treasurer, and Samuel Einstein as manager. Steps were inaugurated for stocking the Potomac River below the Great Falls with small-mouth black bass. Resolutions were adopted expressing regret at the untimely death of Surgeon-General Baxter, one of the best known and beloved among Washington anglers.—T. (Washington, D. C.).

QUEBEC FISH AND GAME PROTECTION CLUB.

MONTREAL, Jan. 13.—The annual meeting of the Fish and Game Protection Club was held in the club's rooms on St. Francis Xavier street on Saturday afternoon last. The president, Mr. George W. Stephens, occupied the chair. The following report was read by the secretary, Mr. A. N. Shewan, and the important recommendations therein contained were unanimously indorsed by the meeting:

Four committees have much pleasure in presenting the annual report of the club for the year 1890, which is the thirty-second year of its existence. In many ways it has been a memorable year in the life of the club, and it is necessary for those who have an interest in the preservation of game and game fish to rally to its support, for although we have good laws they are scarcely enforced, at least in this Province, except through the action taken by the Government. The unfortunate failure of some of the Fish and Game Club caused a very large number of the members of that club to withdraw their names from the F. and G. P. C., forgetting that the two clubs, though very similar in name, had totally distinct objects in view; that of this club being exclusively the carrying out of the laws for the protection of fish and game and the watching of new legislation affecting these subjects, while the Fish and Game Club is an organization, having for its chief object the drawing together in a social way of the genuine sportsmen of this province, and its only connection with this club is that every member of the Fish and Game Club must be a member of the Fish and Game Protection Club. It would certainly be a pity to see the Fish and Game Club stop, but we are happy to say there is little fear of this, as thanks to the energy of some of its members, there is every reason to believe the Fish and Game Club will soon be in a better position than ever before, and be, as it has been for years, the chief support of this club.

Notwithstanding what has been said about the loss of membership, this has been, perhaps, the busiest year the club has had since its foundation in 1858. Under its auspices four or five actions have been taken in the Police Court for infractions of the fish and game laws, and it has failed to get a verdict in its favor in but two. We think this the largest number in one year since the organization of the club. As these actions have not all been taken in the district of Montreal, courts have been held for the trial of cases at L'Assomption, Chateauguay and Beauharnois. The club has had to take Judge Desnoyers to these places, entailing a large amount of extra expense. Could the local justices of the peace be trusted, it would not be an expensive matter to have those tried in the district where they occur. Of cases tried outside the city six were at Chateauguay for unlawful netting, in five of which a verdict was had for the club; in the three tried at L'Assomption the club was successful in 1888, but there were four cases at Beauharnois for unlawful duck out of season, and three convictions were had, sentence in one case being suspended. The success that has attended the club in these cases is due in a large measure to the efforts of Mr. W. S. Walker, who has acted as attorney for the club during the past year. All these precautions have entailed a considerably increased expenditure, and the smaller membership of the club has caused the funds to be at a lower ebb than they have been for a good many years. It is to be hoped that the members who take an interest in our fish and game will endeavor during the next year to see that the membership is largely increased, so that our successors may not be hampered for the sinews of war.

While our committee has been doing its best to prevent actual infringement of the law, it has also tried to stop what it considered bad legislation. At the annual meeting last year attention was drawn to the fact that a bill was before the Quebec Legislature lengthening the open season for duck shooting during the spring to the 1st of May. As the club had, after years of effort, got the close season for duck changed to the 15th of April—a small concession, and certainly not enough in the opinion of any one conversant with the subject, to save the breeding ducks, it was determined to oppose the bill, and for the purpose a deputation was named to go to Quebec, but the bill was rushed through so quickly that it became law before they got away. However, petitions against the proposed change were forwarded to Mr. John S. Hall, M.L.A., who acknowledged their receipt on Jan. 30, but as they came too late he could only present them when the bill was on record. Another step in backward legislation was tried in the session of the Quebec Parliament just closed, when a member introduced a bill allowing the hounding of deer at certain seasons of the year. The bill, however, was defeated in consequence of the opposition of Messrs. Mercier, Boyer, Taitton, McShane and others. The thanks of the club are due to these gentlemen in the matter.

On March 13 a general meeting of the club was called to see if any steps could be taken to put a stop to the unlawful slaughter of ducks on Lake St. Francis—chiefly by Americans. Several plans were suggested and the secretary wrote to Hon. Mr. Hardy, Commissioner of Crown Lands of Ontario, stating the facts. In acknowledging the receipt of this letter Mr. Hardy stated that the Government was looking into this matter, and through the newspapers we see that the Ontario Government has appointed a Game Commission and that the Lake St. Francis matter has been before them. It is to be hoped that the incoming committee will be able to come to such an understanding with the Ontario Government so that all parts of Lake St. Francis can be effectively guarded from poachers and pot-hunters. It is the custom of these gentlemen to shoot without license in the part of Lake St. Francis which is in Quebec, and when they see any danger of arrest betake themselves to the Ontario part of the lake and laugh at our game wardens. On June 14 Messrs. Atwater, Boul-

bee and the secretary went to Ottawa and had a long interview with the Hon. Mr. Tupper, minister of fisheries, and his deputy, Lieut.-Col. Tilton. As a result of this interview the committee were desired to submit to the Government in writing what the club wished. On July 7, by authority of the committee, a letter signed by the president, vice-president and secretary was forwarded to Col. Tilton and is still under consideration of the Government. To the principal points in this letter special attention is called. They are as follows:

1. That Chatagnay, de Lisle, and Beaudette rivers have fishways put in, and that the sawdust act be strictly enforced in these rivers.

2. That the number of licensed nets on these rivers be reduced at least one-half, and that no netting licenses be issued within ten miles of Montreal, this limit being reserved for rod and line fishing.

3. That Missisquoi Bay be closed to net fishing for five years from May 1, 1891.

4. That the mesh or net used be not less than 2 in. on the square when wet.

5. The club desire to ask the appointment of Alfred Marsoin as fish warden, to act in concert with John Morris, of St. Lambert, over the whole district mentioned above, and that local wardens be abolished in these localities.

6. That the close seasons for lake (gray) trout and brook trout commence at the same time, Oct. 1, and end at the same time, May 1, except that after Ash Wednesday people in the country be allowed to catch fish for their own use.

7. That the close season for bass, maskinonge and doré end the same time, June 15.

With regard to section 2, a great many think that we ought to try and get all netting abolished from the Cascades to Bout de l'île, in the St. Lawrence, and on all waters washing Montreal Island and Isle Jésus. Were these concessions granted, there is little doubt but in a few years there would be good fishing with rod and line for thousands in Montreal who have only a day or half a day at a time for an outing.

At a meeting of your committee on the 6th June, it was moved by Mr. Boyer, and seconded by Mr. Atwater, that application be made to the Quebec Government for an appropriation to assist the club with its work. For various reasons this application has not yet been presented, but your committee think that, considering the work the club is doing, and what it has done in the past, it is far more entitled to recognition from the Government than many clubs which receive assistance from the Government in this city. A writer in the daily press a short time ago suggested the propriety of our provincial Government issuing gun licenses—persons not belonging to the province already have to pay, or are supposed to pay, for leave to shoot in the province—but though the idea of issuing licenses for the right to shoot was a very good one, the writer's idea of statistics must have been very vague, when he fancied that a revenue of \$300,000 could be got thus. If he had said that a revenue of \$30,000 could be obtained he would be within the mark and the Government would not only be able to pay competitors and reliable men to look after and preserve our game and game fish, but leave a surplus for the Government, and license to shoot need not cost more than \$2 or \$3 per annum.

A statement of the financial position of the club will be submitted to you by the treasurer, and when the amount of work done during the past year is taken into account we think we are justified in saying that the work has been done with due economy. For the reasons stated at the beginning of their report the membership is smaller than it has been for several years, and it is to be hoped that the members will make an endeavor to add to their number. In this connection the thanks of the club are due to Mr. Boulter, who has been indefatigable in obtaining new members.

The following officers were elected for the ensuing year: President, George Boulter; Vice-President, T. C. Brainerd; Secretary, A. N. Sheehan; Treasurer, H. A. Becket; Committee: I. H. Stearns, L. A. Boyer, George Horne, A. A. Wilson, W. H. Parker, T. V. R. Brown, H. W. Atwater, H. R. Ives, A. Boyer, M. L. A. T. Ham, G. W. Stephens, A. Dawes, E. L. Clarke, E. A. Cowley, Dr. Finnie.

Fishculture.

REARING TROUT FOR MARKET.

Editor Forest and Stream:

I have read in your issue of Jan. 1 an article by Mr. Milton P. Peirce on "Failure of Trout Culture," in which he kindly asks you to name a solitary person who has made a success in raising trout for the market.

If Mr. Peirce will take the trouble to visit the Clear Water Trout Ponds, at Carolina, R. I., owned by Messrs. J. W. Hoxie & Co., or the Old Colony Trout Ponds, located here, I think he will at once be convinced that trout raising is a success. Messrs. Hoxie & Co. have for the past five years marketed 10,000 lbs. of trout a year, besides what they have sold to sportsmen, and they will have that amount to sell next year, and all from artificial hatching.

Pardon me if I state what I am doing at the Old Colony Trout Ponds. I have in two of my ponds some 15,000 trout which will be two years old next March. These trout will average $\frac{1}{2}$ lb. each next April, and therefore weigh not far from 7,500 pounds. I propose putting nearly all of them on the market next spring, keeping only enough over to breed from next fall. I have also, in addition to the above, some 5,000 lbs. of one-year and three-year-old trout, from which I have taken 3,000,000 eggs during the past season. I have also, in addition to the above, some 50,000 trout fry of last season's hatching; many of them are now five inches long. I shall stock my ponds anew with these fry (or yearlings) they will be in the spring) as soon as I dispose of the older fish, and these the following year will average $\frac{1}{2}$ lb. each.

To give an idea of the amount of food such a stock of trout will eat, I will state that I am now feeding 300 lbs. of meat daily to them.

I am aware that there have been many failures in trout raising, and probably very few have made it a success, but it is either from the want of proper facilities or because they failed to give it the care and attention that is necessary to success.

W. L. GILBERT.

PLYMOUTH, Mass.

MICHIGAN FISHCULTURE.

WE have received from the Fish Commissioners of Michigan a copy of their ninth biennial report for the period extending from Dec. 1, 1888, to Oct. 1, 1890. This is unquestionably one of the most valuable of the excellent series of reports published by this Commission. It comprises 216 octavo pages and 23 plates. The half-tone illustrations of fishcultural stations and operations are among the very best that we have seen, and the plates accompanying Prof. Reighard's memoir on the development of the wall-eyed pike have been very satisfactorily reproduced by one of the relief processes.

We are unable for want of time to give more than a passing glance at the contents of this valuable document, reserving its detailed examination for another occasion. The report contains statistics of the fisheries, accounts of new work accomplished and of the routine work of the fishcultural stations, details of the scientific work involved in the examination of the waters, notes on the habits of important food species, data concerning the complete success in stocking streams in which trout were not native, record of the planting of the species propagated and a list of hundreds of streams which have been stocked with brook trout since 1885 and were thrown open for fishing May 1, 1890.

The principal article in the appendix is the one already referred to by Prof. Jacob Reighard on the development of the wall-eyed pike, but we must defer the consideration of this and many other important items until a future time.

SUCCESS OF FISHCULTURE.—The following estimate of the value of fishculture and the protection of fish and game is from the inaugural address of Gov. Tuttle, of New Hampshire: "The artificial propagation and free distribution of food and game fishes is an undertaking of economic importance to the State. It is no longer an experiment, for

it has been fully demonstrated that it is a proper and profitable work for the State to engage in, and should receive the encouragement it deserves. The excellent trout, black bass and landlocked salmon fishing which our 300 or 400 square miles of lakes and streams afford attracts many visitors to our State, and prolongs their stay. The total number of young fish distributed the past year is 1,761,000. The great increase of deer in the northern part of the State is the result of their protection, and of a better observance of the law. It is claimed, and is probably true, that there are more deer than sheep in Coos county. Towns should select men who will faithfully execute the laws protecting fish and game during their breeding season. I recommend legislative encouragement of the work of this Commission."

REARING TROUT AND CARP TOGETHER.—Mr. Philo Ogden, of Durango, Col., has discovered that he can rear carp and trout together without detriment to either. During the large portion of the year the trout feed chiefly upon insects, many of which are very destructive to young carp, and in the winter when there is a scarcity of insects the carp settle down into the mud and the trout satisfy their appetites with snails and minnows which do not hibernates. Both trout and carp are doing well for Mr. Ogden.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1688.

Jan. 20 to 25.—Dog Show of the Georgia Poultry and Pet Stock Association, at Augusta, Ga. A. H. Vanderleith, Secretary.

Jan. 21 to 26.—Dog Show of the Elmira Poultry and Pet Stock Association, at Elmira, N. Y. Carl Hart, Secretary.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Club, at Greenville, S. C. F. E. Capers, Secretary.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, Secretary.

March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Little, Secretary.

March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

CHARLESTON DOG SHOW.

THIS interesting little show was held in connection with the South Carolina Poultry and Pet Stock Association. Though advertised to commence Jan. 13, it was not till the next day at 3 P. M. that everything was in ship shape for judging. Owing to the great distance from Northern kennels and the season of the year, the entry list was, as might be expected, not a very large one. At the same time the class of dogs present was far ahead of anything yet seen so far South, and must have been gratifying to the promoters of the affair. In a sense, the dog show was a sort of side show to the great gathering of poultry and chicken raisers, who literally swarmed from all parts of the country, but we fancy that, judging from the attendance, the dogs proved even a greater attraction than the roosters to the people of Charleston. A continual stream of visitors passed through the aisles nearly all the time the show was open, and no doubt the venture proved a success financially. The 160 exhibits were benched by Spratts Co., in their usual efficient manner, and the feeding was properly and carefully attended to. The hall was tastefully decorated, and this combined with the neat benching made a very pleasing effect. The disinfecting was efficient, for at no time though the weather was warm and very humid, was there the slightest smell. With more experience in such matters, several little items which require attention to constitute a perfect show will, no doubt, be properly attended to in future.

The dogs were benched without regard to their proper numbers and in few cases did the bench number correspond with the tag on the dogs; and another time it would be better to put the prize labels up as soon after the judging as possible, as it is hardly fair to the visitors of a show to expect them to pay their money and then be no wiser when they came out, as to which is the winner, than when they entered the building. Mr. McInness, who looked after the dog show more particularly, was courteous and obliging to a degree, and I trust these few hints will be accepted in the same spirit in which they are given. Like many other undertakings the proper running of a dog show cannot be learnt in a day. Many well known dogs were present, but I would have been better pleased had more local ones been entered. Here is a good field for the dispersion of surplus stock from Northern kennels, collies and St. Bernards in particular. With Mr. Diffenderfer's nice team of St. Bernards this breed did not lack in quality and the Oriole Kennels made a good show with their fox-terriers, nearly a dozen of which were entered. Pointers and the setter classes, especially Irish, were well filled and, of course, with the Philadelphia contingent, well represented. Some good dogs put in an appearance in the terrier and pug classes. Spaniels were also a display of good quality. Dr. H. Clay Glover judged the pointers and setters and H. W. Lacy the rest of the classes. In none of the classes was the competition very keen, so their duties were comparatively easy.

No mastiffs were entered, and here I may remark that the club made a mistake in giving the bulk of the prize money to the challenge classes, for I am certain had they left out the challenge classes and devoted the "kudos" to the open division, a larger number of entries would have resulted, though where they could have put them would be difficult to say, as the hall was just comfortably filled as it was. With these few remarks I will proceed to a review of the awards.

ST. BERNARDS.

were the first to enter the ring. The struggle lay between Warwick, Jr., and Lord Baltimore, as Bawn of Kendal's lack of condition, want of markings and faulty hind-legs put him out of the hunt, though given vhc. Warwick, Jr.'s, better head, color and limbs sufficed to put him ahead of the giant Lord Baltimore, who, though he has improved since Baltimore, is too long in face, light in color and straight behind to make him very formidable. In the bitch class two nice ones from the Maryland Kennel secured the money. Pleiad, recently imported, made her first appearance in this country, and though she is not a crack, still she has many

good points, principally in head, bone and depth of body. She beats Blodwen considerably in bone, though one foot turns out rather badly, still her nice markings and typical head just put her ahead of her kennel mate. The other entry was too poor to notice. In the puppy class a fair little bitch in Roulette, a bit long in head but nicely marked, took the prize and was afterward sold to Mr. E. Penge, the owner of Bawn of Kendal.

In smooths the only entry was the well known and typical little dog, Lord Hector, a sort of pocket edition of his handsome sire. This win will now put him in the challenge class.

ROUGH COATED.—Challenge—Dogs: 1st, J. W. Kemble's Warwick, Jr.; 2d, W. Stewart Diffenderfer's Lord Baltimore. Very high com.; E. Penge's Bawn of Kendal. Bitches: 1st, W. Stewart Diffenderfer's Pleiad; 2d, W. Stewart Diffenderfer's Blodwen. Puppies: 1st, W. Stewart Diffenderfer's Roulette. —SMOOTH COATED—Dogs: 1st, W. Stewart Diffenderfer's Lord Hector.

NEWFOUNDLANDS.

Only two appeared in this class, and being good big black dogs, the one with the thickest head got the prize. Newfoundlanders need attention in Charleston as well as elsewhere. The prizes should really have been withheld, as their coats were too curly.

Dogs and bitches: 1st, James O'Cameron's Rover; 2d, John Amengual's Carlo.

DEERHOUNDS.

Only one entry, and this a well-known winner—B. S. Dering's Nora, described in our Toronto report. She was nicely shown.

Dogs and bitches: 1st, B. S. Dering's Nora.

DALMATIANS.

I was surprised to meet two fairish specimens of this neglected but handsome breed. The dog, Jeff, was by far the best, both in head, legs, feet and spots, though both are splashed too thickly on shoulders and loin.

Dogs and bitches: 1st and 2d, Dr. T. W. Tuggle's Jeff and Bell.

GREYHOUNDS.

Two very fair dogs turned up in Balkis II. and Monarch. The former, a son of Mother Dendike, has the faulty back ribs and feet of his dam, but beats the other dog in head and legs. In bitches a better than either was also shown by Mr. Whiton in Spinaway, who looks like going a bit. She is by Lord Neverstille out of Partera. She completely smothered her opponent Fanny, whose Italian greyhoundy look and poor condition ought really to have put her out of the money altogether.

Open—Dogs: 1st, Woodhaven Kennels' (L. C. Whitten & Co.) Balkis II.; 2d, Dr. John May, Jr.'s Monarch. Bitches: 1st, Woodhaven Kennels' Spinaway; 2d, Woodbury Kennels' Fanny. Best in the show, Spinaway.

POINTERS.

In the heavy weight class for dogs a rather heavy and coarse dog, Alto, won, over Bruno, beating the latter in head, legs and ribs. In the corresponding bitch class Jess had things to herself; she is faulty in head and front. In the light weight dogs Pommy Sec had a somewhat easy win over Boss of Hall's Island, which latter I think just about takes the Spratts in nomenclature, he loses to the winner in ribs, head and legs. Two very nice bitches turned up in the next class, and it was a rather even match, though eventually Lady Graphic's better barrel, shorter back and more showy action, just beat the sweet-headed Rosa May, who has one of the nicest heads I have seen for some time; she is a daughter of the well-known Fritz, and has won several prizes in the South. Daisy, vhc., is straight in stiles, wild eyed, and a bit out in front. Rob Roy, the puppy, was a poor one.

Dogs: 55 lbs. and over—1st, H. B. Briton's Alto; 2d, R. Graham's Bruno. Bitches: 1st, J. W. Kemble's Jess. Under 55 lbs.—Dogs: 1st, N. H. Hyland's Pommy Sec; 2d, T. S. Inglesby's Boss of Hall's Island. High com., W. W. Power's Toby. Bitches: W. H. Hyland's Lady Graphic; 2d, J. P. Cartwright's Rosa May. Very high com., W. St. J. Jervy's Daisy. Best pointer, Pommy Sec.

ENGLISH SETTERS.

A good looking son of Roi d'Or was returned the winner in the dog class, and barring a trifling lightness in muzzle, little fault can be found with him, as he looks a workman all over and fit for any company. Carlton Pero, second, is too coarse and heavy in head, though good in legs and feet. Dashing Kent, vhc., is too straight-faced and wide in front. In bitches Tick, the winner, is a nicely made one, though small, also a bit light in muzzle, beats Molly in pasterns and form generally. Rosa Brown, hc., beats the c. card Lotie, in head and body, the latter being too coarse and heavy throughout. Tick was the only entry in puppies.

No challenge entries. Open—Dogs: 1st, J. P. Dessausure's Sam Slick; 2d, J. W. Kimble's Carlton Pero. Very high com., J. W. Kimble's Dashing Kent. Bitches: 1st, H. A. Bridge's Tick; Woodbury Kennels' Molly; B. McInness's Rosa Brown. Com., A. B. Connor's Lotie. Puppies: 1st, H. A. Bridge's Tick. Best English setter, Sam Slick.

IRISH SETTERS.

In challenge bitches two good ones faced the judge, both stars in fact—Molly Bawn and Ruby Glenmore. It was a tight go between them. Ruby did not show herself well, but the only advantage she has is in color. Molly just beating her in character of head and front, Ruby being somewhat weak in pasterns, and also is not so good in hocks as the winner. Molly looked quite gay for her years; in fact much better than she has for some time. Eight showed up in the dog class, but outside of the winners there was little merit. Kildare, well known, would have been an easy winner but for his condition, for his typical head is all that pulled him in a winner; he really ought not to have been shown so poor in coat and flesh. Merlin loses in shoulders, head and neck, though good in body and bone. Eleo, reserve, is a taking little dog, though lacking a trifle in type, but is of good color. Jack Heywood, vhc., loses in head, too. Jerry C. is coarse and light in color. In bitches Jeanette, an old friend, was placed rightly over Leda Glencho, also well known, in her present shape, the latter appearing with her bag all down as if in whelp, not looking by any means the clean-cut animal that won at Baltimore last spring. Winnie II. is well known, and Madge, vhc., has a fair head only, but nice body and front. Lulu, though entered, was absent. Rosa, c., is off color and small.

Challenge—Bitches: 1st, Woodbury Kennels' Molly Bawn. Reserve, W. L. Washington's Ruby Glenmore. Open—Dogs: 1st, W. L. Washington's Kildare; 2d, B. H. Price's Merlin. Very high com., reserve, Seminole Kennels' Eleo. Very high com., N. P. Colson's Jack Heyward; C. H. Hemme's Jerry. Bitches: 1st, Oriole Kennels' Jeanette; 2d, W. W. Kendal's Leda Glencho. Reserve, N. L. Washington's Winnie II. Very high com., J. W. Kemble's Madge; Com., Sunset Kennels' Rosie.

GORDON SETTERS.

Challenge bitches saw the well-known Roxie, in fair bloom, the winner in the absence of Rose. In open dogs Duke of Kent is just fair, a bit heavy in head, good legs and feet. The other entry had no part of the necessary 62½ per cent. In bitches Viola, light in eye, fair head, might be better in tan, was alone.

Challenge Class—Bitches: 1st, H. F. Smith's Roxie. Open—Dogs: 1st, J. S. Gans's Duke of Kent; 2d, withheld. Open—Bitches: 1st, Jos. F. Gans's Viola.

SPANIELS.

In the dog class there was only one with much pretensions

to type. Black Diamond, looking in good shape, easily defeated Tuck, who is too curly coated and far too long in the legs. In challenge cocker bitches that nice little cocker Novel was alone, she was nicely shown. Black Duke only just succeeded in getting in front of Banjo, who is a little too cobby at present. Duke just beats him in bone and is cleaner in neck and shoulders, where the other is too short and heavy. Banjo is shorter backed but not so straight in coat. Idea had an easy win in bitches, she has filled out nicely since Ottawa. Bessie W., though not in good flesh, beat Hasel Obo in coat, which is too curly. In any other color Red Doc, well known, was alone, and so was Beauty, who is too much out in front.

FIELD SPANIELS—Dogs: 1st, B. F. Lewis's Black Diamond; 2d, L. L. Martin's Tuck. Challenge Cocker—Bitches: 1st, George H. Bush's Novel. Open—Dogs: 1st, B. F. Lewis's (agent) Black Duke; 2d, W. Barnes's Banjo. Bitches: 1st and 2d, Geo. H. Bush's Idea and Bessie W. Very high com., W. Barnes's Hasel Obo. Any other Color—Dogs: 1st, W. Barnes's Red Doc. Bitches: 1st, Woodbury Kennels' Beauty.

COLLIES.

Bonnie Brae was alone in the challenge class for bitches, she was hardly in her usual bloom. Roslyn Dandy far outclassed the others in the dog class. Dr. May's dog is too thick in head, but is in nice coat. The others were the usual out of town type. In bitches Mischief's nice body and coat won the prize, though her head is too short and thick; Beatrice is better in this respect, though far from correct. The others, though nice in coat, were very faulty in head, eyes and limbs. Beatrice won the puppy prize without competition.

Challenge—Bitches: 1st, W. D. Hayes's Bonnie Brae. Open—Dogs: 1st, Seminole Kennels' Roslyn Dandy; 2d, Dr. John May, Jr.'s—. Com., Chas. Inglesby's Rex Maximus and Kirby S. Tupper's Charleston Scott. Bitches: 1st, Seminole Kennels' Mischief; 2d, Dr. John May's Beatrice. Com., A. P. Hazard's Rowena and Albert Berthling's Coomassie. Puppies—1st, Dr. John May's Beatrice.

POODLES.

Dr. S. G. Dixon's black dog Paris won the only entry, and were he clipped would be just a fair one.

PUGS.

Bob Ivy, in challenge dogs, was alone, and looked as well as I ever saw him; he improves with age. Vesta also had matters to herself in the corresponding class. Bradford Rowdy just managed to secure the blue ribbon, being in better condition than Kash, Jr., who excels him slightly in head and body. In bitches Nellie Bly, a little above herself in flesh, somewhat easily beat the long-muzzled Daisy K., and Nelly got all she deserved with her. She is faulty in head and body. In puppies, Kash, Jr., despite his condition, won easily over Nellie.

Challenge—Dogs: 1st, Dr. M. H. Cryer's Bob Ivy. Bitches: 1st, Dr. M. H. Cryer's Vesta. Open—Dogs: 1st, Woodbury Kennels' Bradford Rowdy; 2d, Seminole Kennels' Kash, Jr. Bitches: 1st, Roger S. Harrison's Nellie Bly; 2d, Woodbury Kennels' Daisy K. High com., Frank R. Street's Nellie. Puppies—1st, Seminole Kennel's Kash, Jr.; 2d, C. A. Montague's Nellie.

BULL-TERRIERS.

In dogs Woodbury Kennels' White Stubbs was alone; he was looking well. Meg Merrilies also won in her class without competition, though a wash would have done her good; she was otherwise in fine shape, and Stubbs was almost fit for a battle.

BASSETS.

Associated Fanciers' Mauprat was alone and looked truly disgusted when the secretary asked "What in heaven's name is that thing?"

DACHSHUNDE.

B. F. Lewis's now well known Gill was alone and won; she was looking sleek and well.

BEAGLES.

Little Duke, shown fat, but as lively as ever, had the challenge class to himself. Count, in open dogs, is too long and straight-faced and a bit on the large size. Prince Fay was absent. Quite a nice little bitch in Flossy turned up in the next class and was far ahead of Countess Fay in head and body. Spider, he, is a bit large and coarse. Baby, though a rather nicely made one, is a bit pig-jawed. Snow was over size—15½ in.

Challenge—Dogs: 1st, H. Bennett's Little Duke. Open—Dogs: 1st, Sunset Kennels' Count. Bitches: 1st, Sunset Kennels' Flossy; 2d, Associated Fanciers' Countess Fay. High com., H. J. Bennett's Spider. Com., Sunset Kennels' Baby. Puppies: 1st withheld; 2d, Sunset Kennels' Baby.

FOX-TERRIERS.

Challenge dogs had the old-time Blemton Volunteer for the winner, looking well, and in the corresponding class Blemton Brilliant, getting a bit wide and thick, was also alone. Suffolk Risk's good front and long punishing head put him ahead of Oriole Trap, though the former looked a trifle leggy alongside him. Boots is a fairish one, nice head but a little long cast in body; feet are also faulty. Blemton Ransack is far too thick in head, otherwise a nice cobby, good-legged little fellow. In bitches, Verdict beats Marjoram in legs, feet and bone. Vice, though too small, beat Nelly in coat and back. Hillside Diana loses in skull, too thick, and also in legs and feet. Hillside Marchioness is almost blind in one eye from an ulcer, but has nice body, legs and feet, and would have been placed higher but for the eye. Two fair little puppies were shown, and Marchioness had again to fall back for the above reason.

Challenge—Dogs: 1st, Oriole Kennels' Blemton Volunteer. Bitches: 1st, Oriole Kennels' Blemton Brilliant. Open—Dogs: 1st, C. L. Wilton's Suffolk Risk; 2d, Oriole Kennels' Oriole Nap. Reserve, E. P. Jervey's Boots. Very high com., Oriole Kennels' Blemton Ransack. Bitches: 1st, Oriole Kennels' Verdict; 2d, Oriole Kennels' Blemton Marjoram. Very high com., Oriole Kennels' Vice. High com., C. D. McCoy's Nelly. Com., A. E. Shaw's Hillside Diana. Puppies: 1st and 2d, Oriole Kennels' Oriole Rage and Oriole Dixie. High com., A. E. Shaw's Hillside Marchioness. Though several wire hairs were entered and shipped, they did not arrive at the show.

IRISH TERRIERS.

The old stager, Lewis & Jarrett's Burnside, had it all to himself; he was in full feather.

SCOTCH TERRIERS.

Sunset Kennels' Fanny Fern, an old winner, was alone in the challenge class. In bitches, Sunset Kennels' Brawnie, rather a nice one, was the only entry and was given the prize. She is a bit short-faced, but good in coat, bone and body.

BLACK AND TAN TERRIERS.

Rochelle Kennels had no competition against their The Senator in dog class. It is not too much to say he was in much better shape as regards flesh, but his coat will need special attention for New York. In bitches English Lady is a nice stamp of bitch, not so good in markings as the dog, but better in ears and condition. Fancy lacks pencilings and thumb marks and her tan is washy.

Open—Dogs: 1st, Rochelle Kennels' The Senator. Bitches: 1st, Rochelle Kennels' English Lady; 2d, Miss Clara Ritter's Fancy.

SKY TERRIERS.

Clifford A. Shinn's well-known Sir Stafford had the challenge class to himself and was shown in very nice shape. In open dogs the well-known Lovett scored alone, and in bitches

Lady Countess, light in color, but in better coat than I have seen her before, had no competition. Afterward Sir Stafford and Lovett came together for a special. The former won, beating the latter in head, ears, length of body and bone.

Challenge—Dogs and Bitches: 1st, Clifford A. Shinn's Sir Stafford. Open—Dogs: 1st, Woodbury Kennels' Lovett. Bitches—1st, M. H. York's Lady Countess.

ITALIAN GREYHOUNDS.

A. P. Hazard showed two fair ones; the winner, Fedora, is too full in the skull, but has better legs and feet and depth of chest than the pup Dan.

MISCELLANEOUS CLASS.

Only a fair little toy-terrier showed up in this class, and if the hair can be kept on it would do to show elsewhere.

SPECIALS.

Best kennel St. Bernards, Maryland Kennels: fox-terriers, Oriole Kennels; spaniels, Geo. H. Bush; beagles, Sunset Kennels; best St. Bernard, Pleiad; best fox-terrier, Suffolk Risk; best black and tan terrier, The Senator; best Skye terrier, Sir Stafford; best Newfoundland, Rover; best sporting dog, J. P. De Saussure's Sam Slick; best non-sporting dog, Sir Stafford; best English setter, Sam Slick; best Irish setter, Kildare; best kennel in the show, Geo. H. Bush's spaniels. H. W. L.

SOUTHERN SPORTSMEN'S ASSOC'N TRIALS.

Monday, Jan. 13.

THE trials held at Lafayette, La., did not open favorably, as the weather was cloudy and windy. Toward noon it was warmer, getting cold again toward evening. Owing to recent heavy rains the grounds were unfavorable and very heavy for walking. Cover was very heavy, especially so in the bottoms, and rendered good work almost impossible. The birds are very wild, and consequently little satisfactory work can be done. The Members' Derby closed with six entries.

WUN LUNG AND THE GHOST.

F. F. Myles's English setter dog Wun Lung and Omer Villere's English setter dog The Ghost; the latter by Bob McCargo—Winnie D. They were put down in an open field and ran for half an hour, Wun Lung doing best work on birds, being staunch and using good judgment—one of the best puppies I have seen. The Ghost, on the contrary, was not up to his work, flushing and chasing several times. Wun Lung won easily.

ROMP AND JESSE JAMES.

Mr. J. K. Renaud's white pointer dog Romp with Mr. F. F. Myles's black, white and tan dog Jesse James, by Yazoo—Dimple, were cast off at 9:17 and ran until 10:02. Romp did most of the work on birds, two beys being found. He had better pace, range and judgment. During the heat he unfortunately cut himself in the foreleg on a wire fence, but stuck to it quite pluckily and eventually won. Jesse James was not under good control.

NELLIE BLY AND YUM YUM.

Mr. F. F. Myle's English setter bitch Nelly Bly, by Bruce—Enid, against C. A. Geison's Yum Yum, starting at 10:15 continued till 10:51, then ordered up till other ground was reached at 11:05, when they were sent off again. Soon after, birds were flushed by horsemen in an open cornfield. The dogs were worked to them, each scoring a point, though they ought to have scored more. Nelly had best speed and range, but her work on birds was not good. Nelly was declared the winner at 12:15 P. M.

Second Series.

WUN LUNG AND ROMP.

These two were sent away at 12:56 in an open field, Romp showed signs of the cut he had received, and, though game, he could not do his best. He found the two beys in the heat, doing best work on birds, working with rare judgment, but this did not overcome the better pace, range, style and single-point work of Wun Lung, who eventually won, with nothing to spare.

Nelly Bly ran a bye.

Third Series.

WUN LUNG AND NELLIE BLY.

Luncheon over, at 2:26 these two were put down for first money. Wun Lung pointed a sparrow. Then pointed staunchly near ditch—his actions denoted great excitement—and a possum was found. Mr. Miles amused himself and others by holding it up by the tail. Nelly then tried to locate birds but failed. In the same cottonfield Wun made a flush, he next stopped to wing and made a point, bird flushing directly afterward. He then roared a bird some distance and secured a good point. Nelly followed with a point, but nothing was found. Dogs ordered up at 3:12. Wun Lung won. He was better in style, pace and range, though there was little work done on birds by either dogs. This decided first money.

By request of those interested the club's officers consented that the other prizes should be awarded without further running. The judges then placed Romp second. Nelly Bly and The Ghost dividing third. Thus ended the Derby.

SUMMARY.

First Series.

F. F. Myles's Wun Lung beat Omer Villere's The Ghost. J. K. Renaud's Romp beat F. F. Myles's Jesse James. F. F. Myles's Nelly Bly beat C. A. Geison's Yum Yum.

Second Series.

Wun Lung beat Romp.

Nelly Bly a bye.

Third Series.

Wun Lung beat Nelly Bly and won first prize.

Romp, second.

Nelly Bly and The Ghost divided third.

THE ALL-AGED STAKE (MEMBERS').

The running of this stake began at once and dogs were drawn to run as follows:

Omer Villere's pointer Crocket against J. K. Renaud's pointer Romp.

A. Cardona's pointer dog Dan against R. B. Parker's setter dog Glen.

F. F. Myles's setter dog Bob McCargo against Omer Villere's setter bitch Queen Ella Noble.

R. W. Foster's setter dog Capt. Bethel against F. F. Myles's setter Ben Hur.

J. K. Renaud's pointer Lottery against F. F. Myles's setter bitch Nelly Bly.

Omer Villere's setter dog Lee against F. F. Myles's Winnie D.

F. F. Myles's Gordon setter dog Stubble against N. T. Harris's setter bitch Dimple.

As Mr. J. K. Renaud had to serve as judge, they were not run in the above order. He withdrew his entries of Romp and Lottery. The running followed as given in the following account.

First Series.

GLEN AND DAN.

Mr. R. B. Parker's English setter dog Glen and Mr. A. Cardona's liver and white pointer dog Dan were put down at 3:36. This was a long and unsatisfactory heat on bad grounds, with heavy cover, giving dogs hard work with little satisfaction to judges, as they could with difficulty see the work done. Good work was impossible. Glen was the

better in pace, range and style, doing best work on game. Dogs ordered up at 4:50. Glen won. A start for town was then made. But as a bevy was soon flushed, which settled in an open field quite near, the next brace was then called and was sent on. Messrs. Harris and Renaud were the judges.

BOB McCARGO AND QUEEN ELLA NOBLE.

F. F. Myles's English setter dog Bob McCargo and Omer Villere's English setter bitch Queen Ella Noble had a short run, but little work. The Queen found a point, was steady and retrieved. She had better speed, though Bob McCargo had better range.

BEN HUR AND CAPTAIN BETHEL.

R. W. Foster's English setter dog Captain Bethel, by Gordon—Blanch, against F. F. Myles's English setter dog Ben Hur, by Paul Gladstone—Lottie, were cast off at 9:10. Shortly after, birds flushed in a cornfield. The bevy settled in heavy cover. Sending the dogs in each secured a point. Captain working in open, made a point and Ben Hur was called up to back, but nothing was found, but the Captain had been held too long and bird had ample time to get away. Ben next pointed in corn, the Captain backed well but spoiled the good work by drawing in ahead. Nothing was found to the point. The dogs were then taken up and moved quite a distance and put down again after 43m. In corn a single bird flushed, Ben pointing a bevy; Mr. Myles shot and killed; Ben broke shot and made an indifferent retrieve. The heat then ended at 10:53 in favor of Ben Hur. This decision was rendered too quickly, as really not enough work had been done. Captain's good speed and range offset Ben Hur's limited work on birds. At this point Mr. Renaud withdrew both Nelly Bly and Lottery in order that he might judge.

LEE AND WINNIE D.

Omer Villere's English setter dog Lee against F. F. Myles's setter bitch Winnie D. were cast off at 11:07. Lee started off with a flush, then pointing some remaining birds, but in a short time he moved on and flushed. Winnie, going at good speed, dropped to a point, the birds soon after flushed wild. Moving on to cotton patch Lee pointed and Winnie backed; roading on Lee finally located birds in weeds by a ditch; flushing birds, Lee started to chase but stopped to order. Each made a flush, near hedge, on scattered birds. Lee followed with a point on some birds in hedge, and heat ended 11:20. Lee winning, having done the best work on birds. Winnie was better in pace and range.

CROCKET AND NELLIE BLY.

Omer Villere's Crocket against F. F. Myles's English setter bitch Nellie Bly (Bruce—Enid), were put down at 11:49. Mr. Foster acted as judge instead of Mr. Harris. The dogs were given a long heat in order to decide their merits. Finally, at 1:33, they were ordered up for want of merit, and were consequently out of the race.

DIMPLE AND STUBBLE.

N. T. Harris's English setter bitch Dimple against F. F. Myles's Gordon dog Stubble. At 2:12 this brace started off at a good speed, ranging wide. Dimple found first, pointing a bevy in a cotton field. She was steady to wing. Moving on she soon pointed another bevy, winning the heat at the end of thirty minutes. Dimple worked her ground well. Equal in speed and range. This brought the first series to a close.

Second Series.

GLEN AND QUEEN ELLA NOBLE.

Cast off at 3:15, the heat commenced in a cornfield. Glen soon flushed a bevy and was steady to wing. Glen pointed a single one of the scattered birds; it rose quickly afterward. He next pointed and a single bird got up behind him. Queen came around that way and pointed the remaining birds of bevy. Glen was entitled to the credit of the find, the birds flushed, a few at a time, beyond the briars. Queen afterward made an undecided point. Then each dog pointed false. The next work was in a cornfield, where Glen pointed and birds flushed. The birds were followed into heavy cover and flushed as one of the judges rode in. In the open Glen pointed twice and flushed once. The heat soon after ended, Glen winning. He was best in style, speed and range.

BEN HUR AND LEE.

This brace was cast off at 4:40, running 38 minutes. Neither ranged well. Lee did the best work on birds found, making three points. Ben nothing. Neither did good work. Lee won. Dimple having a bye in this series, ran it out.

Third Series.

GLEN AND DIMPLE.

They started in a cornfield, Dimple pointing a bevy. Glen coming up, scented, drew on and flushed, and was a little unsteady, stopping to order. The remaining birds then flushed wild; going to scattered birds Glen pointed and Dimple backed, then moved on. Glen started to chase when birds flushed, but stopped to order after going a few yards. Dimple next made a good point, Glen following with three points on singles. Dogs ordered up at 5:52. The heat and first prize was given to Glen, a bad decision. Dimple besides having the best range and speed and work generally of a high class, had credit of a find and point on a bevy and a good point on a single bird, while Glen's points were on single birds of the bevy Dimple had found, and his work was not of the quality of hers and should not have been placed over it. Dimple proved herself the best dog in the stake, and should have won first. Lee had a bye in this series.

Fourth Series.

GLEN AND LEE.

They started about 11:07; weather was quite warm. Lee first pointed in a cottonfield; nothing found. After going some distance Lee pointed again and Glen backed; he moved on, Glen roared, then drew on, pointed a bevy, and was steady to shot. Glen was better in speed, range and style. Dogs ordered up at 12:10, Glen winning.

Fifth Series.

LEE AND DIMPLE.

The deciding heat for second prize was not a long one, the point work being about equal, Dimple winning by her superior pace and range. Lee was then awarded third.

SUMMARY.

First Series.

Glen beat Dan.
Queen Ella Noble beat Bob McCargo.
Ben Hur beat Captain Bethel.
Lee beat Winnie D.
Nelly Bly and Crocket (ruled out).
Dimple beat Stubble.

Second Series.

Glen beat Queen Ella Noble.
Lee beat Ben Hur.
Dimple a bye.

Third Series.

Glen beat Dimple.
Lee a bye.

Fourth Series.

Glen beat Lee and won first prize.
Dimple beat Lee and won second prize.
Lee was awarded third prize.

Wednesday.

The day was very favorable for good work. A start was made about one mile to the east of the town. The judges were N. T. Harris, Omer Villere and Dr. Clegg.

ALL-AGE STAKE.

First Series.

PINK B. AND BRUNETTE.

J. A. McCargo's English setter dog Pink B., by Startle S.—Clio, handled by R. P. McCargo, and J. J. Manson's black pointer bitch Brunette, handled by J. E. Watson, were sent away at 9:21. Pink B. had an easy time of it, doing the best work on game. Speed, range and style was altogether in his favor, Brunette ranging poorly, dogs up at 11:08.

DAVE B. AND JENNIE MAY.

J. A. McCargo's dog Dave B., by Startle S.—Clio, was handled by R. P. McCargo, and F. R. Hitchcock's English setter bitch Jennie May, by Roderigo—Bo-Peep, was handled by J. M. Avent. They were put down at 10:17, May first finding and pointing a single in good style near a hedge row; further on she flushed. She then made a point in a cotton field, flushed and chased. Dave then pointed a bevy, which flushed while May was being brought up to back. Pace and range about equal. Down 30m. Dave was given the heat.

RUPERT AND MAMIE G.

P. E. Gregory & Bro.'s English setter bitch Mamie G., by Bryce—Dora Gladstone, was handled by G. R. Howse, and J. M. Avent's English setter dog Rupert, by Roderigo—Bo-Peep, handled by owner, were cast off in pretty open ground. Mamie was the first to find and point a bevy, afterward finding a wounded bird left behind. As it fluttered away she tried to catch it—it was excusable in a puppy. She next pointed a single. Rupert followed with a point on a bevy, Mamie backed; both steady to shot. In a cornfield further on Mamie pointed a single. At the same time Rupert was making a point. At 12:07 the heat ended. It was rather a near thing. Mamie had slightly the best of the other in speed and range, and won.

A move was made for lunch.

FINGAL AND FOLLY.

J. E. Dager's English setter dog Fingal, by Toledo Blade—Lady Gloss, handled by D. E. Rose, and J. M. Avent's bitch Folly, by Roderigo—Countess House, was handled by her owner. They were cast off in open ground, neither dog doing good work. A bevy was marked down, but owing to the whistling and calling the birds rose wild. Fingal then pointed, and was held on point some time for Folly to come up and back—birds moved on. Fingal roamed some distance. Folly then flushed the birds. A point was then made by Folly, but nothing found. Fingal pointed a single. Dogs ordered up at 2:47, both showed good range and speed. Folly was not under good control.

OUR PET AND NELLY BLY.

R. M. Stephenson's English setter dog Our Pet and F. F. Myles's English setter bitch Nelly Bly, by Bruce—Enid, was handled by S. J. McCartney, and Our Pet by his owner. They were cast off at 2:52 in the open. The heat was all one-sided. Our Pet doing all the work on birds, and was best in all other respects, and, of course, won. Ordered up at 3:15.

WUN LUNG AND MARGUERITE.

N. T. Harris's English setter dog Wun Lung, by Capt. Bethel—Fay, was handled by S. J. McCartney, and D. E. Rose's Marguerite, by Gath's Hope—Sue J., was handled by owner. Dogs started at 3:17; Wun Lung starting very fast, having great speed and good range throughout the heat—he is a good puppy. He did the best work on birds, winning the heat rather easily. Mr. Harris (owner) excused himself from judging in heat.

GRADY AND JIM B.

R. M. Smith's English setter dog Grady, by Yazoo—Dimple, was handled by R. P. McCargo, and R. E. Lutz's Irish Setter Jim Batey was handled by G. R. Howse, and sent away at 3:57. Jim pointed first and secured another soon after, Grady then flushed a single. Jim B. was best in speed and range, though both were only fair. Ordered up at 4:25; Jim B. was declared the winner.

FOX D. AND TRIKEY BELTON.

R. P. McCargo's English setter dog Fox D. was handled by owner, and W. J. Baughn's bitch Trikey Belton, by Duke Belton—Nellie Gray, handled by owner, were put down at 4:43 in the open. Fox pointed a bevy in a cornfield. Trikey followed with a point on a single bird and then flushed it. Moving on both pointed on a bevy. Fox flushed an outlying bird and the balance flushed wild. Both then pointed about the same time, moving on they roamed, and the bird before Trikey flushed wild. Fox D. was given the heat. The pace and range was fair, that of Fox the best.

Second Series.

PINK B. AND MAMIE G.

They started at 5:23 and run twenty-eight minutes, leaving the heat undecided. Mamie had pointed a bevy, Pink B. two singles. Range and pace slightly in favor of Mamie G. Dogs were then ordered up until morning.

Thursday.

The day opened cloudy, very wet under foot, having rained hard during the night. On this account, hunting was done on the higher ground run over yesterday. It fortunately cleared off by noon. The unfinished heat was the first one called. A late start was made within one mile of town. At 10:12, after a short run, both dogs winded birds. Mamie to the left about 15yds. away. She proved to be nearest the birds, and roading down a corn row, a single bird flushed wild. Mamie pointed a single just to the left. Pink came up in time to see the flush and make a short chase. Moving on Mamie pointed the bevy again, but it ran on. The dogs roading nearly a quarter of a mile away. Mamie stopped just in time to avoid a flush. Crossing cotton patch Mamie found again, and roading on he got one point, others flushing wild ahead. Mamie had the best range and speed, Pink B. the best style. Mamie won.

DAVE B. AND FINGAL.

This brace was put down at 11:14 in a cornfield. Fingal made an unsteady point, Dave backing well. Fingal moved on, pointed again, this time a sparrow, Dave B. proving a good backer. After a short run in at the lower end of the cornfield Fingal pointed on foot scent; no bird found by Mr. Rose. Near by Dave B. pointed a single in good style, and near fence afterward secured another point and two flushes. Dogs ordered up at 11:35 to find better ground. Dogs were put down again at 12:12. After about a fifteen-minutes' run Dave B. flushed a bevy in a cornfield. Following them Fingal pointed near a heavy cane thicket, where two birds were seen to light; nothing found. Crossing the fence Dave B. found a bevy. Following scattered birds he made two points on singles. Fingal was better in range, speed and style, but did not get to the right places at the proper time. A little point work would have won him the heat.

WUN LUNG AND OUR PET.

Cast off at 10:04, Wun Lung going very fast. Pet made an undecided point, Wun Lung backing promptly when called up. Pet moved on in time to avoid a false point. Soon after she made a point on larks—again Wun Lung backed—dogs ordered up at 1:30 to go to lunch. After lunch, and a 10 minutes' run, she pointed and moved on, Wun Lung near by pointed and soon moved on. On the next hill Pet pointed and then moved on, roading birds, she secured a point and a flush. Both dogs then roaded to the edge of cotton patch, when birds flushed. Returning both dogs were found on point, Wun Lung, as he was in the best position, very likely secured the point first. After flush of birds, dogs were sent

into corn, when Pet flushed a single. In sedge grass, near corn, Wun Lung pointed a bevy in fine style, part of the birds flushed wild. Pet coming down in front of Wun Lung flushed the balance of the bevy. Moving on Pet flushed a single and then pointed false. Near by Wun Lung pointed a small bevy of birds. Pet was unsteady to wing most of the time, Wun Lung steady throughout. He hunts his ground with the judgment of an old dog, is very fast and thoroughly staunch. Wun Lung was declared the winner.

JIM BATEY AND FOX D.

This race did not last long, Jim B. doing all that was done in cornfield bottom; handler called point just as the birds got up. Jim B. moved on a little distance and made a good point on balance of bevy. After 10 minutes' run he pointed another bevy at the edge of woods; he was kept on point for Fox to back. He became rattled by the calling and whistling and put the birds up. He won the heat easily.

DAN B. AND MAMIE G.

Mamie G. was the first to find and a point was said to have been made. Moved on and swinging round ahead of birds she pointed again; birds flushed. In the meantime Dan B. was brought round and on the left side of road, through cotton patch, both dogs pointed. Moving on Dan B. located a single, making a stylish point. Five yards ahead he pointed another single. Further on Mamie G. struck scent, roaded quite a distance, and finally flushed a bevy very close to her. Dogs then ordered up and heat given to Dan B. Mamie G. was the best in pace and range, but not very obedient. Dan B. was thoroughly staunch and was better in style.

WUN LUNG AND JIM B.

Wun Lung was best at all points—much the best in speed, range, and style. His point work was the best. After 30 minutes' run Wun Lung was given the heat. This closed the running for the day. Wun Lung and Dave B. are down for first place to-morrow.

Friday.

Weather cool and cloudy; the grounds worked over not so good as those of yesterday and day before. A large part of them were more or less covered with water between the cotton rows. The first heat of the day was to decide first prize in the Derby. The start was made at about 8:47, two miles south of the town.

WUN LUNG AND DAVE B.

Dave B., after a short run, pointed in cottonfield and two birds were flushed; Lung backed. To the left Lung pointed, moved on, but failed to locate. After about 10 minutes' run both dogs made points, each having a bevy. Wun Lung ran in and flushed. Dave B. was steady to flush and shot. They were then ordered up after 30 minutes' run, Dave B. winning first prize. It was decided to run Mamie G. and Fingal to decide which should run Wun Lung for second money.

FINGAL AND MAMIE G.

Cast off at 9:32 in open cottonfield. Soon after a bevy was flushed by boys running through cotton. After some further running Fingal pointed a bevy, Mamie backed well and then left it. Just afterward she roaded the bird and finally located it nicely, but moved around, jumping in to flush. Fingal afterward pointed, bird flushed between Rose and the dog. Fingal better in style, Mamie best in range and speed. Fingal was given a rest before running against Wun Lung for second money, by running two heats in the All-Age Stake.

FINGAL AND WUN LUNG.

This heat was decided in 30m. Wun Lung, after 10 to 15m. run, pointed a bevy after flushing an outlying bird. Following the scattered birds Fingal pointed single, was steady to shot and was well backed by Lung. Dogs ordered on and each made a flush. Fingal was then awarded third.

ALL-AGE STAKE.

The All-Age Stake closed with 16 entries.

HOOSIER BEN AND BEN HUR.

W. J. Baughn's English setter Hoosier Ben, by Roderigo—Rufra's Cross, handled by owner, and F. F. Myles's English setter dog Ben Hur, by Paul Gladstone—Lottie, were put down at 10:25. They were slow and had good opportunities for good point work. Ben Hur possibly making one point. Ben made several but flushed too much. He was fair in pace and style. At the end of 30m. the brace was ordered up for want of merit. Ben Hur did not seem himself at all.

DAISY HOPE AND TRIBULATION.

W. W. Titus's English setter bitch Daisy Hope, by Gath's Hope—Daisy F., was handled by D. E. Rose, and B. M. Stephenson's pointer dog Tribulation, by Beppo III.—Lass of Bow, was handled by owner, and were cast off at 11:10, both going at a good pace. The heat throughout was a good one. The spotting system shows itself in a case like this to be the only fair rule under which to run these trials. Daisy Hope was the wider ranger. There was little difference in speed if any. Tribulation had the best style. Daisy did most of the point work, which included the finding of a bevy. Neither did any flushing. The heat was as good as any of the meeting. If spotting system was used Tribulation would certainly have another chance. This is a hint to the management for future use.

CORSAIR AND JACK.

B. M. Stephenson's English setter dog Corsair, by Dan Gladstone—Haidee, was handled by owner, and R. P. McCargo's English setter dog Jack, was handled by owner and cast off at 1:50, both going at a good speed. Corsair the faster and ranging widest. Corsair did most of the point work and won rather easily in the allotted time, 30m.

CAPTAIN BETHEL AND MARK.

R. W. Foster's English setter dog Captain Bethel, by Gordon—Blanche, and C. J. Thompson's Irish setter dog Mark were put down in cotton and cornfield. The ground was wet and heavy under cover in corn. Two points on singles were made in thirty minutes by each and Captain Bethel a questionable flush of a bevy. Captain was much the best in pace, range and style. Mark seemed afraid of horsemen and spectators. Captain Bethel was given the heat.

TENNESSEE CHARLEY AND FRED GATES.

B. M. Stephenson's English setter dog Tennessee Charley, by Fred W.—Ida S., was handled by owner, and Hamilton and Jackson's English setter dog Fred Gates was handled by D. E. Rose. They were cast off at 3:07, both starting wild, Charley having best pace and range, Fred Gates not going nor working in his usual form. Working for some time with little result. Tennessee Charley pointed a bevy. Fred came in from a cast and made a point some yards ahead and right in the middle of the birds; both steady to flush. Moving on Charley found another bevy. Fred repeated his performance, coming from the left again, dropping to a point in cotton row about three yards ahead of Charley. Fred ended the heat by a point on a single. Charley won the heat.

SIMONIDES AND ANTONIO.

N. T. Harris's English setter dog Simonides, by Gath's Hope—Gladys, was handled by D. E. Rose, and J. M. Avent's English setter dog Antonio, by Roderigo—Bo Peep, were cast off in cottonfield, both going fast and ranging well. After running some time Antonio pointed on foot scent, going further on, he pointed a bevy in edge of sedge grass, and afterward got a single. Going down a corn row at speed he flushed a single. He afterward put up another. Crossing a ravine he got two points on singles. Simonides did not do much, seemed out of sorts, making a flush or two and one

possible point. Antonio was declared the winner when time was up.

GLEN AND BRUNETTE.

R. B. Parker's English setter dog Glen was handled by R. P. McCargo, and J. J. Manson's pointer bitch Brunette was handled by J. Watson. These two were sent off for 30 minutes, but no birds were found, though Glen was far superior in all that constitutes a field dog, and was awarded the heat. This brought the work to a close for the day.

Saturday.

CASSIO AND STUBBLE.

The morning opened cloudy and cool. Wind in the west. A start was made at 7 o'clock, but as Stubble's handler was not on hand we started without him, and the heat was given to Cassio.

Second Series.

DAISY HOPE AND STUBBLE.

They were put down less than a mile from town in cotton and cornfield. Both started fast. Daisy found first and pointed a bevy in good style. She retrieved well to a kill. Some distance to the left Corsair pointed and then roaded to a flush, following with a point on single bird. Corsair came in ahead of Daisy Hope while she was roading and flushed a single bird, and two flushed ahead of Hope. Going to another field Corsair flushed a bevy. On the scattered birds Daisy pointed a single bird. Daisy was the winner after 45 minutes run.

TENNESSEE CHARLEY AND CAPTAIN BETHEL.

Captain Bethel flushed a single bird after some hard work. After a run of nearly a mile, Captain Bethel pointed a bevy. Charley coming in from the left side, down a cotton row, wheeled to a point. Neither dog could see the other. A large bevy flushed to a thicket but was not followed. Another long run, when Capt. Bethel pointed some distance away, but before handler could get to him he moved on and a bevy was flushed near. Charley then, to the right, pointed a single. Then Bethel flushed. After a short run, dogs were ordered up and Charley won.

ANTONIO AND GLEN.

They were put down at 10:35 in cottonfield, where the last brace was ordered up. Both started at a good gait, Antonio the more stylish and wider ranger. Glen was supposed to have flushed a bevy in cotton patch, and bevy settled in woods. Antonio did all the finding in fine style. Glen made one point to his discredit by refusing to back and taking Antonio's point. At the end of 30 minutes Antonio won.

Cassio ran a bye.

Third Series.

CASSIO AND DAISY HOPE.

Cassio ran a good heat. Daisy did badly, not doing her usual work at all. She scored a false point soon after starting. After a short run Cassio pointed staunchly 200yds. away; the bevy flushed wild, but he retained his point until Avent got to him; he tried hard to get up the birds, not knowing they had flushed. Moving on each secured a point on a bevy, and Daisy retrieved a bird killed by Rose. In sedge grass Daisy made a flush. Moving on to cornfield bottom both dogs passed near a bevy, which was flushed by horsemen. In the same sedge grass Daisy made a flush, then a point. Cassio followed with a false point. This ended 30-minute heat. Cassio was given the heat. Daisy did not go in her usual fast style, putting little spirit in her work, while Cassio was just the opposite.

ANTONIO AND TENNESSEE CHARLEY.

They were cast off at 12 M. in a cotton patch. Antonio hunting with judgment found a bevy. Avent flushed but missed. Further on, in cornfield, Charley pointed and moved on after running birds; he finally located a small bunch. Antonio having made cast to the right came in 40yds. ahead of Charley and wheeled to a point; two birds were flushed. Going to the left and through hedgerow to the next both dogs were found on a point. Each handler claimed what proved a false point. A little further on Antonio pointed. No bird could be found by Avent, though a little further on a single bird was flushed. A long run ensued, when Charley in sedge grass flushed a single, just after Antonio had pointed a rabbit near by. In cotton, Charley and Antonio were found on a point; a single was flushed to Antonio's point, but Charley moved on; a bevy flushed near by which he should have pointed. Antonio then won the heat. He was much the better in speed, range and style.

ANTONIO AND CASSIO.

At 1:23 Antonio and Cassio were put down to run for first prize. Cassio soon made a flush of bevy. Shortly afterward Antonio was missed. It was some time before he was found in an adjoining field on a point. A bird was killed when bevy was flushed. Antonio did not retrieve, though Cassio brought it nicely. A few birds were marked down in sedge grass. Going on, Cassio flushed a single, Antonio meanwhile making a point on another near by, bird flushed and killed, Cassio retrieved. Going on to cornfield bottom Antonio quickly made good points on two beves. Antonio won easily in half an hour.

SIMONIDES AND TENNESSEE CHARLEY.

These two were put down to see which should run Cassio for second place. The dogs were put down in a cornfield, and before going a hundred yards Simonides dropped to a point. It proved a large bevy, and settled in a thicket hedge where it was impossible to go. After a run of fifteen minutes more Simonides was given the heat.

CASSIO AND SIMONIDES.

Simonides kept up his good work in pace and range. He pointed one bevy and two singles. Cassio flushed a bevy and pointed one. His pace and range was also good. After running half an hour Simonides won second money. Cassio and Tennessee Charley then divided third. MAX.

GREENVILLE, S. C., DOG SHOW.

Editor Forest and Stream:

Kindly permit me to say to your readers, in answer to numerous inquiries on the subject, that the South Carolina Kennel Association is a member of the A.K.C. and that wins at our coming show will "count." In addition to the regular and special prizes offered in our premium list, Mr. E. M. Armstrong, of Pittsburgh, Pa., has kindly donated the following specials to be competed for at our show, viz.: A handsome cup for the best Irish setter bitch in the show; a handsome sporting dog collar for the best Irish setter dog or bitch; same for best three Irish setters owned by one exhibitor; same for best Irish setter dog in open class; same for best Irish setter bitch in open class; same for best brace of Irish setters owned by one exhibitor; same for best bitch of any breed in sporting classes. Our entries close Jan. 20.

F. F. CAPERS, Sec.—Treas.

GREENVILLE, S. C., Jan. 12.

NEW ORLEANS DOG SHOW.—[Special to Forest and Stream].—New Orleans, Jan. 20.—This show opened to-day with about 200 entries, and they are as fine a lot of dogs as can be found anywhere on the bench. Among the exhibitors are J. M. Avent, B. M. Stephenson, James Hennessey, B. F. Lewis, Fred P. Kirby, H. F. Peck (Orleole Kennels) and John Naylor. H. A. Bridge, superintendent, is looking out for the interest of the dogs. Molly Bawn was sold to H. F. Peck to-day. Price private.—O.

DOG CHAT.

THE Canton, O., *Repository* tells this little story: One part of the bench show held in the Tabernacle last week, had an amusing ending on Monday. As is usual on such occasions, the people taking a hand in a demonstration of that kind became enthusiastic on one point and must do something immediately to satisfy themselves. Accordingly a number of the owners of different dogs organized a fox hunt. They procured a wild fox and repaired to the vicinity of Hurford's Hill. The party had about thirty-five dogs of various breeds and colors, and including the foxhound which had taken first premium and which the owner claims to be the best in the country. According to the plans the fox was to be given a start of half an hour. All impatient for the hunt, the fox was released. Away he went. Then came the wait. But in the mean time a fox hunt, without the "half hour start" clause, was gotten up and a farmer with his two sons let loose their three hounds, and, of course, had the fox in short order. Imagine the disappointment of the hunting party on seeing the triumphant return of the smaller crowd with the emblem of victory, the fox's tail.

We hear that the Pittsburgh dog show arrangements are coming along nicely, and that premium lists will be out in the course of a week.

A meeting of the Irish Setter Club of America will be held at the coming bench show of the Westminster Kennel Club. All members of the club are requested to be present, as business of importance will be transacted.

The American Pet Dog Club at their recent meeting passed resolutions in favor of the proposed dog hospice for New York. We hear that the *Herald* is perfecting its arrangements to form this hospice. It will be under a board of directors consisting of gentlemen well known in society and sport. We believe that Dr. Glover will be the veterinarian. It is the intention of the organizers that the management of the undertaking shall be in the hands of men familiar with kennel matters. This is the best and only way to succeed.

The National Beagle Club is on the warpath and fully intend to show that their club is not merely a post in the gap. At Boston they will give \$20 cash for the best kennel of four beagles, a \$10 piece of plate for best dog in open class and the same for the best bitch. Best novice class dog and bitch will each have a similar piece of plate, and for the best dog or bitch in the show another \$10 piece of plate will be given. The following gentlemen have contributed to the donation fund: Messrs. H. L. Kreuder \$25, F. W. Chapman \$20, O. W. Brooking \$15, with more to follow.

At Baltimore a piece of plate, value \$15, will be given for best kennel of four, a \$10 piece of plate for best dog and the same for best bitch. Pittsburgh is to have the same.

Owing to the pressure on our columns this week, several letters must lie over, including this week's batch of the cocker controversy. There is a good deal of the Irishman's pig in the latter, despite every precaution it will persist in running the wrong way. This little recess will allow those taking part in it a chance to cool off and think better of it. Hereafter anything which may savor of personality and which does not pertain to the question under discussion, will be rigidly excluded.

A correspondent writes that the following are the officers elected by the Dayton Kennel Club for this year: Pres., Gustav Sanders; Sec.-Treas., Dr. D. G. Porter; Directors, Charles G. Stoddard, Thomas B. Hannah, E. F. Cooper, Charles Whealen, Scott McDonald, D. G. Porter and G. W. Sander; Shooting Committee, Scott McDonald, T. B. Hannah and Gustav Sander. Messrs. Gustav Sander and Charles Whealen have sent South six pointer puppies, six months old, by Luck of the Goat out of Meteor's Trinket, to be trained for the Southern Field Trials Derby to be run next winter. Dr. Meobus, of Alabama, is handling three of the puppies, and Nat Nesbitt, of Mississippi, has the other three.

In order to accommodate exhibitors who are anxious to show at New Orleans, as well as at Greenville, the South Carolina Kennel Association has decided to postpone the opening day of their inaugural show to Jan. 28. This will make the show days the 28th to 31st instead of 27th to 30th, as advertised, and the judging to commence on the 29th instead of the 28th. The entries close Jan. 20.

Some good black and tans are being dispersed throughout the country, evidently proving that this smart terrier is gaining ground in public favor. Dr. Foote writes us he has sold Rochelle Knickerbocker, winner of second, Boston and New York, and first, Buffalo, 1890, to Mr. Michel Hilgert, St. Joseph, Mo. That nice-looking daughter of Meersbrook Maiden, Rochelle Nadij, second, Detroit; third, Toronto; first, Ottawa, and first Danbury, finds a home with Mr. Joseph J. Lang, of Buffalo, N. Y.

In connection with this sale it may be noted that these terriers are from the first litter of black and tans Dr. Foote ever bred. They are by champion Vortigern out of champion Meersbrook Maiden.

We learn from Mr. Chas. D. Cugle, the secretary, that the following have been elected as official judges of the Bull Dog Club of America: Chas. D. Cugle, Box 602, Baltimore, Md.; E. Sheffield Porter, 38 Hillhouse ave., New Haven, Ct.; John E. Thayer, Lancaster, Mass.; Jas. Mortimer, Babylon, L. I.; Wm. Mariner, 405 Broadway, Milwaukee, Wis. Bench show committees, please take notice. The first annual meeting of this club will take place at the New York show at 8 P. M., Feb. 24. Though this club has kept very quietly as to their doings, it is not too much to say that their first move has put them in the first rank with a bound, as a glance at the very liberal prizes they will offer conclusively shows. Their efforts certainly deserve the support of all those who in the slightest way lean toward that good old breed—the bulldog.

It will probably interest our readers to know that Spratts Co. have just received at their kennels at Northvale, N. J., the three Barzois, Ivan, Czar and Czarina, owned by Mr. Paul H. Hacke, of Pittsburgh, and expect to receive early next week Zloem and Prokaza from England, on account of the same gentleman. All five dogs will be left with them to prepare for the coming shows of the National Greyhound and Westminster Kennel Clubs.

The premium list of the fifteenth annual show of the Westminster Kennel Club has been out some time. The club has been liberal as usual. The large breeds and those of most importance in our shows have the same amount of money as last year, in fact all the classes to the number of 177 are well treated. It is only in the matter of entry fee that there may be some grumbling. This has been raised to \$5 for a single entry, and \$3 each additional one. In the case of those breeds where the prizes are \$20, \$10 and \$5, etc., this is all right, but in the \$10 and \$5 classes it cuts down the profits to the exhibitor somewhat. The puppy classes for mastiffs and St. Bernards have a limit of 15 months, and we hope this will be the means of keeping the very young ones away and let in those dogs which, though well developed, are hardly able to cope with their fully-matured

competitors in the open classes. It is in the special prize list that the show is extremely rich, and which illustrates better than any one can write the development of canine interests in this country. Such a display of special prizes as are set forth, both by the W. K. C. themselves and the different specialty clubs, must be particularly gratifying to those who have the true interests of dogdom at heart. The bench show committee is composed of Messrs. Thomas H. Terry, Winthrop Rutherford, F. R. Hitchcock, H. B. Cromwell and Fred Hoey. The judges we have already named, though we hear that Mr. A. D. Lewis will not officiate in the collie ring. Spratts Co. will bench and feed as usual, and a new disinfectant will be used in Walker's Soluble Creosote. Mr. Mortimer will, in the course of a week or so, take up his quarters at the old stand, and be ready for the entries which it is confidently expected will exceed those of any previous year.

We hear that the taking of testimony before the referee in Malcolm vs. Maryland K. C. has been going on during the last week. Both sides seem to have no fear of the result, and the struggle will evidently be a bitter one. By the way, we hear it is dangerous work to mention "Manhattan" in the presence of the M. K. C. secretary.

We hear that the boys at the Canton, Ohio, show wanted their prize money on the last day of the show, as usual, and because it was not forthcoming they took their dogs out of the building at 4 P. M. Saturday, and the management only took in \$2.25 at the gate in consequence. Several of the boys were "dead broke," not having even enough to get home with, having depended on their winnings to see them through.

The fanciers of Columbus, O., are talking of having a show in May, after the big shows are over. Big money will be offered, and there is little doubt but that it would be a success.

We understand that the Rochester people are negotiating with the Buffalo Kennel Club to have a show one week after the other. How would it do for those two clubs to join forces for one show? Thus a good one could be given, for we are sure that exhibitors would rally to them.

We learn that the crack greyhound Gem of the Season has been imported at a large price.

Mr. Sears informs us that Sir Bedivere is expected to arrive on the 24th.

It is our painful duty to record the recent death of two well known fanciers, Mr. James Lindsay, who died Jan. 13, may be said to have done as much as any man in this country, in his quiet way, to bring forward the collie to public notice. In the early 80s and before the advent of the Chestnut Hill Kennels, his kennel was one of the best. Many of his dogs were purchased by the Chestnut Hill Kennels of which he was the first superintendent. Since then he has taken little active part in shows, though still a member of the N. J. K. C. and the Collie Club. Another gentleman the news of whose death will be received with much regret by his many friends, is Mr. Nathaniel Seabury, of Providence. As secretary of the Rhode Island Kennel Club and delegate to the A. K. C. he was well and favorably known. New England circles have lost a good friend. He died after a very short illness on Sunday, Dec. 21, of typhoid fever.

Mr. W. J. Comstock writes us that he has received, per S. S. Nevada, the Irish setter bitch Dunmurry (E. K. C. S. B. 23,143), from the kennels of E. J. Charley, Seymour Hill, Dunmurry, Ireland. She was whelped May 16, 1888, and is by Smith's Napper out of Kate. Dunmurry has won first, Bangor, 1889; first, Edinburgh, 1889; first, Birmingham, 1889; first, Great terrier show, 1890; first and silver medal with Mars for best brace at the Great terrier show, London, 1890, and first, Sligo, 1890. She has thus won seven points toward becoming a champion. In the press notices in England she is mentioned as the best specimen brought out last year. She will be shown at New York, and we trust that Mr. Comstock's pluck will not get the same set back that it did last year in the loss of Breda Florence. Mr. Frank Comstock received by the same steamer the two black and tan terriers Jasper and Louie, so that now this kennel will make a strong bid for the prize at New York.

Maryland Kennel Club has succeeded, through the Governor, in securing a splendid building for their show next March. This is the Fifth Regiment Armory. It will comfortably hold 700 dogs, and will be a great improvement on the one last year.

During the last nine months Mr. Phister's greyhounds have done some tall traveling. Coming originally from Colonel North's kennels at Eltham, they journeyed to London; from London to Liverpool; from Liverpool to New York; from New York to Mr. Phister's kennels at Walnut Hill, Cincinnati; from there to Denver, Col., in charge of the Rookwood people; from Denver back to Emporia, Kas.; from Emporia to Great Bend, Kas., a distance of 150 miles, on foot; at Great Bend they took part in the annual meet of the American Coursing Club; from there to Hutchinson, Kas., where Nettiefield divided the sweepstakes; from there back to Denver, Col.; from Denver direct to San Francisco, Cal.; from San Francisco to Merced, Cal., where they again coursed the fleet-footed jack rabbits; from Merced back to Frisco, returning from Frisco via Great Bend to Lexington, and from Lexington direct to Cincinnati, making at a rough estimate something like 11,000 miles, or nearly one-half the distance around the world in nine months. We are pleased to say that barring a little weakness Norwegian is himself again. They will be on hand at the New York show.

The Mayor of Charleston tendered the visitors to the show an excursion round the harbor on Friday, the 16th, which was very much enjoyed by both the dog and chicken men, the latter, with their better halves, predominating twenty to one. The trip lasted three hours. Steaming out to Fort Sumter, which lies almost deserted in the bay, the company scattered over the ramparts and loading themselves with curiosities, shells and pieces of the gun carriages, passed a pleasant hour while the soldier guide expatiated on the stirring times which the old fort had seen during the ever memorable contest. Then we steamed up the harbor past Fort Moultrie, Castle Pinckney and the Battery, and then up the Ashley River some miles, then back again to the wharf on the Cooper River, when every one expressed themselves as delighted with the courteous attention and the pleasant trip.

Our suggestion that charges against individuals brought before the A. K. C. should be accompanied by a deposit has met with unqualified approbation. The Gordon Setter Club delegate will bring the matter before the club, and Mr. Vredenburg will make the suggestion in his annual report next month. It is a much needed reform nowadays when kennel interests and transactions are spreading so rapidly. The secretary thinks it should not be less than \$20.

The entries for the National Greyhound Club are coming in quite satisfactorily, some 30 greyhounds being already entered. In the challenge classes a bronze medal will be

given as second prize. Speaking of this club, we hear that a protest has been filed with the secretary of the A. K. C. against the inauguration of a greyhound stud book. Maintaining that as this specialty club is a member of the A. K. C., it holds itself bound to uphold the Kennel Club Stud Book, but by having a private stud book such will be inimical to the interests of the A. K. C. publication. If the strict reading of the constitution is adhered to, no doubt it will result in either the N. G. C. A. giving up the A. K. C. or the Stud Book. They will most likely have to do one or the other.

NOTES FROM WASHINGTON.

Editor Forest and Stream:

Dog matters in Washington are in a flourishing condition, and general interest in the bench show to be held on March 17, 18, 19 and 20, is daily increasing. Nineteen new and enthusiastic members were recently elected at the annual meeting. Under the efficient management of the bench show committee, which is composed of busy and pushing members, the event promises to be a very memorable record in canine affairs in this, the national capital.

Extensive arrangements will be made to bench between 400 and 450 dogs. The premium list will be liberal, and such as to insure desirable entries, both as to number and character. There will be 115 classes and \$2,100 will be awarded in regular prizes. The specials will also be attractive, and if dog men of the country don't fill the classes, it will not be because liberal inducements have not been held out to them.

In addition to the prize list, the character of the building in which the show will be held, is unique, and far surpasses most buildings in which dogs are shown on similar occasions. It is the Washington Riding Academy. The riding room is above the ground and is a very spacious affair, is 107ft. long and 98ft. wide, without an obstacle or a break from wall to wall. In this space the dogs will be benched. Around this space, and about 15ft. from the floor, is a neat comfortable gallery, capable of comfortably seating about 700 persons. This gallery is the only obstacle to break the clear elevation to the roof, which is 60ft. high, splendidly lighted by windows running around the 3 sides of the building, and is also lighted and ventilated from the roof. The building is heated by steam, and the temperature can be perfectly regulated to insure health and comfort to man and beast—in fact a perfectly heated, lighted and ventilated bench show, a thing not generally met with. A line of cars passes the door and is easy of access. The bench show committee has for some time held under consideration what is likely to prove a novel and very attractive feature; and it has now decided to undertake the experiment.

On the fifth day, after the dogs and benches have been removed and everything cleared out, except the ring inclosed for Prof. Parker's troop of trained dogs, which will give two performances on each of the four days, and will also be retained for the fifth day, there will be a grand fox drag or chase with hounds, horses and riders. There will be about 25 hounds, 7 or 8 riders, dressed in gay colored satin suits, and they will jump the hurdles and ride after the hounds. This performance will be followed by an exhibition of the troop of trained dogs, and will wind up the show. This will be the first performance of the kind ever held at a bench show, and the managers hope it will prove a great attraction and a social event. A famous local pack of hounds will be entered for the exhibition. The prize list will shortly be ready for distribution, and any information regarding entries, etc., will be cheerfully furnished by the secretary and members of the committee.

FREDERICK S. WEBSTER, Secretary.

WASHINGTON, D. C., Jan. 12.

GORDON SETTER CLUB MEETING.

Editor Forest and Stream:

At a special meeting of the executive committee of the Gordon Setter Club of America, held at 1293 Broadway, this city, Jan. 10, the following members were present: Dr. H. Clay Glover, Dr. J. M. Lordly, L. A. Van Zandt, Dr. John H. Meyer and Dr. J. E. Clarke.

The minutes of the last meeting were read and approved. On motion of Dr. Meyer the delegate to the American Kennel Club was instructed to ask that body to request bench show committees to drop the term "black and tan" setter, using only Gordon for the class. It was moved that the delegate be instructed also to bring a motion before the A. K. C. requiring that all Gordons in future shall have three generations of Gordon ancestors instead of 62½ per cent. Moved that the delegate to A. K. C. bring a motion before that body requiring that in future all charges brought against a member shall be accompanied by a suitable deposit (\$10 or \$15). Moved by Dr. Meyer that inasmuch as Mr. Harry Malcolm has used all his endeavors to discourage competition at bench shows and field trials, in direct conflict to Section 11 of the by-laws, he is a detriment to the club, and he therefore respectfully suggests that he be requested to resign his membership therein. The secretary was instructed to communicate with the Massachusetts Kennel Club in the matter of specials at their show, stating that the finances of the club do not warrant their offering a money special, but that they will use their best endeavors to make their show a success.

The resignation of Dr. Meyer as a committee of one on bench shows and field trials was accepted with regret.

Communications from Clarence M. Johnson and the Duquesne Kennel Club were held for further consideration. The resignation of Mr. J. D. Sperry was accepted with regret, and Mr. James B. Blossom was elected to fill the vacancy thus caused in the executive committee. Election of members followed, and the following new members were elected: Messrs. W. S. Lee, Abm. Quackenbush, Carlton C. M. Hunt, C. H. Pepper, Geo. Bleistein, B. Frank Hall and Chas. S. Hirst.

A committee of three were elected to consist of Dr. H. C. Glover, James B. Blossom and L. A. Van Zandt, to be known as the bench show and field trial committee. Returning to new business the following additional specials will be given at the next Westminster Kennel Club show, Feb. 24: \$5 to second, third and fourth, open dog and bitch classes; \$5 to first and second, novice class.

The meeting adjourned until Jan. 14 at 7:30 P. M.

L. A. VAN ZANDT.

YONKERS, N. Y.

MURDER OF HELEN KELLER'S DOG.—*Editor Forest and Stream:* Nothing in mastiff breeding has ever given me the pleasure that it did to give a puppy to the little blind mute Helen Keller, and no dog of my breeding ever made me as proud of it as did this one by its faithful devotion to its owner, refusing to eat and whining over the house for some days after her departure; and you can judge of my wrath at hearing that the poor inoffensive animal had been shot by a policeman in the common of Sheffield, Ala., by virtue of a city ordinance providing for the killing of all dogs not accompanied by their master. As to the brute that shot the dog, and the greater brutes who enacted such a brutal ordinance, I will heap coals of fire on their heads by hoping they may see this and know what the distressed child said: "They could not have known what a good dog Lioness was or they wouldn't have done it." Such enactments are disgraces to any civilized community. The right to suppress useless vagrant dogs is unquestionable, but that right must be exercised with discretion, and the requirement of reason and justice is that the dogs be taken and held a reasonable time for redemption.—W. WADE (Hulton, Pa., Jan. 13).

THE BULLDOG CLUB.

Editor Forest and Stream:

Regarding special No. 9 for best stud dog and special No. 10 for best brood bitch, offered by the Bulldog Club of America for competition by members only at the New York show, entries for the above two specials closing with me Feb. 12, inquiries have been made as to whether any extra charge is made for these. I desire to make public the reply that no extra charge is made for these or any other specials offered by the Bulldog Club. We wish to encourage American breeders, and only stipulate that owners must be club members to compete for prizes offered by the club. We have several unique surprises in store, and intend showing specialty clubs and the public in general what it is to boom a breed and encourage breeders.

Our charter membership closes Feb. 9. Until that time members will be admitted for \$10, yearly dues; but after that date it will cost \$15 initiation fee in addition to the \$10 dues; so those interested in bulldogs had better join now and save the \$15. Only those who are paid up members by Feb. 9 (day of closing of New York entries) will be entitled to compete for club specials at New York. By the way, I wonder if all your readers have noticed what is offered for bulldogs at New York? Four solid silver cups, value \$550; eleven solid silver club medals, value \$110; twenty cash prizes, value \$118; making a grand total of \$773 in eight classes. Can any one ask or wish for more inducements to show a dog? Fifteen specials, twenty cash prizes, challenge, weight, puppy and novice classes. Who could want more? Every one who owns a bulldog or bitch and is a member of the club has a chance at these specials without extra charge, and if he neglects to join us and enter each and every one of his kennel at New York before Feb. 9—well, he'll be sorry or I will miss my guess. In addition to the specials offered at New York, we will offer club medals at an Eastern, Southern and Western show this spring; so all owners, intending owners, or those interested in the breed ought to get in on the ground floor as charter members for \$10 before Feb. 9. All our money goes into specials, so the more members this year the more specials next year. Join now and save money.

CHAS. D. CUGLE,

Sec'y Bulldog Club of America.

BALTIMORE, Md., Jan. 17.

BINGHAMTON DOG SHOW.

[Special Report.]

THIS little show was held Jan. 6 to 9. As entries did not close until the night before the show they had no catalogue, therefore it is impossible to give the names of all the dogs that were at the show. Greyhounds and fox-terriers were very good. Dunrobin Kennels' greyhound bitch Maud Torrington won the special for best.

The winner in open class fox-terrier dogs brought out a new one, Dot, by Seminole—Dot II., a nice cobby little dog, best of coat, legs and feet. He is owned by Mr. Wheeler, Hotel Crandall, Binghamton. Of course the advocates of the big whippet style of fox-terriers will say it was wrong, but of what use is a fox-terrier unless he can go where a fox does, and a fox can go into any hole he can get his head into? Clarence Rathbone and John A. Logan, Jr., showed some fine terriers.

W. L. Washington won three firsts in Irish setters, but if Mr. Bowman, of Elmira, had been there to handle his bitch Quail, she would surely have won in the open class. I consider her the equal of any Irish setter bitch in America. The great oarsman Charles Courtney appeared in a new role, that of exhibitor in the pointer class, and he surely has a good one in a 14-months-old son of champion Graphic, a good all-round dog with the exception of his Graphic stern. Graphic, Jr., is a dog that is sure to make his mark.

Mr. A. J. Skellie's Spot and Dr. Wesley Mills's Devon Nell were equal first in bitches. Nell is the best, but was shown in poor shape. Four good deerhounds and four very fair English setters were shown. The dog that attracted a lot of attention was the Welsh terrier Rowton Vixen, lately imported by "Namquoit."

ROCHESTER NOTES.

Editor Forest and Stream:

In the article on Flour City Kennel I should have written Miss Caution instead of Lady Caution and Judge is a son of Beaufort instead of by a son of Beaufort. Judge is his kennel name, he is registered as Beaufort, Jr.

Mr. Whitney also owns another mastiff which, being at his barn, I did not see. He is called Horace and is by Minting out of Duchess.

I also misunderstood the name of the Irish setter I called Belford, it should be Balfour.

It is very disagreeable to make such errors, but I have no excuse to offer and therefore I beg the space to correct them. The cockers are Ob stock.

There will be a bench show in connection with the first annual exhibition of the Ontario Poultry and Pet Stock Association, to be held at Canandaigua, Jan. 20 to 23. The premiums will be the entry fees (\$1.50), less 50 cents for each entry, divided into three prizes of 50, 30 and 20 per cent. It is understood that several dogs from this city will be there, including some of Mr. Whitney's, who will probably also exhibit at Boston, Baltimore, Pittsburgh and New York.

Without doubt he has as good stock in his kennel as there is in the country and the older breeders must look to their laurels if they would not be worsted.

OSCEOLA.

ROCHESTER, N. Y., Jan. 16.

MICHIGAN KENNEL CLUB SPECIALS.—Editor Forest and Stream: We would like to know what the Michigan Kennel Club are going to do about the kennel prizes won at their Detroit show? The entries were all made in good faith and should be paid as advertised in the leading papers; it is now four months since the show and there are no signs of a settlement yet. Up to the day of judging the dogs, we (the exhibitors) were led to believe that we were to receive cash prizes, but on that day they substituted plated cups in lieu of cash. We would at the present writing be satisfied with silver cups but it seems bad taste to offer plated ware.—EXHIBITORS.

BENCH SHOWS AND JUDGING.—Baltimore, Md., Jan. 19.—Editor Forest and Stream: The remark in my letter, which you had the kindness to publish in your last issue, contains an error about the judging of great Danes at Philadelphia in 1889. Mr. James Watson informed me that he judged that class then, and it is not more than right for me to declare that I never heard nor read anything derogatory to that gentleman's character. I received information that the individual I alluded to judged at Philadelphia in 1887 or 1888.—J. H. H. MAENNER.

HAS ONLY ONE CURL.—Columbus, O., Jan. 12.—Editor Forest and Stream: You will please favor us by correcting a mistake in the report of the Canton, O., show. In speaking of Penrice, the winning pug, it says he has a fine double curled tail, which is not right; his tail is single curled, but is very tight and could not be carried better, as will be seen in all the Eastern shows the coming season, where many lovers of pugs will have the pleasure of seeing the proudest little dog that has ever stepped into the ring to be judged.—T. A. HOWARD.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 300 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Pauline Burr. By James L. Smith, Hackettstown, N. J. for white and orange English setter bitch, whelped Jan. 2, 1890, by Paul Gladstone (Gladstone—L'vallette) out of Latonia (Count Noble—Dido II.).

BRED.

Prepared Blanks sent free on application.

Gyp—Bow Bondhu. Wm. H. White's (Walnut Hill, Mass.) English setter bitch Gyp (Bowen's Ned—Bowen's) to Gordondale Kennels' Bow Bondhu (Gus Bondhu—Bo-Peep), Jan. 6.

Lillian Bondhu—Prince Kent. L. A. Pearl's (Hampton, Conn.) English setter bitch Lillian Bondhu (Buckelaw—Frolic Bondhu) to Gordondale Kennels' Prince Kent (Royal Kent—Princess Dot), Dec. 26.

Lone Star Beauty—Brazos. J. Leicht's (Beeville, Tex.) pointer bitch Lone Star Beauty (Lightly's Jeff—Heaslip's Zipp) to Truheart's Brazos (Spring—Daisy), Dec. 23.

Dell—Count. G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Dell (Everest—Sequa) to his Count (champion Apollo—champion Miranda), Dec. 7.

Beyrout—Alton. G. W. Patterson (Lake View, Mass.) St. Bernard bitch Beyrout (champion Bayard—Brunhilda) to E. H. Moore's Alton (champion Plinlimmon—champion Queen Jura), Nov. 18.

Flo—Champion Bradford Harry. Chas. N. Symonds's (Salem, Mass.) Yorkshire terrier bitch Flo (Bright—Pan) to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), Jan. 6.

Peggy—Portwood Tiger. Wm. Hickey's (New York) bull bitch Peggy (Boxer—Boss) to J. H. Matthews's Portwood Tiger (Paul Clifford—Hussey), Dec. 23.

Gordon Nell—Murkland Ranger. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Gordon Nell (Malcolm V.—Dina) to his Murkland Ranger (Murkland R.—Beaulah), Dec. 14.

Bell—Murkland Ranger. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Bell (Tom—Cremone) to his Murkland Ranger (Murkland R.—Beaulah), Nov. 28.

WHELPS.

Prepared Blanks sent free on application.

Kitty. Edward Lever's (Philadelphia, Pa.) black and tan terrier bitch Kitty (Ben—Fortune), Jan. 15, five (four dogs), by his Vortigern II. (champion Vortigern—Luce).

Sandy. Edward Lever's (Philadelphia, Pa.) Irish terrier bitch Sandy (champion Dennis—Sandyroft Vim), Jan. 13, six (two dogs), by W. J. Comstock's Mars (Benedict—Ierne).

Jessie Jones. The Loup Kennels' (Broken Bow, Neb.) Irish setter bitch Jessie Jones, Jan. 13, ten (seven dogs), by their Jerry Jarvis (Elcho, Jr.—Maid).

Lady Leeds. C. S. Baker's (New York) St. Bernard bitch Lady Leeds, Jan. 10, five (three dogs), by C. Pfilderer's Marks (Courage II.—Flores).

Genesta. J. W. M. Cardeza's (Philadelphia, Pa.) pointer bitch Genesta (King of Kent—Hors), Jan. 12, five (three dogs), by his Dick of Delphos (Dick—Floss II.).

Daisy Hunter. J. H. and J. A. Hunter's (Sanborn, Ind.) English setter bitch Daisy Hunter (Gath's Hope—Daisy F.), Jan. 1, three (two dogs), by Shelby Hudson's Dad Wilson.

Ruby Whistle. B. O. Van Bokkelew's (Seattle, W. T.) English setter bitch Ruby Whistle (Pegbid—Lady Athol), a litter by owner's Blacklock (Jean Val Jean—Sheena Van).

Floce. B. O. Van Bokkelew's (Seattle, W. T.) Irish setter bitch Floce, Dec. 25, thirteen (eight dogs), by his Mars.

SALES.

Prepared Blanks sent free on application.

Stella. Black and tan terrier bitch, whelped Sept. 20, 1889, by Vortigern out of Luce, by Edward Lever, Philadelphia, Pa., to Charles Wilson, Chicago, Ill.

Mollie O. Red Irish setter bitch, whelped Nov. 3, 1890, by Carless out of Jessie Lorraine, by David Larson, Elgin, Ill., to John B. Whalen, Sycamore, Ill. Also a pup of same litter to Walter S. Davis, Jacksonville, Ill.

Pilot. Black and tan Gordon setter dog, whelped Oct. 25, 1889, by Murkland R. out of Maud, by C. T. Brownell, New Bedford, Mass., to Dr. S. Fleet Seir, Brooklyn, N. Y.

Dandy. Black and tan Gordon setter dog, whelped Nov. 20, 1891, by Grouse out of Rose, by C. T. Brownell, New Bedford, Mass., to J. C. Sterns, Hartford, Conn.

Duke. Black and tan Gordon setter dog, whelped Aug. 12, 1890, by Murkland R. out of Maud, by C. T. Brownell, New Bedford, Mass., to F. S. Wilson, Boston, Mass.

Brandy Boy. Sable and white collie dog, whelped Dec. 12, 1889, by Clipper out of Lady Watson, by C. G. Hinckley, Lee, Mass., to H. H. B. Angell, New York city.

Roxie. Sable and white collie bitch, whelped Dec. 12, 1889, by Clipper out of Lady Watson, by C. G. Hinckley, Lee, Mass., to A. H. K. Passie, N. Y.

Tip. Sable and white collie dog, whelped Dec. 12, 1889, by Clipper out of Lady Watson, by C. G. Hinckley, Lee, Mass., to William Rogers, Stockbridge, Mass.

Lord Fauntleroy. Black, tan and white collie dog, whelped May 16, 1889, by Clipper out of Mavis, by C. G. Hinckley, Lee, Mass., to H. H. B. Angell, New York city.

Prize of Life. Sable collie dog, whelped July 16, 1889, by Glencairn out of Fannie Brown, by C. G. Hinckley, Lee, Mass., to D. A. Hayes, Johnstown, N. Y.

Lady Watson. Sable and white Scotch collie bitch, whelped June 16, 1887, by Glenlivat out of Nellie McGregor, by C. G. Hinckley, Lee, Mass., to Geo. Sherman, Poughkeepsie, N. Y.

Black Robin. White bulldog, whelped March 3, 1890, by Portwood Tiger out of Grik, by John H. Matthews, New York, to F. Willard Roby, New York.

Ino—Nellie Dale whelps. Liver and white ticked pointer dogs, whelped Sept. 7, 1890, by Ino out of Nellie Dale, by Lyman W. Clute; one each to Isaac T. Broadie, Peekskill, N. Y.; A. M. Sargent, Brownsville, Pa.; Geo. A. Ward, Glenville, N. Y.; Frank J. Gleason, Burr Hills, N. Y.; lemon and white, one each to John Dawson, S. Benedict, N. Y.; A. M. Sargent, Brownsville, Pa.; John A. Dewesse, Denver, Col.; and a bitch to John A. Dewesse, Denver, Col.

PRESENTATION.

Girl. E. Link, Terre Haute, Ind., black pointer bitch Girl, by Joe Pape out of Topsy W., to S. B. A. Watson, Jersey City, N. J.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

T. DE C.—Will you kindly tell me what can be done for a setter dog that is always losing his hair? He seems in good health. Ans. Rub the dog well with a mixture of one quart lard oil, a quarter of a pound sulphur lard, and a quarter of black antimony. Put this away for two or three days, then wash off with warm water and castile soap. Repeat if necessary.

BROOKLYN.—As a constant reader of your valuable journal I take the liberty of troubling you for some information pertaining to a valuable Gordon setter which I have owned for some time. That the animal is a valuable one I have no doubt, as several gentlemen of good authority have so stated their opinion, and particularly as she answers faithfully to the description of a thorough-bred Gordon setter as given by "Stonewall." What the animal's pedigree is I do not know, and furthermore I have no way of possibly finding out. Now what I would like to know, as the animal is a bitch, is there any way in which I can secure for her offspring in the future, should I choose to breed her, any kind of a good pedigree. I would also like to obtain your opinion as to what is the best mange cure on the market, and as to whether it makes much difference if the mange be of the follicular or septic type. Ans. Time, and by breeding your dog's offspring to dogs of recognized pedigree is of course the only way your dogs can acquire a pedigree. You cannot manufacture one. You could enter your bitch at a show held under A. K. C. rules by listing it in the Kennel Gazette for a 25-cent fee, and should it win at a kennel club show it is entitled to a free registration in the A. K. C. Stud Book, and there gets a registered number. Glover's mange cure is a good remedy, it will do for either kind of mange, and so will the others advertised in our columns.

D. T. G. Binghamton, N. Y.—I want some advice from you regarding a dog. It is a collie, about seven months old, and we have tried to be very careful with him in bringing him up, and

have him broken very well to the house. He has one very serious fault, which we have been unable to overcome, &c., running away. When he is in the house he will always come when called, but out doors will sometimes go deliberately away from us and be gone ten or fifteen minutes. On one occasion I whipped him severely when he ran away, while calling him, but do not believe that has done him very much good. In all other respects he minds beautifully. If you can suggest a remedy it will be a great favor. Another thing, he is a very poor eater. I don't think he averages six ounces of solid food a day, and that bread and butter with very little meat. Ans. We should advise you to take him out with a long chain or strap attached, and should he show any inclination to leave you, check him sharply with it, at the same time make him understand that he must come to heel when ordered. When you think he understands what is required, unchain him, and should he still wish to run off when called back, punish him. He will no doubt with a little careful handling very soon understand what you desire. Give him a two-grain quinine pill every other night for a week.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MANHATTAN CLUB SCORES.

The following is the result of a very lively rifle match, which came to a close Thursday, Jan. 15 at the new Manhattan Athletic Club ranges, after two weeks of very close shooting. The conditions were any .22cal. rifle, position off-hand, at a 14in. bullseye counting 8 9 and 10 distance 125ft. The prizes were three handsome silver cups valued at \$80, \$60 and \$30 and a Stevens .22cal. pistol. The match was a very closely contested one as to second,

third and fourth place up to the last day, when Capt. Money succeeded in drawing from sixth to third place. Two first prizes were taken by Dr. W. R. Pryor very early in the match and he was never headed, making two 8's. Following are the scores in full: W. R. Pryor.....87 87 86 86 84—130 A. R. Angell.....76 75 70 68 67—355 S. Smith.....30 84 84 83—421 H. O. Shriver.....74 73 71 68 68—334 Capt. A. Money 85 83 82 79—412 J. O. Devereux 72 71 71 70 69—333 S. Slagg.....85 80 80 80 79—404 R. H. Smith.....70 70 62 55 52—312 C. Summerville 81 78 76 75—397 C. W. Minor.....67 64 62 61—330 J. D. Foot.....70 76 76 75 75—375 H. T. Sinclair.....65 60 58 58 57—298 J. C. Taylor.....77 76 75 74 74—376

THE ZETTLER SHOOT.—The three days' shoot at the Bowery range, on Jan. 12, 13 and 14, was a fine success. The out-of-town organizations which were represented were the Queens Rifle Club, the Miller Rifle Club, the Williamsburgh Shooting Society, the Excelsior Rifle Club, of Jersey City, and the Franklin Rifle Club, of Hartford. Of New York clubs the Harlem Rifle Club, the Turtle Bay and the Empire Rifle Club sent some good men, who all went home with prizes. It was expected that Newark would send a few of its representatives, but Mr. Wiegmann, of the Our Own Rifle Club, arrived on Wednesday, as the sole Newarker, and, after shooting a few scores, put up two of 75 each in rapid succession. Shooting lasted until after 12 o'clock, when the bullseyes were measured, and President Walther handed the prizes to the different winners. The scores were as follows: Twenty-five-ring target, two scores to count for the first 5 prizes: L. Flach, M. Dorrier, H. Holges, J. A. Boyken and G. D. Wiegmann scored 150 points and divided the first 5 prizes. H. Walther, A. Stahl and C. Hutch had 75 to their credit and took sixth, seventh and eighth prizes. For the remaining 7 prizes there were 12 contestants with scores of 74. The 73 class was made up of 7 shooters, and 72 was scored by 10. The prize winners on the bullseye target and their scores, every degree measuring 14,000in., were as follows: H. Hodges 9, G. E. Janzer 11, B. Walther 12.5, G. D. Wiegmann 12, M. Dorrier 18, C. G. Zettler 14.5, V. Steinbach 14.5, L. Vogt 11.8, L. Flach 20, J. A. Boyken 20.5. The other close scores were: Overbaugh 32, Baumgart 48, M. B. Engle 24, U. T. Keyes 52.5, Bodenstab 38, Lovelace 44.8, Pope, D. Miller 21, Busse 24, Capt. Dorey 41, Kleinbub 29, Ross 83, Stahl 46, Klingelhofer 23.5, F. Fabarius 31.5, B. Zettler 22, E. Fisher 22.5, W. Vorchach 32, Weeks 24.5.

Identify without question all the American game birds which they may kill. Cloth, 290 pages, price \$2.50. For sale by FOREST AND STREAM.

The "Ace of Clubs" was to have been acknowledged by the FOREST and "STREAM" representative, but he being absent through sickness the reply was made by Mr. H. D. Spencer, a back-slidden newspaper man, who is now studying law at Bloomington, Ill. Mr. Spencer is an ardent canoeist and a rattling good speaker and he made a most interesting relation between the press and the honorable sports of the field.

"The Ace of Clubs" was the closing formal speech, and Mr. J. B. Keogh made it one of the pleasantest. The ace of clubs is the totem of the Chicago Canoe Club, and the sign by which it commands the respect and the token of a top-card organization. Mr. Keogh recognized the fact that the canoe is the only sport which has

the burgee bearing this strange device may lead one. He consulted his hand with laughter and applause, and left a pretty keystone to the oratory of the evening.

The body assembled now sang with great gusto that cheerful air "Put on de Golden Sword," led by Mr. Crane. Then followed stories and song, and song and stories. The old punch bowls got a trifle more hollow looking. "Auld Lang Syne" was sung, and finally, amid a grand circular war-dance, the air of "Home Sweet Home" prevailed, and the entertainment which the Chicago boys had so hard and so successfully tried to make a pleasant one was at an end.

E. HOUGH.

A CANOE CRUISE DOWN THE SUSQUEHANNA

[Concluded from Page 536.]

LOOKING over the waters we both questioned about Commodore, and were disappointed to see him dodging the rocks through the shore channels. Then casting our eyes down the river we saw Mac and Ed resting on their paddles as though nothing extraordinary had happened. It was the work of but a few moments till we had our canoes holed out, standing in the meanwhile in water up to our waist, to keep the canoes from having holes bored into them by being dashed on the ledges by the reaction of the numerous whirlpools. During this pleasant operation exclamations came from the Doctor: "My good nicker-plated rudder gone. Well, and where is my hat? Yes, and I busted my hatch, and the bulkhead is gone!" And looking further he found that he could count on finding that the work was a much shorter time than he could sum up the lost, as the saved were far in the minority. As for me it did not matter, as this was not my first swamp. Vaulting into our craft we ran the second rapid, and were then surprised to see the others up at the station now at Shenk's Ferry.

At their call to come and get a drink of coffee we went in, were asked to muddle to partake of the refreshments. While sipping our coffee we were entertained by an old craftsman, filled to the brim with Highspire whisky. He made us miserable by his praise of himself; how he ran the channels in this and that stage of the water, until we were glad to pay for our coffee and leave.

Our next thoughts were turned toward a camp for the night. We encountered rough water for two miles, when we ran in on shore at York Furnace, preparatory to establishing a camp. There we could find no wood, but on looking just opposite on the island we saw an elegant spot and plenty of fire-wood; so we at once re-embarked. Landing, we had to carry our things about 150 ft., but were well repaid for it, as the spot was situated on a bluff and the trees high, which made the most delightful camp since the start. After taking everything out of our canoes and turning them over on the pebbly shore, we carried our possessions up to the camp site and then started a roaring fire.

In the meantime a smaller fire was lighted and supper put on. A rope was then stretched around the camp-fire, and on it we hung our clothes and blankets to dry. In the tent which we pitched, we prepared to bunk for the night. This night, amid all the hardships that the day brought to us, was the most enjoyable. We had as beautiful a place as the eye of man ever rested on, seemingly surrounded, on account of the many curves that the river takes, by the most picturesque mountains.

Just before retiring we had a view of the most beautiful night scene. Far away to the east on the top of the long ledge of mountains, could be seen a light, looking in the distance like a huge camp-fire of some huntsman. After a little waiting we could see it creeping up and up, now and then hiding from view, behind the thick foliage, and at last our waiting was rewarded, as the moon, the beautiful orb of night, rose from behind the mountain and shining down the valley in all its glory. "Well, I am going to turn in, I am tired," came from Mac, and following suit we all turned in and were soon resting in the arms of Morpheus.

Thursday, Aug. 13, found us up at 6:30, and we wrote some postals and handed them to the ferryman who came across to the hotel on the west shore. Breakfast over, we again packed up and started on our journey. We encountered rapids at every hundred yards, and after running a mile of very rough water we rounded the bend near Suquam station. There we went through some heavy waves that necessitated a stop to bail out. Just here is where the two channels of the bay meet, and the water runs between a mass of boulders, towering above the water's edge to a height of 50 feet. The water is so fast, that it is impossible to make a landing. The river, two miles below, is said to be 100 ft. 150 ft. deep. The river is also full of curves, and with the rapidity of the current, the whirlpools and the eddies are abundant, making paddling difficult and tiresome.

Paddling through this wild stretch of country, we observed on our right a beautiful club house, situated on a very high bluff, overlooking the river, and on the left a fine view of the railroad, we found it to be the Ridgway Fishing Club, of York. A short distance further down we passed McCall's Ferry, at which place we saw a number of fishermen, and of course, propounded to them the same old story of how far it was to different places below and whether we would encounter any rough places, in answer to which they told us a book full, but we knew in a short while that what they told us was only fisherman's talk. The river below gradually widens out and takes a straighter course, and as the wind was blowing with terrific force against our faces we moved uncomfortably slowly.

Doctor turning in his canoe called out, "Do you hear that, fellows?" and it needed no explanation, as coming from far in the distance could be heard the roar of some great falls or rapids, we knew not which. Working along under a leaden sky, at the time, we sighted the head of the rapids and were soon upon them.

The Doctor headed for shore and we all followed and got out and examined them. After holding a council we again took up our paddles and in two hours, by wading, paddling and lifting our canoes over large rocks, we succeeded at last in covering the hundred yards of the worst rapids some we had to contend with, and on inquiring found them to be the noted Cully's rapids. The distance of three miles to Fite's Eddy was covered in a short time, at which place we made a brief stop and inquired further of the river.

At this point it is wide and along the Lancaster side is very swift. We skirted close to the shore, as the trees overhanging the river and making the water very narrow, we had to make a rate of 6 or 8 miles an hour. Back at Cully's Mary and I tied our cravats to our penants to dry, but as we were near Peach-Bottom, 4 miles below Fite's Eddy, Mac found both pennant and cravat gone and was without that piece of attire for the rest of the trip. After landing at Peach-Bottom and tying our painters fast to an old steamboat, we got out and went up to the hotel and made a purchase of some milk and sandwiches, the sandwiches measuring about 8x3 in. Disposing of this lunch we went back to the canoes and helped our commodore to pack up, preparatory to shipping home. Our hearts full of sorrow for poor commodore we cast off our painters and amid farewells, ending up with the club yell, Rah! Rah! Rah! H. C. C. and a tiger, we moved off.

The run from Peach-Bottom to Bald Friar, 15 miles below was a very fascinating paddle, the water being so fast. After passing Bald Friar it was difficult to find a channel through a fish dam, which made it necessary for us to get on a small island and examine it from below. Lurching our canoes again, we ran the dam without any trouble and we were now on the alert for a so-called Hollow Rock, a dangerous place, which we had been cautioned about at Peach Bottom. Hearing the roar of heavy rapids ahead of us, and not seeing the river for a considerable distance below, we knew that we had a very steep rapid to go through, or else we were nearing the breast of a dam.

The idea of dropping suddenly over a falls was not pleasant, so running to the left, we stopped on a neck of land, and there the Doctor and I got out and waded to the edge of the turmoil. We found it to be a small island, with the water boiling and heating itself into foam, making such a noise that to hear our talk was impossible. Tramping back and getting into our craft, the Doctor started out and struck the channel and went through like an arrow, for it seemed but an instant until he was in smooth water, waving his hat for use to come ahead.

Mac pushed off, but on account of a small whirlpool was unable to make his way. He was scared, looking back at the fast water over backward, but strange to say, bobbed up at the foot in shipshape condition. Ed concluded still to change the mode of running rapids by getting into his canoe, while I kept hold of one end with a rope, which nearly ended in a ducking for me.

Left to myself, I had to manage the best I knew how, as the other boys were 150 yds. below me. Swinging along the shore until I got to the head, I got into my canoe with more or less difficulty and succeeded in skirting along the shore, making the run without accident.

Coming up with the boys, I found that they had ascertained from several men on shore, that the place which we had just come through was Hollow Rock, which was a surprise to us, and a very agreeable one. Had we had information gathered along the route, we learned that after passing Hollow Rock we had nothing more to encounter in the way of rapids.

Strong head winds and a slight rain make us a little discouraged, and to find a suitable camp was our next ambition.

The current of the river takes a sweep to the right about one-quarter mile below Hollow Rock. Here we found ourselves on the right hand shore and soon approached a large frame bridge that crosses the river. Seeing a number of surveyors, we inquired the name of it, but they did not know—"Just arrived," they said, and it was not until afterward that we found out that it was the Coneywango bridge, opposite Coneywango Station on the P. D. and C. R. R.

Adding from under the bridge Mac said, "Look down there, see that bridge, that's Hayre de Grace, I'll bet a dollar," and there in the distance we could see a span of the bridge at Hayre de Grace. This sight revived the boys' spirits, and further down could be seen an island, where we concluded to camp for the night. Passing through a succession of small rapids, we heard Ed grumbling to himself, and found out that he had hit a rock and stopped. Working on down, we ran in on the island, that we set out for as our stopping place, and Doctor got out to reconnoiter, but pronounced it unfit for a night's stay, and as we had few if any provisions, we decided, one and all, to go over to shore and buy some food and camp there. Sutting the action to the word, we went across, and while Mac and the Doctor went on a foraging expedition, Ed and I took a nap. The boys reappeared laden with a dozen ears of corn, a dozen eggs, two quarts of milk, and a loaf of bread, all for the sum of 50 cents.

Cruising along the mainland for a short distance we ran in on shore. Carrying our canoes up the grassy bank we made our fire, preparatory to getting supper. This being accomplished, supper was served. Mac and Ed attended to that part of the programme, while the Doctor and I put up shelter for the night. Supper soon over, we covered up the canoes and their contents carefully, as the sky was dark and the air was heavy, cautioning us to make ready for a rain, and rain it did before we were ready for it.

Ed intended to sleep in his canoe, but was so long in making his cot that the others could not sleep, and hence he had to sleep in the tent with us. It poured all night, and on rising in the morning I found my canoe half full of water after all the trouble I took in covering it up.

Breakfast was prepared with difficulty, as the wood was wet; but after Doctor exercised himself in coaxing and blowing he got the fire under way and cooked some coffee and eggs. About this time a little pickaninny appeared among us so suddenly that we cast our eyes upward expecting to see a few more drop off the trees overhead. By questioning the little dark-skinned fellow we found out that he could get us some milk, and forthwith we sent him for it with two jars. A few minutes' wait brought the pickaninny and then we sat down to breakfast. The eggs in particular were good, and since they came from the forest we were at that late date we found how good a cook the Doctor was.

Those eggs were the only things he cooked on the trip, and we praised them up so as not to discourage him if he should ever attempt it again. Clearing up the remains of our breakfast we gave them to the small African, who to repay us, took our utensils up to his house and had them scoured and cleaned, the first time they had been since they came into the world. Then he put up our kit into as small a space as possible, as we would reach our destination in an hour's paddle we launched our canoes. In the meanwhile the youngster came down with his fishing rod, and after some persuasion I got the loan of it, and in a short time caught him a fine string of fish much to his amazement and delight. An old fisherman sailed into our landing and got out to examine the little bells, as he called them. In answer to our inquiry of how far it was to the port, he said it was 3 miles, as he sailed up and down every day.

Pushing off we paddled off around the curve and saw Port Deposit ahead, but the distance was only one-half mile, so we put that fisherman's lie down with the rest.

Our run to port was pleasant and the waves were rolling up from the bay, making our light craft bob up and down like so many corks.

We made a landing opposite the station, and at once went up to the hotel and there took a bath and brushed ourselves up in our nearest.

Crossing the street from the hotel we got shaved and there it was time to end the trip.

The Doctor and I expected to go on, but on account of being poisoned on my hands and other impediments, much to Doctor's discomfiture, I decided not to. We just had time to get our canoes to the station and to buy our tickets when the conductor shouted, "All aboard," and we started homeward.

TRU-D.

THE HOISTING SAIL COMPETITION.

We have received from Mr. Zerega the following conditions governing the contest for the prize offered by him: For the best hoisting and lowering rig, competition to take place on July 6, from 1 P. M. until sundown. Place, Brooklyn C. C.; judge, Mr. W. P. Stephens, whose decision shall be final. Competitors, the members of New York C. C., Brooklyn C. C. and the canoe clubs of the Passaic River. Entries to be made in writing and to be sent to Mr. W. P. Stephens, at the office of FOREST AND STREAM. A second prize will be offered if five, and a third if ten entries are made before April 1. Conditions governing the contest as follows: Rig to consist of at least two sails, the canvas must be under way and sails hoisted and properly furled at command of judge. The contest is to be determined by points, which are to be counted as follows: Perfection in hoisting, 3 points; perfection in lowering and properly furling, 3 points. Perfection in balance (to be determined by sailing without rudder and with fixed centerboard or centerboards, over a short course to windward and to leeward), 5 points; merit and beauty of design of sails; neat and seamlike finish, 3 points. Possible score, 17 points. Should the score of any boats tie, such boats must be rejudged, and on the same day if possible. Double entries permitted, but only one prize awarded to any competitor. Reading not considered.

MASSASOIT C. C.—The Massasoit wigwam in Boston Harbor, was a scene of life and enthusiasm on the evening of Jan. 12, on the occasion of the annual banquet of the Massasoits. Gaily decorated for the occasion was the club-house, which stands isolated on the margin of the bay, looking on to the sometimes rippling, sometimes surging waters, the scene of so much summer activity and pleasure, surrounded by a harbor full of yachts and smaller boats, whose towering masts constitute a forest in the midst of which the pile-built wigwam is successfully hidden from the rude gaze of an unsympathetic public. After some time had been spent by the Massasoits, the neighboring Puritans and the Lynn Sagmores in fraternal chat, the more serious business of the evening was taken in hand, and the canoeists sat down to a delicious banquet. About fifteen guests and ten members were present. After the spread the tables were removed and a lantern exhibition of club camps and cruises was given by Mr. Benedict. The club house was tastefully decorated with flags, paddles, etc., and a very enjoyable evening was passed. The fine club house, built on the "knoll," Wilson's Point, was finished too late for any formal opening last season, but the members have yet considered races and a reception for Decoration Day next.

THE TURTLES' SLEIGH-RIDE.—On Jan. 9 the Mohican C. C. had a grand midwinter frolic, under the leadership of Capt. Winné, an expedition in two large sleighs to the club's summer house down the river, where Mate Wheeler and his aids had gone in advance to prepare fires and a feast. The hill near the house was converted into a toboggan slide, lighted by a bonfire and Chinese lanterns; the canoeists bringing toboggans with them. Music was furnished by the banjos and guitars, and a grand feast was spread in the pretty little club house, the party reaching home very late. Capt. Winné was not only gone far toward reviving the old-time spirit of the Turtles in summer but he has kept it alive in the winter, too.

PURITAN CLUB Annual meeting, Jan. 17, officers elected: Com., Edw. S. Gilmore; Vice-Com., J. S. Dean; Rear Com., Jos. E. Hill; Treas., Lotthrop Dodge; Sec., James W. Cartwright, Jr., 611 Washington street, Boston; Board of Directors, above officers and Francis J. Baxter and Samuel A. Brown; Membership Com., Geo. R. Underwood, J. E. Hill, J. S. Dean; House Com., E. S. Gilmore, Howard E. Jones, Messrs. J. R. Roberts and J. M. Allen; and a condition and Prospects brief. Fleet comprises 20 canoes, 8 canoe yavls, 6 new in 1890.

SINGLESTICK RACING IN 1890.

THE 40 FT. CLASS.

WHETHER or no the past season in the 40 ft. class has justified the brilliant predictions of last winter and proved a great success to the readers may judge for themselves from the accompanying table of races. This must be plain, that the races have surpassed in number those of any class in previous years, that a large proportion of these contests have been spirited and exciting, and that there is nothing in the results of the season of 1890 to contradict the conclusions drawn in 1889 as to the superiority of the moderate type of keel boat over all others. The promise of the winter was unusually bright, while many of the old favorites, Bansee, Chiquita, Baboon, Xarx, Pappoose, Nymph, Gorilla, Alice and Verena, had retired from the racetrack, and though but three new boats were building to replace them; these were all racers and of the latest model and build. At the same time there were still a number of the '89 boats that were preparing for another trial, Liris, Marquita, Tomahawk, Minerva, Helen and the untitled Choctaw. Nearly all of these were undergoing important alterations, mainly in the direction of Minervaizing.

Helen was altered by raking her sternpost, cutting away the forefoot, lowering her ballast and the substitution of an entirely new sail plan; Marquita was also taken in hand in the same way, her ballast being lowered by recasting in wider piece of her entire keel, with two extra tons added; her forefoot being cut away; while Liris received a new rig, somewhat smaller than her original sail plan, including an outfit of Laphone canvas. Tomahawk was but little changed, being painted black in place of white, but the hull being unaltered. Minerva was unchanged in hull, but had a new suit of Laphone canvas and new gear, her sails being altered. Before the season opened she changed owners, being sold by Admiral Tweed to a brother of Mr. Royal Phelps Carroll, owner of Gorilla, Capt. Charles Barr still retaining command of her. Another of the '89 boats was Choctaw, a Burgess centerboard, similar to Nymph, completed late in the season and not raced that year. Her owner, Mr. Arnold Thayer, proposed to race her, and she was fitted out early in the season. The only new boats, those before mentioned, were from Mr. Burgess's designs, the first of them, being for Messrs. Charles F. and George O. Adams, former owners of Pappoose and Baboon. Gossoon, the new craft, was a keel boat, like both of her sisters, but considerably narrower, being but 12 ft. extreme beam, or 6 in. less than Pappoose, a boat 4 ft. shorter. The construction, with canvas and oak frames, was not so admirably light as the previous Burgess boats, and she was fitted throughout for racing, every effort being made to save weight in hull and rig. In marked distinction to most recent yachts, she, like Volunteer, weighed less than was estimated, floating above her lines and with a waterline of but 39 ft. 6 in. when finally raced, and this after she had been coppered in place of the usual bronze paint. A sister boat to Gossoon, Mr. C. H. W. Foster's Ventura, a centerboard boat of deeper and narrower model than any of her predecessors, and with the same construction as Gossoon. She was but 12 ft. 6 in. beam, about 2 ft. less than Nymph and Verena, while her draft was about 7 ft. 6 in. Beside these two built by the Lawleys, another centerboard racer, one foot wider and not quite so deep as Ventura, but of the same construction, was built by Pleggrass for Mr. E. D. Morgan. As each of these boats differed from the old ones as well as from the other two, they formed an important addition to the 40 ft. racing fleet.

The first race of the year was the little sweepstakes on May 30 between Helen and Ventura, won by the former, at Marblehead; but the real opening of the season was in the sweepstakes of the Seawanhaka C. Y. C. on New York Bay, a week later. Although the race had been long announced and entries made, the boats preparing for it, yet the race day, June 7, found the fleet all belated, only Minerva and Choctaw being anywhere near the line at the appointed hour. The conditions of the race included a one gun start at 11 A. M., waiting for no one, but when the gun fired only two yachts out of six entries crossed. Liris finally came down with a bad start, and 13 min. later from Boston. The first time by Mr. Bryan Alley, with Choctaw, steered by young Mr. Fish, anywhere within 5 m. of her stern. This continued until the Hook was reached on the way in, when by some clever work with the tides Liris, steered by Mr. Lovejoy, cut in ahead, being first at Buoy 10, with Choctaw just astern and Minerva third. From here there was no more to be said, for less than a minute later, while Choctaw took the second prize, Liris succeeded in making up all of her handicap, making the best time over the course, but as all times were taken from the gun this counted nothing. The race proved little, through the variable conditions and the very uneven start.

The main cause of the delay was the overmastering of nearly all boats on the day. Minerva and Choctaw, in particular, running so far over 40 ft. that it was necessary to strip them very close to get them in. This caused much delay in the two or three days preceding the race.

Only two days later Minerva, Liris, Helen and Choctaw met again in the spring regatta of the Larchmont Y. C. in a fairly good breeze, Liris and Minerva making a most interesting race, but in a very short time Liris made a very bad showing, being within a couple of minutes of the winner; but it was evident that though much better than in her first year she had no place with Minerva. She started at once for Boston, afterward sailing one race on June 17 against Ventura, who beat her; this ended her racing and she turned cruiser.

Only three fortunes started in the Atlantic Y. C. annual regatta of June 17, but one of these was Minerva and another Chiquita, a yacht that had never raced, though out of all of the previous year, and reputed to be very fast, a good contest was promised, an added feature being the presence of Choctaw, who had been sailing very well in the brushes about the bay. Though the weather was rather too fine for good racing there was a very fair race between the three, Liris making a strong showing in the near end of the day, but at the end of the race, however, through an inexcusable blunder she went on the wrong side of a channel buoy, thus being disqualified. The corrected times showed her nearly 5 m. ahead of Chiquita, but her blunder gave first prize to the latter. Mr. Carroll at once challenged Com. Lawton for a match and the challenge was accepted, the race being arranged for June 23, for 250 yds. start, but when the day came Mr. Carroll had gone off cruising in Minerva and the race was never sailed.

The Corinthian Y. C. regatta followed the Atlantic, Minerva parting her bobstay within a few minutes of the start, and withdrawing after an ineffectual attempt to repair damages. This left Choctaw, Tomahawk, Marquita and Broncho, the latter not finishing. Choctaw won, Liris and Tomahawk second. Next day in the regatta of the new K. C. Minerva was ready at the line, beating the other three by over half an hour.

All the races thus far had been sailed in light breezes and smooth waters, but two days later, in the annual regatta of the Seawanhaka C. Y. C., there was a strong wind from S.E. and a roll of sea from the Spit out to the Scotland. A cold drizzle of rain made the day anything but cheerful save to racing men. With a long beat from off Bay Ridge to the Scotland, something that is a notable exception over this course; there was a fine race for the spectators. The event of the day was the sailing of Marquita, though she had shown considerable improvement over her first year in the previous races, especially in the way she carried her canvas, she had won nothing better than three or four places in as many starts, but on this occasion she broke up, and soon left both Minerva and Liris astern. She gained some advantage from the rain, which only made her old cotton mainsail set better, while it spoiled for a time the new English canvas of Minerva and Liris, but the main factor was the very skillful handling of Mr. Burgess himself, who was in command for the day. She not only carried her canvas better than the other two, but she was outside the Hook, and went along dryer and easier than either. At the same time Minerva was within her allowance of her all day, and would presumably have won in any event, but her chances were improved by the loss of Marquita's topmast at Buoy 10 on the way home. Off the wind in this breeze the loss was comparatively small, and barring the mishap Marquita could hardly have gained enough to make a difference in the final result. Liris was not in addition to the regular prize, the Leland cup, with Com. Center's prize for her helmsman, Mr. Alley.

On the following Monday a special sweepstakes for the 40 ft. class was sailed by the Seawanhaka C. Y. C., only Minerva, Choctaw and Liris starting, though the day promised well for a race, with a moderate S.E. wind. This was a receptive, however, as the wind fell high and tricky. Minerva won without any particular effort, winning the regular prize and the Carroll cup of '89, Liris and Choctaw making a hot race astern, finishing even after a most complicated series of luffing matches across the bay, Choctaw consequently taking the race on corrected time. This finished the

Nos. 14 and 15. races on runs of New York Y. C. Cruise, count as one race.

S. $\frac{L + \sqrt{SA}}{2}$; C. L., classed by corrected length; W. L., classed by waterline; s.o., sail over; g., grounded; d., disabled; w., withdrew; n.t., not timed; p., disqualified; m., private match.

races in New York Bay, with Minerva easily first and nobody in

On July 4 at Larchmont Minerva, Liris, Mariquita and Choctaw were the starters, in a light and fluky race. Minerva won by over 2m. from Liris, with Mariquita far astern and Choctaw withdrawing. In addition to the regular prize Minerva won the Gould cup.

Thus far nothing had been heard from Gossoon, but she had been sailing about Marblehead to stretch her sails and gear. Her first race was the July 4 sweepstakes with Ventura and the two 46-footers, Thelma and Millicete, in which she lost her hollow topmast when holding the lead in the middle of the race, disabling her completely. Ventura did poorly in this race and was not timed. The meeting of Minerva and Gossoon was looked forward to with an interest almost as deep as that of the Cup races, but unfortunately the first race, the Eastern Y. C. annual, on July 10, was a failure, not being sailed to a finish. In the light and variable winds through which the yachts drifted all day, Gossoon did rather the better work, while her sisters, Ventura and Pappoose, were far astern of Minerva. Next day there was a fine breeze and a tumble to the waves, making good racing; Gossoon and Minerva running and reaching the first twelve miles with but 13s. between them; but on the wind Gossoon gained over 3m., winning by 2m. 20s. corrected time. Ventura beat both the others down wind, in part owing to her sailing her own course while they were fighting in company; but on the wind she did very poorly, finally giving up. Pappoose also did not sail the race out, these two days being her only trials during the season.

Following this race, which still left sufficient uncertainty to make the coming contests very interesting, was a full of three weeks before the forties met again in the New York Y. C. cruise. Gossoon sailed in the Golet cup race, doing very well for her size, but the first class race of the cruise was for the Iselin cup, \$250, sailed off Newport, 12 miles to windward and return, on Aug. 2; the wind being but moderate with a clear day and smooth water. Starting 4m. after Minerva, Gossoon had nearly caught her within the first 20m., and all looked for a clear walk-over for the Burgess boat, but after this sudden gain Gossoon failed to carry out the programme, and at the turn was still a little behind her time, which little in the long run home she failed to make up, Minerva finally winning by 49s. This was the maiden race of the centerboard Moccasin, and though she was but third, being 10m. astern of Minerva, it is the best out of her five starts. Mariquita, though again steered by Mr. Burgess, did nothing in this race save to beat Choctaw, the two never being fairly in it with Gossoon from the start.

Liris was with the fleet in cruising trim, and did not enter this race, but she took part in the two runs from Vineyard Haven to New Bedford, and from that port to Newport. On the first run into New Bedford Liris and Moccasin started, Minerva having put into New Bedford for a topmast to replace one lost on the run to the Haven, which does not count as a race. Liris was delayed shortly after the start by going to the assistance of a yacht in distress, while Moccasin broke her rudderhead and withdrew. On the second run she was again in hard luck, taking the ground and being towed off, which put her out of the race. This race was very fluky and amounted to little, but Minerva won with Gossoon second, Liris not being timed. The final race of the cruise, a special event for a \$200 prize given by the club, found Mariquita again with the other four. As on the previous day the wind was light and fluky Minerva was 1m. 15s. ahead of Gossoon at the end of the 9 knots beat out, but Gossoon overtook her coming in, finally winning by 3m. 5½s. Mariquita and Liris were never in the race, being over 15m. astern of Minerva at the finish, while Moccasin varied proceedings by smashing her centerboard and giving up.

The Corinthian Sweepstakes followed the close of the New York cruise, as last year, the course and conditions, even to the wind and weather, being practically the same. The starters were Gossoon, Minerva, Mariquita, Choctaw, Liris, Ventura and Moccasin. Minerva, with Mr. Will Fife on board, though he took no part in the sailing, was in trouble before the start, carrying away some of her topmast gear, and crossed the line 10m. astern of Gossoon, with a handicap of 5m. In actual time she beat Gossoon nearly 4m. on the windward leg of 8¼ miles, lost half a minute on the final leg, a reach home. Thus, in actual time, she did the best work of the day, but her big handicap made her official elapsed time 2m. 13s. greater than Gossoon's. This is so near to her allowance from Gossoon that it was a matter of very close measurement between them as to the winner, and a lengthy correspondence has resulted between the club and Messrs. Burgess and Adams. We understand that by the official measurements of Mr. Hyslop for both boats, which it was agreed in advance were to govern this race, the prize goes to Minerva by a few seconds, but in so far as the merits of the boats are concerned this is a small matter in view of her large handicap which she succeeded in working off. Mariquita made the best showing of the year in this race, save in the Seawanbaka annual, being third boat, and within one minute of the leaders. Liris was a couple of minutes astern of her, while Ventura and Choctaw were never in it. Moccasin broke down and withdrew, as usual.

The race now shifted to Marblehead, and the Beverly Y. C. gave a special race for the forties, after which the Corinthians of that pretty port followed their brothers of New York in a repetition of the very successful series of the year before. The Beverly Y. C. race was sailed on Aug. 17, the course being 10 miles to windward from Marblehead Rock and return, the weather being light and fluky. Minerva was 9min. ahead of Mariquita at the outer mark, and nearly 15 ahead of Gossoon the fourth boat, Ventura, parting her obstay and withdrawing. Minerva finally beat Mariquita by 11min. and Gossoon by 15min.

This year there were 3 instead of 5 races in the Corinthian series, the prize being a \$300 cup, presented by Messrs. Augustus and Edward H. Choctaw, and Edward Thayer of Pappoose. The first race was very much of a fluke, Ventura beating Gossoon 17min. and Minerva nearly 23min. in 24 knots, Mariquita being second. The second race, in a strong breeze and sea, was won by Minerva by 2sec. only from Gossoon, Mariquita being 3min. astern and Ventura 7. The sail-off between Minerva and Ventura, in a light and baffling wind and some sea, was won by Minerva in 24min. for 20 knots, thus giving her the cup, as in 1888.

Up to this time Minerva had beaten Gossoon five times out of eight races, or counting the Corinthian sweepstakes for Gossoon, as was claimed, the score would be even. To settle it finally, Gossoon challenged Minerva for a series of three private matches for \$100 per side, the mean of the allowance of the Eastern and New York clubs to be used. In the first race, on a rainy day with a strong wind and a good sea, Gossoon won by 5m., and on the second, with a moderate breeze and less sea, she won by nearly 4m.

The rest of the racing of 1890 is soon told, Gossoon and Ventura sailed two private matches off Marblehead, Gossoon winning both, then she started in a private match with the 46ft. centerboard Millicete, losing her gammon iron when near the end of the race and with a good lead. This kept her out of the Eastern fall regatta, the last event of the year at Marblehead, in which Ventura was classed with the 46ft. boats, beating them by the aid of their own tardiness in starting, all but she being handicapped badly.

The season ended at Larchmont, where several particularly good races were sailed. The two club races of Sept. 6 and 8 were sailed in light and fluky weather, though Minerva won both very

easily; but they were followed by two days of rough sailing in a N.E. gale, the races being both private matches between Minerva and Liris. In the first Liris broke her tiller, being obliged to give up, though Minerva completed the course in the worst weather in which the forties have yet raced. Next day the weather was still worse, Minerva sailing with three reefs in and Liris two, Minerva winning by 7m. Next day Liris sailed a private match with the 46ft. Jessica, and was again beaten, the race being mainly running and reaching in a good breeze and disturbed water. A day later Mariquita and Liris met for the last time in the regatta given by the Manhattan Athletic Club of New York, an organization which has lately included yachting and canoeing among its many specialties. Mariquita and Liris decided also a private match by the result of this race, both prizes going to Mariquita.

This ended the season in the 40ft. class, the total results being summed up in the table. As in the previous tables, we have counted the first places won, whether each carried a prize or not, and also the second place where four or more started. We also give the actual number of prizes won by each yacht, including special cups. Leaving out Chispa's percentage of 100, to compare her only with one picked boat from the large Burgess fleet. Through the season three new racing boats sailed against Minerva: Gossoon, Ventura and Moccasin; 11 races being sailed, of which Minerva has won 6, Gossoon 4 and Ventura 1. In competition against the entire Burgess fleet, in 21 races, Minerva has made being 14 firsts, 4 seconds, 1 fourth and 1 break down, beside which is the Atlantic Y. C. regatta, in which she outsailed two of the other boats, though disqualified for a blunder. She and Gossoon stand so far ahead of the fleet that the doings of the others is of secondary interest.

The Burgess centerboard boats have done nothing, showing a total of 4 first places for 25 starts. Choctaw has once beaten Tomahawk and Mariquita; the new Ventura, though pluckily and persistently raced, has once beaten Minerva and Gossoon, the race being a fluky one. Moccasin's achievements are limited to a third place out of 5 starters and 4 breakdowns. Mariquita has been considerably improved by the alterations in her keel and ballast, and has been very steadily raced, but she won only a single race, that with Liris on Sept. 13. Her best work was in the Seawanbaka annual, but beyond that her next achievement was only a third prize in the Corinthian sweepstakes. She has, however, succeeded in beating Liris, coming in ahead 5 times out of the 8 races they have sailed together. Liris has but one first to show for a large number of starts, beating Minerva once in the early part of the season. Gorilla and Alice have also joined the cruisers.

This year's racing has settled the fate of a number. Helen has been sold for a cruiser, Pappoose has been sold to race on the lakes, where she will be in the 46ft. class, with the 20-rater Vreda; Mariquita is for sale, her owner having a new Burgess 46-footer under way; Minerva is also for sale. Choctaw has already been sold for a cruiser, as well as Awa, whom we have not included in the table as she has sailed only a few local races. Liris is now being altered for cruising, a cockpit and wheel being added.

The future of the class for 1891 is yet uncertain, but the Boston 46ft. boom has not reached such formidable proportions as to threaten the complete extermination of the 40ft. class; a new 40 is promised from a design by Mr. John B. Paine, who has been so

successful in the 24ft. Swordfish and the 20ft. Hornet, and she would doubtless enliven the racing if built. Gossion may be expected to go a little faster in her second season than in her first, while Minerva is not yet beaten off the field. Her old skipper, Capt. Chas. Barr, has found a new berth, and she herself is for sale, so it is uncertain whether she will be raced at all, and if so, how well she will be sailed. The only new boat thus far is the Palma craft, Mr. Burgess having orders for 40ft. and 30 racers, but no forties, while New York is building nothing at all.

FOREIGN YACHTS IN AMERICAN WATERS.

FOR ten years after the first races for the America's Cup, in 1870-71, British yachts were unknown in American waters; now and again a large steamer or schooner called at a few ports in cruising, but racing yachts, and especially small craft, were unknown. In 1881 Madge was sent out here by Mr. Jas. Coats to race with American yachts, the result being now a matter of history. Madge was followed by Maggie, Stranger, Uldia, Genesta, Clara, Galatea, Shona, Delvin, Thistle, and later by Minerva and Jessica.

Under a provision of the Revised Statutes of the United States, Section No. 426, all of these yachts have been allowed the same privileges as American-built craft, including an immunity from tonnage charges, whether used about the coast only or on the seas. In the cases of Maggie and others that have been imported by steamer, import duties have been collected, but in all other respects they have been as free as American yachts, their owners in some cases flying the American yacht ensign. The exact status of these vessels has never been clearly defined, but as a matter of courtesy that is common among nations they have been accorded the usual privileges of pleasure vessels.

Within the past two weeks a very important bill has been introduced in the Senate by Senator Frye, of Maine, which reads as follows:

"A bill to regulate the rights and privileges of pleasure vessels and yachts of foreign build and ownership.—Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That Section 426 of the Revised Statutes is hereby amended by the addition after the word 'tax' of certain provisions contained in the words following, to wit: Any such vessel, however, remaining in the United States a longer period than six months in any one year, or sold to or becoming the property of a citizen of the United States, or chartered from the owner, shall become subject to duties at the rate of twenty dollars per gross ton, and if navigated by a citizen of the United States shall become subject to a tonnage tax of one dollar per ton at every port at which she may arrive. Any vessel, whether used as a pleasure vessel, yacht or otherwise, and whether of foreign or domestic build or ownership, not documented by the Government of the United States and not otherwise provided for by law, found navigating between district and district, or between different places in the same district, shall be liable to a fine of \$100. Any vessel not documented as a yacht of the United States, displaying the yacht ensign prescribed by law, shall be liable to a fine of \$30."

The provisions of the proposed law are plainly expressed and easily understood; in the case of visiting yachts, such as Genesta, Galatea and Thistle, they will be allowed to sail in American waters for six months in any year, but no longer for instance, if Lieut. Henn should pay another friendly visit in Galatea, as he did in 1886-7, arriving in August of the former year and staying until October of the latter, he would be compelled to pay duty on his yacht about \$1,800, and beside this a tax of \$80 to \$90 at every port at which he called, besides being liable to a fine of \$100 every time he got under way.

In the case of such yachts as Minerva, Clara and Jessica, owned by Americans, not even the six months grace is allowed, but if the proposed bill becomes a law these yachts will be compelled to pay duty, and after that will be unable to leave their moorings. Their owners will have the choice of breaking them up for the lead and copper, or of making house-boats of them.

The hot competition which has been carried on for years be-

tween American and British designers will be very quickly ended, not by honest victories over the British craft on the race courses, but by the cheaper and simpler process of prohibiting them from sailing at all. With Clara out of the way Anconada, though she has never beaten the cutter, can claim to be the fastest of her class. In the same way any possible danger of a defeat of the new Burgess 46-footer by Jessica, will be removed. In the 40ft. class, as we show elsewhere this week, the honors of the year go to Minerva, she and Gossion being even in the races in which they have met, while she has beaten all the rest of the class easily. With her out of the way Mr. Burgess can safely claim the supremacy in the 40ft. as well as the 46ft. class.

The proposed bill is an admirable complement to the new deed of gift; that document virtually stops racing in the larger classes but still fails to reach the case of small yachts like Clara and Minerva, which have crossed the ocean and beaten the home craft. All of this is remedied by the new bill; it will still be possible for British yachtsmen to send their yachts over here for a short time, but why should they trouble themselves to do so when it is evident that Americans do not want international races and have taken all possible means to protect themselves from challengers in any class?

Should the bill become a law foreign yachtsmen can place but one interpretation upon it and its fellow, the new deed of gift; that they are not wanted on this side and, though there are certain conditions under which they may come, their absence will be much more precious than their presence.

The great factor in the advance of American yachting since 1880 has been the continual presence and competition, often with success, of the British yachts. Madge and her sisters, down to Minerva, have served as models, their good points have been closely copied, their bad ones have shown us what to avoid; now that we have presumably learned all that is possible from them, it is proposed to remove any danger of further defeat by prohibiting them from racing.

The proposed bill is an excellent one—for the pockets of American designers and builders—but it is a most unjust one to the many American owners of imported yachts, who are robbed of their property without redress. We do not know who are behind the bill, but we look for its condemnation at the hands of every American yachtsman who values fair play before any false claims for national supremacy gained by barring out all rivals.

The greatest hope for American designing lies in free and unrestricted competition with all nations, and not in a system of protection which handicaps all rivals and restricts competition to American craft alone.

ICE YACHTING.—On Jan. 16 the race for the Van Nostrand Challenge Championship Cup of America was sailed on Orange Lake, the course being 20 miles, 10 rounds of a 2 mile course. The wind from the north, light to moderate. The starters were:

Scud, J. Darby	1 22 43
Windward, Chas. Higginson	1 27 28
Lady of the Lake, Wm. Pinkney	1 28 22
Dragon, Chas. Merritt	Disabled

Dragon led for the first 4 miles, when the clew of her mainsail caught away, and she withdrew, after which Scud, the famous Shrewsbury boat, won easily, as above. The judges were: Judge Charles F. Brown, of the Second Division Court of Appeals; Dr. A. A. Waldron, Gardner Van Nostrand, ex-Alderman B. B. Moore and Vice Commodore Willett Kidd.

HUDSON RIVER Y. C.—Officers, 1891, Com. H. F. Allen; Vice-Com., I. E. Drew; Treas., R. V. Freeman; Sec., Harry Norton; Meas. R. Murry; Fleet Surgeon, A. W. Becker; Steward, J. T. Hufnagle; Trustees, W. L. Brigham, B. Alexander, J. Stilger, A. A. Bueholz and Conrad Roth; Finance Committee, J. Langerfeld, Frank Drescher and Rufus Darrow, Jr.; Representatives to the New York Y. R. A., R. V. Freeman, J. Stilger, and H. F. Allen.

NEW YACHTS.—Mr. Burgess has an order for a 26ft. l.w.l. boat for Holland. Lawley & Son have an order for a 51ft. steam launch. They have in frame the Belmont and Vanderbilt boats, and will soon have the Thayer boat timbered.

BAY OF QUINTE.

THE alteration in the ballasting of the sloop Norah, which I foreshadowed in a former letter, has been made. Seven thousand pounds of lead have been taken from under the floor, cast into a keel and placed on the outside. A good job has been done by Mr. John Allen, our local shipwright, who has, by various devices, most sensibly strengthened the backbone of the yacht and fitted it for the burden which has thus been imposed upon it. This work has been done in anticipation of a challenge from the Atlanta for the Fisher cup, which Mr. Bell has seemingly good reason for believing that his fine craft can successfully defend.

Nothing has as yet been done to the Atlanta; indeed, it is questionable if they have as yet matured their plans. Let me tell them, that to have a chance of winning the Fisher cup they must put their craft in better trim than she has ever been.

Thus, you see, we will have some interesting races between our two big ones, which are certainly the fastest yachts on fresh water.

Appropos to the proposal at the L. Y. R. A. meeting to expel the B. Q. Y. C., it seems to have been made with the object of arousing to action the old standbys of our once-famous and powerful record of any club in the world. This once splendid organization, which was the means of reviving genuine yachting on Lake Ontario, was unfortunately in losing by removal some of its most useful members; gradually dry rot set in, and now the association is, if not dead, at least moribund. I have, however, hopes that a better spirit will prevail during the coming season. As to the indebtedness to the L. Y. R. A. the money could be raised in half an hour to-morrow morning if only some one would undertake to do so—but there's the rub.

PORT TACK.

CORINTHIAN Y. C., of Marblehead.—Officers elected on Jan. 14: Com., B. W. Crownshield; Vice-Com., Gordon Dexter; Rear-Com., F. B. McQuesten; Sec'y, Everett Palmer; Treas., J. B. Rhodes; Meas., Howard Whitcomb. Executive Committee, Wm. S. Eaton, Jr., F. E. Peabody. Regatta Committee, Geo. C. Adams, W. W. Keith, Geo. A. Stewart, Geo. W. Mansfield, Wm. P. Fowle. Membership Committee, Arthur Binney, W. A. Harvey, S. W. Sleeper, W. N. Merriam, J. W. Hodgkins. House Committee, F. A. Seamans, F. M. Wood, Henry Taggart. Board of Jurors, Daniel Appleton, W. N. Merriam, Fred L. Rhodes, Lawrence Whitcomb, G. W. Mansfield.

BROOKLYN Y. C.—Officers 1891: Com., R. F. Sutton, sloop, Mull; Vice-Com., Chas. E. Simmons, White Wings; Rear-Com., Geo. P. Lyons, Grace; Meas., H. W. Kilbourne; Pres., D. Reilly; Sec'y, Wm. Gagger; Treas., W. H. Buck; Membership Committee, A. G. Walden, Wm. Dodman and W. Taylor; Regatta Committee, G. W. Hume, A. S. Rischoff and J. V. P. Shields; Trustees, E. H. Chandler, Albert Clunan, John Cottler, P. H. J. Geaunot, George P. Foote, E. C. Fitzgerald, Claude Berrard and R. C. Hopkins.

LYNN Y. C.—Officers, 1891: Com., F. E. Baker; Vice-Com., S. L. Saunders; Sec'y, F. E. Newhall; Treas., J. W. Altwill; Meas., A. W. Hay. Directors, E. B. Newhall, H. L. Parker, J. W. Haines, E. H. Taylor, W. E. Neal. Regatta Committee, H. P. Armistead, C. H. Crowell, J. H. Tutts, C. R. Cuss, E. C. Smith. Membership Committee, W. A. Estes, Frank Holbrook, Arthur Putnam.—F. E. Newhall, Sec'y.

A NEW 46-FOOTER.—Mr. A. Cary Smith has just completed the design for a 46ft. keel racer of about 13ft. beam and 10ft. 6in. draft, a very handsome boat of the modern type, with clipper stem. It is not decided whether the yacht will be built.

NAUTICAL MAGAZINE.—With the 60th volume of this standard periodical, beginning with Jan. 1891, the size of the book is considerably increased. The number contains more than the usual amount of practical matter concerning commerce and navigation.

ROSALIND.—Mr. C. S. Eaton's 30-footer has been sold to Horace F. Smith, of Germantown, Pa. Mr. Eaton has now a new 65ft. steam yacht at Lawley's.

CORINTHIAN NAVY.—The annual meeting of the Corinthian Navy will be held on Jan. 27 at the Marlborough Hotel, at 8 P. M. MABEL F. SWIFT.—This sloop, designed by Mr. J. Borden, has lately been sold to Com. Rowe, Columbia Y. C., New York.

TARPON FISHING.

Anglers contemplating a trip to Florida this coming season will find it to their advantage to inspect our celebrated

Tarpon Rods, Reels and Lines.

The largest tarpon (184 lbs.) ever killed on a rod and reel was taken with one of our Noibwood Tarpon Rods. They are pronounced "PERFECT" by all who have used them.

OUR NEW SOFT LINEN TARPON SNEEL IS THE BEST.

Steam Yachts and Launches;

THEIR

MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

- Theory of the Steam Engine. Extracts from Lloyd's Rules.
- Boiler Efficiency. Racing Steam Yachts.
- Boiler Mountings. Management and Care of Machinery.
- The Engine and its Parts. Principal Types of Yacht Machinery.
- The Screw. The Design of Hulls.
- Laws Applicable to Steam Yachts. Addenda: Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—From Author's Preface.

Cloth, 240 pages. Price, postpaid. \$3.00.

FOREST & STREAM PUB. CO, 40 Park Row, New York.

The New Whitmore Hammerless Shotgun and American Arms Co. New Safety Hammerless Revolver.

Guns 10 & 12-Gauge.

These arms are the latest and best firearms to-day on the market; have features which no other firearms possess. Ask your dealer to show them to you.

AMERICAN ARMS CO., 36 New Street, East Boston, Mass. Revolvers .32 & .38.

GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 shot gives you 120 rounds with your own gun. Practice limited only by shooter's enthusiasm. Our pneumatic auxiliary gun barrels can be inserted in any ordinary breech-loading shotgun in a moment, converting your gun into an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet of No. 1 shot is discharged that will break any clay pigeon or kill small game at short range. No fire, smoke or noise, and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.

P. O. Box 1127. VAUGHAN & CO., Philadelphia, Pa.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer,
 "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

ANSWERS TO CORRESPONDENTS.

THE PERSISTENCY OF PESTS.

FROM the sowing and planting of his seed, almost, indeed from the turning of the furrow, the farmer enters upon a contest with the weeds, for a place in which his crops may grow, and if he or the crops are not vanquished, as the weeds never are, the warfare continues till harvest time.

While he, with infinite labor, prepares the ground and sows his seed with all care, praying that drouth may not wither nor floods drown it, and that frosts may not cut down the tender plants, the winds of heaven and the fowls of the air scatter broadcast the seeds of the noxious weeds, or they lie dormant in the ground awaiting opportunity, and then they germinate in sterile places, fence corners and nooks of the wayside, and flourish alike in scorching sunshine and in sodden soil.

They defy the latest and the earliest frosts, grow with their roots in the air; and cut down, spring up, grow on, blossoming and ripening their seed in creeping stealth and even unscathed by blight; and so flourish in spite of all unkindness of man or stress of nature, that the husbandman wishes they might by some freak of demand become the useful plants, his present crop the undesired ones.

Somewhat of the position that weeds stand opposed to the plants which the husbandman depends upon for his livelihood, vermin hold toward the beasts and birds, upon which the sportsman depends for his recreation.

While they whose protection men endeavor to maintain during the season of procreation, and at times when scarcity of food prevails, decrease often to complete extinction, the vermin, whom the hand of man is always against, continue to increase and multiply or at least hold their own.

To them as to the weeds nature seems to deal a kinder hand, and spares, even nourishes, while she destroys their betters.

The snow crust, that walls the quail in a living tomb, makes a royal banquet hall for the pestiferous field mice, where they feast and revel in plenty, secure from all their enemies, feathered or furry. It impounds the deer, but gives free range to the wolf and to his as pitiless two-legged brother, the crust hunter.

The wet seasons that drown the callow woodcock and grouse work no harm to the ravenous brood of the hawk and owl, nor to the litter of fox, mink or weasel. Wet or dry, hot or cold, the year fosters them throughout its varied round.

Winged ticks kill the grouse, but the owl endures their companionship with sedate serenity and thrives with a swarm of the parasites in the covert of his feathers.

The skunk has been in bad odor since man's first acquaintance with him, and has always been killed on sight as a pest that the world would be the sweeter for being rid of. In later years the warfare against him has received an impetus from the value of his fur, but though this has gone on relentlessly for a quarter of a century, or more, his tribe still live to load the air with a fragrance that incites the ambitious trapper to further conquest.

All the year round all the farmers and their boys wage war upon the crows, but each returning autumn sees the columns of the black army moving southward with apparently unthinned ranks, while, year by year, the harried platoons of ducks and geese return fewer and less frequent.

Those detested foreigners, the English sparrows, increase and multiply in spite of bitter winters and righteous persecution, while our natives, the beloved song birds, diminish in numbers.

Thus on every hand we find the undesirable in animated nature, the birds and beasts that we would gladly be rid of, maintaining their numbers, while those whose increase we desire are losing ground and tending toward extinction.

The prospect for the sportsman of the future is indeed gloomy, unless he shall make game of the pests and become a hunter of skunks and a shooter of crows and sparrows. Who can say that a hundred years hence the leading sportsmen of the period will not be wrangling over the points and merits of their skunk and woodchuck dogs and bragging of their bags of crows and sparrows?

SNAP SHOTS.

THE second International Ornithological Congress will be held at Whitsuntide, 1891, at Budapest, Hungary. Those who expect to attend should be present by May 16, and names will be registered and detailed programmes issued on and after May 14, at the central office of the National Museum. The programme as stated is as follows: May 17, opening ceremony of Congress and exhibition; May 18, formation of special committees and sections; May 19, reading of papers and special committee work; May 20, concluding session of the Congress; May 21, commencement of excursions. The sections into which the Congress will be divided are as follows: Systematy, Biology, Anatomy, Avigeography, Oology, Migration and Economical Ornithology. Persons who intend to read papers should advise the committee of the precise titles of their contributions and the sections before which they will come before April 30. Such communications should be addressed to the Hungarian Scientific Committee, National Museum, Budapest, Hungary.

The Audubon monument fund, which was set on foot two years ago, has languished. The committee of the New York Academy of Sciences having the undertaking in charge have secured a design of a monument to cost \$10,000. The scheme of making the subscription a national one appears to have been abandoned; and it is now proposed to make an effort to secure in New York 100 subscribers who will contribute \$100 each, and to have the monument completed and dedicated next October.

In our columns of Dec. 25, 1890, we called attention to the effort in northeastern Pennsylvania to accomplish the repeal of the law framed for the protection of pickerel from Dec. 1 to June 1, which period covers their spawning season. Some newspapers of Montrose and other

towns in the same county are advocating a change of the law and one of them goes so far as to recommend the seining out of all pickerel weighing 1 lb. or upward. Mr. G. W. Bunnell, of Auburn, joins us in defending the wisdom of the act in question and he has recently expressed his opinion in one of the newspapers mentioned. Our confidence in the gentlemen who influence legislation in matters pertaining to Pennsylvania fishes is such that we feel sure of the wisdom of their action, and there ought to be no question as to the necessity of protecting spawning fishes. If the pickerel is a favorite with any class of fishermen let them show their appreciation of it by applying to its care the same common sense principles which govern their treatment of other animals.

Readers of early volumes of FOREST AND STREAM will recall the series of hunting sketches contributed by El Cazador, in which were quaintly described the experiences of an old Californian woodsman. Their author was Maj. H. W. Mitchell, of Los Angeles, Cal., a man of high standing in the community, and one who as sheriff had won the admiration of his fellows for his proved courage and brave discharge of his duty. Intelligence of his melancholy death has just come to us. With two comrades Maj. Mitchell was deer hunting on the Los Angeles River. A deer had been wounded and the three hunters separated to pursue the game. Shortly after this one of them, seeing what he took to be the deer, shot twice; and running up discovered that he had killed Maj. Mitchell. Thus by an irony of fate, alas! not infrequent, a brave man who has dared and achieved heroic endeavor and gone unscathed through rivers of peril, meets death at last by some ignominious cause.

The enterprising citizens of Southern Pines, North Carolina, have issued a proclamation inviting the whole country to join them in "a week of old-time Southern sport," beginning Feb. 4. The enticing programme maps it out thus: Wednesday, reception of visitors. Thursday, quail hunt. Friday, rabbit chase. Saturday, squirrel hunt. Sunday, services at white and colored churches. Monday, wild turkey hunt. At night, coon hunt. Tuesday, fox chase. Wednesday, deer hunt. This programme will be interspersed with a "Southern barbecue, a possum supper and banjo picking, dancing, singing, mouth organ and reed playing by colored men and women." And we will add on behalf of the citizens' committee that any reader of FOREST AND STREAM, who cannot make it convenient to be present on this occasion, may find ample solace in reading the third page of coon hunting literature, which will be given in our issue of Feb. 5.

In our issue of Jan. 1, President Blackford, of the New York Fish Commission, wrote in reply to the charges by Mr. John D. Collins, of Utica, that Protector Drew had been discharged because he intercepted illicit shipments of fish to Mr. Blackford:

I challenge Mr. John D. Collins to produce the proof or evidence for his statements, or stand convicted of being a willful and malicious slanderer. I also challenge him to produce any evidence that I have ever done anything as a buyer or seller of fish that has been inconsistent with my position as a Commissioner for the State of New York.

Five weeks have elapsed, but Mr. Collins has produced nothing to substantiate his statements. There may have been people who read these charges, and not knowing the character of the Commissioner believed Mr. Collins. Who believes him now?

There was a time when, of all newspapers, the New York Sun was noted for the crispest and pertest and tersest paragraphs of news. In those days Mr. Dana surely never would have allowed the vicious circle-round-the-owl-and-finally-twist-its-head-off style which converts "a number of fishermen" into "a number of gentlemen interested in the sport of luring the finny tribe from the deep by the means of hook, bait and line."

In their report for the year 1890, just to hand, the Massachusetts Commissioners report that the operation of the non-export game law, enacted last year, has already shown excellent results, having practically stopped the invasion of the Commonwealth by men from other States for market-hunting. It is gratifying to learn that common carriers have shown themselves in hearty sympathy with the law.

The Sportsman Tourist.

THROUGH THE OLYMPICS ON AN ELK TRAIL.—I.

BEFORE the Olympic region, between Puget Sound, the Straits of San Juan and the Pacific, has been fully explored; ere the trout have been all caught out of the streams and lakes, or the elk and deer exterminated—while the country still has the charm of the unknown and is an object of some interest and curiosity—let me give your readers an account of a tramp that I took with two old schoolmates in the latter part of August, '90.

One of my comrades we will call the Cayuse—he was so designated among ourselves because of his former connection with a periodical whose brilliant but very brief career in Seattle is never to be forgotten, i. e., the *Spotted Cayuse*. The other was the Marine, a name given him in gratitude by certain friends who had suffered shipwreck through his skill in the management of a catboat. I, too, had a nickname, but can only remember that it was uncomplimentary and emphatically inappropriate.

For a month the Cayuse and I had lived royally at the Marine's ranch on the shore of Lake Cushman—so-called from the old trapper Cushman, who first hunted the valley of the Skokomish—the home of trout and wild duck galore and delicious. At least the trout were delicious. The ducks, I grieve to say, we never could, for some reason, approach readily enough to taste, though we tried our best. I imagine they were exceedingly tough and full of small shot.

For a long time we had intended to go through the mountains, which, at that time, were totally unexplored. Parties had gone part-way up, but none, so far as it is known, had ever reached the top of the main divide—and I may safely say that we were the first to do so.

However, it did us no particular good to be the first, so if anybody feels wronged by the claim, and thinks he got there ahead of us, he is very welcome to the distinction.

Our trip was delayed a long time, because the Marine had a house to build, and, whenever a start was proposed, said that he could not spare the time, but must get to work on his house by Monday next.

But the summer was nearly over, and we were told that a party of three were going up, and would be glad of our company.

The three were experienced woodsmen, and the chance of going with them was too good a thing to miss. So we set out, leaving the Marine's house in the misty future—where it stood for a long time after.

Our friends were: Vick, a settler of the Skokomish Valley; Cross-eyed Chris, a trapper and backwoodsman in general, who had had part of an ear bitten off in a fight, and who must have stepped straight out of a dime novel of the old school; and Joe, a logger.

I'm not sure that they wanted us—for they started off very early one morning in a pouring rain (one of the luxuries to which the "glorious climate of Puget Sound" constantly treats its admirers from August to June following) and they gave us only about an hour's notice. But, whether they wanted us or not, I learned on that expedition that the woodsman in the wilderness is a host in his home, and whatever these three could do to make it pleasant and comfortable for the rest of us they did with a hearty goodwill.

Not having time to get ready, we started as we were. The plan was to trace to its source the Skokomish River (which flows southeast from the mountains through Lake Cushman and empties into Hood's canal), thence to cross the divide to the source of the Quinault River (which flows southwest, widens into Lake Quinault and seeks the Pacific at Gray's Harbor). The hunting was good on the mountains; we meant to stay there a while and shoot elk and bear otherwise to push on down the river to Lake Quinault, where there is a Siwash reservation, and explore the country between.

The first day was a hard one. The rain came in torrents; and after we passed Butler's cabin, the last one up the river, and about four miles from the Marines, our way led through the thick underbrush; and every bush we touched meant a new drenching.

At noon we halted and took a short but appropriate lunch. Joe carried a tin pail hanging loosely from the handle of a frying-pan which protruded from his pack. He was repeatedly warned that he would lose it; and when at last it rolled over the edge of the cañon into the river our delight knew no bounds. Not so much for the opportunity of saying "Told you so" as for the chance afforded us of welcome rest, while Joe retraced reluctant steps to a point where the river could be reached and there waited the advent of the fugitive, which sank just before it could be reached.

What a stream the Skokomish is—from the Siwash *skoookum*, mighty, and *mish*, river. Small in volume, but tremendous in force; water of a hue like clear beryl, torn here and there into purest foam.

Through the valley it roars—down the foothills it thunders in heavy falls and rapids—high in the mountains, a thread of ice-cold water, it goes ringing and rippling down long cascades into rocky basins and through the echoing woodlands—till one lying half awake in camp, seems to hear a troop of joyous beings laughing and singing on the hills above him, and falls asleep to dream of old Greece. No wonder—if their Olympus was like ours—they peopled their hills and groves with bands of choral nymphs and laughing satyrs. The voice of the mountain stream is sweet and clear, wild and unearthly in the night—but hold on! Pegasus would tear his wings to pieces in this thick underbrush, and if I don't look sharp I shall follow Joe's pail down the rocks. And who will swear for me as Joe did for his pail?

And so we stumbled on—worn and weary out, till the huge hemlock and fir and cedar towering above the land in the pride of their 300ft. of height grow darker still, and the clouds shut down about us and night came on chill and heavy with the rain. Then we are glad to put down our packs—a good 50lbs. each strapped to our shoulders—ham and bacon, flour and salt, sugar and dried apples and baking powder, cartridges, cooking utensils, tobacco, etc., etc., all rolled up in our blankets and tightly bound for compactness—glad to lay down our heavy and, so far, useless Winchesters, while Vick and Joe cut logs and brought pitch knots for the fire, and Chris undid the packs and prepared to cook supper, and the rest of us cut boughs of young balsam and piled them thick upon the ground for a couch. A blanket spread lengthwise over

these, and the rest of the blankets over the six of us abreast, for covering, formed our bed. Three of us spread the tent—an A just big enough for our party—and cooked a good supper, and the camp-fire roared and crackled and lit up the tall columns of the trees about us and showed the dripping arches of our dark green roof, far overhead.

The trunks were overgrown with thick moss, and moss hung long and heavy and wet from the boughs of the vine maples, and in it along the trunks and lower branches of many trees grew graceful ferns that hung still and feathery in the windless air. A fairy scene on a gigantic scale.

The Marine and I passed a thoroughly uncomfortable night, listening to the snoring of the Cayuse and the three backwoodsmen, while the Cayuse's dog—a beautiful setter whose name I forget, 'twas something like Boots—crawled to and fro, wet and mournful over our prostrate forms.

Early in the morning Chris arose and awakened us with a tremendous yell—to which I attribute the fact that we saw no game till that evening—and we rose reluctantly, ate our breakfast and started again, with packs somewhat lightened. Now we had come well into the foothills, and traveling was no joke.

We could not go close by the river, for the stream was rushing through a deep cañon for below us, the hill sloped so steeply toward the brink that walking along the side was very hard on the joints, and the ground was slippery with fir needles. Huge fallen trees, often 8 or 9ft. thick at the base, blocked our way, and a heavy undergrowth of blueberry bushes proved a serious difficulty, both because it was hard to push through them, wet and tangled as they were, and because the Marine and the Cayuse would stay behind to indulge their fondness for the berries, and then call to the rest of us to show them the way. (I understand that they make similar complaints, but will not waste time in denying them.)

We went in single file, the unhappy man in front, who ever he happened to be, shaking the bushes as he went, to take the edge off the inevitable shower bath that the leaves held in store for us.

Our object was to find the elk trail—the path which the elk have made descending, generation after generation, to the valleys in the early snowtime and returning again when the heat of summer drives them back to the peaks, to feed secure from flies and drought in the rich green pastures that lie near the eternal snow. When they herd in the river-bottom (by which I do not mean the bottom of the river; 'tis the Western phrase for the valley through which a stream flows, and the low lands near its mouth) they stand huddled together in the snow like cattle, and, like cattle, can be shot down. But the settlers have hitherto sternly forbidden any wanton destruction of the big game, killing only what they needed. But since tradesmen have set a high price on the antlered heads, I fear the poor "mooolock," as the Siwash call the elk, will soon be either exterminated or reduced to a race of Amazons.

In summer it is almost impossible to get near them, and if a man would follow them up the hills, he must endure heavy toil and much hunger, but he will generally sleep well and soundly o' nights, if he can find a level spot to lie down in.

In the course of centuries they have succeeded in making a very respectable path, not passable for any beast of burden, but a man can follow it if he wants to. And such a path we were trying to find; for this is the only way of traveling such country as one must go through to reach the heights.

Now the Marine and I had made a previous exploration of the river, a little beyond the cañon near whose head we now were, and had been deterred from further discoveries only by the fact that we needed more solid sustenance than huckleberries, and had rashly eaten up our provisions. Besides, it had been necessary for us to go back at that time with view to initiating the construction of the projected house.

On that occasion we had traveled some distance by the elk trail, and, therefore, both knew where to find it. The others, however, did not put entire confidence in our guidance, for each of us had somehow an entirely different idea as to where the trail was to be found.

So they waited while the Marine and I, each confident that the other was wrong, set forth to find it. We lost ourselves and each other, and found no trail. But after we got back to the party we pushed on at haphazard for a while, and at last all came on it at once.

We also found a spring, which was most welcome, for wet leaves don't go far toward satisfying a thirsty man, and since we had been obliged to leave the river we had had no water. At some distance above the cañon the trail led down to the river and disappeared. Probably the elk go straight up the river bed at this point, a feat which was rather beyond even the long legs of Vick; for the stones in the river are covered with a thin, transparent slime, and too slippery to walk on where the current has any force, even though the water be shallow. So we slipped and tumbled across the stream and some way up the opposite slope, then pushed our way along through bushes and over the loose rocks as best we could.

Our position was as follows: The hillside barely escaped being perpendicular by the least possible slant. The ground gave very poor footing, being composed of a loose soil and flat, slaty stones that had slipped down from the crest. This was overgrown with a thick mass of alder and vine maple, each stalk growing down hill on a slant from the roof for several feet before it began to curve upward. The only way was to hold on tight near the roots and crawl between the stems.

Several hundred yards below us roared the stream between its precipitous walls. Where the alder and vine maple left off below us were jagged rocks that had rolled from the heights above, overgrown for the most part with roots and bushes, so that the space between them formed well-set man traps and greatly endangered the legs of the unwary. Along the stream and over the rocks was a rank growth of a delectable plant, rightly called "devil's club"—a bush with a broad innocent-looking bright green leaf shaped like a maple. The underside of the leaf and the whole stalk is covered with thorns from one to three quarters of an inch long, finer than needles and breaking off easily to attach themselves to the unfortunate person who touches them. In short, the plant is a sort of vegetable porcupine. I shall never forget the first time that I cast myself down to rest among these innocent shrubs. Above us the hill kept its

steep slant and thick growth of bush and then went right up in perpendicular walls of rock.

We pushed ahead, Chris fighting his way through the brush like a cat, Vick winding his long limbs in and out with singular speed under the circumstances, Joe pushing away like a thick, sturdy little bull by main force and the rest of us profiting by their excellent examples.

Toward evening the bed of the stream became accessible again, and the flow of water was now so small we could travel in it, but icy cold. Joe was the only man who spoke. He was the profanest man I ever saw and the fittest at this time for spokesman. Then we found ourselves in open air and under the clear sky—for the rain had stopped—before us the sharp peaks of the first range in near view.

We crossed a clear field, a broad green meadow where there was a great village of marmots—or "mountain beaver" as they are called—an animal really much like woodchuck, but larger, and at a distance rather resembling the beaver. Brown, shaggy, short bushy tail, very good to eat. The only one I ever saw was shot by the Cayuse on a former expedition among the foothills. At that time we spent a great part of two days and several nights close to a multitude of their holes, but that of the Cayuse was the only one we saw. Yet in the morning every hole had a little handful of freshly plucked leaves in front of it. The Cayuse killed his just at dusk.

We crossed the field and were going down a steep bank to another branch of the Skokomish—a mere brook near its source. Joe, who was ahead, called out, "Fifteen boys, there's a bear!" I was sliding down behind him having fallen at the top of the bank, but caught a bush and stopped, but before I could see the bear or get a footing I felt a tremendous thump in the small of my back from the Marine, who had also slipped. The bush broke and away we went. At the same instant right over the rifles of Vick and the Cayuse went off, and Joe below us, and we arrived in a heap at the bottom in time to see the bear vanish at the top of the opposite bank. He was badly wounded and left a great trail of blood behind him, but though we hunted till nearly dark he was not to be found.

Then as it was too late to find a better camping ground we had to stay where we were at the bottom of the gorge close by the stream. There was just one place where we could lie abreast and have a fire at our feet, and this was covered with brake and small bushes, which we cut with our knives, but the stubble was too sharp for comfort. The place too was not as level as it had looked and was so situated that our line as we lay extended sideways down hill. We did not pitch the tent but used it as an extra blanket. As the man at the lower end of this reposeful couch was crowded out by the weight of the others above him, and rolled off, he would pick himself up and start over again at the upper end of the bed—just as a small boy rises to the head of his class—the next turn following his example in due course.

As we ate supper the crisp wind from the peaks made us shiver in our wet clothes. FRANCIS DANA.

[TO BE CONTINUED.]

IN THE REGION ROUND NICATOWIS.

IV.—THE LAKE OF PLEASANT MEMORIES.

GASSOBBEIS is a lovely lake. High land compasses it. On one side the hills rise toward Sabas. In the north Duck Lake Mountain shows a changing side, green or blue, mellowed into purple by the sunset. The lake itself is rather more than two miles long by a mile width, surrounded by hard, dry shores, free from deciduous wood, green and inviting. Near the shores the water is shoal, and the ice, forming on it in past ages, has taken up all the large rocks save a very few and carried them into the sea-wall on the shore, leaving the bottom hard and clean. In this shallow water, especially near the outlet, the lake is grown up to rushes and water lilies, the former dressing it till it looks like a grass field, the latter in their season making it a parterre of hundreds of acres of the loveliest blossoms. Trout are the fish here; the only pickerel which I ever heard to be caught was maimed and deformed that it was probably dropped here by some fish hawk flying over from Fourth Lake. Gassobbeis is a paradise for small game; all wild things seem to loiter. The ducks sail off among the rushes conversing with each other, the deer wade out into the shallows to feed and escape the flies, and the bears follow the shores for cranberries and huckleberries in their season.

Here Father had a camping place just to his mind. Many pleasant memories clustered about it, and whether he thought of it in summer or winter it was always home and a quiet haven after stormy Nicatowis, hot and a clean caravansary after the slime and desolation of Fourth Lake. Here they could get all the ducks they wanted and trout from the pool on the stream, or venison if they wished it. Here, after the blankets were spread down after supper and the fire built up for the night, B. Sebatiss used to repeat that story whose repetition never wearies, the old "Sung um joyfully," always preluding the tale with the query, "Never we told it you that time how she sung it 'Joyfully' Old Isaac?"

Gassobbeis seems to belong to Sebatiss more than any one else. He, too, loved it well. He enjoyed the "great deal scenery" and the good living, and he often expressed the wish to Father that their wives might there to share it—"our women," as he used to put it with an air of pride and ownership. He frequently told the story of his courtship, dwelling with satisfaction on the times when he "was great deal favor with old folks specially young ones." He was a man of fine sensibility despite the two hundred and sixty odd pounds of flesh which obscured the inner light to strangers, alive beauty, exquisitely humorous, softer-hearted than even the generality of woodsmen. "These hard hearts," which Lear complains, find few hiding places in the woods; is there a cure in nature for them? Sebatiss would not indulge in even the brutality of kindness when that kindness could only save his own feelings. "We cut y' trout tomor' mornin'," he said to the baby seal that he starved for lack of milk, but for the night he fondled and made it happy. He was a consummate raconteur. With how much pathos he told the story of the death of little Johnny. With what appreciation he described the man to whom he sold the blackfish oil, so that Just himself seemed to wink at their deceiving such a judge of oil. A literary instinct guided him to the telling point of his narrative, and he grasped them with a firm har-

repetition he used when effective, but never the aimless retrogressions of the ignorant and unskilled; when he digressed it was to express some quaint, original thought or call up some philosophical question. He never doubted that his stories were worth hearing and he never apologized for their length. He was a master of the use of details and had to tell long stories. He never quarreled with his genius nor cropped the tail of his Pegasus. If his audience got to sleep under a double number he reproachfully asked, "What for you gone sleep? Why you don't gone wake?" and began again at the point where he judged the thread had been broken. Hunting stories, his trials as governor, old legends, stories of porpoise shooting at Quoddy and tales of the sea were in his repertory; and all began alike with, "Never we told it you that time when—" as if all had been many times rehearsed to different audiences. Ahwassus, the Bear, the other Indians have nicknamed him. He says that bears can talk, but won't. He always talks to them when he meets them, calls them cowards, says they understand Indian because they look ashamed. Brother to brother it must be when they meet—the Indians were right in calling him Ahwassus, the Bear; each big, and fat, and strong, with brown faces and little eyes, strong sense and sagacity. It was Gassobeis that revealed thee, O Sebattis Wassus.

We got two ducks and some berries while at Gassobeis' time, but nothing else except a box. Ducks were not abundant here this year. Toward evening we heard a strange, rumbling noise, not thunder—the way was clear—a distant, low-pitched sound that seemed as much in the earth as in the air. The others said it sounded like rolling logs from a brow landing, but I could liken it to nothing except the noise in Lorna Doone, which rose from the moors at eventide and died away in wailing. In the morning, after the fog cleared, we made ready to go to Machias. True to his principles, never to lug an extra pound, Father began his preparations by sorting out all that we could leave behind. Even from our load there was a considerable pile laid aside to be hidden—all our spare clothes, except boots and stockings, for one thing, and our best hats, which were stored under the box found the day before. We took with us only the necessities of life, and as few of them as possible, only a week's rations of flour, pork and potatoes, and no luxuries except a gallon can, which was used indifferently for spring water, berries and to keep small game from flies, and two grape baskets, which are convenient for such small stores as tea, salt and pepper—in all two turns apiece including the canoe. When we set out the wind was east and the sky but half clear. Loons were flying. We made our way to the head of the lake and found the carry without difficulty by steering just to the left of the last island. With this direction in mind the carry is not hard to find, for it is a winter road leading straight down to the lake across the bog.

GASSOBEIS CARRY.

There is a story, now water-logged and condemned but still afloat, of the notoriously profane man who was so taken aback on discovering that the tailboard of his cart was out and his load of ashes was distributed the whole length of the hill, that all he could say was, "Swearing won't do it justice." More might be said of Gassobeis Carry—nothing more apposite. I have seen all sorts, but though there may be worse carries, I have yet to see that kind. It isn't as blind to follow as some, nor as rocky as some, nor as long as others, and possibly not quite as wet; but in its palmiest days its water privileges very nearly equal those of the famous Mud Pond Carry, and in its variety, which age does not wither nor custom stale, it completely distances that much condemned place. Yet in the encouraging guide book phrase, "Even ladies have been known to undertake it." But an unincumbered man or even a woman ought not to complain of anything short of impassability. The tune changes when a man must stagger along over rocks, roots and swamps beneath all the load he can rise under, or still worse with a canoe on his head, than which no Eastern despot was ever more prompt to make one's neck the price of a misstep. From Gassobeis to Fourth Lake is not only a hard road but a long carry, not less than two miles—two good Maine miles at that, says Father, who has lugged on it these many times. We have several kinds of miles here—the hort mile, the mile, the long mile, and "the good long laine mile," which is the Scotch mile and a bitcock.

At the beginning of the carry the load was bound up into packs and lugging bands adjusted. I had secured my coats and buckled them to my bag—which by a long and persistent course of obstinacy I have secured the right to carry myself—and had just tied a pair of shoes beneath, when the fraud was discovered and the shoes seized as contraband. However, being rear guard, it was possible to secure something else, the can and a hatchet perhaps, after the advance was already on the march. Off we started one foot before the other, at a pace very like a trot for one no taller than myself, Father at the head of the train, Jot next under a hump like a camel's, my mackintosh and rubber boots in the rear; through lambkill and rhodora waist high and wetter than ordinary water; over a footing of sphagnum so thick and yielding that it was like walking on a feather bed laid on springs. There was a quarter of a mile of that carry, and, in spite of predilections for bogs already expressed, I think there are better places for carries. Up hill we posted as if on the king's business, over stones and fallen trees, nor stopped until we reached the height of land; fairly long stages, made as quickly as possible, and short stops, is Father's rule for carries; rest in walking back for the next load.

"What will you have for refreshments?" I asked, as they went back for their second turn. "Ice cream," said Father. In their absence I provided them the best substitute which the woods afford—a heaped handful of mowberries (*Chiogetes hispida*). The tiny vines were natted over the old crumbling logs and all bore pearly berries. I had never before seen it fruiting so abundantly. This is the nonesuch of our berries, a little too good and rare for common use, but unequalled when enjoyed separately, when the gust is allowed to linger on the palate until the full savor of its spiciness is dissolved. It is the crowning achievement of the heaths—the most feminine of them all, pure in blossom and fruit as the snow from which it gets its name, delicate in all its structure, shy in its habit, and although hardy and evergreen wherever it is, reaching its full perfection only when it finds root and support, yea, and its life in that on which it lavishes all its graces and beauties and excellencies.

The second stage was short, extending only to the fork

in the road where the index on the dead pine points to the left and the Machias Lakes. On the left before you reach this is a "bear-biting tree," a pine, I believe, which Father pointed out to me. I should not have noticed it myself; and, indeed, it was not until I had seen half a dozen such, that I was able to distinguish them from trees which had been shot at, scored with a pick-hand-spike or otherwise accidentally injured. The marks, which are from 3 to 8 ft. from the ground, are often overgrown and pitchy, and would not be taken by any one but an expert for the work of an animal. They are found in firs, pines and spruces, most frequently in the former, and invariably, Father says, in trees that have a conspicuous place along some road or carry, at the fork of logging roads or the edge of a landing—never in the deep woods. The marks are made by the great canine teeth which are set in so deeply that they rend the tree as if a rifle ball had been shot through the side. Usually the same tree will be bitten many times by bears of different sizes or else several trees not very far apart will be marked. "Tell the man who made that," said the old Greek painter, pointing from his friend's drawing to his own more perfect one, "that the man who made this would like to see him." Because these trees stand in prominent places and the bears always rise to their full height in biting them, it has been supposed that they indicated, like the old Greek's line, the identity of the author. The tree on this carry has proved the correctness of the supposition. Several years ago when carrying across to Machias, Father examined the tree carefully; returning a few days later, he was surprised to see a new bite so far above all the others that its height astonished him. Closer investigation of a mossy log at the foot of the tree revealed the tracks of a very large bear, who, shrewder than the rest, had stood on the log while making his mark. It was a plain challenge to the world of bears to bring forward some one taller than that. I wonder whether he ever saw it afterward and remembered his own cunning with an inward chuckle, for no doubt they do remember.

The third stage was long, very long it seemed, extending even to the cross-road to Unknown and the Hemenway farm. It is this that gives the carry its bad name—rocky, mossy, slippery, the holes between the rocks filled with moss and water. Then there are slippery skids in the way just frequently enough always to catch you unawares, fallen trees here and there, and a good bit of swamp embellished with sawgrass, tall brakes, moss, rotting and slimy skids, hussocks which promise good footing till you land on them and water which may be mid-leg deep and may be a good deal deeper. By the time the swamp is reached, the lugging bands have slackened and the pack has begun to sag; you would raise your hands to relieve your throat of the band which is choking you, but both are full, every cramped and aching finger hung with a separate article which cannot be set down, and on you go splashing doggedly through the water or jumping from hussock to hussock, while the pack sinks lower and bounces harder and chokes more with every jump, and the mosquitoes which sit on the alders here from March to December rub their bills on their sleeves and pitch into you, seeing that you can't help yourself. A mosquito has no regard for the rules of the game. It may be your luck when you cross this carry in the dry season of 1891 to be able to call it pleasure. I admit that I could smile at it while experiencing it in wet 1890; but not even my wildest dreams of pleasure include Gassobeis Carry until it has been averaged in with so much else that the proportion of Gassobeis is infinitely small.

We took dinner at the cross-roads—less dinner than table decorations, for while the men had been lugging their second turn the woods around had paid tribute to me. Although it was well along in September the "ivory-leaf plums" (*Gaultheria procumbens*) of the year before were still hanging beneath their glossy leaves.

The fourth stage was short, memorable only because the cold which had been following all the way across the carry now overtook me and proved a misfit several sizes too large. It was the old story of taking too good care of one's self. To avoid getting wet I had worn my mackintosh and this was the result: The long skirt clinging to the wet rubber boots at every step doubled the exertions of walking, the rain on the bushes wet it from the bottom nearly to the waist on the inside and the perspiration condensing on the shoulders wet it from the top downward nearly as far. It was, in fact, a dripping rubber sheet. Constant exercise while waiting and careful wiping did not avert the mischief. Henceforward I eschew rubber garments unless it is actually pouring. Better by far be wet and stay wet, cold and miserable than be forced to cool off too suddenly. It is a poor constitution that can't stand considerable of the former, and the strongest should not be expected to undergo the latter.

The Machias end of the carry is even less cheering than the Gassobeis terminus. The journal calls it "an unwholesome-looking place," and in my own mind it is associated with the Ancient Mariner and "a million million slimy things." When you get here you will wish you hadn't come. Marshes half a mile wide extend back to the "dry kyle" which fences the woods with dead trees, standing or fallen, grim, gaunt and gray. Loose-strife tangles the wet marsh and lily-pads and "moose-ear" half cover the stagnant stream which twists about without rule or direction, too lifeless to run straight. The place is given over to pickerel, mud turtles and "slimy things that crawl with legs." Penobscot people call it Penobscot Brook, but Machias folk seem to know it best by the name of Cy's Gulch, an appropriately outlandish name, for gulch is a term seldom heard here and this is anything but a gulch.

FANNIE P. HARDY.

Camp-Fire Flickerings.

"That reminds me."

"WHY, Jim, you don't seem to kill anything, what's the matter?"

"The birds are wild as the wind and rise clear out of range."

"But you haven't shot at one over 50 yds. to-day."

"Well, that's a long distance."

"But you told me your gun would kill about every time at 80 yds."

"Well, the fact is, I've got such a ternal headache that I can't shoot worth a cent."

Natural History.

THE PORCUPINE.

YOUR clever correspondent, L. J. Flower, asks, "Can any one tell us of any good this animal does or state any sufficient reason why it should not be killed on sight?"

I propose therefore to accept the challenge and give a few reasons, appealing in the first place to history, by which it will be seen that as great Rome was once saved by the cackling of geese so the life of a distinguished missionary, who was traveling through the forests of New Brunswick in the winter of the year 1677, was saved by means of a pair of porcupines. This missionary was Father Christian Le Clerc and he was on a pastoral visit from Nepisiguit to the Miramichi, called then the Saint Croix. The party consisted of himself, a French gentleman and an Indian and his squaw. They were lost in the woods.

The party, the members of which were absolutely without food and nearly starved to death, had fallen in with another Indian who had dreamed of having killed a moose, and who had assured Father Le Clerc that this dream would bring them on a moose's track, and that they soon would have plenty of food. But here is the continuation of the story in Father Le Clerc's own words, which I have translated into English: "In order to confound his extravagant credulity and to convince him (the Indian) of the care which God takes of his servants, providence permitted us when we were thinking least of it to find two large porcupines about 4 o'clock in the afternoon. These animals, which resemble the hedge-hog very much that one sees in France, were denned in the hollow of a tree, whose bark, as it served for their food, they had eaten. Each commonly has his own den, and our Indian was as much surprised as we were to see them denning together. The first one which was taken they loaded upon my shoulders to take to the squaw who had already lighted the fire, in order to do the cooking in the kettle. We made a good meal of it; the soup seemed as savory to us as a good consommé, and we in reality experienced the truth of the proverb which says that there is no better sauce than a good appetite.

"We carried the other porcupine to the camp of our Indian, where he found eight persons in whose attenuated and fleshless countenances could be plainly seen the little nourishment which they had taken, and the hunger which these poor unfortunates had suffered for the month that they had been camped on the bank of a river (N.W. Miramichi), where they had fished trout in very small quantity. They had but five of these for their whole provision when we arrived where they were. These were placed in the pot with our porcupine, which we ate together."

The Micmac or shore Indians are very partial to the porcupine as an article of food, the Abenakis not esteeming it so highly, much preferring the flesh of the muskrat, which the former Indians do not care about, indeed the Micmacs call the Abenakis (of St. John River at any rate) muskrat or musquash Indians.

The Indians make use of the quills of the porcupine, which they dye to ornament their birch bark boxes with. Some of this work is very pretty. When the white hunters of our forests find a porcupine they very often make use of his flesh for food. The black cat or fisher is very partial to the flesh of the porcupine, and will dare all the dangers of his quills to secure one; and the hunter often finds that the fisher which he has captured carries some of these quills in his hide.

The porcupine is very fond of fat or grease of any kind. It frequents old camps, and one almost always sees some part of the *deacon-seat* on which grease has been spilled gnawed away by the sharp teeth of this animal.

I admit that the porcupine does eat the bark of trees. I do not think, however, that he girdles them so that they die. His chief food in winter seems to be the leaves and small boughs of the sapling hemlock. He is a good climber, but slow; in fact, he is a very slow walker and his movements are far from graceful. As Mr. Flower says, the porcupine can strike quick and dextrous blows with his tail. I have cut a piece of beech and stirred up a porcupine in his den by means of it, and on withdrawing the stick found the hard wood filled with quills which had been driven into it by the animal's tail.

With Mr. Flower I admit the damage which one of these animals can do to a field of buckwheat, but I do not think that they are specially notorious for trespassing on man's domain, chiefly confining themselves to the forest. They are very fond of making their dens among loose rocks. The interior of Nova Scotia, which is very rocky and has little soil, is the best ground which I have ever seen for porcupines.

EDWARD JACK.

FREDERICTON, Canada.

WILD GESE.—San Luis Potosi, Mexico.—In California I often heard the Hutchinson goose, that is the small one marked like the Canada "honker," called brant. I occasionally saw white ones there, but they were not so abundant as the white-fronted or laughing geese. This is the variety we have here in Mexico. I saw in a flock of them not long since one that showed white, but I could not tell whether it was a different kind or not. I have never seen either the Canada goose or the Hutchinson here, though I remember that in the National Museum at the City of Mexico there is a Canada goose labeled "Toluca Valley," a point near that city. This museum has quite an interesting natural history exhibit, by the way, though the specimens are wretchedly mounted, and visitors usually take more interest in the antiquities.—AZTEC.

BIG HORNS.—St. John, N. B.—In your paper of Jan. 15 I see that Dr. C. B. Parker mentions, in an account of a moose hunt in Kibby Valley, that they killed a moose whose antlers spread a little over 4 ft. 8 in., blades of the horns 12 in. wide, evenly balanced and each containing 11 prongs, and pronounced by good authority as large as any on record. I would like to mention one that was in this city last fall, which tops the list in this country. A Mr. Smith, of Bear River, Nova Scotia, in last September shot two moose inside of twenty minutes, which were mounted by J. H. Carnell, of this city. The largest horns measured 5 ft. 4 in. spread, blades of the horns 15 in. and 34 points. The other one was but a little smaller. Can any one beat this.—R. O'S.

THE BLUE-STRIPED TRIGGER FISH.

LAST October while in New Hampshire we learned from Mr. Charles Bassett, of the firm of George B. Appleton & Co., Boston, Mass., that a curious fish had been taken at Wood's Holl, Mass., and forwarded by his firm to the Museum of Comparative Zoölogy, at Cambridge, Mass. From Mr. Bassett's description we easily recognized the fish to be one of the trigger fishes, a species of *Balistes*. The fish was exhibited by Messrs. Appleton & Co., in Boston, and attracted much attention. Recently we have received from Mr. R. O. Harding, Secretary of the Massachusetts Association, a letter inclosing a description of this trigger fish by Prof. Samuel Garman, of the museum above mentioned.

The blue-striped trigger fish is only an accidental visitor as far north as Cape Cod. It is common in the Gulf of Mexico and the West Indies. The fish is remarkable for its shape and the peculiarities of its teeth and stiff dorsal spines, the first of which resembles a trigger in shape and can be immovably fixed at will. There is a figure in the Fishery Industries of the United States of a related but less handsome species, *Balistes capricornis*. This illustration will give the reader a good idea of the

general form, but the blue-striped species (*vetula*) has the lobes of the tail fin much more produced than in the *capricornis*, and may readily be distinguished by its colors. The general color is dark brown; there is a vivid blue ring on the snout and each side of the head contains two parallel stripes of the same color. The dorsal and anal fin, and the root of the tail fin, are also marked by a blue band. The outer margin of the anal and caudal fins are blue, and there is a crescent-shaped band of the same color a little behind the root of the tail. The other species (*capricornis*) has been taken as far north as Wood's Holl a number of times. Its color is a uniform dull grayish-brown. The small size of the mouth of the trigger fishes and their large and projecting teeth would not suggest their adaptability for capture by hook and line, but in the spring of 1885, when the steamer *Albatross* was at Cozumel, Lieut. Asher C. Baker, of that vessel, demonstrated the fact that the species can readily be taken at the surface by using small hooks baited with cut clam or pieces of fish. In the Bermudas the common trigger fish is considered as a valuable food fish, but in the Gulf of Mexico, according to Mr. Silas Stearns, "in regions where it is not eaten it is regarded as a pest by the fishermen from its habit of stealing bait from their hooks. Its manner of taking the bait is rather peculiar, for instead of pulling the line backward or to one side it raises it upward so quietly that the fisherman does not perceive the motion, and then, by careful nibbling, cleans the hook without injury to itself."

The *Balistes capricornis* is known as the leather jacket at Pensacola, and it is considered one of the most difficult fishes to land, because its sharp and powerful teeth enable it readily to cut the line or break the hook. The skin of the trigger fishes is used as a substitute for sandpaper in Florida, the Bahama Islands and the Bermudas. Our figure is from a drawing by Mr. Harding.

WHAT THE A. O. U. HAS DONE.

AT the eighth annual meeting of the American Ornithologists' Union, held at Washington last November, Mr. J. A. Allen, who has been president since the founding of the Union, delivered a retrospective address touching briefly on the work done by the Union since its origin. We are now in receipt of the text of the address, which has just been printed.

Mr. Allen speaks of the organization of the Union in 1883, and of its being an outgrowth of the Nuttall Ornithological Club of Cambridge, Mass., which had turned over to the Union its quarterly journal, then known as the *Nuttall Bulletin*, and what has since become the *Auk*. One of the earliest tasks which presented itself after the founding of the Union was to reconcile the differences which then existed in regard to the nomenclature employed by ornithologists. The result of the labors of its committee was the publication of the octavo volume of 400 pages which embraces a Code of Nomenclature and the Classified Check List of North American Birds, the importance of which is everywhere acknowledged. The work of the committee on the Status of the European House Sparrow is well known. The information which it gathered has been turned over to the Division of Economic Ornithology of the U. S. Department of Agriculture. The same may be said of the work of the committee on the Geographical Distribution of North American Birds, which almost at once outgrew the resources of the Union.

At the second congress of the Union a committee was appointed on Protection of North American Birds. The work of this committee was humanitarian and utilitarian rather than scientific. It did much to enlighten public opinion in respect to the extent of the destruction of birds for millinery purposes and its lamentable results. On this subject it published two bulletins, secured the enactment of excellent laws for the protection of birds in several States and co-operated with societies for the prevention of cruelty to animals in protecting birds. It was also the origin of the Audubon Society, with its widely scattered chapters, and of numberless lesser societies especially devoted to the protection of birds. The influence it exercised, directly and indirectly through the public press has been beyond estimate. Within a short time after the publication of its first Bulletin, song birds, and in fact our native birds generally, nearly disappeared as adjuncts of the milliners' art, and the consequent decline in this country of the "feather trade" forced several of the leading dealers in bird skins for millinery purposes

into bankruptcy. There is no doubt that to the direct and indirect results of this committee's energetic crusade are largely due the markedly improved sentiment respecting bird slaughter for millinery purposes, and its great decline in this country during the last four or five years.

The important work done by the Union's journal, the *Auk*, is fittingly referred to, and then Mr. Allen passes on to a consideration of the activity in ornithology in the last seven years, and the work done by its individual members.

The Union has had a steady growth, and at the beginning of the last congress had on its rolls 49 active, 25 honorary, 68 corresponding and 253 associate members. Active and honorary members are limited to 50 and 25 respectively.

ZOOLOGICAL PARK APPOINTMENT.—Mr. W. H. Blackburne, who has long been connected with Barnum & Bailey's Circus, has been appointed principal keeper of the Zoological Park at Washington, D. C. Mr. Blackburne has had a long experience in caring for caged circus animals, but the conditions in a zoological park are somewhat different, and just how well fitted he may be to take charge of such a park we do not know.

THE BIOLOGICAL SOCIETY OF WASHINGTON.—The eleventh anniversary meeting of the Biological Society of Washington was held in the lecture room of the Columbian University on Saturday evening, Jan. 24, at 8:30 o'clock. The retiring president, Professor Lester F. Ward, delivered an address entitled "Neo-Darwinism and Neo-Lamarckism."

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

IN ENGLISH FIELDS AND COVERS.

AT a recent dinner party my neighbor amused me with a description of an American gentleman's first shooting party at Sir John's. The whole account indicated how little is known by some, otherwise well-informed, Americans about this favorite English sport. The fact that the American wore thin boots to go tramping through the covers, and that when a rabbit was shot by one of the company he plunged into the underbrush to fetch it, were signs of ignorance that the Englishman laughed at, but he admired the determined manner in which the Yankee proceeded to question every action with the evident object of gaining information. For those who are unable to enjoy a "personally conducted" investigation a few words may not be out of place.

Preserving and shooting are not matters of a moment. Throughout the summer the gentlemen of the house anxiously inquire into the welfare of the birds and the prospects of autumnal sports. The game keeper watches with practiced eye the conduct of the game, he keeps the pheasants confined in wire inclosures in the breeding season, employs the barnyard fowls to hatch the eggs and then tenderly rears the young birds. He provides proper food for all and, mayhap, lays a dainty trail of raisins to tempt birds from his neighbors' preserves.

Game licenses are obtained (costing about \$10), new sporting dogs are added to the kennels, and before the first September sun has risen all is in readiness. The master appears in stout tweed breeches, his great boots strapped about the leg, a close-fitting cap covers his head, a cartridge bag is slung across his shoulders.

The season opens on the first day of September, and the favorite guests are invited for shooting on this occasion. The master has a large enough party staying in his house or he asks some other "guns," who drive over from their distant country homes, bringing their wives or daughters with them.

By 10:30 A. M. the sportsmen are started across the fields with one or two sporting dogs—setters, retrievers or terriers—at their heels, while the keeper and his assistants follow at a respectful distance. They march on till they reach the appointed turnip field. At the word of command the dogs set to work; back and forth they go, with noses close to the ground, till on finding a scent the setter strikes the proper attitude, the sportsmen come up just as the birds either scuttle off through the furrows or fly up as marks for the ready guns, several of the covey fall and the rest are off beyond reach. The dogs are again sent on and another covey is soon up. As the party pass on following the game, the keeper and his assistants pick up the birds, and the netted bag with its canvas lining soon grows plump if sport is good. Occasionally the terriers are urged into a hedge and a couple of white tufts flicker by, and a brace of rabbits or hares is presently gathered in by the keeper.

The ground game, i. e., rabbits and hares, are the perquisites of the tenant in whose hedge the "pussies" are shot, endless controversies arise as to the ownership of the different sides of a hedge, for the tenant farmer, if he is of a poaching disposition, will set his guns on the wrong side of the hedge, and perhaps entraps some birds to which he is not entitled. Meanwhile our shooting party is working its way through the fields to the spot appointed for lunch, which is taken picnic-fashion, *à fresco*, or eaten under cover, if the day proves too damp for an out-of-door collation. A substantial meal it must be, as the men are sure to be "as hungry as hunters." And ten great hampers reveal many seasonable delicacies. The ladies have joined the party here and listen to the story of the day's sport.

"What were you doing lying on your back, Harry, up in that field?"

"You would have done the same, Jack, if a fellow pointed his gun at you."

"That reminds me, chimes in another, you know what a shot Smith is, he nearly killed me the other day."

"Exactly, I think he must have a grudge against us and wants to annihilate the family."

The month passes away and the fields are shot over several times a week and then "Master" joins other shooting parties, sometimes taking with him his own man and dog, but only on rare occasions, though I have heard of a man developing great popularity at this season, because he has a favorite sporting dog. Often the Master comes home enraged with some poaching farmer who has shot every one of a covey that were known to frequent a dis-

tant field, and to-day when the Master went to bag them he found only a heap of feathers.

October commences, perhaps, with a bright autumnal day such as are so common at that season in America, but unusual here. To-day the pheasant shooting opens and the Master and his friends drive off to the covers on the hill, to the thick grove of larches with a scrub oak undergrowth, where the shy birds hide. The party now is augmented by a number of beaters, who with stout cudgels lay about them in the underbrush to frighten up the birds. The guns divide, some going into the thicket with the beaters and the others stand outside, a gunshot apart, moving gradually around the covers. The birds, when started, fly up and the bright plumaged cock forms a mark for the sportsman, but his mate is often spared for breeding another season.

The ladies are out to-day and go round the covers with the outer guns until some take fright at the spent shot that rattles around them like hail and they retreat to a safer vantage ground. Sometimes a drive is instituted. This sounds much more complicated when described than it really is. Two parallel paths or "drives" have been cleared through the covers with by-paths connecting them. The beaters with two sportsmen start at the upper end of the place between the paths, while two guns are placed at the ends of the first by-path; these shoot at the game as it flies before the beaters. As the latter approach where the guns are stationed the sportsmen move on to the next by-path and whistle their signal to the beaters, who continue to drive on the game. In this way the covers are shot over.

As the season advances the game grows shyer and scarcer; naturally enough, you would say if you saw the bags brought in and had an opportunity of entering the well filled tidy larder—but sometimes the sportsmen are lured away by hunting or other amusements till the lady of the manor threatens to follow the old fashion of serving a dish of spurs when the larder is depleted.

The November days are so short that little shooting can be accomplished, but the wild pigeons afford a variety in the sport, for after a day's work, when few partridges have been secured toward sunset, which is very near 3:30 P. M., you may see the guns wending their way toward a group of trees, in which it is rumored the pigeons roost. Sometimes they have luck enough to bring in a brace, but the birds are shy, though often on a Sunday they will perch boldly near the house, for they seem to know that is a "close" day for them. These birds are a very acceptable addition to the larder, for when well cooked and highly seasoned they form a most palatable dish, even preferred by some people to other game.

Toward Christmas the cry of the wild duck is heard, and a sharp watch is kept near the ponds on which they alight; they sometimes pause a couple of days in their flight or in favored localities they will spend the winter.

Shooting continues all winter until the close time for most game begins, on Feb. 2; but even then the spring affords rook shooting; this usually is in season toward Easter, when the young birds are about a month old. Not only are the old birds too "smart" in hiding behind the boughs of the trees, high up in which they have built their clumsy nests, but they are far too tough to be eaten. There is not the same prejudice against them that we have for crows, for the rooks are granivorous birds. I had, however, imagined rook pie to be a very untempting dish, but when urged to eat some by those who liked it I was surprised to find the meat very delicate, not unlike that of pigeons. Only the breast is used in the pie, and the skinning and preparation is a difficult process.

There are some matters of etiquette connected with shooting that should be mentioned. For instance, when one is invited to join a shooting party none of the game that falls before his steady aim becomes his, but belongs to the owner of the place, but occasionally the "master" may present a brace of birds to some lady of the party whose larder he may suspect is not already well stocked. Sometimes the clergyman of the parish does not care for the shooting on his glebe and gives it to the "squire," who, as a rule, keeps the minister's table supplied with game. Each guest at a shooting party is expected to tip the keeper and his assistants. Often a gold piece is slipped into the keeper's hand. If he has had his horse put up in the stable a coin is given to the groom. So thorough-out it all shooting is an expensive amusement; with the cost of guns, cartridges, licenses and fees, a pretty heavy drain is made upon the purse, even where one has the shooting with his house and does not have to hire from a neighbor; even when he has his own preserves he may have to buy the privilege of shooting over some little farm that divides his fields. Still there is little complaint on the score of expense, as the English are so keen for this amusement, and an American soon learns the ropes and enjoys the sport thoroughly if he gets a chance.

FRANCES B. JAMES.

WILDFOWL IN OREGON.—II.

NOW the boys must choke down their indignation and deal gently with me while I pay my respects to the great blue heron. Not that he is a game bird in any accepted sense of the term, but a duck lake or slough in this country (or, in fact, almost any other) without this quiet, dignified form stuck at respectable intervals here and there would be like the play of Hamlet with Hamlet left out. Not being an ornithologist myself, I will call your attention to Webster's description of a heron, to wit: "A wading bird with long legs and neck." I guess Mr. Webster is correct. That's about all there is of him, and the grotesque figure at the bar fills the bill.

Hérons, we are told, are distributed over nearly the whole of the civilized world, but in this particular part of creation they are known to the hunters by a less euphonious appellation. These solitary sentinels are created, of course, for some good purpose, but the average hunter has not yet discovered what that purpose is. Certainly not for food. Possibly for taxidermists to experiment on. The pot-hunter can tell you one thing for which they are most excellent—warning ducks of impending danger. How many boys there are that can tell you of lost opportunities on ducks, coupled with an expletive for the benefit of these long-necked, keen-eyed monuments. Many a "kid" and even mature pot-hunter has crawled through mud and saw-grass hundreds of yards to get a raking shot at a half discovered flock of mallard, teal or woodcock feeding in some secluded nook out of the wind, only to be greeted at the supreme moment by that infernal, blood-curdling, agonizing yell that can be compared to nothing else that ever greeted the human ear. Those who have

never heard it can read Dante and draw on their imaginations. But the ducks understand its meaning and away they go. They stand not on the order of their going, but go at once.

Probably no chapter on wildfowl shooting ever before even complimented this bird with an obituary notice; but his very meanness entitles him to some consideration, and his stoical indifference of the opinions of hunters in general makes him game. If you want to laugh the biliousness out of your system lie down close in the grass when you see one flying your way, particularly if he is flying low. Wait until he gets over you, then jump up, swing your hat and yell. You don't need to shoot. Save your ammunition and you will have just as much sport. He can neither go forward, backward, up nor down. In his great effort to do something he succeeds in doing nothing, but to double up and open out like a big jack knife, or in other words, "hump himself." If you don't believe it, try it; it is really funny.

Many a good joke could be told about this bird of ill-omen which might compromise the reputations of some of our best hunters.

On one of the trips of the old hunting boat Gold Dust to Sauvie's Island one of these hoodoo birds was tipped by some hunter, probably on an old grudge. After the bird struck he solemnly gathered himself up, plumed himself, shook the mud from his heels and boldly started to walk across the meadow to a neighboring pond. Some one on the waiting boat discovered him, and in a short time the crew, from the engineer down, armed with every conceivable weapon except a gun were in hot pursuit, believing that they were about to capture a young sandhill crane. Finally a discharge from a stick of cord wood brought the game to bag, and had it not been for blunt Judge Whally, who came aboard late and not in on the scheme, that crane would certainly have graced the table of some quasi-nimrod.

When they are wounded care must be exercised in approaching them. Their apparent quiet indifference to their fate bodes evil. That long, pointed stiletto-like bill, so handy in picking up small fish, frogs, lizards, etc., when held in reserve and used at the proper time on the unsuspecting sportsman or setter, makes a most profound impression. Instinct and long experience in calculating distances and studying opportunities has rendered them efficient. Never let your dog go near one when the bird is wounded. Like Josh Billings's mule, the heron will stoically bide his time. Charley Johnson, one of Portland's most enthusiastic sportsmen, can give inquiring ones further information on this point. Charley is one of those earnest hunters who find more than simple killing in the sport of hunting. Well, he crippled one of these birds, and its glossy plumage and calm look of confidence imbued him with a desire to bring the bird home alive, presumably that he might be the better able to illustrate points of beauty in the despised creature. He took his seat in the boat, with the prize nestling between his knees, while Capt. Riley plied the oars. Charley proceeded to expatiate upon the ornithological subject at hand, the captive all the while looking him in the face with what was assumed to be ill-concealed gratitude. Finally Charley reached the end of a long sentence and a period was needed. The grateful bird furnished one square on the bridge of Charley's nose. It was the opportunity heretofore mentioned and the bird was equal to the occasion.

But something about geese, ducks and snipe will probably be more interesting to your readers and in my next I propose to tell them something about the most wonderful country in the world for game of this character.

PORTLAND, OREGON. S. H. GREENE.

[The first paper of this series, published last week, was erroneously signed "Multnomah."]

LOADING.

Editor Forest and Stream:

In your paper of Nov. 27, I stated that I agreed with one of your contributors that heavy charges of powder would bring larger bags of game than light charges; that I had experimented with light and heavy charges; that I used 4 to 4 1/2 drs. in a No. 12 gun, and 5 drs. in a No. 10, and that to overcome the recoil from such charges I padded the sleeve of my coat, etc. The object of heavy charges is range and penetration.

That item has met with criticism, and one of your contributors, Dec. 27, say in substance that a 28 or 30in. barrel No. 12-bore will not burn that amount of powder. He is much mistaken, or the ordnance department of the U. S. Army, and the manufacturers of fixed ammunition and those who use it, are much "off." I presume those critics will not claim that the ability to burn powder decreases as the size of the bore is increased. The bore of a No. 12 gun is about 3 1/2 in., or .75. There are 7,000grs. Troy in lb. avoirdupois, making 27.3grs. to the dram. The standard U. S. cartridge for .45 rifle contains 70grs. powder. Let us state the following problem and solve it. If a .45-cal. will burn 70grs. powder, how much will a .75-cal. burn? .75x.70+.45=116.6+27.3=over 4drs. powder. It does not follow that because the Government standard is 70grs. a .45-cal. will burn no more than 70grs. Some of the fixed ammunition manufactured by the

Winchester Repeating Arms Co. for .40cal. Ballard, Sharp, Remington and single-shot Winchester rifles contains 90grs. powder, which, by the foregoing method of stating the problem, shows that a No. 12 will burn over 6drs.

Again, take the Winchester express single-shot rifle, .40, the shell for which is charged with 110grs., over 4drs., making over 7drs. for a No. 12 bore.

The critics may say those rifles were long-range. Exactly so, and that is one of the objects of heavy charges; or they may say the barrels were 32in. in length. Then take into consideration in the computation that length, and still it will be found a No. 12 will burn much more than 4drs.

Some of the Winchester repeating arms, model 1886, .45, length of barrel 26in., use 90grs.; .40, 82grs.; .50, 110. Taking the latter caliber and amount of powder in stating the proposition, and it will be seen that a No. 12 bore, 26in. barrel, will burn over 6drs. powder. The question discussed above is not how much powder a man can stand under, but how much will a No. 12 bore gun burn.

Comparatively but a few men, unless they were hunters for the market, have had a greater opportunity, and improved it, than I have to hunt quail, prairie chickens, ducks, geese, swans and sandhill cranes. From 1855 I have lived within four hours' drive of Beaver Lake and the Kankakee swamps and marshes—that paradise for the hunter until within a few years. I have had hunting friends visiting here by the score, who sported as much as myself. We all learned by experience to use heavy charges of powder, as there would be, of course, a good-natured spirit of rivalry among us. There was so much

ing their hounds, and have a hunt with him, good-naturedly chaffing him by saying they would beat him in the hunt.

My friend wanted my gun for that hunt. I let him have it and some shells loaded with 5drs. of powder and No. 9 buckshot. Afterward I received a note from him, saying he had gotten away with his Kentucky friends; that he killed five deer at six shots.

I learned to use heavy charges of powder and pad my sleeve under the following circumstances. One fall, about 1856, thousands of pigeons one day came into a small body of timber near town for mast. Soon there were over seventy guns, estimated at that, in the timber. The firing was about as rapid as could be made. I was present with a 12-bore gun, made for me by W. W. Billingham, Rochester, N. Y.

There were so many persons in the timber shooting that I could not obtain all the shooting I desired; some fellow would run in between me and the bird and fire.

I then charged my gun with 4drs. of powder as an experiment, and when a fellow would run in ahead of me when a bird came around, I would fire over the head of the interloper and get the bird. Without that heavy charge I could not reach the game. I made so many and successful long shots that day as to attract attention. The success was supposed by the spectators to lie in the superiority of the gun. On that occasion all I had to protect my arm from the recoil of the gun was the sleeve of a linen coat and a shirt sleeve. When I quit shooting my arm was much bruised and painful. After that I padded my sleeve.

In thirty-five years of shooting I never had my head affected but twice. On one occasion I was at the lake shooting from my boat, which I ran into the flats for cover. I used two guns. I returned to camp for dinner with over an hundred head of ducks, geese and brant. The game was wild, and of course I made many miss shots, taking chances. After dinner I went out again, feeling perfectly well; but after firing for a few times had to quit for the day, the firing hurt my head so much.

On the other occasion I was shooting at a pond, where the game came in for water from time to time during the day from their feeding grounds on the grain fields. I had to lie on the ground on my left side and without cover, the color of my clothing blending with the earth, and had to shoot from that position. I had fine sport, ending up with a serious headache. A friend with me occupying a like position came out about the same way.

The only wonder is that in shooting so much I have been so free from unpleasant results. During the fall that I speak of shooting from this boat I fired away at ducks, geese, brant and swan over 75lbs. of shot, saying nothing about the amount fired at quail and chickens. That amount, however, was rather more than an average for a season.

[From Life.

My friends and myself were able to have good guns, and had them; knew what good powder was and used it; used different brands and size of grain, grains of the size of the Hazard No. 4 Gov. shooting to FFG. We found of course that the coarse grain would not produce as great a recoil as the finer, with us the finer was the more effective.

There was one thing upon which myself and my sporting friends did not agree. There were about as many opinions as friends. This was as to the best size of shot to use for ducks and geese. After considerable experience and observation I became satisfied that the disagreement was occasioned by the different guns, one gun shooting one size of shot better than another size, each man judging from the shooting of his own gun. If game is so near that (figuratively speaking) you can rap it over the head with your cane, light charges will do, but in a day's shooting, when some of the game is at long range and some at short range, the man who uniformly charges heavily, everything else being equal, will come in at night with the larger bag of game.

Some of your readers may say, I seem to have had considerable experience in shooting on the wing, and as much has been said in your paper about the method of holding the gun, would like to know mine. The method I use is common with all my sporting acquaintances. When the bird is flying across the line of aim we aim at the bird and continue to carry the gun at the aim until the gun is discharged. If the shot is a long one aim higher than ordinarily, on account of gravity. If the bird is flying very rapidly, and it is difficult to take a good aim thereof, we do as well as we can and at the instant of pulling the trigger throw the aim a little ahead of the bird.

I never have had these methods fail me but once. Three friends and myself were up the river for ducks. We camped near a point where the river made a large bend in the form of an ox bow. The point of turn to the point of the return of the river to assume its natural course was about 200yds. across and open. The river up stream from the turn for a mile or more was nearly straight. That day there were many small ducks, the name of which I do not know, but called here by sportsmen "lightning flyers," on account of their rapid flight. My three friends went up the river in a boat, and obtaining good cover commenced shooting; they were good shots and fired many times.

I took position between those points and commenced shooting after my usual method, and fired many times

AS DELICATELY PUT AS POSSIBLE.

Bristow.—Funny thing about that moose. He was at least a mile away when I plunked him, and I hit him within an inch of the spot I aimed for.

Gordon.—Was he standing or lying?

Bristow.—Standing.

Gordon.—There's the tremendous difference between you and the moose, Charlie.

shooting that the game would become shy, and hence the necessity for shooting at long range.

Sportsmen here accustomed to use heavy charges would shoot at game that a man accustomed to use light charges would not think of shooting at, and they enlarge their bag of game. A man who is accustomed to use heavy charges with a padded sleeve never thinks of or feels recoil.

I would not dare to use a 7lb. gun with such charges. In fact, my sporting friends in those days would not take such a gun as a gift on condition that they use it. Our guns ranged in weight from 9 1/2lbs.

I have an excellent 12-bore gun, weight 8 1/2, made to order, in which I use 4 to 4 1/2 drs. I had a 12-bore, 32in. barrels, an excellent gun, which I charged with 4 1/2 drs. It weighed 10lbs. My 10-bore guns were 32in. All my 12-bore were 30in. The result of my experience and observation is, there is nothing gained by length over 30in. In the shot barrel, No. 12, which I use in hunting deer, I now use invariably 4 1/2 drs. powder, 9 buckshot, wadded. This standard with me is the result of over thirty-five years' experience.

I have had friends from abroad on visit with me, with light guns, for the purpose of shooting at the lake and marshes. Those guns were invariably failures then, by reason of the inability to use heavy charges of powder. On such occasions I would let the friend use mine.

When ducks would run plenty here our boys and young men would camp out in squads for a few days' hunt at different times. On one occasion, as a squad were about starting out, one of the boys came to me and said the other boys were continually "getting away with" him; that he had a good heavy No. 10 gun, and he did not think he was nervous, and asked me for advice. I told him to charge his gun with 5drs. powder and 1 1/2 oz. No. 4 shot, and to stuff his coat sleeve with rags so as to break the recoil. On his return he called on me and said, "Mr. L., I did as you told me, the gun kicked like thunder, but I got away with the boys this time."

I spent a few days in southern Missouri with a friend in hunting deer and turkey. They usually hunted deer on horseback with hounds. I had a 10-bore shotgun with me, and occasionally put in a few days hunting quail, and made some long shots which my friend admired. While there that friend received a note from some of his friends abroad, saying they would pay him a visit, bring-

but killed nothing. I could see up the river a sufficient distance to see the game approaching in season. They all flew about the same height above the ground.

I finally adopted the plan, when I saw the birds approaching, of aiming about the line of flight, keeping both eyes open; and when the birds were within about 15 ft. of the line of aim, fired. By that method I obtained about three birds at five shots.

My friends returned to camp, but had killed nothing. One of them came out where I was shooting and commenced firing. He was as good a shot as myself, but killed nothing. Finally he inquired how I managed to hit the birds. I informed him. He tried the experiment and succeeded as well as I did.

That friend said that when he and the other two friends were up the river in that boat, distant about a mile, they would shoot, and then it would seem that about as soon as their gun was discharged they would hear the report of my gun, the flight of the birds was so rapid. H. S.

THE DOG FOR GROUSE.

Editor *Forest and Stream*:

In yours of the 8th Mr. Gordon wants to know what kind of a dog to get for hunting "partridges," which scare him "out of his boots" when they get up all of a sudden. Though this is doubtless a figger o' speech, the first requisite in the business is for Mr. G. to conquer the tendency to get panicky, for unless he does, dog or no dog, he will get very few birds. And I would advise him to persist in shooting on the wing whether he gets any game for a while or not. He don't want to pot-shoot birds. I know he don't. He says so. If he did he'd get a little whiffet of a dog that would scare a bird up into a tree and then stand and bark until his master sneaked up and murdered it. I'm very glad he is above such practices. Let him persevere until he shoots his first bird artistically, when he will find that he hasn't anywhere near arms enough with which to hug himself.

He wants to "know somewhere near where a bird is." That's laudable. I don't blame him. It is one of the first things to know when he is afield, and as he can know much better with the assistance of a good dog, that is what he ought to have. But what breed? That opens up considerable of a subject as regards grouse shooting. I have hunted "partridges" a few, in widely different sections of our country, under many varying conditions, with setter, spaniel and mongrel, and although I know that I shall be tabooed by a large class of spaniel men I advise Mr. G. to get a setter. I do this not because I own one and can't see any good in any other dog, nor because I own a cocker and can't see anything admirable in him. Oh no! Far from it. Money could scarcely buy him. If ever the hackneyed appellation "merry little cocker" fitted like a "duck's foot in the mud," it does in Tobe's case. He is the loliest, good natured, indefatigable, perseveringest, untriningest, little black ubiquity on legs there ever was. As a house dog he is a treasure, when he doesn't get suddenly sick, as he does sometimes before you can open the door. Even then he does his best to get out in time. He is wonderfully intelligent and sensitive, and a good watch dog. He is the terror of stray cats, though with our white Malt-aby he is on the very best of terms, and has heaps of fun. He is several years senior, and of course as becomes a well-bred dog submits to many indignities complacently, though he knows very well when he has just about rations enough for his own use, and she suggests a division thereof. It is very amusing to see her, as he is soberly jogging along thinking of something important, make a sidewise spring or two and land on his back, where she goes through the motions of using teeth and claws with a great show of business, and when he rolls her over and over on the floor, his only show as much as was hers. But his funniest caper is with stray curs. He knows that I have a great aversion to such and if he sees one on the premises, from the window, sounds the alarm forthwith, but if he is outside when one arrives, and I am not around, the way he hobnobs with that dog, and puts in the time for all it is worth is funny to see, but let me appear suddenly on the scene, and trouble begins. With snarl and spring and back up Tobe attacks the nuisance with all the fury his little skin will hold, working himself up to a desperate pitch, which has a surprising effect on the interloper, which is unable at once to determine whether it is for fun or keeps, or to account for this sudden change in the weather. A small dog is generally panic-stricken at once and makes for neutral ground, but a larger one hesitates to show the white feather, seemingly saying, "You little whiffet, what do you mean? If it was't for your master I'd twist your neck for you," and then trots off stiff-tailed, unless demoralized by a whizzing stone or stick. Tobe follows to a judicious distance, though never so far as to be beyond reach of the reserves, and then trots proudly back saying by all his demeanor, "I'm the boy that can clean 'em out."

He has been taught a number of cute tricks, but I think his specialty is the tea-party performance, in which my little daughter also appears. A little table is set and loaded with various goodies. Tea or coffee is poured. Tobe hops into a little chair at one side, and is fitted with a napkin underneath his chin. He has a little plate and saucer, from which he takes the solids and liquids, but never presumes to touch anything until helped. He prefers tea or coffee well sweetened. As he sits there with head slightly dropped watching his mistress from under his eyebrows, his attitude and expression are very comical, which, of course, provoke laughter from the audience. Then the bud of a tail wags good-naturedly, and Tobe says evidently, "That's all right. As long as I'm having a good time and feed, you're welcome to all the amusement you can get out of the performance." But when he wants something very badly indeed, and can't ask for it in English, comes and sits down by me, resting his chops on my leg, and steadfastly gazes at me with his beautiful hazel eyes, I capitulate then and there, and am ready each time to make affidavit that a good dog is one of Heaven's best gifts to man.

Tobe is a working cocker and came from J. Otis Fellows's kennels over four years ago. There is no mink-weasel-otter type about him. He is a business chunk. He stands something over a few inches at the shoulder, more than that from occiput to caudal, which latter is just half long, is jet black with exception of star in breast, is finely feathered, has wavy coat, weighs as much as he ought, and is as plucky a little treasure in bush, windfall,

briers or brambles as ever stood on legs. He had a pedigree and has it yet, I guess, though I have lost it.

So much for a cocker. Would I swap him for a setter? Ask my youngest olive-branch, if you want to get into difficulty. Yet I do not hesitate to aver my belief that I can get more grouse with a well-broken setter than with a cocker. Briefly these are my reasons: With either dog, close in-working is necessary. A cocker flushes the bird, you know not when nor where. Be you never so watchful, it will too often take you unawares, and generally at great disadvantage, as regard cover of bush or tree. As to this point of flushing, whether the bird goes away or into a tree, honors are even between the dogs. A keen cocker will too often get just a little too far away before you are aware of it, and then, of course, is just when he flushes the bird. A well-broken setter is just one point ahead on a point. He shows just as surely as the cocker when scent is hot, and if he flushes, you have equal chances as with the little dog; if he points, you choose your own position. Of course a grouse will not always lie to the dog, but there is always the possibility of its doing so, and this makes the setter, in my estimation, much more desirable. I am considering the grouse only. If quail are about, that is additional reason why a setter is preferable. I would choose a rather small-sized dog, for then they would be not much more objectionable as house companions than the spaniel, and other things being equal, they are just as good hunters. Let Mr. G. get a well-bred setter puppy not over two or three months old, and with all the patience he can beg, borrow or steal, train him by Hammond's method, and he will in all probability have a dog that will be a constant delight. *Verbum sap.*

I notice Mr. Bishop's correction anent the grouse-hawk incident and criticism by me. I am glad to be corrected, and am glad Mr. B. is with me. We always like to be in good company, you know. We'll shift the responsibility where it belongs and try and read the lines more correctly next time. O. O. S.

A LETTER FROM GERMANY.

Editor *Forest and Stream*:

I read with much interest your editorial in the issue of Dec. 18 and headed "Shot Count and Weight."

German gunners have been endeavoring for several years to establish a standard set of gauges for both soft and chilled—here called hard—shot, but have so far only partly accomplished the desired results. The initial steps were taken by the most prominent sporting club in the country, the Allgemeine Deutsche Jagdschutz Verein (General German Game Protective Association), and several shot manufacturing concerns have since adopted the standard fixed by the club. Of course this standard

only refers to and covers the question of the size, not the weight of shot. I annex a very simple and cheap shot measure (price five cents) as used in this country. This measure has on the left near the larger figures a narrow groove, in which ten pellets of shot are placed in a row. The number of the shot thus measured is now visible on the right, the diameter on the left side of the measure. For instance, by placing ten pellets of standard shot No. 5 in the groove the line touched by the last (tenth) pellet will point to No. 5 on the right and figure 3 on the left side of the measure, the last figure showing that the diameter of each pellet is three millimetres. Each additional size either reduces or increases the diameter by just one-fourth of a millimetre. As will be seen shot No. 5 is 3, shot No. 1 4 millimetres in diameter.

This simple measure is a never failing gauge for fixing the size of shot, but as to securing a uniformity for weight does not cover the object sought for by gunners. In cases where also a uniformity by weight is desired gunners here resort to the shot counter, an apparatus nearly as simple in construction and handling as the shot measure, and no doubt known also in America.

By changing the millimetres into fractions of inches the same can easily be converted into a measure suited for America and American shot.

In the same number of your paper referred to before appears an article headed "The Ohio Season." I must confess that to one living in a country where the laws are enforced regardless of person or standing the account rendered by the Dayton gentleman in relation to the violation of the game laws in that State are an extreme surprise. When the game season closes here it is closed; and neither the gunners nor farmers, boys, pot or market hunters will dare to violate or defy the law. Market and pot-hunters are fortunately unknown in this country, and farmers are not permitted to hunt on their own grounds unless these grounds cover 300 acres in an unbroken or undivided piece; thus only a comparatively small number of farmers enjoy the privilege of their American brothers, and these few do and must respect the game laws the same as the rest of the hunters who have rented their hunting grounds.

It is true we have some game poachers in Germany, but the mischief done by them is comparatively small.

A violation of the game laws is punished here by a fine, imprisonment, and if it is a bad case, by a withdrawal of the hunting permit for a time of two to five years. Every one carrying a gun is obliged to take out a hunting permit or license, and these are only granted to men who have never been convicted of any criminal offense.

Game dealers are not allowed to place on sale any kind of game for which the season is closed. Dogging or chasing game on horseback is prohibited by law.

Our game laws are a blessing for all true sportsmen, and through them Germany still offers great sport to gunners.

ARMIN TENNER.

BERLIN, Germany, Jan. 2.

A WORD FOR LIGHT GUNS.

AFTER all the best gun for this country is the one that is the easiest to carry." So spoke my hunting companion as we toiled somewhat slowly after our dogs up a rather steep side hill one day in October several years ago.

We had experienced one of those unsuccessful days that sometimes fall to the lot of the shooter in Connecticut, at least, and now near its end, after having looked everywhere we could think of in vain, we were making toward our team and for want of better occupation for the mind were discussing the relative merits of the different styles and weights of guns.

My shoulders were aching somewhat from the steady all-day pressure of an 8½ lbs. 12-bore Bonehill at the time and the remark set me to thinking. For that day, at least, a two-pound gun would have killed as much game as either of us had in our pockets; taking the days as they ran would not several pounds less than I was then carrying furnish me much more comfort and perhaps almost as many birds.

For twenty-five years I had carried as heavy a gun as I could tramp under and loaded it with as much powder as I could stand back of, and at no time had I ever done any very remarkable execution among the birds.

The "bird hunters" of my boyhood days, before the era of breechloaders, all carried light guns, 14, 16, 18 and even 20-bores, as I remember them, and yet their game bags (pockets were not so plenty then as now) were always well filled, and if such guns would kill game then why not at the present time.

My early instructors were fox and squirrel hunters, and troubled not the whistling woodcock (which whistle aforesaid is certainly made with his wings) nor the whirling quail (which does not whir with his beak any more than the woodcock whistles with his), and no gun was worth the room it occupied in the house unless it shot double Bs well. So 30 inches of barrel, No. 9-gauge and about 10 lbs. in weight made up my first shooting piece, and the black and blue marks on my growing shoulders at the end of a day's hunt did not at that time lessen my admiration for that terrible engine of destruction.

A few years later, after my earliest canine friend had gone, not without deep regret on my part, to the place where all good dogs go, even if they are of unknown pedigree and hunt "varmouts" alone, I obtained a setter pup, and finding that my 30 in. barrel struck too many trees when trying to point it in the direction of the July cock, I cut off 4 in.; but still it was a solid arm, and I had quite come to believe that the occasional long shots which I made with it could be duplicated by nothing lighter. So the breechloaders which succeeded it patterned after it much in weight, if not in other respects.

As I shoved the one I first mentioned into its case and then into the wagon a half hour after the above remark of my friend, I wondered still more as my shoulders felt the relief from the strain, whether or not he was not right. "The bulk of our birds fall dead, if they fall at all, inside of 30 yds. Five times as many are missed clean at 20 yds. as are killed at 40. Why will not a light gun kill at those distances? It will. I will buy one." So I reasoned and resolved, and resolving so I did. First I bought, still a little fearful of the result of the experiment, a cheap 16-bore, marked J. Manton, weighing about 6 lbs. I shot it two years, and although I felt that I must load it so heavy that the recoil was very unpleasant and kept alive the physical dread of a gun which had stayed by me for twenty years, and caused me to miss more birds than all other causes put together, still I killed more birds in proportion to the number of shots with it, than with anything that I had owned up to that time.

The experiment working so well, I gave that gun away and bought a 16-bore Tolley hammerless, which, after I had cut it off to 36 in., weighed 6½ lbs. About this time I became a convert to wood powder, and my shooting at once improved 50 per cent., part of it due to the fact that the new gun fitted fairly well, and quite a good share of it to the fact that I could now pull the trigger without at the same time pulling as though I wanted to run away from the gun; for now, for the first time in my life, I was shooting a gun that did not "kick."

For two years I carried it and was fairly well satisfied. With 1½ oz. of shot and 2½ drs. Schultze powder it gave as good pattern as any 12-bore gun that I had ever seen, and the penetration was always sufficient for all ordinary distances, with no recoil. A year ago last fall, however, I chanced to step into Von Lengerke & Detmold's, on Murray street, and there for the first time saw a Franco-cote featherweight 12-bore hammerless, 26 in. barrel, 5 lbs. 14 oz. I heard their story about the performances of the gun, handled it, and said get me a 16-bore, 5 lbs. weight, and I think I shall have the best gun in the country for upland shooting. One of the members of the firm said he thought such a piece would certainly be there before the next season, but the months rolled by and it came not.

The mischief had been done as far as I was concerned, however; a 5 lb. gun I must have, if not in 16 then 20-bore. I tried our American makers, but could get nothing better promised than 5½ lbs., but on the 20th of September, five days before the season opened, Squires, on Broadway, received a shipment of Greeners among which was a 20-bore, 26 in. barrel, 4 lbs. 15 oz. gun. I had no special predilection for the Greener, but wanted a gun of that weight, so I bought it and found both barrels full choke; for what purpose they were so made I can't conceive. However, that didn't trouble me much, for I soon took practically all of the choke out of the right barrel and modified the left somewhat, and then started to shoot the gun. Before going to the fields I targeted it carefully and worked at the bore until, loaded with 2 drs. of Schultze powder and 1 oz. of No. 8 shot, the right barrel distributed 150 pellets evenly over a 30 in. circle at 40 yds., and the left barrel 250 and 260 on the same circle at the same distance.

I tried no sheets of paper for penetration, but after studying the face of the board fence upon which my papers were placed for a minute, and finding that the shot were driven into the pine boards out of sight, I said "this will kill birds," and spent no more time on that branch of the subject. The result of the season's shooting fully justifies the prophecy then made. With no gun that I have ever had in my hands have I ever made so good an average on quail, woodcock and partridge. Nor have I ever killed birds further than with this toy. During a week's hunt in Virginia I met many shooters

who in the morning handled the "pop gun" with amused contempt, and at night, at the end of a day's shoot, looked at it with astonishment, after having seen bird after bird fall before it quite as far away as they could kill them with their 12-bores.

There is no peculiar merit in this particular gun, but I think that it is true that any 20-bore gun with a proper charge will give very nearly as good penetration as an 8-bore, though, of course, not being fitted for so much shot. Probably $\frac{1}{4}$ or $\frac{1}{2}$ of an ounce of shot would give better penetration with this than the full ounce does, but I want the spread of the ounce and I get penetration enough to kill and do not care for more.

If, however, it is true that I lose anything in penetration by laying aside the cannons I used to carry, I certainly gain more in handiness of weapon and lack of fatigue of body and consequently precision of aim than I lose.

This gun is always in my hand, and not being shifted wearily from one shoulder to the other just as an old partridge starts. It comes to the eye in a second with an untired muscle supporting it, and the bird is very lucky or very wild that gets 30 yds. from its muzzle before the shot are after him.

Possibly with black powders the recoil when loaded for good penetration would be uncomfortable, but the days of black powder are numbered, and with the nitrates will come back again the light guns, which the era of breechloaders displaced. Four years ago I met a couple of fellows in Litchfield county returning from a two days' hunt with eighty-five woodcock and partridge in their wagon. "Why don't I have as good luck as you?" said I. "You use too big a gun," said one and passed me over his 20-bore Pat Mulligan. "Can you kill partridges with that?" I said. "I think they die of fright when I point it at them," he replied, "at any rate, there they are." And he was right; there they laid, the biggest bunch I have ever seen killed by two men in the same time.

20-BORE.

ROCHESTER AND VICINITY.

Editor Forest and Stream:

A committee from the Monroe Sportsman's Association went before the supervisors of Monroe county last Friday. Supervisor Page introduced the following resolution:

No person shall shoot or otherwise kill, or have in his or her possession, except alive and for the purpose of propagation, any quail, except during the month of November in each and every year; and any person violating this section shall be subject to a fine of \$25 for each offense. For partridge, grouse or pheasant, the close season is fixed between Dec. 31 and Oct. 1. That for woodcock between Nov. 30 and Sept. 1. Any person selling the various named birds out of season, or snaring or trapping the same, shall be fined \$25 and committed to jail for thirty days. No person shall hunt or kill any of the said game upon any farm or lands without permission of the owner or lessee; and any violation of this section will subject the transgressor to a fine of \$25 and thirty days in jail.

The committee was granted the privilege of the floor and W. S. Kimball, W. H. Bowman, R. R. Fanning and ex-supervisor J. H. Brown spoke in favor of the protection and propagation of game, urging the board to pass the resolution presented with that view.

The board will consider the resolution next Thursday. One thousand quail of the 5,000 contracted for arrived last week. I have seen them and they are a splendid lot of birds. Only a few have died and those mostly from overeating before they were supplied with gravel, as a post mortem examination of a number of crops and gizzards showed. They will be divided into lots of twenty-five and each bunch will have a coop by itself.

It is settled that the Association will also procure a number of pheasants from Oregon. It is to be hoped that these birds will be absolutely protected for a number of years.

Does this association mean business? Well, I rather think so. Mr. Redmond's assertion, made in this journal some months ago, that "Rochester compared favorably with any city as a sportsman's center," bids fair to prove true.

I inclose circular and card prepared by the Monroe Sportsman's Association for circulation among the land owners of this vicinity. The executive committee proposes to get a list of the farmers, and by this means insure a large membership. But it is also intended that parties living in other counties should become members, therefore the association, through the FOREST AND STREAM, invites all who are interested to communicate with the secretary, Mr. Edmond Redmond, who will send the circular and other information.

OSCEOLA.

ROCHESTER, N. Y., Jan. 26.

A PENNSYLVANIA DECISION.

WE are indebted to the courtesy of Mr. S. L. Boggs, of Pittsburgh, for the full text of the following decision, to which reference was made in our issue of Jan. 15:

COMMONWEALTH } Western District, No. 217,
vs. } October Term, 1890,
WM. WILKINSON, } Quarter Sessions of
Appellant, } Allegheny County.

PAXSON, C. J.
The defendant was convicted in the court below of a violation of the game laws. The jury found, specially, that he had in his possession for sale, and exposed for sale, in the city of Pittsburgh, on the eighth day of February, 1890, twenty quails. But they also find "that said quails were not killed in the State of Pennsylvania, but were ordered by telegraph by the defendant from a firm in St. Louis, Missouri, where it was at the time lawful to kill and sell said quails; that said quails were so ordered on December, 23, 1889, and were delivered by the Adams Express Company, and paid for on December 30, 1889, by the defendant."

Upon this state of facts the court below entered judgment for the Commonwealth upon the verdict, and sentenced the defendant to pay a fine of two hundred dollars (\$200) to the Commonwealth; or in default thereof, to undergo an imprisonment of two hundred days.

The proceedings were founded upon the ninth section of the act of June 3, 1878, Pamphlet Laws, 161, which enacts that "No person shall kill, or expose for sale, or have in his or her possession, after the same has been killed, any quails or Virginia partridge, between the fifteenth day of December, in any year, and the first day of November next following, under a penalty of ten dollars (\$10) for each bird so killed, exposed for sale, or had in his possession." A later act changed the time of killing quails, but that is not of importance.

By the thirty-fifth section of said act, it is provided: "In all cases of arrests made for the violation of each and any of the foregoing sections of this act, the possession of the game, fishes, birds, animals, fowls, nets or other devices provided for or so mentioned, shall be *prima-facie* evidence of the violation of said act."

The manifest object of this act was the preservation of game within this Commonwealth. We cannot assume that it was intended to preserve game elsewhere. And it would be a forced construction to hold that it was intended to exclude from our market quails or other game killed in other States, where, by the laws of those States, the killing of them was lawful. A careful reading of the language of the act shows that it applies only to game killed in this State out of season. "No person shall kill * * * any quails." This means that no person shall kill quails within this Commonwealth, except during the period allowed by law. The law was not intended to have any extra territorial effect, and if it was, it would be nugatory. After prohibiting the killing of quails, the act further declares, "or have in his or her possession after the same has been killed, etc." What does the word "same" here refer to? Clearly, the antecedent game, the killing of which had already been prohibited. The plain meaning of the act, as we view it, is, that no quails shall be killed in this State between the dates specified, and no person shall have in his possession, or offer for sale, any quails so killed in this State.

The construction claimed for the act by the Commonwealth, would render any one a criminal who lawfully killed quails in another State, and brought them here for his own use. It would be *prima-facie* evidence of a violation of this act, and, if he could not show in a defense that he killed them outside of this Commonwealth, he would have no defense at all.

The matter is too plain to require elaboration. The judgment is entered for the defendant below, *non obstante veridicto*.

MAINE DEER INTERESTS.

THE bad slaughter of deer in Maine by hounding the past season, I am afraid, is already being followed by the crust-hunters. The feeling is that the Commissioners are powerless to hinder this crust-hunting till new laws are passed, or at least till new appropriations are provided by the Legislature now in session. The crust-hunters feel that the hounders have had more than their share of the game, without molestation of the law, and now that the hounding season is over, they must destroy the few deer left in their yards, hemmed in by the deep crusted snows. Already the snow is very deep in the woods, and the deer have been driven early to the yards. Each of the latter snow storms have been followed by a rain, and the snow has been solidly crusted over. I saw several deer in the Boston market the other day—just arrived from Maine. They had not been killed many days; certainly since the close season began, Jan. 1. It is only reasonable to suppose that they had been crusted in the deep snow. What will be the result to the Maine deer if this is to be kept up nearly three months longer? The deep snows last in that northern region till well into April, and the crust-hunters are fond of plying their nefarious sport late, for the reason that the weather is not as cold and the snow is deep enough to enable them to catch every deer in the yard in a very short time and with very little trouble. This crust-hunting is not done by sportsmen. Indeed, it is not generally done by the guides who work for sportsmen in the open season. It is done by the shiftless drones of the towns and villages, who are too lazy to hunt deer in a reasonable way. But worst of all, it is done by the skin-hunters, who get a few dollars for moose and deer skins. They take all there are in the yard, reckoning that it will be their only chance; and little they care for game in the future. I would not trust them, even if the last pair of deer in that State were in the yard and the skin hunters knew it—I would not trust them to spare their lives for the sake of the game of the future. No. They would not spare them. They would kill them and get the few dollars their hides would bring.

The Governor of Maine has appointed a committee on fisheries and game that will be very likely to propose wholesome amendments to the fish and game laws, amendments in line with the recommendations of the Commissioners. This comes from the good sense of Governor Burleigh, but what form of law the lumber people will allow to be carried through is a question.

SPECIAL.

Editor Forest and Stream:

The undersigned hereby offers the sum of \$40 to any person who will furnish evidence that will lead to the conviction of any person or persons, engaged in illegally killing deer in the towns of Dixfield, Mexico, Roxbury, Carthage, Weld, or Byron, Maine, during the winter of 1891. Also \$10 reward for killing any dog engaged in killing or chasing deer; the last offer holding good until further notice.

N. C. LOCKE.

SALEM, MASS.

VERMONT FISH AND GAME LEAGUE.

PUTLAND, Vt. Jan. 26.—At the meeting of the Vermont Fish and Game League held here on the 21st inst., there was a good attendance from abroad, and the reports received indicated that the League have the full sympathy of the public, and that its usefulness is widely recognized. Henry R. Dorr, president, occupied the chair. A. J. Merrill, W. R. Peake and W. Seward Webb were appointed a committee to investigate the cost and practicability of importing game birds from foreign States or countries; and to suggest proper legislative measures for the protection of such game birds if procured. At the suggestion of Walter H. Childs, of Brattleboro, the chair was authorized to appoint a committee of three for the purpose of consulting with associations in New Hampshire, Massachusetts and Connecticut, with a view of securing legislation to improve the fishways at Holyoke and other points on the Connecticut River, so as to permit the passage of salmon and shad to its headwaters. H. R. Dorr, Chas. C. Warren, M. S. Colburn, Wm. Walker and J. W. Titcomb were appointed a committee to confer with the fish commissioners and fish and game associations of neighboring States in regard to securing uniform laws for the protection of fish and game common to each. The president, secretary and treasurer were appointed a committee to decide where the annual meeting will be held, with power to appoint sub-committees to arrange for a banquet at that time.

The matter of providing ampler fishways in the Connecticut river is of larger interest than is generally appreciated. The nets stretched across the river in Connecticut, and the dams in Massachusetts, prevent the passage of salmon and shad to the northern waters of the river, where, perhaps, the finest salmon pools in New England are ready to be reoccupied by the fish with which they were formerly populated before the stream was blocked.

Among the members of the league present from out of town were Hon. W. R. Peake, Bristol; Hon. Hiram Atkins, Montpelier; and Charles F. Orvis, Manchester. C. H. Wilson of Glen Falls, N. Y., was also present. Mr. Wilson, whose nom de plume,

"Gantrie" is familiar to New England sportsmen, is an earnest worker for fish protection in Vermont, and is always a welcome guest among Vermont fishermen.

The Vermont Fish and Game League now numbers 122 members. Its outlook is excellent, and the general interest in the protection of fish and game which the organization has aroused indicates that substantial benefit to the State will result from the work of the league. The bill which Congressman Grout has introduced appropriating funds for the location of a fish hatchery in Vermont was brought to the attention of the league, and his efforts in this direction, which are expected to be successful, are heartily appreciated.

The annual meeting of the league comes in the month of November at which time the league will undoubtedly celebrate the close of its first year's work with a banquet. WHEELOCK.

LEGISLATION AT ALBANY.

[Correspondence of Forest and Stream.]

ALBANY, Jan. 26.—Assemblyman Bush has offered the following which has been passed by the Assembly, ex-Speaker Husted declaring that the resolution was just and important: *Resolved*, That the Committee on Public Lands and Forestry be and it is hereby authorized to undertake and prosecute during the present session of the Assembly, a general inquiry into the administration of the laws in relation to the Forest Commission, and to report what, if any, changes in the present laws are necessary to better protect the forests belonging to the State, with power of itself, or by any sub-committee of its own members, which it may appoint, to summon witnesses and to examine them under oath, to send for and examine books and papers and to hold meetings at such times and places as to such committee or sub-committee may seem requisite and proper, and the committee is hereby authorized to employ a stenographer.

Assemblyman Beakes has introduced a bill making the season for hunting deer in Sullivan county from Oct. 1 to Dec. 1, and allowing venison to be sold from Oct. 1 to Dec. 15.

Assemblyman Brundage has introduced a bill appropriating \$5,000 for a fish hatchery in Urbana.

Assemblyman Rice, of Ulster county, has introduced a bill to repeal the act of 1887 for the preservation of shad in the Hudson River.

It is thought that the statement made against Mr. Basselin, one of the Forestry Commissioners, in regard to the map of the Adirondack Park, will force his resignation as a member of the board. The fact is, as is alleged, he is not a member of the line defining the park so far within the line defining the wilderness, just at the very point where, in Herkimer county, it would leave his own territory outside of the park, shows that, as a Forestry Commissioner, he is unfit to have in charge the great interests of the people relating to the Adirondack Park. A man with such interests as Basselin ought never to have been appointed to the place, and it is said that the other members of the Commission have all along been blamed for things that Basselin insisted upon and which their own judgment told them were wrong. In this case, however, it looks as if Basselin had insisted once too often, and that he will have to go. It is said that Gov. Hill has been ready to have him go for some time past, but that he would rather have the move made by Basselin than to make it himself.

THE CHATHAM FISH AND GAME ASSOCIATION.

OF CHATHAM, MORRIS CO., N. J.

THE annual dinner of the Chatham Fish and Game Association was held on Wednesday evening, Jan. 23, at the Fairview House, Chatham, N. J. The officers of the association are: Geo. Shepard Page, President; W. W. Ogden, Vice-President; William Elder, Secretary and Treasurer. Mr. Page presided. An excellent dinner was served, at the close of which the president referred to the extremely favorable position occupied by the grounds of the association, its rapid growth in membership, very eligible location of its property and grounds for the improvement of the past season of incorporation, the liberation of quail and other game birds, in order that the extensive grounds controlled by the association might be more liberally stocked. The territory of the association is contiguous to the upper Passaic, mainly on the line of the townships of Chatham, Hanover, Madison and Summit. Eight thousand acres are now under lease. Farmers willingly grant the association consideration of the improvement of the ground for many varieties of ducks. It is only necessary to plant wild rice in the quail, partridge, woodcock, snipe, ducks and rabbits. Comparatively few persons unsupplied with the tickets of the association now visit the ground. The sport, therefore, during the past fall season and during the present winter, up to the first of January, has been very good. The wide expanse of meadows and wet ground adjoining the lower Passaic affords a favorable ground for many varieties of ducks. It is only necessary to plant wild rice in order to secure a great increase in the number of the ducks, as well as to make it an extensive breeding ground for them. It is the intention of the association to plant wild rice at favorable points.

Mr. William Elder confirmed the favorable report of the president, used the establishment of a home, centrally located in Chatham, where the meetings of the association could be held, and with opportunities for athletic sports, such as bowling, lawn tennis and billiards, a library of books and papers pertaining to field sports, and adapted as a meeting place not only for the members of the association, but also for their families. He stated that the association had no debts, and there was a good balance in the treasury.

Mr. W. W. Ogden, in a very interesting manner, replied to the toast, "Field Sports in the Passaic Valley." He believed that no other association of the same character could say that it numbered among its members a sportsman who had frequently shot over the same ground now controlled by this association in the company of Frank Forrester. This could be said of Mr. William T. Budd, now in his eightieth year. He gave many remarkable experiences, in some of which, he had taken part. He believed that the great scores of forty or fifty years ago, among game birds, could be repeated, with proper protection and re-stocking. He referred to the remarkable success of six guns on the 3d and 4th of July, at the opening of the woodcock season and within a recent date, when 120 woodcock were killed, all were within ten acres of ground, and within a mile and a half of where the association was now assembled. He believed these grounds to be more favorable for a larger variety of game birds than any other of which he had knowledge. He had no doubt that the area of leased ground could be easily increased, and that the twelve square miles now controlled could be readily quadrupled. He alluded to the stocking of the Passaic with black bass by the president, not many years ago, making it now one of the best waters for that game fish in the vicinity of New York.

Mr. Charles Lum, in a very humorous speech, replied to the toast of but one word, "Punch." He was followed by the Rev. C. N. Church, Messrs. Yeaman, F. H. Lum, Pool and W. H. Lum, the closing remarks to the ladies being appropriately responded to by Mr. H. Johnson, of Newark.

Mr. F. H. Lum, in a very practical speech, advocated that immediate steps should be taken to secure ground and erect a home for the association. He suggested that bonds for \$50 and \$100 bearing 5 per cent interest be created, and emphasized the suggestion by agreeing to take a portion of the amount himself. His proposition was warmly indorsed by other members, the result being that a liberal percentage of the entire amount was subscribed for and a committee appointed to carry into effect the recommendation. Several new members were proposed. A committee was appointed to incorporate the association, also a committee to secure quail and liberate them in the early spring. The secretary was instructed to send a remonstrance from the association to the Legislature to protest against the enactment of the proposed law for the State of New Jersey, prohibiting the shooting of quail for five years.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free upon application an interesting circular of Mr. Grinnell book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Adm.

FOREST AND STREAM, Box 2,532, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

POTOMAC RIVER BLACK BASS.

ONE evening about the middle of April, 1888, my two brothers and four friends decided to take a trip to the Big Falls of the Potomac River, fourteen miles from Washington, and try the bass, which to our great delight we found by numerous inquiries had been biting very freely for the past ten days. We made arrangements to meet our three friends at Riggs' Hotel at 2:30 the following morning. We all parted in high glee, and started home to get together our tackle. It is useless to mention to our readers how slowly the hours passed. While overhauling our tackle I found my leaders about worn out. My brothers, whom we will call Mollie and Gordon for short, wanted more hooks, sinkers, lines, etc., so we all decided to go down town to M. A. Tappan's and get a supply. We hadn't been in there five minutes, when I walked Walter J., one of our party, and one of the most enthusiastic sportsmen among us, to get a new line. The door had hardly closed, when Lewis, Bert and Lapin arrived. We were all together again for the second time that evening. After talking fish and fishing tackle for an hour, and buying about twice as much as we needed, we parted again, to meet in four hours and thirty minutes. All of us hurried home to get what little sleep we could. Mollie set the alarm, placing the arrow at 1, as he was to go for a team some distance off.

We had but fairly gotten into the land of dreams, where I was sitting on a large rock overlooking the big eddy at the falls, quietly fishing, when the click of my reel began to hum; all of the boys were crowding around me, as I was playing the big fish with the air of a professional and saw him break water for the first time, when I jumped out of bed and heard the last echo of the alarm clock and saw my brothers climbing out of bed. While Mollie had gone for the team and I was getting everything together, Gordon had the little oil stove in operation and soon had a pot of hot coffee, eggs, bread, butter, etc., when I walked Walter and Lewis to breakfast with us, instead of going to the hotel, and very glad we were to have them. In a few minutes we heard the rattling of a team, and sure enough it was Mollie. After eating breakfast and waking every one in the house, and I expect one or two houses on either side of us, we put our traps in the wagon, piled in ourselves and started on a brisk trot for the Riggs House.

Drawing near we saw Bert and Lapin waiting for us. They soon got in, and, everything being ready, we gave three loud cheers, Mollie tightened the reins and spoke to the horses without effect, tried again with the same result, jerked the lines, but no good. The driver then applied the whip, but instead of going ahead the horses went straight up and down. Things began to look serious and unpleasant, as several persons were standing around watching our efforts to make the horses move on. We all got out, patted them, talked kindly to them, said a few bad words, but still they stood in the same place. Things began to look blue sure enough, for we wanted to reach the fishing grounds by daylight and had no time to spare. I thought of the twitch, which I had tried before with good effect, and with the aid of two lead pencils and a stout piece of twine the horses were soon moving up the avenue at a brisk trot. The twitch was then taken off, I jumped in and we went along for half a mile when the nags stopped again. I repeated the same operation with good effect until half way to the falls, when it had to be repeated. The boys proposed that I should continue right along holding to the twitch, but I didn't see it in that light. We finally arrived at the hotel about a half hour before daylight, and found a dozen others ahead of us.

We put our horses up and started to find bait. We did not have to go far, as three or four men at the hotel had plenty to sell. Minnows 15 cents per dozen, and crawfish 25 cents per dozen. After everything was in order we, with about twelve or thirteen others, lounged around the veranda, waiting for daylight. Pretty soon one of the attachés of the hotel made his appearance and asked how many of us wanted breakfast, which would be ready at 7 o'clock, and not getting an encouraging reply he said, "Gentlemen, it will be useless for you to go to the river before 8 or 9 o'clock, as the bass do not bite until about that time." Out of the nineteen or twenty fishermen that stood around twelve bit and ordered breakfast. At the rays of light we started for the big eddy, about 300 yds. away, and when we reached it we saw four natives hauling in bass at a great rate. They already had about fifteen fish. It did not take us long to get our tackle in order, and seeing that the fishermen before us were using crawfish we used the same bait. I made the first cast of our party, and my bait had hardly time to reach the bottom when I hooked a fish. By the frantic rushes it made and the way my pole bent all attention was turned to me, and lines were taken out to give me room to play my fish, and all waited for results. I gradually worked my way around to a little strip of sandy beach that extended about 15 ft. in length and about 7 ft. back to a wall of rocks; all the time my line was cutting the water from right to left, now taking in line as fast as possible as he makes a dart toward me, and giving him more line as he makes for the other side of the eddy, and it is all I can do to keep him from under those rocks to the left. Now for the first time he breaks water and throws himself into the air. "What a beauty," comes from all as he disappears again, while I am wondering if I am going to land him or lose him. At last he is pretty well played out; occasionally he would make a rush from right to left, and after a big fight I had him within 6 ft. of the sandy beach. Not having a dip-net I had to land him on the beach and finally pulled him in. When out of the water fully 12 in. on the beach he made his last effort to free himself and succeeded. Now, it was a race between us, and I rushed into the water after him, as he was flopping and splashing around. I kicked and scooped with my hands with the hope of again landing him and partly succeeded once, but he finally slipped between my legs into deep water and was gone. I half wished I hadn't come fishing, but what's the use getting mad, there are lots more in there. So I took all jeers and fun poked at me by the rest good-naturedly. We all baited

and cast in again, and for three-quarters of an hour what glorious fun we had, standing on the narrow strings of beach side by side, not having enough room to make half a cast. When two or three hooked a fish at the same time, then there was a general mixture of lines and fish causing a number to be lost. Finally the number of our crawfish was reduced to two. The lucky ones, Gordon and Bert, who had those, caught three bass, while the rest of us had to content ourselves with minnows, which proved poor bait that day, as the bass would not touch them. At the edge the basin or outlet on the opposite side sat a lone fisherman about 45 ft. above and directly over the water. He was using a stiff home-made rod and crawfish for bait. He was fishing on the edge of the swift-running water, and about every hour he hooked and hauled up a beautiful bass. The fish he caught were about the size of shad and would average about 4 lbs. in weight.

As no more crawfish were to be had, and we hadn't had a bite for two hours, we spread out our lunch, after which we lighted our pipes and took a sun bath. Some of the boys were soon sleeping soundly and the rest of us tied a light rope around the leg of B., and taking a half hitch around the leg of L. we made fast the other end to the leg of M., and then went off to see if we could find some angle worms, getting about two dozen. Gordon, Walter and Lapin took the old stand on the beach, while I climbed over the rocks to the other side of the pool, to try my luck. Baiting and casting in, I soon had a nibble, and then a bite, and in half a minute I had landed my fish; another cast was made with the same result. After that the fish would not bite. Gordon, becoming desperate, started off to get some crawfish if there were any within a mile or so to be had. After an absence of half an hour he came back bringing 15, which he bought from a boy for 25 cents. He had to pass where the sleepers were, and got to them just in time to see L. try to turn over and disturb the others, who in turn began to twist and kick, and in a few seconds they were all in a heap, each one trying to free himself from the others.

After they were straightened out we again turned to the fishing, and were at it but a short time when Gordon hooked a large fish which was making his line cut the water in great shape. At the same time I had a bite, but dropping my rod and calling to Walter to attend to it, I went to the assistance of Gordon, determined to help him save that fish if possible. While Gordon was playing the fish, which we could see was a large one, he cleared the water three times and showed himself in the air. Walter picked up my rod and landed a 4 lb. bass. Gordon's fish was about played out when he hauled him out on the beach, but as he touched the sand one flap with his tail freed him from the hook. I was expecting as much, and had stationed myself close to the water's edge, and threw myself on the beach parallel with the water, as the fish made desperate efforts to get away. Gordon soon had him on the string. Then we all examined and admired the fish, which we concluded would weigh over 2 lbs. With this last instalment of crawfish we took seven bass, and after using all of our bait we decided to leave for home.

Lewis had his camera along and photographed us among the rocks. Upon counting our bass we found our total catch was 23 fine fish. Gordon caught the largest by three-quarters of a pound. Walter claimed to have taken the greatest number, and to prove it he said he had cut a wedge-shaped piece out of the tail of each fish he caught. This gave him two-thirds of the whole catch.

We held a council of war upon this and came to the conclusion that he not only cut his own fish, but one-half of ours also. He protested and so did we. As the majority rules, we divided the catch equally. We packed our things in the wagon, and threatened to make Walter ride the off horse home if he didn't keep quiet about those fish. Our horses stopped at the foot of a hill and would not stir until we unhooked and changed them; by this we knew that they had been hitched up wrong all the time, for we had no further trouble with them. As I look at the photograph upon the wall before me now it seems as if it was yesterday. If I am here the coming summer the fishing season will find me at the falls, or at Goose Creek, a few miles further up the river, as often as my time will permit. In the latter stream there is fine bass fishing at times.

I have just finished packing my grip and will start for a two or three-months' trip through Florida, and I shall try to furnish the readers of FOREST AND STREAM a few fishing notes from that State.

CLIFF.

WASHINGTON, D. C.

BASS IN CALM AND STORM.

WE had driven one August morning some four miles through a delightful Maine region, where from hilltops commanding views of the White Mountains in one direction and the winding waters of the Sebago Lake system in the other, we pitched down into little valleys and runs with the clustering branches of beech and maple meeting and interlocking overhead, and caught now and again the rippling music of a trout stream pouring its yellow-brown waters over some mossy log. Less traveled roads and lanes branched from our course, with rich, grassy swards growing luxuriantly between horse path and wheel ruts. The golden rod, midsummer's mile post, was beginning to light its golden torch wherever the sun had penetrated. A flock of young grouse, which scurried from the road ahead and peered out at us from under a low-branching hemlock as we passed, too, indicated by their size that autumn was approaching with no uncertain tread; but later on, when we sat at anchor, our light boat mirrored in the unruffled bosom of as gemlike a bit of lake as ever "nestled amid hills," and mopped from our faces the outpouring sweat, we could contemplate coming cold without regret. I can easily picture the look of disdain on certain countenances when I acknowledge that we were still fishing for bass with grasshoppers, but such was the fact nevertheless. Previous trips to this water had demonstrated that these particular bass were addicted to "hopper eating," and with nothing else could we tempt them; so hoppers it was.

While the boat lies motionless and we expectantly wait for a coming bass I will introduce you to our party. That fellow in the stern, whose jovial face is swelling and blistering in the hot sun, is a tailor, alias Fatty—a fellow who will turn out at any hour of night to go on a fishing trip and come home happy whether it has been a "fishing day" or not. He with negligee shirt adjusted in such regular folds with tie so scientifically knotted and

steel-colored gloves which are attached to his shirt sleeves with court plaster, is a counter-jumper—one who affects to dislike angling, but has taken the trip "just on Fatty's account." The other occupant of the boat is the writer, and for obvious reasons I cannot say much in praise of him, therefore I desist. A reel suddenly clicks, the counter-jumper's rod bends and vibrates, an angry bass leaps in the air, scattering many-hued drops of water into the sunshine and again seeking its element, where it exhibits all the feats set down in the repertoire of a good healthy bass; all in vain, he is soon in the landing-net and a minute later pulls down the scales at 2½ lbs. Whiz! whiz! It is some ten minutes later, and again it is the counter-jumper's reel that is screaming. Again there is a fine bass shaking himself in the air, but when he drops beneath the surface the line falls slack, there is no graceful bend continued in the rod, a dead grasshopper floats where the late combat was carried on and the counter-jumper resumes his seat in silence and seeks for a new hook in his tackle box.

"Too bad, C., you lost him," says Fatty. No answer, oh no, he cared nothing about fishing, not he. Fatty and the writer had both had more or less luck when noontime had come. While eating our lunch amid the bores of forest trees with the smell of fern and balsam as appetizers, mutterings of thunder came to us from up Mt. Washington way.

"Now, boys," remarked the writer in a sort of paternal way, "we may get a heavy shower this afternoon, I will do as you say, fish it out or start for home now; for my part I am a thorough countryman, used to the elements, and a ducking more or less counts for nothing; but with you it is different, and I am ready to stick to the fishing or give it up," and he tried to put on such a look and air of superiority as we should presume some veteran plainman might assume with the freshest of tenderfeet. "Fatty and I have our mackintoshes, and I think we can stand it," said the counter-jumper. "Yes," assented Fatty, "and you can have a rubber poncho by going to the carriage for it." "No, thanks," said the writer, as indignantly as if he had been offered a nursing bottle, for he had a settled belief that the shower would "go around."

We were soon anchored at our favorite grounds, but the fish had evidently not returned for the afternoon session. Up in the northwest was a large bank of black, threatening clouds, rolling up larger and larger; their every movement seemed to force out roars of thunder, which increased in volume as the storm approached. Flashes of lightning rent the clouds asunder like sheets of flame and then darted away among the hills in zig-zag lines. Several crows perched on a dead pine gave forth discordant cries and then sought the deeper woods. A broad-winged hawk circled overhead, its under parts looking satiny white against the murky blackness of the storm cloud. A few uncertain puffs of wind and then down from the northwest, bowing huge trees before it and whitening with foam the lake's surface, came wind and storm in united fury. Suddenly objects but a few rods away were shut from view, and like a deluge the rain struck us. The others had drawn on their mackintoshes, but the writer had pinned all of his faith on a shooting coat which had once been recommended as waterproof; but that day was past, for the first sheet of water that fell penetrated to the skin and left him gasping as he used to in his boyhood days when he endeavored to hasten the season by "goin' in swimmin'" within a fortnight after the departure of the ice, but this, however, was a more continuous gasp, for each succeeding sheet of water seemed colder than the preceding. However, other matters demanded attention; there was a tugging at his rod, which denoted the presence of a bass of no mean proportions, and, too, the boat was drifting shoreward at a rattling pace considering that it was dragging an anchor.

"Net this fish for me quick C.," cried Fatty excitedly. The counter-jumper picks up the net and his own reel begins to chatter like an alarm clock. For a few minutes the air seemed filled with vibrating rods, leaping bass, thunder, lightning, rain and excited exclamations. A huge tree on shore was heard to fall with a tremendous crash: our boat was now filled with water to the thwarts and pulling in our dragging anchor we guided her on to a sand beach, where she was soon emptied, and now, wonder of wonders, there were five bass more than when we took our noontime lunch, yet none had any recollection of catching but the three we had taken, almost simultaneously, in the height of the storm. Evidently some one had been too excited to know when he caught fish, but we shall never know who. The storm for the present had passed and we again anchored and cast in our grasshoppers, but there was no response from the depths below. We were admiring the puffs of fog hanging to the hillsides when again from the northwest came indications that another installment of the storm was nearly due.

"Boys," said the writer, with becoming humility, "I said earlier in the day that one ducking, more or less, didn't matter to me, but when it comes to taking two, more or less, I weaken; let's go home." "Agreed!" the others exclaimed; up came the anchor, and away we pulled for the landing, impelled to haste by the increasing thunder peals. Once ashore, we made a break for the farmhouse, where we had left our horse, and just as the storm again broke we entered the barn with rods, lunch baskets and fish. The writer was not possessed of a dry thread and it was with a feeling of great thankfulness he espied an empty shortsack in one corner. Three holes were quickly cut in it, off came the wet shirt and on went the improvised one of shorts sack. It was a poor fit, but it was dry; it was rough in texture, but that same roughness created a friction that was not unwelcome to a cold body, where "goose flesh" had reigned supreme; it was minus sleeves, but no sleeves were better than wet ones that clung to you like court plaster, and what it lacked in ornamentation Fatty, the tailor, supplied by weaving into the front a delicate lacing, shredded from a corn leaf. The storm ceased, the sun reappeared, and we drove home over a road washed clean as a floor.

J. C. MEAD.

NORTH BRIDGETON, Me.

NORTH BRIDGETON, Me., Jan. 20.—We are now so buried in snow that very little ice fishing is being done in this section. Landlocked salmon fishing at Sebago Lake usually opens the fishing season in Maine. This usually comes on about the first of May or directly after the ice breaks up.—M.

CARP IN LAKE ERIE.

WHILE passing through the fish market in this city about two years ago I saw exposed for sale a German carp. It was about 20in. in length and weighed 12lbs. It was a scale carp, very dark in color, and very beautiful. I asked the dealer, and he said the fish was caught in the nets set out in the lake from this port. I did not see any more or hear of any others being sold in the market until within the last two weeks, when they have been plenty. These were caught in the lake at Port Clinton. They were mostly about 7in. in length, and varied from the mirror to the scale varieties. One was very large, and much like the first one I saw two years ago. Some of the others had no scales; others had a few very large scales, while others were covered evenly with the regular carp scale. I have no means of knowing how they got into the lake; but the interesting fact is, that they are there in great numbers and are thriving wonderfully. They sell at the same price as the yellow and blue pike caught in the lake. Being grown in such pure cold water, their growth is not as rapid as it would be in warmer water; but the flesh is firmer and of a better quality. This goes to prove that if it is difficult to stock the streams and ponds and lakes with what are considered better fish, they can soon be filled with carp; and while they may commonly not be as fine a table fish as some others, there can be no doubt that they will adapt themselves to almost any circumstances and thrive well where others would not do well at all. There was a great craze about them when they were first introduced, and now we have gone to the other extreme. As a people, we are too notionate and impulsive. We all go crazy over something new to-day and drop it entirely to-morrow. Now, while the carp, when raised in some stagnant little puddle, may not be very desirable food, it is just what any sensible person would have expected. It is stating a fact that cannot be controverted when I declare that these fish, when raised in pure water and on good food, are very firm in flesh and excellent for the table. There are literally thousands of acres of water scattered throughout our country, which are now furnishing scarcely any fish, which would, if planted with young carp, in a few years furnish tons of good edible fish to thousands of our people who are scarcely ever fortunate enough to get any fresh fish of any kind. If they can live and thrive as these have done, among the millions of carnivorous fish, they can live anywhere. HOMERUS.

CLEVELAND, Ohio.

ANGLING RETREATS OF MAINE.

II.—THE MONSON LAKES AND PONDS.

THE township of Monson is situated in the northwestern part of Piscataquis county, which has within its limits the largest and most magnificent sheet of inland water (Moosehead) wholly within New England, and the highest and most famous mountain in the State (Katahdin), often erroneously placed by map makers and writers in the adjoining county of Penobscot. Monson is fourteen miles below the foot of Moosehead Lake, ten miles west of Sebago Lake and six miles north of the Bangor & Piscataquis Railroad, being connected with this line by a narrow-gauge road. It is only twenty miles by rail to the Piscataquis terminus of the Maine Central system and twenty-five miles by rail to that great highway of nations, the Canadian Pacific Railway. This town is about 1,000ft. above the level of the sea, and the air is pure and healthy. Hay fever and all malarious diseases are entirely unknown and impossible in this region.

Three-quarters of its territory is yet an unbroken wilderness, and many of its highest hills are still covered with a native growth of spruce, fir, cedar, white and yellow birch, poplar, pine, maples, ash, hemlock, etc.

The largest sheet of water within its borders is Lake Hebron, more than three miles in length, at the foot of which nestles a pretty and picturesque village. Here is a summer hotel of grand proportions and excellent facilities, and on its shores are summer cottages. A local company are selling cottage lots, and quite a large number will be built here during the season of 1891. This lake is surrounded by mountains and sloping hills of forestry farms and pleasant farm habitations with the lofty and pine clad peaks of Russell and Bald mountains in the adjoining town of Blanchard standing as grim as sentinels over all. The landscape from any point of view is delighting and pleasing.

It contains the spotted square-tail trout (*Salmo fontinalis*), ranging in weight as high as 5lbs. Lake trout (*Salmo fontinalis*) are often taken which weigh 6 and 7lbs., and some weighing 8lbs. have been caught here within a few years past. The spotted trout rise to a fly, and a favorite method of taking them is by trolling, sometimes with flies and sometimes with a single hook baited with anglerworm. The lake trout fishing is usually in about 40 or 45ft. of water, with minnows, shiners and small chubs for bait. The natural supply of fish here has never been depleted by poaching, and in addition to this several hundred thousand trout fry have also been planted.

Taking lake trout with a light rod and reel is exciting sport for one who has no scruples against being dubbed a common bait fisherman, for they are very gamy. Their meat is nearly white and exceedingly sweet and tender. The Fish Commissioners of the State planted European whitefish here four years ago, and they are seen in large schools and are beginning to be taken by our own people.

Sail and row boats and canoes of all descriptions are on the lake, and the steamer Molly Tomah makes hourly trips during the summer season. Besides Lake Hebron there are within this town twenty-three or twenty-four other ponds, as follows: The two Spectacle ponds, Tibbets, McLarign North Pond, McLarign South Pond, Bell, Lillie, Ward, the Twin Doughty ponds, Strout, Doe, Duck, Monson or Goodale, Squaghuign, Meadow, Jacobs, Thatcher, Curtis, Doughty Bog Pond, Juniper and Eighteen Pond.

The two Spectacle ponds are in the northwest part of the town on the county road to Moosehead Lake, the old highway passing over the narrows between the two. They are designated as Spectacle East and Spectacle West ponds. Their name was derived from their shape, both being round and the two together resembling a pair of eye-glasses. Dense forests surround them and spotted trout are plentiful in each. The eastern or lower one is the larger one, it being one mile from the narrows to its foot. The Rev. O. F. Stafford, D.D., now of Deering, Maine, secured some liberal catches there in the season of

1889. Trout are sometimes taken there which weigh 3 and 4lbs. each. Its outlet is a rapid stream emptying into Monson Pond and from thence into the Wilson River.

Childs Falls, a beautiful and grand looking cascade in the wilderness and which have long been of interest to the tourists, are on this stream. They are some 40ft. high and rush and tumble over huge piles of slate rock. The lovers of brook fishing frequently traverse its banks for the lively brooklet trout and are always well rewarded for their undertaking.

On the west side of the road to Elliottsville plantation about four miles from Lake Hebron is Meadow Pond, one-fourth of a mile from the highway. This is a pretty little pond, covering fifty acres or more of land entirely surrounded by old growth forestry and is in shape nearly round. Trout weighing 2 and 3lbs. are often taken with a fly at this pond.

About one mile through the white birch woods in an easterly direction from Meadow is South Pond, another famous and popular resort for fly-fishermen. This is considerably larger than the former. These trout are remarkable for their superior beauty and very small ones are rarely taken. The outlet of each of these ponds winds through forestry and the forest waste and ruins of ages to Wilson River. J. F. S.

MONSON, Me.

AMERICAN TROUT FLY IMITATIONS.

I HAVE been thirty years a fly-fisher, and during that time have been an amateur rod maker, and always tie my own flies. I have just finished a black bass minnow, and trout fly-rod, of bois d'arc, as presents to friends. Getting up these fixings I call angling indoors and take almost as much pleasure in it as in catching fish. I have now a nice little trout stream on my own farm and can enjoy and study these beautiful fish at will.

For many seasons I was resident physician at old Rawley Springs, on Dry River, which, take it all in all, is one of the finest trout streams in this country. The trout are larger than in any stream at the South, except Greenbrier. The casting is as unobstructed as on an open lake. There are no flies or insect pests of any sort at all. No stream affords finer opportunity for studying mountain trout in their native place.

One summer, at Rawley, I made up a fly at random, using some remnants of floss and feathers, just what I happened to have, at the request of a friend, to show his wife how a fly was made. When it was finished it was thus made: Lower third of body golden yellow, upper two-thirds dark red floss, this tipped and ribbed with gold; hackle black center, red tips (coch-a-bondu); wings, the striated feathers of lesser blackhead duck. To show that trout would actually take this fly I went, after sunset, to a pool, near the springs, used by gentlemen as a bathing pool, and at the first cast took a splendid trout 13in. long.

For years I have found this fly the very best for the larger trout of Dry River. I tie one with the wings on a No. 8 Carlsh Kirby for stretcher, one without wings, Palmer fashion, on a No. 10 Aberdeen for dropper, and with that cast, after sunset, I have caught more big trout than with any other I ever tried. The same combination tied on No. 3 and 5 Sproats is splendidly killing for black bass.

Now what is the original insect for which theoretically the fish mistake that fly? Held in the fingers dry, or pinned to a card, it recalls no insect known to me, but on a very short line cast, as in fishing, and drawn close to your feet as you stand in water knee deep, in the dusk of evening, it does exactly resemble in appearance a common firefly or lightning bug. Taking the hint, with a specimen before me, I tied one which was an exact imitation and after thoroughly testing the matter I came to the conclusion that the original form was much more attractive both to trout and bass. I therefore abandoned the lightning bug theory. I now suspect (a "working hypothesis") that the above described fly is easily seen and not suspiciously gaudy, and the fish take it for something alive in the nature of a bug good to eat.

In order to see whether the trout were feeding at that hour on any fly of the least resemblance to any artificial fly I examined the stomachs of all the big ones I caught. I found that they mostly contained crawfish, small minnows and worms; no flies.

Therefore, I started another "working hypothesis," to wit, during the daytime these big trout are bottom feeders; certainly you can't get one of them to rise to any kind of artificial fly in any of those much-frequented pools until it is nearly dark. At dusk they begin to feed on the surface, and at that hour an experienced angler will generally get the largest one in the pool at the first cast, the fly being bright enough to show well and not gaudy enough to scare the fish or rouse their suspicion. That is the very hour when the air is full of lightning bugs. Yet I have an idea that fish don't like lightning bugs, for using them as bait I find to be a dead failure.

If my opinion that the largest trout are bottom feeders by day and surface feeders at night is correct, this will account for the well-attested fact that they are very rarely taken in the day time, either in Dry River or any other, and are taken almost to the exclusion of smaller sizes from dusk until it is too dark either to see how to fish or to avoid treading on a rattler or copperhead. Hence also we may understand why the antipodal hour at the other end of night—that is to say, from dawn to broad daylight—is not near equal to that from dusk to dark.

I begin to feel almost a stranger to readers of FOREST AND STREAM, and would not at this time venture upon their patience with anything fishy, except that I know that like that "time-honored Lancaster," of whom we read, angling hath an "infinite variety, which time cannot wither nor custom stale." Out of my experience by many waters allow me just to suggest that I never put a tail on a fly any more. I dress them as near nothing to be anything, as well, say a leading actress of the day. Most flies have too much body, too much hackle, too much wing, too much tail, too much everything. I hate, I despise, I do detest a big, loose, hairy, feathery, gaudy fly, and I am fully convinced that not only trout, but even big-mouthed black bass are of the same mind that I am. A happy New Year to FOREST AND STREAM and all its readers! And now, if nobody "jumps on me" about this I may have something else to say about the big trout of Dry River at another time.

M. G. ELLZEY, M.D.

GREENLAND ESQUIMAUX FISH HOOK.

WITHIN a few minutes after the bark Argenta, plying between Philadelphia and the Arsus Fiord, Greenland, in the cryolite trade, had moored at her docks at the Danish settlement called Ivigtut, an Esquimaux came over the gangway carrying a string of Arctic codfish. This was on Sept. 25 last. The Arctic codfish was described and pictured very interestingly in a recent number of the FOREST AND STREAM, as well as the method of catching them through the ice on the Alaska coast. It is likely, therefore, that the Greenland method of taking them in open water may be interesting to sportsmen as well as naturalists.

The Greenland Esquimaux uses what is probably the largest hook in the world for the size of the fish taken, for it is about as long as the fish itself. The one here pictured had been in use for several years, but was still in good condition for work. It is more properly a jig than a hook, for the fish are always caught under the gills or the belly by the hook. Its length over all, not counting the seal-leather loop to which the line was fastened, is 10in. The points of the hook are 2½in. apart. Beginning at the top there is a piece of hollow bone 1½in. long in which the loop is secured by two dowels, or trenails, passing through and through the bone and loop. These pegs are accurately fitted and, though slender, are of ample strength.

Next to the bone is a wedge-shaped piece of greenstone, of the kind used extensively by the Esquimaux in making their seal-oil lamps. It is 2½in. wide at the top, by 4½in. long and 1in. wide at the bottom. But while it tapers from the top down when looking at it square in front, it is more than a quarter-inch thicker at the bottom than at the top. Why this peculiar form was given to the stone I could not learn, because I could not talk the language or find an

interpreter who could make the owner understand what I wanted to know, but the owner said greenstone was used because it was the color of the water of the fiord.

The lure consists of four seal teeth and a bit of red flannel fastened with strings and pegs to the face of this stone. They hang loosely so that they will flourish about as the jig moves up and down in the water.

The two hooks were secured together by casting some lead about the shanks, and the lead was then smoothed off, flattened on top and lashed to the bottom of the stone. The joints, like the scarf between the bone and the top of the stone, showed first-class workmanship.

As appears from the illustration, the hooks are barbed, but in catching the fish the hooks, I was told, rarely penetrated as far as the barb. The hooks are obtained from the whites.

The fish were at that time caught in water about 800ft. deep, but at other seasons are found in much shallower water. I saw one Esquimaux fishing from his kayak. He lowered the hook on the end of a linen line, that was about the thickness of a carpenter's chalk-line. When it reached the required depth, that is within two or three feet of the bottom, as he explained by holding his hands about as far apart as he could reach and then within about two feet of each other, he began jiggling the line up and down, lifting it say six inches and lowering it again and occasionally raising it a foot or more. My Danish companion said a white man could not tell when a fish was on the end of such a long line, but I guess a white man could learn to tell if he tried long enough. When a fish was caught it was hauled up and strung on a line of seal leather. I did not see one hauled out, for the fishing was bad that day and my time limited, but I was told that the fish seeing the lure waving about ran their noses against it and were then caught as the hook was raised up.

There were three ships at Ivigtut while I was there, and they were supplied with all the codfish the crews wanted. The Esquimaux wanted hard-tack or tobacco in exchange, but commonly took hard-tack. There was no regular price. The native brought a string of fish—ordinarily a dozen or so—and got sometimes one dozen and sometimes two dozen sea biscuits in return, according to the humor of the ship's steward. The fisherman always went away smiling, whether he got much or little.

The owner of the fish hook offered it to me for a plug of smoking tobacco. JOHN R. SPEARS.

WHITEFISH AND TROUT.—At the station of the U. S. Fish Commission at Alpena, Mich., the total number of whitefish eggs collected during the spawning season was 50,920,000. Of this number two employees of the Commission took 1,920,000 from Dec. 1 to 6, at Beaver Island, Lake Michigan. The loss of eggs during December was only six per cent. of the total. About one-third of the eggs were obtained from fish caught in gill nets. The temperature of the water ranged from 38 deg. on Dec. 1 to 32½ deg. on the 31st. On the last day of December there were available for distribution from the station at Northville: Lake trout eggs, 2,500,000; brook trout eggs, 140,000; Loch Leven eggs, 120,000; Von Behr (*S. fario*) eggs, 220,000.

SOMERSET, Ky., Jan. 17.—Our hunters are devoting most of their spare moments to the quail, but I notice that while in the earlier part of the season bags of from 35 to 50 were numerous, the number now averages 10 or 12 per day. Our fishing club members are only waiting for the river to get in good shape, as the pike and wall-eyed pike will bite most any day this time of the year.—R.

ANGLING NOTES.

LAST week the FOREST AND STREAM spoke of the disadvantage anglers labor under when fishing for the first time in strange waters. There is probably nothing so conducive to a well-filled creel as a thorough knowledge of the waters one expects to fish, be it lake or stream. This applies particularly to trout fishing, though to a certain degree true of all kinds.

No matter how much experienced an angler may have had, or how well he fishes, his first visit to a new locality is apt to prove unsatisfactory and a disappointment. There are often long stretches of good-looking water that hardly contain a trout, while some insignificant backwater, generally overlooked, may teem with good fish.

These little backwaters often have a small spring trickling in at the further end, and if carefully fished, particularly in warm weather, will yield some very handsome trout.

There was a stretch of still water on the Lycoming, right in the village of Ralston, Pa., which the writer for the first few visits never thought worth fishing, as it was so public and close to several dwellings. Coming back a little earlier than usual one evening I thought I would try it, and to my surprise I took several unusually large and well-fed trout. Probably every one had neglected it for the same reason I had.

As all anglers know, these fish are very partial to certain spots in the stream; a good pool will almost always contain a big trout who seems to be the boss of that locality. If he is caught, another will be found there inside of twenty-four hours. As the season advances these fish change their location and seek the headwaters or pools into which cold springs empty. Often these springs are at the bottom of the lake or in the bed of the stream, and therefore hard to find; so that sometimes parts of streams that have plenty of fish early in the spring are entirely barren in warm weather. These places can sometimes be located by watching them just before sunrise, when a little mist will be seen over these cooler spots.

Then, again, there are often good localities up the smaller streams. I remember such a one up Frozen Run, near Ralston, where it empties into the main stream. It was but a little rivulet, that looked entirely to insignificant to be worth fishing with the fly; but one day when the Lycoming was swollen by heavy rains and fishing was impossible, I walked up for a mile, tempted more by the big strawberries than any prospect of trout, when suddenly I came upon an old, deserted and half-decayed mill pond, surrounded by woods. The water was dark and clear, and a nice bit of white sand beach at the upper end afforded room for a back cast. I killed nineteen beautiful trout before I left that afternoon, and on every subsequent visit to Ralston I always tried that lonely little mill pond away back in the hills. SCARLET-IBIS.

CONNECTICUT RIVER PIKE.—Albany, N. Y.—When I was at Greenfield, Mass., last week, a party there told me he had caught maskinonge in the Connecticut River. When I intimated that they must be northern pike he said he saw one caught weighing 35lbs. Have you any of your contributors any knowledge of this fact?—DEXTER. [We find in Dr. Goode's "American Fishes" the following statement concerning reports of muskellunge in this river: "It has frequently been said in print that muskellunge were introduced into a pond near Bellow's Falls, Mass., in 1838, and that they have since escaped into the Connecticut, where they have become abundant. This is a great mistake. I have examined several of these would-be muskellunge from the Connecticut, but all of them proved to be over-grown pike. This species probably does not occur in the Connecticut." The pike is credited in Germany with a maximum weight of 70lbs. Frank Buckland saw an example weighing 36lbs., and a Scotch specimen of 72lbs. is recorded. Continental Europe is said to have furnished an individual weighing 145lbs. There is no doubt that the pike under favorable conditions reaches the weight referred to by "Dexter," and the probability is that the Connecticut River specimen belonged to this species. The capture of such a fish must have been a sight worth seeing.]

Fishculture.

NEW HAMPSHIRE FISH COMMISSION WORK.

WE have received the report of the Commissioners of Fish and Game, of New Hampshire, for the year ending Dec. 1, 1890. The popular appreciation of the work of fish breeding is amply manifested by the greatly increased demand for young trout. Eight years ago 60,000 fry were allotted to the whole State, but now fully twice that number are distributed in a single county. The work of the Commission is devoted chiefly to the cultivation of indigenous fishes and the introduction of species whose adaptability to New Hampshire's streams and lakes has been established. The lake trout has reached a high standard of excellence in Newfound Lake, due to its large size, the color and flavor of its flesh and its game qualities. The Commissioners hail with delight the increase in the number of fish and game leagues in various parts of the State, because "they create a healthy sentiment in regard to the necessity for a close season for fish and game, and a due regard for the game laws in the localities where the leagues are established, and educate the people to a better knowledge of the value of the streams and lakes in their section of the State."

The ponds and lakes of New Hampshire have an area of nearly 300,000 acres, exclusive of Lake Winnepesaukee, and the rivers and creeks are estimated to cover 100,000 acres more. The Commission has a list of 558 ponds and lakes, including a description of the bottom, their area and the kinds of fish found in them. Pickerel, perch and hornpouts exist in 321 lakes, black bass have been introduced into 113, landlocked salmon into 73, and in 39 ponds brook trout and lake trout are native. The good results of planting lake trout and landlocked salmon are plainly evident in Sunapee and Newfound lakes, which furnish as good fishing as can be found anywhere in New England. The landlocked salmon reach a weight of 16lbs. and the lake trout about the same. This remarkable growth is attributed to the abundance of landlocked smelt introduced as food for the trout and salmon.

The Commissioners called the attention of the Legislature to the desirability of examining the waters of Great Bay with a view to the cultivation of oysters, which at one time existed there in large numbers, but have now, by overfishing or dredging, become extinct.

Many complaints have been received of the great damage done to numerous fine trout streams by sawdust and mill refuse. This is a matter outside of the Commissioners' jurisdiction and must be considered by the Legislature. It is stated that many of the purest and coldest streams, which abounded with fine trout a few years ago, are now so polluted by a foul mass of decayed sawdust that the vegetation has been destroyed, the insect life exterminated, and the trout driven away. The Commissioners quote a statement to the effect that not only are fish seriously injured by sawdust, but that epidemics of typhoid fever have been traced to the pollution of the water by organic matter such as bark, sawdust and sewage. This is a subject which is attracting a good deal of attention and causing a vast amount of discussion, and it is certainly deserving of complete investigation and control by legislative action.

The report of Col. Elliott B. Hodge, a member of the Commission and superintendent of the five hatching stations, follows that of the Commissioners. Col. Hodge records as many as 50 salmon at one time in the large pool, below the falls at Livermore. Sixty salmon were taken and placed in the reservoir at the Plymouth hatchery. Two hundred thousand eggs were obtained from these salmon in October and the fish were returned to the river. Many salmon were seen spawning in the river late in October.

"Many of these fish were smaller than usual for this river. Some of the females, which gave spawn, would not weigh over 6 or 7 lbs. The largest male taken weighed 25 lbs., female 20 lbs." Over a million brook trout eggs are now being developed at Plymouth, an increase of 300,000 over 1885. Col. Hodge bought upward of 6,000 wild trout, measuring 4 to 5 in. in length, for \$3 per hundred delivered at the hatchery. Since the adoption of the landing nets for salmon and brook trout, described in FOREST AND STREAM of Oct. 30, 1890, not a single fish has been injured by handling and fungus has been entirely absent. Losses of trout were occasioned at Plymouth by kingfishes and minks. Thirty of the former were caught in traps during the last season.

The total distribution of fry for 1890 was as follows: Brook trout, 644,000; lake trout, 535,000; Loch Leven trout, 23,000; Alpine lake trout, 8,000; saibling, 4,000; California trout, 20,000; golden trout, 102,000; Penobscot salmon, 240,000; landlocked salmon, 180,000; total 1,756,000.

At the Bristol station, which was completed in September, 1889, 525,000 eggs of lake trout were taken in Newfound Lake. These were hatched and planted in the lake at a total cost of about 22 cents per thousand. At Weirs, where the fish are much smaller than those in Newfound, 260,000 eggs of lake trout were obtained. At the Keene station no eggs have yet been collected. Breeding ponds will be constructed in the spring and supplied with a stock of brook trout.

Illegal fishing is still practiced in New Hampshire and spearing on the spawning beds is still exerting its baleful influence on the fish supply of the State. Numerous arrests and convictions have been made with salutary effect on the public regard for protective laws. The fish and game detective, Mr. B. P. Chadwick, reports violations of the laws in relation to lobsters and the arrest of five individuals in Rye, Nashua and Portsmouth, who paid fines ranging from \$20 to \$120 and costs. He finds that the lobster laws should be amended so as to make it an offense to catch and sell eggs bearing lobsters. Hunting and fishing on Sunday are on the increase, much to the annoyance of church-going people. Before leaving this subject we must call the attention of our readers to the fact that the Alpine trout above mentioned is a recent introduction by the U. S. Fish Commission from Switzerland. It is a black spotted species related to the common *fario*, which is now so well established in its new home in American waters.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Jan. 27 to 30.—Inaugural Dog Show of the South Carolina Kennel Association, at Greenville, S. C. F. F. Capers, Secretary.
Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.
March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore. Mrs. W. Stewart Dufferin, Secretary.
March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh. Pa. W. R. Littell, Secretary.
March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.
March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.
April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Mumhall, Secretary.
Sept. 1 to 4.—Dog Show of the Youngtown Kennel Club, at Youngstown, O.

FIELD TRIALS.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

Mr. A. C. Wilmerding quotes me as having stated that Doc was not for competition at New York, 1890, because "he was afraid of Jersey." What I actually did write was that Doc "was probably afraid of Jersey." Without authentic information I could not have said for certain why a dog did not compete, so I qualified the statement. Mr. Wilmerding's explanation that he owned Doc at the time of the New York show is quite satisfactory. It was on account of my not having noticed that the dog had changed ownership that I thought it probable he had been kept back so as not to meet Jersey. The statement is cheerfully withdrawn and I apologize to Mr. Wilmerding for having made it.

Mr. Wilmerding expresses much surprise that I should have fallen into the error of saying that Mr. Mercer owned Doc. If Mr. Wilmerding will refresh his memory I think he will find that Doc was recently in Mr. Mercer's kennels, at Ottawa, and that he was advertised in the stud over Mr. Mercer's signature. If this be true there is scarcely room for great astonishment, as it was this that misled me. It is not perfectly clear to me why Mr. Wilmerding attaches so very much importance to these comparatively trivial matters, yet ignores the fact that Mr. Mercer, over the signature of "Gothamite," has made misstatements about certain judges and certain dogs for no other apparent reason than that of forcing Mr. Wilmerding's and Mr. Mercer's dogs into prominence and keeping them there. While I can readily understand why Mr. Wilmerding is particularly anxious to see "a calm and non-combative series of communications on the cocker," I must confess to being somewhat disappointed that our president should be so deeply concerned about trifles, yet entirely indifferent about things which sap the very life out of dog shows and make the judging of dogs worse than a farce. Possibly Mr. Wilmerding has been informed that a prominent fancier will move that, in the event of Mr. Mercer not retracting the willful misstatements he has made, he be expelled from the Spaniel Club, and in anticipation of this is reserving his energies for a thorough investigation of the matter before that tribunal. But many of his old admirers are not only greatly disappointed but

orely grieved that he did not come out with a strong denunciation of the course pursued by one who is known to be the man that recently had charge of Mr. Wilmerding's dog Doc.

Let me suggest that your correspondents keep their remarks within a reasonable distance of the pivotal question, which is not "cocker type," but truth versus what Mr. Wilmerding has correctly designated as slander. In the very first communication published in this discussion Mr. F. H. Mercer, over whom our Harlow friend calls the "anonymous" of "Gothamite," asserted that Mr. Watson and myself "started the long and low craze" in cockers, whereupon in a letter free from "personalities" or comments of any kind, I demanded proof to support that assertion. Mr. Mercer, instead of producing evidence or retracting his misstatement, sent for publication in this paper, still concealing himself behind the shield of "Gothamite," an answer which has been generally condemned not more on account of the trickery so manifest on the face of it than for the writer's tacitly admitted low estimate of the good sense and intelligence of the readers of FOREST AND STREAM. Here is his peculiar reply: "To Mr. Chas. H. Mason would say that I don't propose to spend several hours looking up his writings to convict, and don't need to, because it is a well known fact that he has borne a leading part in encouraging the long and low craze."—FOREST AND STREAM, Dec. 18. Mr. Mercer did not propose to spend several hours to look up my writings because there are no writings which would sustain him to look up. Then why did he not say so? And why did he drop the word "started" and ask us to take leave of our senses in believing him that "started" and "encouraging" have one and the same meaning? Would a truthful and genuine dog fancier resort to such devices?

Mr. Mercer's next move was to get an advertisement out of me to help the Doc boom. (I am good enough to be quoted and misquoted when the use of my name will help the boom, but when my criticisms are unfavorable why then they are worthless and the writer of them is a very wicked man.) This is how Mr. Mercer, now over his own name, puts it: "He [C. H. M.] 'spotted' champion Doc for a good one several years ago, repeatedly saying that were he in condition the prize money was at his mercy."—FOREST AND STREAM, Dec. 18. Now, had I "repeatedly" said that prize money was at Doc's mercy I would tacitly have admitted that Doc was the best cocker in America. "Repeatedly" would likely take in all the reports I have ever written on the dog, because I have not criticised him more than three or four times. If Mr. Mercer had stated that upon a certain occasion, when Doc was shown against one competitor and that competitor a deteriorated one, I reported that the prizes would have been at Doc's mercy had he been in condition, then Mr. Mercer would have written the truth. But neither Mr. Mercer nor anybody else could show by an atom of evidence that I "repeatedly" stated that prize money was at Doc's mercy, because in only one report have I written anything of the sort. Mr. Mercer knew this and so was unable to "find room" to look up a criticism that needed no looking up because every sportsman knew where to find it. I will quote this report so far as it pertains to Doc, to show Mr. Wilmerding and others the kind of argument Mr. Mercer has resorted to since this discussion commenced:

"Obo II. did not turn up for competition in the champion class for dogs, leaving Brant and Doc to fight out the battle. Brant won, but it was condition that took him to the front. His skull has thickened considerably, causing his weak muzzle to look lighter and snipier than ever, and he is not nearly as good as he was when he made his debut at Buffalo last year. Doc was light in flesh and his coat all out of condition. What a pity that men should throw prizes within my points of Miss Obo's form; but—FOREST AND STREAM, April 12, 1888.

This is the "repeatedly" that Mr. Mercer could not "find time" to look up, the statement that was distorted so as to make it appear that in my opinion Doc was able to beat any cocker on the bench. But that I did not consider Doc the equal of the cracks was demonstrated when I placed him behind Miss Obo II., Jersey, and probably one or two others. The following report is further evidence that there has been no inconsistency on my part in regard to this dog:

"In the challenge class for cockers those old competitors, Miss Obo II., Chloe W. and Doc, again faced the judge. We have been summing it into spaniel men for the last two years that neither Chloe W. nor Doc is within my points of Miss Obo's form; but, notwithstanding this, Mr. Wilmerding has on three or four occasions placed Doc over Miss Obo. We are pleased to find that at this late hour in the day he has come over to our way of thinking. Miss Obo II. won with many points to spare. Between Doc and Chloe W. it is a very close thing, and we were prepared to see either win. On this occasion Doc, probably on account of his having been considered better than Miss Obo II., took second. Chloe W. is as good as he."—FOREST AND STREAM, March 14, 1889.

Having written this I could not, in justice to either FOREST AND STREAM, exhibitors and breeders of spaniels or myself, permit Mr. Mercer's trickily worded advertisement to go unchallenged; so I again demanded evidence to support what I knew was an incorrect statement. Mr. Mercer's reply was on a level with his conduct since this discussion opened. It displayed the same disposition to sneak out and evade the question that has characterized every answer he has made to my questions. He attempted to evade and manly acknowledgment of his error (had it been one) was all that would have been needed to right a wrong and insure respect, if not success. But Mr. Mercer does not seem able to give a straight answer unless it is forced out of him, and so he tried the old dodge. This is it: "I think it was in a report of one of the spring shows of 1888 that I observed the remark by Mr. Mason: 'I have the paper somewhere among hundreds of others, and when I can find time shall look it up.' For the rest, 'hearsay' is all I have to go on." Is not this a disingenuous attempt to shirk the real question? My request was for evidence in support of the untruthful assertion that I had "repeatedly" said that prize money was at Doc's mercy. How could a critic in one report of a dog show "repeatedly" state what Mr. Mercer has asserted? If Mr. Mercer had been sincere he would have acknowledged his error instead of trying to make us believe that criticisms which could only appear in a number of reports had appeared in one. If he was particularly anxious to score a point over me he should, for the time being, have discontinued his juggling tricks. He might by his method of arguing make 2 and 2 into 22, but in his little contract with me he may not find it an easy matter to make one into two.

Mr. Wilmerding will see from this brief review of the origin and progress of this discussion that cockers are not the theme. The thing began by Mr. Mercer ("Gothamite") making a misstatement about me, and could I do anything else than show he had made a misstatement? I asked for evidence to sustain a groundless assertion. That evidence was not forthcoming and never will be for it does not exist. Such being the case I deemed it only proper to expose the "Gothamite" (Mercer) scheme to get rid of certain judges and dogs for reasons which must be apparent to everybody. Mr. Mercer's friends now appeal to you to have the discussion switched on to a siding. This, of course, is done with a view to saving the little that is left of Mr. Mercer and his arguments (?), but like the Doc boom it will not go through. Nobody said a word about "personalities" when Mr. Mercer (imagining that he was safely concealed by the mask of "Gothamite") made sneakyish and untruthful statements about men and dogs. Nobody shouted "personalities" when Mr. Mercer tried to juggle his false accusations through the smallest of holes. No correspondent considered his conduct anything but the ethics of controversy, or his absolutely misleading and vindictive utterances anything but the commencement of a "calm and non-combative series of communications on the cockers," or at least if a correspondent did

consider Mr. "Gothamite" Mercer personal, he tacitly indorsed him by saying nothing then and a great deal now. It was a part of the racket. Why then, when some of us make incontrovertible statements are these statements called "personalities"?

Nobody is more opposed to the introduction of personalities into a discussion of any subject than I am. But when a man has proved by his own statements, over his own signature, that no sharp curve is too sharp for him to take then I want to show what he expects to find on the curve; and I fail to see why tracing truthfully and consistently every step leading to that curve should be considered personal. More especially do I fail to detect anything personal when every statement made is borne out by that man's written and printed testimony. Mr. Mercer's case must be disposed of before the cocker discussion can be renewed and surely I have a right to demand this. Using a pseudonym, he has made statements which neither he nor anybody else can verify. These misstatements ought to be retracted and a most ample apology made before the writer of them is allowed to discuss either dogs or any thing else.

Mr. Mercer's mistake, of course, was not in writing his first letter over a pseudonym. He had a perfect and indisputable right to do that provided he started in with an honorable motive. But he had no right, no one has the right, to make a misstatement about others, neither over a pseudonym nor over his own name. And no one, having made such misstatements, either ignorantly or purposely, can refuse to retract his misstatements when they are shown to be such.

I need not add that if a writer is genuinely concerned to deal with facts, to get at the truth, to discuss a question as truthful gentlemen discuss it, to give others their exact due, he will not require prodding to hasten to correct such misstatements as in this particular case "Gothamite" (Mercer) has made about Mr. Watson and myself and also about certain dogs.

Mr. Mercer's conduct thus precludes self-respecting people from noticing anything he may write or say in the future, until he shall have retracted and apologized. Nobody can possibly be benefited by discussing dog matters with men who distort facts, evade real issues, and put forth arguments which are not only empty of points and knowledge, but silly as well.

CHARLES H. MASON.

NEW YORK, JAN. 17.

Editor Forest and Stream:

To briefly reply to Mr. Chas. H. Mason's letter, which is clearly pointed at me under the supposition that I am "Gothamite," I say that, First, I do not and never did own Doc. Second, as I own the Clumbers which would be Johnny and Drake's most dangerous opponents, I cannot comprehend of what benefit it would be to me to depreciate judges that are inimical to them. Mr. Mason wrote in 1887 that he did not profess to be a judge of Clumbers. Since then he has seen only my dogs, and it seems to me he assumes a good deal in writing as he does of a subject on which he does not assume to have authority. Third, I have no interest whatever in the sale of "The Spaniel and Its Training," consequently its advertisement would be of no benefit to me. Fourth, I have not purchased a cocker for some years. Fifth, I did not get a couple of dogs four years ago from Mr. Vieth. Sixth, Johnny and Drake, who Mr. Mason infers I got in '87, I got in August, 1884, and they were not my first Clumbers. Seventh, in 1885 I was breeding Clumbers and cockers, though Mr. Mason states that I did not own a dog prior to 1887. Eighth, I have been to more than six dog shows in my life. Mr. Mason's apologies are now in order.

F. H. F. MERCER.

OTTAWA, Canada.

Editor Forest and Stream:

"It is, I believe, untrue that I 'repeatedly' said prize money would be at Doc's mercy if the dog were in good condition. Therefore, I call upon Mr. F. H. F. Mercer to produce proof, etc."—Chas. H. Mason in *Forest and Stream*, Dec. 29, '90.

"Doc was light in flesh and his coat all out of condition. What a pity it is that men should throw prizes away when they have them at their mercy."—Chas. H. Mason in *Forest and Stream*, Dec. 12, '88.

Some more parallel lines for the printer to worry over. Mr. Mason appears to forget that I have announced my readiness to withdraw the above noted statement should he deny the impeachment. It would be well for him to reserve some of his teaching for home use and to practice a few of the axioms he preaches. He has made several statements about me personally that are entirely at variance with the facts, but I have yet to read an apology or retraction from him. In a letter not yet published by you I have shown in detail how woefully he has erred, not to use a stronger term, in his two-column letter of a fortnight ago. It is unnecessary, therefore, to touch on the questions therein dealt with, here.

The Clumbers, as usual, bear the burthen of Mr. Mason's song, so I suppose I must consider what he says. With many apologies to your readers, therefore, I shall refute some of the statements which he defies me or any man to prove untrue.

1. Never having read "Our Prize Dogs," Mr. Mason's criticisms therein of Johnny and Drake could not have influenced me in retiring the former (the latter is not retired.) Johnny was retired before "Our Prize Dogs" was published. "The well known Clumber spaniel Johnny has been retired from competition on the show bench."—*Forest and Stream*, July 5, '88. Thus we see that the criticisms in "Our Prize Dogs" could not have affected the retirement of champion Johnny, while Drake had never been retired, the criticisms could not "result in his withdrawal from the show bench." 2. Johnny and Drake have never competed for a prize since "Our Prize Dogs" was published, therefore they could not win them. 3 and 4. I will leave time to answer. 5. Judging from Mr. Mason's standpoint, winnings in England, Snow, having won first at Birmingham twice, first Barn Elms and many other prizes, must be considered "a good dog" (bitch). I owned her some time prior to 1889. 6. It would be profitless to consider.

Mr. Mason claims most of the credit for the importation of Boss III. and Bromine. Let us see how much he deserves of it. In '87 I secured the then invincible champion Psycho, Cynic, Snow, Cherie, Clover and a couple of other crack English Clumbers to come to this country. From some hitch or other the arrangement, most regretably, fell through. This evidences how matters stood with me long before Mr. Mason commenced his "downing" campaign. Mr. T. C. Bate, who imported Boss III. and Bromine, never read, and probably never heard of, Mr. Mason's criticisms on the American Clumbers. He was thinking of going in for dogs in the spring of '89. I happened to be in his office one day on a visit to his brother. Johnny was with me, and Mr. Bate expressed admiration for him. The talk went on to dogs and ended in my lending him several dog books to read, and especially articles by me in various publications, on Clumbers. He caught the fever, bought a pair of young bitches here and later imported Boss III. At that time I am sure he had never heard of Mr. Chas. H. Mason. After Boss arrived I received a letter from Mr. H. H. Simmons, of Sevenoaks, England, offering me Bromine and Snow. I went to Mr. Bate, and by dint of perseverance, persuaded him to import the former. I have Mr. Simmons' letter in which he thanks me for my kindness in having sold Bromine for him, and states that Mr. Bate had written that he purchased her only on my recommendation. I had the good of the breed sufficiently at heart to rejoice at this important addition to the spare ranks of American Clumbers. Who then is entitled to "claim credit for the importation of Boss III., etc." Mason or Mercer? Although Johnny and Drake, for good

and sufficient reasons, were not shown against Boss III. and Bromine, I showed others against them, even in the face of certain defeat, thus Mr. Mason's statement that I did not exhibit against Boss III. and Bromine is untrue.

Mr. Mason says that the question before the house is whether "Gothamite" and I are one and the same. Pardon my obtuseness, Mr. Editor, but really I thought the "question" was the "Cocker Spaniels of 1890." [It is supposed to be.] Some people are extremely fond of giving advice to others. Mr. Mason is one of them. "Give and take" is fair play. Let him then act up to his asseverations. Having made "statements which he cannot substantiate" he must now, if he has the courage of his published convictions, apologize and retract.

F. H. F. MERCER.

OTTAWA, Canada.

Editor Forest and Stream:

After reading the various letters, and taking them into consideration, are we not to conclude that this was a discussion started for a selfish motive and not for the good of the breed? Mr. Mason has followed the originators of the scheme quite sharply. Mr. Mercer now admits he knows who "Gothamite" is, which I have never doubted. They have seemed to chime together so nicely in their letters right along. He now wishes to have personalities dropped. Should this not have been thought of at the start? Mr. Mercer states in reply to my letter that "I have only Mr. Mason with me, quoting Mr. Watson as indorsing Mr. Fellows's nice little bitch Velda," a specimen I have no recollection of a single spaniel man insinuating was not a good one, and not honoring Mr. Fellows for producing such. His indorsing her is no evidence that he indorses Mercer's views. Facts and those proved to be such are accepted as evidence I believe. Mr. Mercer has made the statement, "I should have liked to have seen Dolly Obo placed over Jersey in the challenge class." Right there I have him, for at that same show Mr. Watson positively stated that Dolly could not beat Jersey, an opinion that any competent judge would indorse.

His statement, "There is not much to be said in answer to Messrs. Willey, Nelles and Mason on the question of the cocker type. Our views of what a cocker spaniel should be differ so entirely." There is no question on that point. Whether Messrs. Mason, Nelles and myself are right, or Mercer, I will leave it to your readers' good judgment. He admits he was unknown as a dogman before 1887, yet claims he has now been breeding. I take it from his letters, about nine years, in all this time where has he produced a good specimen? If my advice—to show his knowledge before posing as a critic—was, as he terms it, a piece of impertinence, what shall we say regarding this would be self-appointed teacher and critic!

He wishes to know why Jersey should be called a typical cocker. During the season of 1890 my dogs were exhibited at three shows only, namely, New York, Boston and Buffalo. At Buffalo and New York was placed the \$100 silver cup, donated by the American Spaniel Club, for the best American-bred cocker. Under Mr. Wilmerding as judge, Jersey won that cup at New York, and again at Buffalo under Mr. Mason. Having won this cup twice, and being the only cocker who ever has won it, that certainly entitles him to all the honors I have claimed for him. Yet this is the dog which "Gothamite" or Mercer has designated as the fish-headed, sway-backed, weak-jointed, almost coatless and lifeless Jersey. Mr. Mercer refers to my not judging, to imply that my services were not in demand, I suppose. I will say that I have no desire to officiate in the ring. I have refused many times to judge at our most prominent shows, moreover I have no desire to pose as an authority or assume Mr. Mercer's position. My reputation as a breeder has been won in an upright and honorable manner. My spaniels which I have exhibited have won their honors in honest competition, as every honorable exhibitor should expect. I have not aspired to rush into print in every paper that would publish my letters, and then blowing myself and dogs into notoriety. A dog which requires these has no place in my kennel. How well I have succeeded as a breeder and exhibitor the record of shows and pedigrees of the most noted cockers now on the bench will show. I frankly admit that there is room for improvement, and it will be my aim in the future as it has in the past to make it smaller. I think I know the weak spots as well as any person who gives them a casual glance now and then, but to devote my time discussing and criticising them with every erratic critic, I must decline.

J. P. WILLEY.

Editor Forest and Stream:

The contribution of "Gothamite" in your issue of Nov. 20 has brought a veritable bonnet's nest about his ears, more than realizing, I fancy, whatever anticipations he may have had of creating a stir in the spaniel community. There can be but one opinion of the writer who conceals his identity in a discussion where his opponents are advocating their opinions over their own signatures. Should these letters *pro* and *con* (too many issues, are there not? Stick to the text, gentlemen) be kept up I trust he will have the courage and manliness to discard his *nom de plume* and stand upon the footing of his past record alone. We can all decide then whether it entitles him to our favorable consideration or otherwise. If, however, as Mr. Mason very distinctly alleges, "Gothamite" and F. H. F. Mercer are so closely connected that they have never been separated, we must be resigned to see "Gothamite's" utterances like the famous letters of Junius, "pass into history, shrouded in mystery."

His statements to the effect that Messrs. Mason and Watson started the "long and low" craze, is certainly not correct. With dogs of this type placed before them to judge, they in a degree indorsed it by granting prizes, but how could they have done otherwise? It is undeniable that the fancy for breeding a dog with a long back and short legs has been carried to excess, but nevertheless a reversal to "Uncle Dick's" hobby would in my estimation be leaping to the opposite extreme and is more to be avoided than recommended. "Gothamite" is pleased to pass severe strictures upon Jersey. It is rather remarkable that none of the well-known judges who from the time Jersey made his *debut* in the show ring until to-day, have been awarding him ribbons, discovered these grave defects, which the all-discerning "Gothamite" has brought to light. Let me say my dear "Gothamite" (or "Ottawa-ite," whichever it may be), that when you can put your finger on another "fish-headed, sway-backed" dog like Jersey, do it at once. It won't be necessary to go to New York and pick him out from the array of talent at the bench show in this instance. Rescue him from obscurity anywhere, and he will give you the reputation you so sadly lack. With reference to Mr. Mercer's Clumbers it appears to me that the criticism passed upon them by Chas. H. Mason resulted at least in the importation of fresh blood to recruit the renowned Ottawa Kennels (as Mr. Mercer with charming modesty says the best in the world). Whether the lot shown at Ottawa last year, which comprised some fifteen specimens, represented the pick of his kennel or not I cannot say; it is safe to assume that they did, but among them all there was only one Clumber, Bromine, who won second prize. The rest were most emphatically an inferior collection.

To look at cockers again; Doc, that much-praised, much-maligned little dog, has, as I have frequently said, very few good points. His head is typical and his ribs are well sprung. Outside that his greatest friends, if they be judges at the same time, can say nothing favorable to him. When we want to establish a new type, for heaven's sake let us not turn to Doc as a model.

I have written these few lines not because I have a desire to embroil myself in the current dispute; on the contrary,

this is my last letter, lent more as a protest against the inconsistencies of "Gothamite" and in support of Mr. Mason's attitude throughout. Judges of his stamp, fearless men with the courage of their convictions are what we want. Mr. Mason may at times be incorrect in judgment, but his influence and arguments are, and during my acquaintance with him have been, nearly always on the right side.

G. BELL.

TORONTO, JAN. 21.

Editor Forest and Stream:

Now the question that must interest you spaniel men really the most of all is who is "Gothamite?" His identity means \$500 for the American Spaniel Club IF—

This club will get five hundred cockers from the great and only Mason, if "Gothamite" is not Mercer, but alas, if it be proven that "Gothamite" is Mercer, then will said club experience the heavy loss of said five hundred cockers, because of its not gaining that which it anticipated. Truly Mr. Gothermer is not Mercite, and we know it, or *vice versa*.

However, Bre'r Mason may just as well shove that five hundred along and we will hold it "pending investigation," for fear Bre'r Peshall might lay hands upon it and work it edgewise into the "Peshall gig," 12-28 28, or that Bre'r Vredenburgh should manipulate it to swell the A. K. C. funds for 1890. Five hundred is small and the gazing committee would never see it.

But, all this seems to have very little bearing on the text "Cocker Spaniels of 1890." Just the same, there is pretty nearly as much here about dogs, and nearly as much about other people, as in some of the letters we have had before this. Yours for peace,

SLY DOG.

Editor Forest and Stream:

Before writing the few subsequent words, I might say that, except by letter and having purchased a few puppies, also having had the stud services of two of their dogs, I have no acquaintance whatsoever with any of the spaniel men now engaged in the cocker controversy.

That Mr. F. H. F. Mercer and "Gothamite" cannot possibly be one and the same person, I think the following is conclusive proof. "Gothamite" writes in his letter dated at New York city, Nov. 9, issue *FOREST AND STREAM*, Nov. 20, "I never saw spaniels judged so badly as at Toronto, etc. There, in open black dogs, a nice puppy, Kildare, got nothing whatever. This is so promising a dog that I feel sure under his new name, Obadiah, he will appear prominently in the prize lists of future shows."

"Gothamite," by the above, certainly implies (in fact says) that he was present at the Toronto bench show, and saw the cocker spaniel Kildare. Mr. Mercer writes, issue *FOREST AND STREAM*, Dec. 18, "Unnoticed Obadiah (*nee* Kildare) I have not seen, but Mr. Geddes recently showed me his photo, and if it is to be relied upon, he is indeed a nice dog." I have no interest whatever in Kildare more than wishing the little fellow well, having sold him to Mr. Geo. Bell, of Toronto.

HENRY B. NICOL.

Editor Forest and Stream:

I looked in vain over your issue of the 22d inst. to see if Mr. C. H. Mason's offer of \$500, in your previous issue, had been accepted. Evidently the sum was not large enough to draw the badger. His hair has been too carefully overhauled and he has now gone on another tack.

The time has now come for "Gothamite" to acknowledge the fair Dominion of Canada as his home, and that his criticism of Jersey, even if dictated, was not more to belittle Jersey than to draw attention to the wonderful and (on paper) invincible Doc, who, since his fifth year and change of ownership, seems to have developed qualities which the best judges failed to detect when he was in his prime.

E. M. OLDHAM.

NEW YORK, JAN. 23.

Editor Forest and Stream:

One writer on the "Cockers of 1890" says in *FOREST AND STREAM*, "There has been no general improvement of late." This I doubt, and to prove it I will offer a special of \$10 for the best cocker bitch in the show, provided Miss Obo II., the best bitch of 1889, and Bene Silk, are entered to uphold the above quotation. The rest I feel safe in trusting to the younger, and I trust, improved bitches.

I will also offer \$10 for the best type of cocker for field work, both to be awarded by Mr. Watson or "Uncle Dick" Fellows, the two best posted cocker judges in this country to my notion. These specials are to be competed for at the Cleveland Kennel Club show in April next. I should like to hear from Messrs. Willey, Whitman and others, if my offers meet their approval. I am glad to see you shut off those who insist on making this question avenues of personalities.

A. W. PANGCOAST.

ATBURNDALE, Ohio, Jan. 25.

Editor Forest and Stream:

Mr. Mercer, by failure at once to deny the charge that he is "Gothamite" has thereby admitted it. Such being the case he will see that he must without delay withdraw his original statement regarding Mr. Mason and myself. Viewed in the present light of facts, Mr. Mercer has placed himself in an unpleasant position, but he has only himself to blame, and it should be a warning to other novices to be careful how they write on subjects they know nothing of. I now await Mr. Mercer's retraction and apology.

JAS. WATSON.

Editor Forest and Stream:

Having read the various letters on cocker spaniels in your paper of late I wish to say I fully indorse Mr. C. H. Mason's views, especially his article in *FOREST AND STREAM* of Jan. 1, on the improvement in cocker spaniels during 1890. When one enters into a discussion on cockers, with as able a man as Mr. Mason, it is quite necessary to be fully posted on the subject before starting to discuss.

GEO. H. BUSH.

BUFFALO, N. Y., Jan. 24.

Editor Forest and Stream:

When I predicted that "Gothamite" would "break his young neck" I had no idea that Mr. Mason would put an end to his inglorious career as neatly and speedily as he did. Now that one-half of this inexperienced young man has been retired, Mr. F. H. F. Mercer is doing the talking for both, and a pretty mess he is making of it. His telling us that he knows who "Gothamite" is on a par with most of his other statements, it is inclined to be funny. If Mercer does not know Mercer, who does know Mercer?

There is no getting away from the general belief that in all human probability a nice little scheme was planned to boost a dog and a judge at the expense of better dogs and vastly better judges. But for Mr. Mason's clear-sightedness that scheme would surely have been put through.

Look here, Mr. Mercer, "cocker type" is out of the question. "Gothamite" made untruthful statements about two of our best judges and "slandered" the best cocker dog in America. Mr. Mason, Mr. Watson and little Jersey each have a reputation to lose. Before you can be permitted to discuss dogs we want to know: Did "Gothamite" concoct a scheme whereby the cocker spaniel Doc was to be placed over Jersey? Was it a part of that scheme to push Mr. West to the front to the exclusion of older, more experienced and better judges? Did that scheme provide that misstatements should be made about Mr. Mason because he placed Jersey over Doc, and about Mr. Watson because he did not think well of certain dogs owned by Mr. Mercer? Shall a writer in an entrenched position be permitted to make statements he would not dare to over his own signa-

ture? Did anybody besides "Gothamite" have a hand in that scheme? When these questions have been considered and dismissed, the subject of cocker type can be discussed in a friendly way by those fanciers who are content to state facts.

Mr. Wilmerding wants peace. "Sly Dog" wants peace. Sly dogs as a rule are sly. The writer wants peace, but it must be peace with honor. There can be no honor without justice; so he signs himself yours for justice, OBO.

JANUARY 19.

Editor Forest and Stream:

The cocker spaniel discussion has gotten into a most deplorable condition. Beginning as a discussion of cockers, it is now only a discussion of personalities. It had been hoped that the miserable squabbles between Messrs. Washington and Covert had so surfeited readers that writers would take heed to their ways, but these hopes do not promise fruition.

THE ONLOOKER.

[The foregoing letters indicate a consensus of opinion among spaniel men that "Gothamite" should withdraw his erroneous assertions respecting certain judges. Beyond such a "personal statement" from him, we shall permit no further "personalities," but communications relating to "Cocker Spaniels of 1890" will be welcomed at any time. Our idea of a discussion of this sort is something that will settle for all time the question of proper cocker type, the difference between a small field spaniel and a true cocker.]

DOG CHAT.

AT the annual meeting of the stockholders of the Duquesne Kennel Club, held at the Hotel Schlooser, on Jan. 20, the following gentlemen were selected, and the officials of the club for the next year will be: President, S. L. Boggs; Vice-President, J. O'Hara Denny; Treasurer, W. E. Patrick; Secretary, W. E. Littell. Board of Governors: John Moorhead, Jr., W. Lyle, Dr. J. S. Phillips, J. O'Hara Denny, W. E. Littell, John M. Chaplin, and J. O. Horne. Bench Show Committee: J. O. Horne, J. O'Hara Denny, W. E. Littell, John Moorhead, Jr., and E. H. Denny. At the coming dog show, March 11-14, Mr. John Davidson will judge English, Irish and Gordon setters, pointers and greyhounds. Mr. James Mortimer will judge mastiffs, St. Bernards, Great Danes, Newfoundlands, Chesapeake Bay dogs, Clumber, field and cocker spaniels, collies, bulldogs, bull-terriers, dachshunds, fox-terriers, pugs, Italian greyhounds and miscellaneous classes. Mr. Joseph Lewis will judge beagles, foxhounds, bloodhounds, Bassett hounds, King Charles, Blenheim, ruby, Prince Charles and Irish water spaniels. The list of specials that will be offered at their show is particularly large, but want of space will not permit of our publishing it in full. Among the principal ones are kennel prizes of \$20 for mastiffs, St. Bernards, both breeds, collies, pointers, English, Irish and Gordon setters, foxhounds, pugs, beagles, fox-terriers, Newfoundlands, greyhounds, cocker spaniels and deerhounds. Nearly every breed gets a cash special of \$5 to \$10, and the specialty clubs are liberally represented. Doubtless this list will be materially increased before the show, so that the coming exhibition will have quite an old-time flavor about it in this respect at least. This club has adopted something new in their letter head. This is a small circle with the Duquesne Kennel Club, Pittsburgh, March 11 to 14, in the middle, and radiating from the outer edge of the circle are twenty lines on which are printed the number of hours distant from Pittsburgh of twenty of the principal cities that have kennel clubs and are principal kennel centers.

Messrs. W. J. and Frank P. Comstock and Edward Bicknell have joined forces, and claimed the name of Narragansett Kennels for their kennel of Irish and black and tan terriers, schipperkes and Japanese spaniels. Mr. Comstock writes us that the black and tan terrier Louie, recently imported, whelped a nice litter Jan. 17, by Jasper (Sir Edward II.—Lloyd's Rose).

It strikes one as peculiar that the Newfoundland does not receive more attention at the hands of breeders and exhibitors in this country. Besides being one of the handsomest breeds, they are noted for their docility and the many occasions in which they have displayed their intelligence and bravery in rescuing people from a watery grave. Only last Wednesday we read of a child ten years old, living at Berlin, who, while trying to lift a pail of water from the mill pond, overbalanced herself and fell into deep water. The family dog, a Newfoundland, heard her screams as she rose to the surface the second time, and jumping in, succeeded in catching her by the hand and so swimming with her to shore, where, dragging her half way out of the water, his bark for help was quickly answered and the child was saved. Many stories of a like description could be told of this noble animal. That he is appreciated in England is proved by the large classes one sees at the different shows. While many are casting around for new breeds to boom, why not try and raise some of the older and more deserving to their proper position.

Spratts Co.'s imported "bench raiser," M. Murphy, has evidently impressed the good people of the South, for we find him dubbed Captain in one of the New Orleans papers, where he seems to have pleased both chicken and dog men with the benching arrangements.

The greyhound Volunteer, owned by Mr. H. P. Thompson, of Toronto, Can., died last week from a ruptured stomach. He had won several prizes.

A noted great Dane in Canada, Mr. Roedler's Lord, imported from Germany and considered the best dog of the breed in Canada, was poisoned recently. His record was: 1st, London, 1888; 1st, London, Toronto, and vhc., New York, 1889; and second to Melac at Toronto, 1890. Death has been busy among the best dogs in Canada, for we have also the news of the death of the noted black cocker Sensation, owned by Mr. J. W. Bunting, of Toronto. She was literally a sensation, for though of unknown pedigree, under Mr. Bell's careful handling she swept the decks at the New York show of 1889. Though she has gone off considerably the last year or so she has still done a good deal of winning. She died in parturition.

The Hamilton Kennel Club was to have another members' show last Monday for terriers. Mr. Geo. Bell was to be the judge. We hear that the Canadian division will come down in full force at the W. K. C. show, bringing with them a large entry of dogs, of course the majority of which will be spaniels. We trust that when they get together the pipe of peace will circulate and the proper type of "cockers of 1891" will be the only topic discussed.

One of those provoking slips of the pen made us state last week that Sir Bedivere would arrive on the 24th instead of sail on that date. It was all the more provoking in that it caused two well-known St. Bernard men to take profitless journeys to Boston to see the crack. There is some little consolation to be drawn from it however. Two other kennel papers had it right, so it only proves that the dog men look to FOREST AND STREAM for their news. We promise these gentlemen therefore to square matters at New York when we meet. Sir Bedivere's latest price is \$12,500—Next.

An auction sale of dogs in the show was to take place at

New Orleans on Saturday evening last, and no doubt a good many of the northern dogs will change hands, especially in the terrier section.

There is trouble in the round-headed bull and terrier camp at Boston, and dire threats are made by one disappointed exhibitor of keeping his dogs at home this year. It is needless to say that he did not win last year. Though these dogs are as identical to Boston as its baked beans, it would be no great loss were the classes done away with. There is precious little satisfaction in either judging them or showing them, for no one seems to know on what lines they are to be judged.

Mr. Purbeck is practical, he denies the rumor that he paid \$3,000 for the greyhound Gem of the Season and adds that he would not pay that sum for any dog on earth, and he's not far wrong.

Mr. Keyes, of the Rideau Kennels, Ottawa, Canada, will accept our thanks for the pleasing photo of his good little cocker bitch Rideau Flossy. We shall publish it as showing the difference in type two acceptably good cockers may be, as type goes at present.

Our illustration this week is the noted black cocker bitch Idea, owned by Mr. Geo. H. Bush, president of the Buffalo Kennel Club. Idea is by King of Obos (Obos II.—Darkie) out of Snow II. (Obos—Snow), and was bred by Mr. Geo. Bell,

of Toronto, Can. Her winnings are: 2d, open, 1st, novice and puppy classes, Toronto, 1890; 1st, open, puppy and novice classes, at Ottawa, 1890; 1st Charleston and 2d New Orleans (at Bessie W.), 1891. These are the only times she has been shown. While she has her faults, she is still one of the best of the "Cockers of 1890."

Mr. B. F. Wilson has the sympathy of his fellow breeders in the loss of that grand sire of field dogs, the English setter Count Noble. This noted dog died at Sewickley, Pa., last Wednesday morning. The dog was taken sick immediately after eating his dinner and, despite all the doctor could do, death claimed him. Count Noble was imported by Mr. D. C. Sanborn, of Michigan, since whose death he has been in the possession of Mr. Wilson. He was whelped in August, 1879. Sired by the noted Count Wind'em, and claiming as his dam the well-known Nora, his pedigree was of the bluest. It was on the field and as a sire of field trial winners that this dog must be ever remembered. In 1880 he won the National Derby. In the Brace Stakes with Nellie he won second prize. In the Pennsylvania Trials' All-Aged Stake he divided first money, and was third in the Fairmont, Minn., Trials. A few only of the noted dogs he has sired can be mentioned here, among them recur to us such names as Gath, Roderigo, San Roy, Prince Noble, Jr., Roger, Bohemian Girl, Katie Noble and King Noble. Following so soon after the death of Gladstone, the English setter breeders have indeed sustained a loss, though in the natural order of things he had almost lived beyond his powers.

Mr. Jarrett, manager of the Chestnut Hill Kennels, arrived home last week, bringing with him from England five dogs. Instead of bringing Christopher he chose a youngster by Edgbaston Fox out of Purity that is said to be a hard nut to crack. Roslyn Sensation also returned with him. The noted field trial Irish setter Tearaway, for Mr. Geo. H. Covert, of Chicago, also came in the same vessel.

A meeting of the advisory committee of the A. K. C. will be held this evening (Wednesday), when several important charges against different members of dogdom will be investigated.

We hear that those stars of the fox-terrier world, Venio and Vesuvienne, are now at the kennels of Mr. John E. Thayer, Lancaster, Mass. If this is the case, competition in fox-terrier classes will be lively this spring.

The W. K. C. has opened its office at 44 Broadway for receiving entries and transacting business connected with the coming show.

At the auction sale of dogs at New Orleans, buyers were few. Fred Kirby was the auctioneer. Bull-terrier White Stubbs brought \$150 and Warwick, Jr., ran up to \$1,600, as it is said, but was withdrawn. The highest bid for the English setter Dimple was \$1,000—rejected. Another sale was to be held on Sunday evening.

The newly formed Whippet Racing Club, whose existence has been brought about through the exertions of the editor of *Canine World*, will hold its first meeting next month. A 200yds. handicap will be run with \$500 added money. This ought to draw the best dogs in the world, and such prizes at meetings properly conducted, will soon place whippet racing among general sports to be indulged in by high and low, as they may desire.

To show what an extensive affair Mr. Cruft's coming great terrier show is to be, we may mention that there are 477 classes provided for already. Strange as it may seem, bull-terriers, in the schedule, had only one class for dogs and bitches; this has been attended to by request.

It is very likely that some wire-haired beagles will be seen at Boston. A certain beagle man proposes to import some, if they can be secured.

Mr. W. L. Washington, of Pittsburgh, Pa., has made another valuable addition to his kennel of Irish setters by the purchase of the beautiful champion Irish setter bitch Molly Bawn (5841), who for years was the undefeated champion of the American benches. She was bought at the New Orleans bench show (exclusive mention of the purchase through Mr. Peck was made in our last issue), and has been bred to Mr. Washington's Kildare, who has now won his way into the challenge class under five different judges. Molly Bawn is six years old. She was sired by champion Glencho out of Biddy, and is well known to all lovers of sporting dogs. She has a record that had never been equalled up to the time it was made. Her principal winnings are too well known to need repeating here. Molly Bawn is also a thoroughly broken field dog. With the addition of Molly

Bawn Mr. Washington will be able to bench four entries in the challenge classes at the New York show.

Mr. Littlefield, proprietor of the Lake View Kennels, writes: "Your kennel department far surpasses any other paper in this country. But as an advertising medium I derive the most profit. It reaches a class of readers that I have tried through other papers to find—those that appreciate a good article and are willing to pay for it." We do not solicit encomiums of this sort, but when they are received spontaneously and with a request for further advertising space, they are always gratifying and prove that our claims are just.

We learn that the special prize list of the Washington City Kennel Club's coming show in March is increasing rapidly, the latest additions being a cup for the best fox-terrier in open or puppy classes, and a cup, value \$30, which will probably be given as a kennel prize for St. Bernards.

They draw things pretty fine sometimes in English courts. A well known coursing man recently answered a summons before a London police court for not having his greyhounds muzzled in the street. He claimed exemption from the muzzling order, under a clause that said greyhounds and deerhounds, among other sporting dogs, were exempt from wearing muzzles when being exercised and in charge of a competent person. The judge held that taking the dogs along a public street, though led by a chain, to their exercising ground, was not part of the exercising. That commenced when the fields are reached, and that the dogs must be muzzled till they got to the fields. The defendant contended that according to "Stonehenge" and other authorities, walking along the roads was part of greyhound exercising. The question was purely a technical one, and the defendant was fined 2 cents and 50 cents costs. This decision, if adhered to, will affect packs of hounds such as the Queen's when they go out to exercise.

The American Spaniel Club will appoint a competent person to look after the club members' entries at the New York show, and if this supervision proves successful it will be continued at subsequent large shows.

Our attention has been called to a pamphlet issued by Dr. W. W. Bradley, who has a grievance against the Associated Fanciers. In it he sets forth under oath before a notary public in North Dakota, that last August, having received special list No. 12 of the Associated Fanciers, he purchased two dogs from them, Dom, an English mastiff, and a certain St. Bernard. He sent the company \$100 with the request that the dogs be kept till Sept. 10. They agreed to these terms and accepted the money, stating that Dom weighed then about 143lbs., though in the list he is quoted at 150lbs., and that the dog would win in a second class show. He wrote the company to express the dogs to Ransomville, N. Y., where he then was, on Sept. 10. He waited there till the 14th, but no dog arrived nor did he hear from the Association. He then wrote them to express the dogs to Buffalo on the 17th. He arrived there on the 18th, but no dogs had come. He then wired them: "When and where can I find my dogs?" He says that repeated messages were sent asking for an answer. It was not till the following Saturday that he managed to get an answer by telephone, that they had not answered the telegrams because they supposed he would receive their letter, explaining that the St. Bernard got away while being taken to the depot, but that they would ship Dom, the mastiff, that night at 7 o'clock. On the Monday he again wired to both their office and kennels, and found that no dog had been shipped to him. Not hearing anything further, he then left for his home, Milnor, N. D. On the 29th the Associated Fanciers wrote him, "No doubt you consider the Associated Fanciers the greatest friends on earth, and I do not blame you. Here is what I am willing to do—to send you the mastiff and the St. Bernard, if he turns up. If he does not turn up, we will ship another and a better one; also to pay all your expenses, if reasonable, or to refund you your money if so desired and pay your expenses." Mr. Bradley then wrote them demanding payment of the \$100 and \$15 expenses, at the same time forbidding them to send any dog, as they had not filled their contract. He says that in defiance of this they expressed to him on Oct. 27 a mastiff (?) in good flesh that weighed 101lbs. He refused to accept it, as it was not the dog he had bought. He has not received any part of the money he sent the company, nor anything on account of expenses. This is sworn to before Chas. E. Wolfe, Notary Public of Sargent county, N. D. Two other men swear before the same notary that they weighed the dog and found it to be 101lbs. and in good flesh. This is Dr. Bradley's sworn statement of the affair, and as these pamphlets are being scattered broadcast, it behooves the Associated Fanciers to state their side of the case, as the above certainly demands it. We have received several letters on the subject from people inclosing affidavits as to Dr. Bradley's good standing and character.

Mr. Mortimer writes us that the following specials have been offered for the W. K. C. show in February: Besides the Gordon Setter Club's specials, which have already been published in these columns, Mr. Rowland P. Kearsby, of New York, offers \$10 for the best field spaniel brood bitch, to be shown with two of her get, the get only to be judged, and open only to members of the Spaniel Club. Also the American Spaniel Club sweepstakes of 1891, for field spaniels whelped in 1890, will be decided. Entry fee \$3 each, with \$10 added by the club, to be divided as follows: Forty per cent. to winner, thirty per cent. to breeder of winner, twenty per cent. to second, ten per cent. to third, open to members only. Entries close Feb. 9. Also a sweepstakes for cocker spaniels, with the same conditions. All entries to above stakes to be also entered in their respective classes at their show. Entries to be made with the secretary of the American Spaniel Club, Geo. H. Whitehead, 441 Chestnut avenue, Trenton, N. J. N. Rowe offers the American Field English Setter Cup, value \$100, for the best English setter in the show. We are asked to correct an error which appears in their premium list concerning the old English Mastiff Club's Forty Guinea Cup. The latter is offered by the old English Mastiff Club, and not the American Mastiff Club, and is for competition among the members of the former club. There will also be a class for great Dane puppies under 18 months old and another for bull-terriers under 20lbs. weight. The management will gladly divide any class by sex where five entries of either sex are received. Mr. Daniel Downey, of Boston, offers \$10 for the best Yorkshire terrier, bred in America.

We have not space to spare for the publication of Mr. Watson's letter to the *Fanciers' Gazette*; suffice it to say that in heaping his mountain on their mole hill he has left nothing of them in sight to swear by.

Mr. R. F. Mayhew has the satisfaction of having got two kennel papers into a legal snarl owing to his remarks about Mr. Krehl, of the *Stock-Keeper*. This gentleman has brought suit in the High Court of Justice in England against the *Fanciers' Gazette* for the publication of Mr. Mayhew's letter. In the issue to hand of *Fanciers' Gazette* they make an ample apology in the following terms: "We consider, on a re-perusal of the letter, that it contains an attack on Mr. Krehl's character which should not have been made. We desire, therefore, to repeat the expression of our deep regret to Mr. Krehl that the *Fanciers' Gazette*

has been made the vehicle for such an attack on him, and in the frankest manner possible to apologize for the pain caused to him by the publication of the letter in question." The position of the *Fanciers' Gazette* strikes one as very like the cat in the monkey and chestnut episode.

"Nutmacker," in the English *Stock-Keeper*, has been warned by that paper to attend strictly to American news and leave personalities and a discussion of our poor judges alone for the present. By the way, why don't "Nutmacker" rechristen himself "Phonograph?"

Just as we go to press we have received the premium list of the Maryland Kennel Club's show, March 3 to 5. The prizes in the principal breeds are liberal, \$10 for each sex in challenge classes and \$15, \$10 and \$5 in many of the open classes. With the growing interest in terriers and toy spaniels, we think that bench show committees might help them along by making the prizes in these classes somewhat larger. The entries close Feb. 18 with Mr. W. Stewart Diefenderfer, 220 North Charles street, Baltimore, Md. We have also received a number of premium lists and blanks, which can be had on application. Judges will be announced later.

America will claim another crack King Charles spaniel shortly. This is Ben Lomond II., a grandson of champion Bend'or.

Mr. F. H. Perry, Des Moines, Iowa, in sending us an advertisement says that he has added a number of new bitches to his kennels, and expects to handle dogs quite extensively. He also adds: "I congratulate you on your improvement in your kennel columns." Thanks.

We are always pleased to see extracts from *FOREST AND STREAM* published in other papers when due credit is given, as such extracts show which way the wind blows, and where our contemporaries look for the latest news in kennel circles. We are sorry to find our esteemed contemporary, the *Philadelphia Item*, so regardless of the ethics of journalism as to clip biddo, for instance, our Indiana Field Trial report and Mr. Brailford's letter on the late field trials. Such practices are misleading to say the least, and below the dignity of such an enterprising paper as the *Item*.

CIRCUMSTANCES ALTER CASES.

Editor *Forest and Stream*:

When Addison K. Strong cruelly shot and mutilated my handsome pointer Troy and Recorder Darwin acquitted him of the charge of "cruelty to animals," following Strong's testimony that he had loaded the gun with fine shot to "tickle" the dog up with no intention to kill, and the affair had been reported in your columns (March 6, 1890) Mr. Wade, of Hulton, Pa., took the matter up. He stated that he failed "to see where the judicial officer was so stupid," and on the face of the returns Addison K. Strong had his "respects and congratulations," and he wished he would become doggy (March 20). In last week's issue Mr. Wade condemns in rather strong terms an officer of Sheffield, Ala., who in plain pursuit of his duty as a public guardian killed a mastiff (a breed that Mr. Wade has said scares both human beings and horses) that, vagrant-like, was roaming the common in that town. Hadn't Mr. Wade better use a little of that cool deliberation that he advised in such cases? And as for putting one's self in another's place I can faintly imagine what he would have done had he been in my place, or what he does in a case where he is entirely wrong. Wrong from the fact that the only blameworthy person in this case is the one who had the dog in charge and neglected to observe the ordinance which, however unwise it looks to us, may have become a necessity in a Southern community. I can truly sympathize with the sadly affected Helen Keller, as my pointer was the companion of a little one, who when the poor dog lay riddled with shot and his ear blown off, said of the aggressor: "He was a mean, mean man, for Troy was a good dog." W. H. MURPHY.

OGDENSBURG, Jan. 26.

BRUNSWICK FUR CLUB'S MEET.

Editor *Forest and Stream*:

The regular annual meeting of the Brunswick Fur Club will be held at East Wakefield, N. H., commencing Feb. 9 and continuing for a week or ten days. At the beginning of the meet the annual election of officers will take place and regular business of the club be transacted, after which daily hunts will be the order. As the snow is deep it would be well for visitors to provide themselves with snowshoes; and as good fishing through the ice is convenient those liking that sport might put their fishing gear in their outfit. Arrangements have been made to accommodate all comers at two taverns close to the railway station, and board will be \$1 a day. Mr. Samuel Kershaw, the hotel proprietor, will look out for hunters on their arrival.

East Wakefield is on the Conway division of the Boston & Maine Railroad, and can be reached from Boston by either the Lowell, Nashua and Rochester, changing cars at the latter place, or the Boston & Maine and Conway division. From western Massachusetts the best way to go would be to take the Worcester, Nashua & Rochester, changing at Rochester. The Maine members would find it most convenient to take the Portland & Rochester, changing at Rochester.

East Wakefield is in the foothills of the White Mountains and a noted place for foxes. One hunter killed ten in a week there last October. All members of the club are urgently requested to be present on Feb. 9; and any fox hunter in good standing from any part of the country will be given a hearty welcome. A. C. HEFFENGER.

PORTSMOUTH, N. H., Jan. 21.

NOTES AND NOTIONS.

HERE is a lesson that all writers on canine matters would do well to profit by. No writer in that field stands as high as "Ashmont," not only on medical matters, but in every department of canine affairs. "Ashmont" shuns controversial writings on any point, never doing any unless driven to it, and then confining himself to the defensive. This may seem a summary relegation of other writers than "Ashmont" to secondary positions, but is not the statement strictly correct?

Mr. Mason and Mr. Watson are totally at fault in their ethics as to the wrong of Mr. Mercer setting forth one view over his own name and another over the name of "Gothamite" (presuming for illustration's sake the fact is so). An anonymous writer has no standing as to facts; no reader is supposed to attach any weight to anonymous statements of any kind whatever. It would be ridiculous to hold any other view. This is shown by the occasional incident of an editor indorsing the personal character and knowledge of an anonymous writer as a statement as to fact is made. So supposing Mr. Mercer has stated opposing views in a dual capacity, where is the moral wrong? If he stated aught as within his knowledge, as a fact he was testifying to, and that statement was not his own belief, he was wrong, and on this point I am not prepared to speak, but if his statements were general or inferential it is ridiculous to attach obliquity to him for it. Not only is this true in morals and ethics, but it is abundantly supported by precedent. Nothing is more common for a writer who wishes to arouse active interest in a subject than his engaging writers to oppose his views in print, thereby keeping up an interest in

the subject that would otherwise die out. I knew of one of the most distinguished dog lovers in England, a man far above even the suspicion of double dealing, who engaged and paid a writer to oppose his arguments, simply to arouse interest in his efforts to revive a practically extinct breed. I furnish the editor with the names and perhaps he will kindly indorse my statements. [Our correspondent's statement is correct.] I am the most surprised and pained at noting Mr. Watson's taking this position, for surely an overhauling of the "Porcupine" writings will develop just what he hypocritically blames Mr. Mercer for.

The receipt of the Westminster Kennel Club's premium list has reminded me of a forgotten duty. Gentlemen all, lift your hats to Mr. J. Otto Donner, president of the W. K. C., and to Mr. W. H. Child, delegate of the Philadelphia Kennel Club. The retirement of two such men from active participation in kennel affairs was the most discouraging cloud in our skies, and their return promises better things to come. The miserable, degrading, petty squabbles over grievances, the making of kennel interests mere vehicles for the gratification of petty personal spites, and conversion of a ruling body in kennel affairs into a mere instrument for personal gratifications could never have happened with such men as Messrs. Donner and Child active in kennel matters. What a gratification to such men as Messrs. Moore, Sears, Perry, Fay, Smith, Porter, Hemingway, Hearn, Thompson, Huntington, etc., etc., this bow in the clouds must be? What a "National Kennel Club" a confederacy of the New England, Westminster, Philadelphia and Mascoutah kennel clubs would make? THE ONLOOKER.

EASTERN COURSING CLUB'S MEET.

THE second annual running meeting of the Eastern Coursing Club was brought off on the 20th of January, and may be regarded as marking the beginning of real coursing in the East. The club decided in December last to hold its annual meeting in January, and a committee which was appointed at that time immediately began preparations which culminated in an enjoyable meeting of representative Eastern coursing men, and in the prettiest coursing that has been seen east of the Missouri.

The ground selected for the coursing has plenty of cover for the hares, and having been given perfect liberty and sufficient time to become accustomed to their surroundings, it was only needful that there should have been a larger number of hares to have made a delightful day's sport. The difficulty in finding the hares, added to the hardness of the ground, made it impossible to conclude the running, and after going through the card once, the stake was divided among the six dogs remaining in. It is a pleasure to record that the Society for the Prevention of Cruelty to Animals was not represented at the meeting. The case would certainly have gone very hard with them had they sought to interfere, for the coursing was done in the open country, and the hares proved quite able to take care of themselves.

One interested spectator, who had never before witnessed any coursing, said, that after thinking it all over he could not understand why the S. P. C. A. should interfere to prevent coursing, in which the greyhounds, running by sight only, either catch their game quickly and kill it instantaneously or let it go free to a safe retreat, and at the same time make no objection to the hunting of hares with packs of beagles, in which the element of cruelty is so much more apparent.

It is thought by many that the society would not have interfered with coursing last year had it not been for the meddlesome activity of a member of the society from New Jersey, who invaded Long Island soil with the avowed purpose of putting a stop to coursing at any cost. His success was not very satisfying, for at the close of the season he went home with the verdicts of three Long Island juries, which declared that there was no cruelty in the sport. The fact that the Jerseyman referred to is supposed to be at present very busily engaged in "doggy" matters of far more personal interest to himself than coursing may possibly account for the absence of the S. P. C. A.

The dogs entered for this meeting were of much higher class than those that ran last year, running dogs having taken the place of dogs only fit for the bench show. Dr. M. H. Cryer, of Philadelphia, a true sportsman, who was brought up near the classic Waterloo ground, judged the meeting and gave perfect satisfaction to all.

Mr. J. Black's imported bitch Dolly Dollar did not have a chance to show what she might have done under favorable circumstances. She was slipped with Mr. R. Lambert's Sweep, but the slips breaking, the dogs were picked up after running strapped together for a short distance, and being started a second time ran a fluky trial which could hardly have been satisfactory to either owner. Grace Briant had the foot of Waverly, and in the early part of a course of moderate length, scored a number of points which the fawn had not had time to wipe off when he turned the hare to the bitch to kill. Mr. A. L. Page's handsome black dog Charles Davis acquitted herself creditably, and very decisively beat Mr. Growtage's Zoe in a long and interesting course in which the hare outran both dogs and went to cover.

Thanks are due to the owner and to the tenants for their kindness in permitting the coursing to take place over the estate. If a few men would combine and purchase this estate, and stock it with hares, they would not only place coursing upon a firm basis but would have an excellent investment. Let some wealthy patron of coursing now come forward and the success of the sport will be assured beyond a doubt.

SUMMARY.

American Field Club Stake, for all ages, at \$10 each, National Greyhound Club rules, 13 subscribers:	
Mr. J. H. Watson's L. b. Dry- time	beat
Mr. M. Murphy's w. bk. b. Lucy Dashwood	beat
Mr. R. Beard's be. d. Romp	beat
Mr. A. L. Page's bk. d. Charles Davis	beat
Mr. F. Hemming n's (Mr. Black's) r. b. Dolly Dollar	beat
Mr. F. Hemming n's (Mr. J. Black's) bk. b. Grace Briant	beat
Mr. C. Reinhard's bk. b. Cheerful	beat
Stake divided.	
Mr. W. Schumacher's red dog Colonel (absent).	
Mr. N. Q. Pope's (absent).	
Mr. N. Q. Pope's (absent).	
Mr. W. B. Growtage's r. b. Zoe.	
Mr. R. Lambert's bk. w. d. Sweep.	
Mr. E. C. M. Fitzgerald's f. d. Waverly.	
Mr. C. Reinhard's bk. b. Cheerful	beat
Girl a bye, dr. l.

THE O. E. M. C. CUP.—New York, Jan. 22.—Editor *Forest and Stream*: At the Westminster Kennel Club's fifteenth annual bench show, to be held in New York, Feb. 24 to 27, and at the third annual dog show of the Mascoutah Kennel Club, to be held at Chicago, April 3 to 11, the Old English Mastiff Club's forty guinea challenge cup, for the best in all mastiff classes, will be competed for. This competition is restricted to members of the Old English Mastiff Club, entry fee \$10, one-half of which goes to the winner. Entries for the Westminster Kennel Club Show, to be made before Feb. 15 with R. H. Derby, 9 W. 35th street, New York city; for the Mascoutah Kennel Club Show, before March 15 with R. P. H. Durkee, Tacoma Building, Chicago, Ill. For the committee, R. P. H. DURKEE, R. H. DERBY, F. T. UNDERHILL.

DEATH BY DISTEMPER AT LEXINGTON.—Charlottesville, Va., Jan. 22.—Editor *Forest and Stream*: Mr. Dexter has lost another valuable pointer from distemper, Moonshine, litter sister to Rip Rap. Ought it not to be compulsory for handlers attending field trials to report any suspicious cases of sickness among their dogs to the field trial authorities?—C. E. McMurdo.

NEW ORLEANS DOG SHOW.

THIS show opened Jan. 21 and continued till the Sunday night following. There were in all about the same number of dogs benched as at Charleston. Many of the winners, in fact the majority, were the same that won in that city. Several of the decisions were upset, though, notably the placing of Bessie W., the cocker spaniel, over her kennel mate Idea, and Blanton Trap the fox-terrier, over Suffolk Risk; but then if judges were all of one mind, where would be the fun of exhibiting. It is this delightful uncertainty that creates the charm—to the winners. The attendance was good, and the people of New Orleans seemed to take great interest in the fine collection of dogs present. The bloodhound Jack the Ripper was an object of great interest, and especially as he secured the special for best dog in the show.

The appearance of Mr. J. M. Avent with his noted field trial setters and American foxhounds, served to increase the quality in those classes. The catalogue was hardly so well arranged as it might have been. The benching and feeding in the hands of Spratts Co. was well done, and the Sanitas disinfectant kept the building free from offensive odors. Messrs. John Davidson and J. M. Tracy did the judging. The list of winners is as follows:

MASTIFFS.—Dogs: 1st, Mrs. O. V. Steinwher's Tiger (only entry). Bitches: 1st, C. Huber's Nellie (only entry). Puppies: 1st, C. Huber's Nellie (only entry).

ST. BERNARDS.—Dogs: 1st, J. W. Kemble's Warwick, Jr.; 2d, Mrs. G. W. Seibel, Jr.'s; Major S. Puppies: 1st, Mrs. G. W. Seibel, Jr.'s; Major S.

DEERHOUNDS.—CHALLENGE—1st, Brinley Silvester's Nora; GREYHOUNDS.—CHALLENGE—Dogs: Rookwood-Landseer Kennels' Master Rich. Bitches: Rookwood-Landseer Kennels' Miss Rose.—OPEN—Dogs: 1st, Rookwood-Landseer Kennels' Troubadour; 2d, Woodhaven Kennels' Balkis II. Bitches: 1st, Woodhaven Kennels' Spinaway; 2d, Rookwood-Landseer Kennels' Clipsetta.

POINTERS.—OPEN—OVER 55LBS.—Dogs: 1st, withheld; 2d, J. Hennessy's Bowshaft. Very high com., Omer Villere's Crockett. —OVER 50LBS.—Bitches: 1st, Mountain City Kennels' Rosa May; 2d, Anthony Valtio's Lady Kate; 3d, J. W. Kemble's Jess.—CHALLENGE—UNDER 50LBS.—Dogs: 1st, W. H. Hyland's Pummery; 2d, F. Myles's Tribulation; 2d, F. F. Myles's Weston (only entry). —UNDER 50LBS.—Bitches: 1st, J. Hennessy's Thilma; 2d, W. H. Hyland's Lady Graphic. Very high com., B. M. Stephenson's Tennessee Sue.

ENGLISH SETTERS.—Dogs: 1st, J. M. Avent's Roderigo; 2d, N. T. Harris's Don Roderigo. Very high com., J. M. Avent's Cluch. High com., Omer Villere's Robert L. Lee and H. G. Baughman's Hoosier Ben. Com., J. M. Avent's Antonio. Bitches: 1st, J. M. Avent's Miss Thompson; 2d, C. A. Gessen's Yum Yum. Very high com., W. Mayroonne's Topsey II. and F. R. Hitchcock's Jennie May. High com., Omer Villere's Queen Ella Noble. Com., H. J. Baughman's Trixie Belton. Puppies: 1st, H. A. Bridge's Tick; 2d, H. J. Baughman's Lufra B.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, Geo. H. Covert's Dick Swiveller. Bitches: 1st, W. L. Washington's Ruby Glenmore. —OPEN—Dogs: 1st, W. L. Washington's Kildare; 2d, Geo. H. Covert's Red River Glencho. Very high com., T. H. Price's Merlin. Bitches: 1st, W. L. Washington's Winnie II.; 2d, J. A. Logan, Jr.'s Jeannette. Very high com., W. W. Kendall's Leda Glencho. High com., Geo. H. Covert's Tillie Bora and Glidella.

GORDON SETTERS.—CHALLENGE—Dogs: 1st, Dr. S. G. Dixon's Ivanhoe. Bitches: 1st, W. S. Hammett's Rose.—OPEN—Dogs: 1st, F. F. Myles's Stubble; 2d, J. Hennessy's Romulus. Bitches: 1st, Dr. S. G. Dixon's Blossom; 2d, Jos. S. Gaus's Viola.

AMERICAN FOXHOUNDS.—Dogs: 1st and 2d, J. M. Avent's Foxes Rock and Rob. Bitches: 1st and 2d, J. M. Avent's Flora and Nellie.

SPANIELS.—FIELD—1st, B. F. Lewis's Black Diamond.—COCKERS.—BLACK—CHALLENGE—Dogs: 1st, Geo. Bough's Black Dog. Bitches: 1st, Geo. H. Bush's Novel.—OPEN—Dogs: 1st, W. Barnes' Banjo. Bitches: 1st and 2d, Geo. H. Bush's Bessie W. and Idea. Very high com., W. Barnes' Hazel Obo.—OTHER COLOR—Dogs: 1st, W. Barnes' Red Doc. Bitches: 1st, Woodbury Kennels' Beauty.

COLLIES.—CHALLENGE—1st, W. D. Hayes's Bonnie Brae.—OPEN—Dogs: 1st, Seminole Kennels' Roslyn Dandy. Bitches: 1st, Seminole Kennels' Mischief; 2d, G. W. Sentell, Jr.'s Beulah S.

POODLES.—1st, Dr. S. G. Dixon's Paris.

DAOSHUNDE.—1st, B. F. Lewis's Gill.

BULL-TERRIERS.—Dogs: 1st, Woodbury Kennels' White Stubbs. Bitches: 1st, Woodbury Kennels' Mez Merrilies; 2d, J. H. Naylor's Dinah.—OTHER THAN WHITE—1st, N. T. Harris' Helen.

BEAGLES.—CHALLENGE—1st, H. Bennett's Little Duke.—OPEN—Dogs: 1st, Sunset Kennels' Count. Bitches: 1st, Sunset Kennels' Flossy; 2d, Associated Fanciers' Countess Fay. Puppies: 1st, B. F. Lewis's Baby.

FOX-TERRIERS.—CHALLENGE—Dogs: Oriole Kennels' Blanton Volunteer. Bitches: Oriole Kennels' Blanton Brilliant.—OPEN—Dogs: 1st, Oriole Kennels' Oriole Trap; 2d, C. D. Purroy's Suffolk Risk. Very high com., Oriole Kennels' Blanton Ransack. Bitches: 1st and 2d, Oriole Kennels' Verdict and Blanton Ethel. Very high com., Oriole Kennels' Beveridge Heate and Blanton Vice. High com., Oriole Kennels' Blanton Marjoram and Dixie Kennels' Marchioness. Com., Dixie Kennels' Hillside Puppies: 1st, Dixie Kennels' Hillside Marchioness; 2d, E. W. Kirk's Shot.

BLACK AND TAN TERRIERS.—Dogs: 1st, Rochelle Kennels' The Senator. Bitches: 1st, Rochelle Kennels' English Lady; 2d, Clara Plittler's Fancy.

SCOTCH TERRIERS.—CHALLENGE—J. H. Naylor's Rosie.—OPEN—Bitches: 1st, Sunset Kennels' Brownie.

SKYE TERRIERS.—Dogs: 1st, C. A. Shinn's Sir Stafford; 2d, Woodbury Kennels' Lovett. Bitches: 1st, M. H. York's Lady Countess.

YORKSHIRE TERRIERS.—1st, John Cummins's Dandy.

DANDIE DINMONT.—1st, N. E. Hoff's Border Dandy.

FUGS.—CHALLENGE—Dogs: Dr. M. H. Cryer's Bob Ivy. Bitch Dr. M. H. Cryer's Vesta.—OPEN—Dogs: 1st, J. Bromback's Bradford Rowdy; 2d, Seminole Kennels' Kash, Jr. Bitches: 1st, R. T. Harrison's Nellie Bly; 2d, H. T. Coltman's Lady. Very high com., Woodbury Kennels' Daisy R. Puppies: 1st, Seminole Kennels' Kash, Jr.

IRISH TERRIERS.—CHALLENGE—1st, Lewis & Jarrett's Burnside.

MISCELLANEOUS.—OVER 25LBS.—1st, Mrs. R. V. Ratchford's Jack the Ripper (bloodhound). —UNDER 25LBS.—1st, Associated Fanciers' Mauprat (Basset).

TOY TERRIERS.—1st, Woodbury Kennels' Tillie. Among the special prizes for dogs were two for the best dogs in the show. The prizes were \$25 for the first and \$10 for second. The judges awarded the first special to Jack the Ripper, the bloodhound, owned by Mrs. R. V. Ratchford, of Jackson, Miss.; second prize to the pug dog Bob Ivy, owned by Dr. M. H. Cryer, of Philadelphia.

SIR BEDIVERE AND ALTON.—Boston, Mass.—Editor *Forest and Stream*: In your issue of the 15th inst., the following appears: "Notwithstanding all this talk about Sir Bedivere, it must be remembered that there is a dog in this country yet undefeated in the best company, and who has not yet met the champion; this is Alton." Thinking the writer of the above had been misinformed, and being under the impression they had met, I took the trouble to look through a file of the *Stock-Keeper* (English) and found that they met at Windsor (St. Bernard Club show), June, 1889, and competed for the 100 guinea challenge cup offered for the best dog in the show. Sir Bedivere won this, beating all rough and smooths, including Watch, Alton and others; he also won the Halsey Trophy, Watch being his nearest rival. I also find that they met at Manchester, March, 1890, and competed for the 25-guinea Deakin challenge cup offered for the best non-sporting dog in the show. At the ring-side were the St. Bernard champion Sir Bedivere, British Monarch, the bulldog champion; Metchley Wonder, the collie, and Alton, Mr. Smith's winner in the open St. Bernard class. Again Sir Bedivere won, thus repeating his victory of the previous year. Metchley Wonder won the reserve.—F. A. BACHELLER.

for a minute. In the score appended the direction of each bird has been given carefully, but no such score can faithfully reproduce a race, because it cannot describe the quality of each bird. Two birds may be fast, but one may be a "pinner," and the other fast and one very slow, so that the proper credit of the kill is quite lost. The public is wisest which believes that these two men shot at birds on the average practically equal. Brilliant and phenomenal kills were nearly equally distributed. George Kleinman saved two birds hardly a foot inside the line. Elliott lost two just over. He also lost an incomer, dead just across the line. This is a fair trial, and the result is a fair one. The three instances here different in the tide of pure luck, not skill. Elliott would have won. Thus may be seen the exciting nature of this match, and its fairness, and its evenness. We must look away from the detailed score, careful and accurate as it is. George Kleinman can win more races than J. A. R. Elliott, because he has the better theory of shooting at the trap. He has the better aim, and he has the better power down to before, but he never fired it in the air. Elliott's style is due to make him lose sooner or later. A model in position and brilliancy, he still has that foolish Eastern "bang-bang" notion too deeply settled in him. A close observation showed that Elliott lost the effect of his second nine times in the 100 birds, by shooting where there was no bird. Any one who has seen Elliott shoot at the trap will know that he was right. See the 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32nd, 33rd, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42nd, 43rd, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52nd, 53rd, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62nd, 63rd, 64th, 65th, 66th, 67th, 68th, 69th, 70th, 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, 78th, 79th, 80th, 81st, 82nd, 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 90th, 91st, 92nd, 93rd, 94th, 95th, 96th, 97th, 98th, 99th, 100th. It is true that of these nine birds his first barrelost stepped all but one, but suppose a bird had recovered and gone on, as may well happen? You do not see this "bang-bang" theory in the Kleinman shooting. Used to careful shooting on

Editor Forest and Stream:
It has occurred to me that it would assist the members of the regatta committee in forming their opinions as to what constituted a "general purpose canoe," if some of those interested would send their views either to members of the committee or to be published in the FOREST AND STREAM.
Now is your time to kick, boys! before we put a shoe on you which pinches. If you have a good suggestion please share it with the committee.
[We will be glad to give space to a discussion of this important subject.]

PURITAN C. C.

THE following invitation has been sent out by the Puritan Club. We would be surprised if it was a late hour before the "drill" was "all over." Greeting—Dear Sir: You are cordially invited to be present at the first winter Pipe and Beer Night of the Puritan C. C. at their club house, 821 East Sixth street, City Point, Boston, Mass., on Saturday evening, Jan. 24, 1891. Strictly "Stag." Old clothes. Amusement from 8 P. M. to —. JAMES W. CARTWRIGHT, JR., Secretary.

The following report has since been received:
The sighing of the wind among the bare branches of the tall poplars on the grounds had ceased. The moon threw a soft light over everything, being especially beautiful as one glanced seaward, where with the exception of its bright glaze, it dimly lighted up the bay, so that one could see plainly points at quite a distance.

An old square house on the edge of the bay was brightly lighted, and sounds of merriment could be heard issuing therefrom.
As one drew nearer the sounds assumed a more distinct character, and if, as in the case of the writer, he had "stepped on Jessup's Neck," he recognized the familiar strain "Gib me, Oh gib me, Oh how I wish you would, dat water million growin' on de vine."

It was the first winter "Pipe and Beer Night," of the Puritan C. C. given to its boating friends on Jan. 24.

Upon entering the lower story of the house, the visitor was confronted with the bright glare of numerous lanterns, by the light of which the fleet was to be seen calmly reposing each upon its berth. There were many types of canoes, from the razor like trim of the pot-bellied Old Calamity, some brand new, and others rusty enough to look like the ancient Mayflower of the 1620 Puritans, which noble ship has been chosen in fac-simile as the totem of the club.

But the busy hum of many voices in the rooms above, forbade a very long sojourn with the fleet. Finding the stairway and ascending to the upper story, one was again met with plenty of light from lamps, Japanese lanterns, etc. The light was not brilliant on account of the density of the fumes of tobacco rising from many pipes, and the newcomer noticed a couple of sturdy canoeists busily engaged in shoveling the smoke out of the open doorway.

Tables and chairs were conveniently scattered about, and seated at the same or standing in groups conversing, were our confreres in our glorious sport.

The long clay pipes, and glasses of amber tinted beer, threw one back to the times of Van Twyller and Stuyvesant in New Amsterdam; but the language was not Dutch, being good plain English, with plenty of laughter to make the aged browed members of the club-room ring. The voices sank to a low hum, at the sounds of the guitars accompanying the voices of "Happy John" and his companions, colored minstrels procured for the occasion. Their songs etc. were well rendered to the evident enjoyment of the guests, who numbered about sixty.

On the table lay the keg running an almost steady stream, to quench the thirst of the dry canoes, and a light lunch was prepared for all who desired a foundation.

Each new comer entered he was relieved of overcoat, etc., and then presented to Com. Gilmore, the newly elected head of the Puritan tribe, Vice-Com. Cartwright of the Eastern Division, a member of the club made every one at home and at ease as he circulated among the acquaintances assembled.

One by one the lights went out, and as the room was soon dark, save that the space occupied erstwhile by a door to the back room of the house, was a brightly lighted blank.

Once more the strains of the "Water million growin' on de vine" sounded forth, and simultaneously a stereotyped picture of Jessup's Neck with its array of tents, flags and other features, fell upon the screen. One could almost see W. marching around in his shirt-tail at the long line of campers, headed by the "Big Red" Harbor "Water melon band." More views of the meet were shown including the three K's, Ko-ko, Kraemer, and the Ko-ko-ko, and to the partakers of last year's, came the solemn vow to be present at next year's meet, "if it took a leg."

The third keg was rolled in amid the tumultuous applause of the now patriotic canoeists, and they let the eagle scream with a will.

The evening passed, songs and recitations, and the great and "razzle-dazzle" dance by "Bob" Webber of the Lawrence C. C. and Secretary Cartwright of the home club.

Slowly the men withdrew in time to take the I. A. M. horse car to the city and the P. and B. night was ended by their songs as they took their sheets close aboard, and luffed around the corner, some having their painters hitched to safer though slower going craft.

Thus it is that canoeing lasts the year round and between the men springs that bond of good-fellowship so characteristic of our sport.
P. E. N. PUSHER, MDCLXXXIV.

PRIZE FLAGS FOR CANOE RACES.

FOR many years it has been the custom in the American Canoe Association to confine the prizes, other than a few trophy cups, almost exclusively to silk flags, the majority of these being made and presented by members or by ladies interested in the Association, or by the various clubs. Nearly all of these flags are of amateur make, in fact, but as the flags are many among our enthusiasts who have been part of the flags have been purchased. Taking the A. C. A. and division races quite a number of flags are required each year, 25 being given in the A. C. A. races of last season. Out of the large membership of the Association there are many who are willing to make the necessary number, but very few of them know just what is wanted and how to go to work to make it. As there are many among our readers who have in recent years made flags made by themselves or their friends we would be glad to have from some of them directions for the work, describing the proper materials for field and trimming, the mode of cutting and sewing, embroidery, mounting, etc. Some of the old regatta committee men can perhaps tell us just the sizes of flag that are needed for first and second prizes, and if any wish to exercise their artistic taste in preparing designs for the use of those who can make the flags, but have no talent in designing, we will be very glad to publish them. The present is the season for such work, and we hope to hear from many who can give hints and suggestions in the matter.

ATLANTIC DIVISION.—On Jan. 22 a meeting of the executive committee of the Atlantic Division was held at the fencing rooms in New York, Vice-Com. Dorland presiding. Beside the members of the committee several of the ex-officers of the Division were present by invitation of the vice-commodore. A number of matters connected with the Division were discussed, the principal one being the meeting. It was decided to hold it from June 25 to July 6, the old ground camp at Chesapeake Creek being the favorite location if it can be obtained. The regatta committee presented a programme of races and an appropriation was made for the expenses of the prizes, etc. At the same time it is desired that canoeists shall furnish prize flags, as the prize is to be obtained only by the presentation of a flag. The regatta committee was requested to consider the practicability of organizing a Division crew for a war canoe race, such as was proposed by Mr. Barney, the idea being to use one of the war canoes now owned in the Division, appointing a captain of the crew, who would select his crew from members of the Division at the A. C. A. meet. In connection with this scheme it was also proposed that the Atlantic Division should offer a prize banner, to be competed for each year by war canoes from each Division, at the same time challenging the other Divisions. The question of increasing the membership and of interesting unattached canoeists within the Division was carefully discussed, and it was decided to prepare a circular to be sent throughout the Division, stating the nature and objects of the A. C. A. and the manner of joining it.

NARRAGANSETT BOAT CLUB.—At the annual meeting of the Narragansett B. C. at Providence, R. I., on Jan. 13, the following officers were elected: Pres., Hiram Kendall; Vice-Pres., John Shepard, Jr.; Sec'y, Chas. E. Hudson; Treas., Chas. W. Rhodes; Capt., Chas. H. Gurney; Lieut., Frank A. Sheldon; Governors, Jas. S. Aborn, A. E. Flint, Jeffrey Davis; Auditor, Frank Bowen. The membership of the club has been one of the largest during the season of 1890; the easy facilities which the cable tramway has offered, has been the club house bringing a large increase. The turning of the boat house on Dec. 6, 1890, cast a shade of sorrow on the club, as there were a great many valuable prizes in the shape of silver cups, silken banners, etc., which were destroyed that cannot be replaced. However, a large, elegant and substantial club house will be erected in the spring (if the plans that the building committee have accepted are any criterion) that will more than make up for the loss of the old one. With a new boat house and present excellent accommodations for reaching it our next season promises to be most prosperous.—CHAS. E. HUDSON, Sec'y, P. O. Box 1037, Providence, R. I.

IANTHE C. C.—The annual dinner of the Ianthe C. C. was held at Morello's, in New York, on Jan. 24. Com. Lawson, Vice-Com. Dorland, and several other guests were present, in addition to a full attendance from the club.

CRESCENT C. C.—The annual election of the Crescent C. C., of Greenville, N. J., was held on Jan. 14, the following officers being elected: Com., Dr. O. F. Coe; Vice-Com., Edward W. Edinger; Sec'y, Joseph P. Greaves; Treas., Wm. W. Hillier; While the club has been in losing its house and a number of boats by fire, its members are in no way discouraged. Plans for a new house have been accepted and steps taken to begin work as soon as possible.

THE A. C. A. SUPPLEMENT.—The first supplement to *Sail and Paddle*, containing all the A. C. A. news from the regular January number, has been sent out to all A. C. A. members who are not subscribers to the paper. With it is included an application blank with a statement of the aims and extent of the Association, and directions for applying for membership. These supplements will be issued through the year.

A. C. A. MEMBERSHIP.—Eastern Division: Edward S. Gilmore, Charlestown, Boston; Lander M. Houé, Edwin S. Webster, Boston. Atlantic Division: Otis D. Goodall, Washington, D. C. Central Division: E. W. Delano, Rochester, N. Y.

HARTFORD C. C.—The annual meeting was held Jan. 20 and the following officers elected: Pres., Dr. G. L. Parnelle, Treas., W. B. Davidson; Sec'y, F. B. Lewis; Com., J. D. Parker; Executive Committee, the above officers and E. H. Crowell.

Yachting.

ANOTHER CRUISE IN THE VELMA.

ON July 3, 1890, about 10 P. M., the little cruising cutter Velma* left Lynn for a trip down the coast of Maine for the third consecutive year. The night was clear, with a good moon and a very light air in the harbor. We intended to anchor at Nahant and leave early in the morning, but an old sea was setting in upon Bass Point, and we thought it would be uncomfortable to lay there the first night, and so we sailed around Nahant with a breeze of air and laid our course for Cape Ann Lights. The Lynn Y. C. cruised to Essex River and were to be there on July 4. As we drifted by Shag Rocks a sloop came out between them and the shore, carrying a big clubtopsail. We had thought to take things easy through the night and carry lower sail only, but that changed our minds; so we sent up our club also. We had the men and a boy for the crew, but the skipper and boy steered all night, as the others did not feel just right inside. The breeze freshened quite a deal and sent us along well with started sheets; we kept the sloop's sail in sight until nearly daybreak, and when near Thatcher's Island Lights found we had passed her, as we kept off shore and held a better wind.

We passed Cape Ann at 4 A. M., and the slooped us into Rockport harbor where we got breakfast. Starting again at 8:30 we went across Ipswich Bay, and entering Essex River dropped anchor at 11 A. M. where the tide ran very strongly. In the afternoon the steam yacht Trio came in with two boats in tow, another came in later, so we had quite a fleet. Next morning we found ourselves a cable's length down stream, the strong tide had broken the anchor, and we had dragged until we got into a weaker current.

We had a clambake and fireworks and enjoyed ourselves well for a couple of days, leaving on Sunday morning at 11:45 in tow of the Trio. She cast us off when over the bar, and we stood across for Portsmouth with a light wind and set spinnaker. After a while we ran into Little Harbor and anchored at the Westwater. We had a good crew, but we found plenty of water at all tides. In the morning we drifted out past the bell buoy at 10 A. M., and started down toward Portland; the wind was very light all day and dropped entirely at 5 P. M.; we were then near Cape Porpoise with the tide about half out, we towed into Cape Porpoise Harbor easily against the tide, although the coast pilot said it ran strong, but after leaving Cape Porpoise with the tide in the sea rose, but the Kennebec thought it rather a light one. We picked up a mooring which a fisherman showed us and had a nice berth for the night.

We started out in the morning under lower sail close hauled, with a heavy breeze from S.W., made a couple of tacks and shaved close by Old Prince at 7:30, and started sheets and set topsail. The wind came strong and stronger, and the sea rose, but we hung on to the topsail until the mainmast ringbolt began to draw out. The boat's painter was made fast to it, and the jerk in the heavy following sea started it out, as it was not through a beam as we intended to have it. Securing the ring with a lashing, we took in the topsail and let her drive, passing Cape Elizabeth at 10:45, having made nine nautical miles in one hour and a half, better speed than we thought the little boat capable of.

We passed Portland Head and ran up the channel and around the breakwater at noon, and beat up toward the yacht club and anchored; quite a contrast to the year before, when we were nearly four hours getting in from Portland Head near midnight and in a heavy rain. On Sunday we lay at anchor, and on Monday we went up to the Miller's Cove and back. Friday one of the crew left for home, and Sunday another left, leaving the skipper and boy alone.

Monday we shipped as mate Mr. H. E. Feineman, who had been with us twice before, and leaving Portland at 3 P. M., with a good south wind, we ran up to Potts Harbor and anchored in the entrance to the Bass at 5 P. M. The morning, beating out against the tide with a very light air. Coming out of Mericenneau Sound we got a heavy wind and sea, made a number of tacks to get by Turnip Ledge, and eased sheets for Cape Small Point. The sea was breaking very heavily on Bald Head Ledge, we went inside and passed Seguin at 8 A. M. The wind and sea were heavy until we passed the Cuckolds and ran into Fisherman's Passage. In Muscongus Bay we got a heavy thunder shower and hard rain, running under jib alone until the rain ceased. We passed a big yawl with topsails aloft bound in toward Booth Bay, then the wind got very light and ahead at times; we went by Egg Rock Beacon and through Davis Straits and anchored at Port Clyde at 4 P. M.

On Wednesday, July 16, we left early with a light wind, and anchored at Green's Landing at 7 P. M. In the morning we went ashore and left the old stove burning, it took to smoking and plastered the fo'castle and part of cabin with soot, so that soap and elbow-grease in abundance were required to clean things, but finally we were snugged up and started out at 2:45 P. M. with very light air, but caught a good breeze in Joriche Bay and went through York Harbor at 4 o'clock, then lost the wind and finally picked up a mooring in Mackerel Cove, Swan's Island, at 7:40 P. M.

In the morning it was blowing fresh, and some fishermen who came in said it was rough in Blue Hill Bay; so we close-reefed the mainsail and set the small jib and beat out around Cranberry Point; and after starting sheets shook out the reefs. We passed Bass Head at 10:50 and beat into Mt. Desert Passage against the wind. We had a succession of calms and nice breezes in Frenchman's Bay and dropped anchor in Bar Harbor at 7:30 P. M. Uncle Sam's war ships were here, and the Eastern Y. C. fleet was at anchor in the Harbor. We started out next day, wind light, then calm, and afterward it began to blow strong and rain heavily; we had got down to the jibs and were close-hauled trying to get out of the bay. At last we hove to under jib and sail, and after a while we were close hauled for Widows Island; could just lay our course and drifted along into the Thoroughfare and came to anchor at North Haven at 7 P. M. just astern of Gitana. Soon it rained and then cleared off and was fine in the night.

Next day we left early with a light wind, which we lost in Frenchman's Bay as usual, and then some time afterward got a nice breeze, and as we passed South-west Harbor some of the East, but Gitana and Chiniqua went by Bass Head into Blue Hill Bay, where we followed them and went through Casco Passage and anchored at Green's Landing at 1 P. M. The skipper went ashore to buy provisions and found the stores closed, when it dawned on him that it was Sunday; so he soon got aboard and started out at 2 P. M. A light breeze came in from East Penobscot Bay, and we were close hauled for Widows Island; could just lay our course and drifted along into the Thoroughfare and came to anchor at North Haven at 7 P. M. just astern of Gitana. Soon it rained and then cleared off and was fine in the night.

We started out early next day with a fair wind, which held until near Andrews's Island, then drifted through the West End channel, passed through the Island at 2 A. M., and stopped at Port Clyde at 12 P. M. and went ashore and stocked up with grub. Leaving at 2 P. M., we went to through Davis Straits with a head wind, and finding we could not lay our course for Eastern Egg Rock, we went

by the Red Buoy on the Keys, and with light winds went near Gangway Rock and Franklin Island Light, and hauled sharp on the wind for New Harbor. We passed close to Crane Island and the Lewis's Island, and then hauled sharp on the wind for New Harbor, where we anchored at 7 P. M. We were well provided with charts and pilots; in the daytime we sailed by the Atlantic Local Coast Pilot, as the coast was described well and we were able to make many harbors that we would not have ventured into without its aid. In thick weather and at night we sailed by Eldredge's Coast Pilot, as we knew that was correct and safe.

Next morning, with the tide and a breath of air, we went by Pen-aquid through Fisherman's Island Passage and outside of Seguin at noon. We then had a light breeze and passed outside of Half Rock at 2:50 and got to Portland Head at 5 P. M. and anchored in the harbor at 6 o'clock.

Wednesday, July 23, we left Portland in company with a sloop; we beat out around Cape Elizabeth in a heavy wind and sea that worked into a regular smoky sou'wester; we got along well until near Richmond's Island, where we got it very rough. The sea was very sharp and the worst the skipper was ever in, although he had fished all around St. Lawrence Bay from June until October; it broke over us at times, and a sharp one filled the tender. The mainmast was belted, and the shoulders into the after hatch after oilskins, the skipper yelled "Help," and the mate was on deck instantly, as he never heard the skipper call for help before. We hauled the tender alongside and managed to save one pair of oars and the spritsail, and were afraid we should have to leave the tender, as she might drag us on the rocks; but the little cutter towed her along, and the water partly ran under the stern.

Soon we were able to start sheets, and ran around the west point of Richmond's Island and into the harbor, where we anchored at 2 P. M., and dried our clothes in the bright sun. We went ashore and crossed the island to the cliffs and watched the heavy seas break over the ledges, thankful that we had passed them as well as we did. We would probably have got along better to have kept further off shore.

We sailed out in the morning with light wind which died away, and then the fog shut in very thick; we drifted around and the fog lifted before noon, and after passing Wood Island we got a good breeze and started sheets a little. We were at Cape Neddick at 5 P. M., and kept on for Portsmouth, but we lost the wind. It was calm for some time, and then the wind started in from the south when we were near the bell buoy. As we passed Whale's Back the fog was very thick, and it was hard work to locate Portsmouth Light, as the shore lights were so plenty, but steering by compass we soon heard the noise of the breakers on Fort Point, and hauled around the light and anchored near the Newcastle shore at 11:45 P. M. Soon Whale's Back began to roar and kept it up at times for the next two days. We lay at anchor Friday and Saturday, weather was foggy, and the schooners came running in for a harbor, it was at the time of the cyclone at Lawrence.

Saturday night the clouds broke away, but it was still foggy. It was clear in the morning and we left early in company with the cutter Millicent and a fleet of schooners. The wind was light and ahead, we struck a heavy squally breeze near Rockport, which died away entirely when past Thatcher's Island at about 2:30 P. M., and we towed into Gloucester in company with Yashiti, and anchored just below the Lighthouse wharf at 10:30 P. M. The night was clear and the moon shone brightly. Next morning the mate left on the cars, and the skipper and son started for Lynn. A bright clear day with very little wind until we got to Halfway Rock, then a fair wind took us by Nahant and into Portland, and we were at home again.

VELMA.

THE MONTGOMERY SAILING CLUB.

THIS club, which was located on the Schnyckil River at Norristown, Pa., not far from Philadelphia, has lately died after four seasons of good racing, on account of internal dissensions. In spite of natural disadvantages from the narrow river and the squally winds, the club has been quite prosperous, a number of races being sailed each year with good entries, the fleet comprising various small craft, such as tuck-ups, duckers and canoes. The usual difficulties of handicapping a mixed fleet has been very fairly met, and the racing was essentially satisfactory. In this respect, which makes it all the more to be regretted that good sport has been spoiled by lack of harmony. So far as we are aware, the main source of the troubles lies in the fact that the race committee was composed of men directly interested in the competing boats. While this is sometimes a necessity in small clubs, the active members being a small number, it is very undesirable in a club where the membership is large, however fair he may be, to give an impartial opinion in a case in which he is personally interested. We would advise the parties in the present case to adjust their differences if possible and reorganize the club with a race committee composed entirely of non-racing and disinterested men, at the same time overhauling their rules if necessary in order to avoid any new disputes. Such a course will be more satisfactory in the end than to abandon all racing. The following report of the dissolution of the club, which we have been compelled to shorten somewhat, was furnished by the secretary:

The Montgomery Sailing Club was organized in March, 1887, and the racing during the past four years has been very spirited. Canoes, duckers, tuck-ups and hikers raced in one class under a handicap rule. Slight changes have been made at the beginning of each racing season; but the allowances have been practically the same throughout the four seasons, although based on different rules at different times. The handicaps for the last two seasons have been based on sail area, the value of sail being computed at 2 seconds per square foot per mile.

At the beginning of the season of 1890 it was decided to hold the best ten races of each boat to count for the championship. The winner of each race received 10 points, the last boat one point, and the others according to the order in which they finished. The summaries of several of the earlier races were published in the *FOREST AND STREAM*. Everything went smoothly until the first half to windward.

The smaller boats, which were given their time at the start, were hardly away before a very severe storm swept down the river.

Four tuckups and one sharpie (Stranger), 55 ft. boats, with cat rigs, 162 ft. area, were however, a very fine line and very fast. Some of the captains were halting members of the race committee, in an endeavor to have the race postponed. Finally Com. MacAllister, captain of the Stranger, made a signal indicating his decision that it should be a go. The starter displayed his signal and the boats were off like greyhounds. By the time that the leaders had made a couple of tacks heavy black clouds were looming up in the west, and soon the rain poured down in horizontal sheets, with flashes of lightning and piercing crashes of thunder exceeding anything that has been experienced in this locality for many years.

The wind increased to a gale, and every one of the boats ran ashore and dropped sail. The storm soon passed over, and was succeeded by a light breeze. What were the racers to do?

Every boat had been brought to a standstill by stress of weather, and the crews had landed and taken refuge in boats or on the shore. There was no agreement among the contestants to meet at the Commodore, being a contestant in the race and a member of the race committee, did not call the race off. In this dilemma, Captain Ritter, of the tuckup Volunteer, approached the commodore and asked how about the race? The commodore answered, "We will sail it off tomorrow." The Commodore made the sail and ran home.

Afterward several parties claimed that they thought the race was lost, and that they knew nothing of what the commodore had decided in regard to it. As will be seen later on, the question as to whether the Commodore had the right to say that it would be sailed off, was one of the most important questions the club was ever called upon to decide.

The number of points to the credit of each boat up to this time was as follows: Nellie, 59.93; Stranger, 52.81; Igitious, 49.83; Volunteer, 44.92; J. S. Lever, 33.99; Vesuvius, 25.51. Volunteer had been sailed in three races by her owner, Fred Whitman, and on one occasion she had stopped to pick up the crew of a capsized boat, and thereby lost her position in the race. She did not start in any race, so that she had but six races to her credit, and in one race, so that she had but one point, while the other leading boats which she had beaten had each had several races to their credit. Geo. W. Ritter, one of the best sailors in the club, had given up sailing his canoe after the first three races, and had taken the Volunteer for the balance of the season. He had sailed her in the last three races and scored 28.71 points, which was more than any other boat had scored in the same races. It was therefore evident that the Volunteer was the final struggle for the championship would be between the Nellie and Volunteer. The race days had been fixed at the beginning of the season, 13 races and no more, and 10 races to count for the championship.

The race of Aug. 3 had been lost through lack of wind, so that the Volunteer had already lost two races, and had one record of 1 point which she was forced to throw away. Barring up her record for the season, she had to do this to make every race during the balance of the season. The Nellie, Stranger and Igitious had each 17 races to their credit, and could therefore afford to lose two races

*The lines of the Velma, 17 ft. 1 in., were published in the *FOREST AND STREAM* of Jan. 31, 1889, with a cruise; the second cruise being published on March 6, 1890.

AUXILLIARY NAPHTHA LAUNCH FOR CRUISING.

THE AUXILIARY NAPHTHA LAUNCH.

NEARLY a year since, on Feb. 13, 1890, we published the interior plans and description of an auxiliary naphtha launch, the Etcetera, an experiment in the way of naphtha launches that has proved quite a success after two years trial. The accompanying drawings, for which we are indebted to the builders, the Gas Engine & Power Co., of New York, show a newer craft of the same description, now building for an extended cruise from the coast to the Great Lakes. This yacht will be rigged like the Etcetera, with mainsail, jib and mizen, the model including sufficient keel for sailing purposes. The dimensions are:

Length over all.....	35ft.
L.W.L.....	31ft. 3in.
Beam extreme.....	5ft. 6in.
L.W.L.....	5ft. 1in.
Draft extreme.....	3ft.
Least freeboard.....	1ft. 3 1/2 in.
Sheer bow.....	1ft. 9in.
stern.....	8 1/2 in.

The frame is of oak, the timbers being all steam and bent, and every care is taken to secure the strength which is so important in a cruising craft. The interior arrangement will be similar to that of the Etcetera, but the cabin will be smaller in proportion to the added length of the boat, giving accommodations for four men; the large open cockpit will be fitted with a tent and awning under which the cooking will be done and where part of the crew will sleep, except in very bad weather. The motive power will be one of the new ten horse-power naphtha engines, placed in the usual position, in the stern, thus leaving the greater part of the boat unencumbered by the engines and boiler. A small lead keel is provided as a steadier. In such a boat a party of three or four can spend the summer in cruising of the most enjoyable sort, finding their way at will by river and canal to almost any part of the country, and cruising in these craft is each year becoming more popular. The cleanly and compact nature of the fuel, and the ease with which it can be obtained, are great points in its favor.

SENATE BILL 4821.

THE proposal to exclude by legislative action the foreign-built yachts now racing in American waters has thus far met with general condemnation from the yachtsmen of New York; and though Boston has not yet been heard from, her sailors will no doubt oppose the measure as soon as its full import is fully understood. We quote the following from the report of the Commissioner of Navigation for 1890, lately published:

"Yachts of Foreign Build Used in the United States.—Considerable complaint has been circulated by the press and otherwise because foreign-built, but American-owned and chartered yachts fly the American yachting ensign and are freely used in the United States to the exclusion of vessels of American build. The practice granted by Section 4218, Revised Statutes, which allows any yacht to leave a port without a clearance if the foreign nation to which it belongs grants a similar privilege.

"It will be seen that this privilege may easily be abused, and that vessels might be introduced with a view to their remaining in the United States permanently, without payment of duties, something that was obviously not contemplated by the law. The existing legislation upon the subject is vague and complicated, and this office has experienced much difficulty in solving the various riddles presented relating to the matter. The Bureau has not held that these vessels may be retained for use here, and considers that such use would be an offense against the laws. A contrary opinion is expressed by interested parties. The regulations governing yachts of foreign vessels, navigating without documents, become subject to disabilities. No case involving disputed points has been submitted to the courts so far as this office is aware, and the question as to what disabilities are incurred, therefore, has not been judicially determined. To allow the free importation of these vessels into the United States would be unjust to builders here. Additional legislation seems necessary, and it is suggested that section 4218 be amended by the addition thereto of the following provision:

"Any such vessel, however, remaining in the United States a longer period than six months in any one year, or sold to, or becoming the property of, a citizen of the United States, or chartered from the owner, shall become subject to duties at the rate of \$20 per gross ton, and if navigated in the United States shall become subject to tonnage tax of \$1 per ton at every port at which she may arrive. Any vessel, whether used as a pleasure vessel, yacht or otherwise, and whether of foreign or domestic built or ownership, not documented by the Government of the United States and not otherwise provided for by law, found navigating between district and district, or between different places in the same district, shall be liable to a fine of \$100.

"Any vessel, not documented as a yacht of the United States, displaying the yacht ensign prescribed by law shall be liable to a fine of \$30."

We have had occasion to follow very closely the history of the introduction of foreign yachts in America, a matter only of the past ten years, and in this time we have found little or no complaint on the part of yachtsmen or of the press, against the presence of these craft. The fact is generally recognized to-day that to foreign competition alone is due the great stride in American yachting from the ancient wooden tubs of the seventies to the Volunteer and Gosson of the present time. It may be that there are builders, or even designers, so blind as to favor for temporary gain a measure like this, but the great body of yachtsmen, together with all interested in the production of yachts, are well aware that international racing and the sharp competition of foreign designers is the life and stimulus of American yachting.

This is an era of protection, and if other industries are to enjoy its alleged benefits it would be unfair to exclude yacht building, and a tariff on yachts would be no more unjust than on other foreign products. On this point, however, the logic of the report is very much at fault, and in no way in harmony even with the theory of protection.

Any possible injustice to yacht builders, as suggested by the report, could be overcome by the imposition of a duty on foreign built yachts, such as the proposed bill calls for. It does not follow, however, from any of the premises that it is necessary, after a man has paid duty on his yacht, that he must be prohibited from racing or even sailing her in order to protect American builders. Granting that, as stated, "to allow the free importation of these (foreign built) vessels, would be unjust to builders here," then all that is necessary is to make them subject to duty; which, once paid, they are free to sail at will. To impose on them a tonnage tax which would so tie them up in red tape that they would be unable to sail from port to port with the fleet of native built craft, is a serious injustice; but the act does not rest even here. There is no provision by which a foreign built yacht can be documented as a vessel of the United States, so that the whole sum and substance of the act is to hamper as far as possible yachts of genuine foreign ownership which may visit temporarily American waters, and to prohibit entirely the ownership of these yachts by Americans.

This sort of protection goes far beyond the mere builders and reaches the designers, and while these gentlemen are no less entitled to the benefits of the protective system than other American citizens, we have not found any yet who are looking for a handicap in their favor in their contests with the designs of the Clyde.

We have studied carefully the voluminous report of the Commissioner of Navigation, covering a wide range of subjects relating to American shipping, but we fail to find a word for yachts or yachting. The sole mention of this most important subject is in the form of recommendations such as those above, for restrictions and penalties on American as well as foreign pleasure craft. There is not a word in favor of such exemptions and privileges as might easily be conferred on pleasure vessels without injustice to merchant craft or conflict with the shipping laws; but on the contrary the attempt is made to force the yachtsman into compliance with laws made for large merchant vessels and not for yachts. Not only is Minerva and Clara placed on a level with the ordinary tramp "lime-julcer," but their American sisters, though faring much better, must comply with the same laws that were made for the coaster and the collier.

THE MEASUREMENT OF SAIL AREA.

THE Brooklyn Y. C. has for a year past used the Seawanhaka rule, or $\frac{L \times S \times A}{2}$, as its basis of allowance, but as the fleet is composed of catboats and sloops, the former rig including most of the racing craft, the method and measurement used by the Seawanhaka C. Y. C. has been replaced by a measurement of the actual area as nearly as possible as given in the following report of the club measurer at the annual meeting this month:

To the President and Members of the Brooklyn Y. C.:

The fleet of the club at the end of the year 1890 comprised 52 craft.

Of this number the following are measured: Vida, Honing, Faustina, Bess, Carrie, Seneca, Irene, Ermine, Union, Seminole, Minnie, Grace, Manhattan, Alice, Poncho, Alma, Myra, Gertrude, Mull, Luna, Grimalkin, Kildoe, Rose, total 23.

The following are partly measured, by which is meant sufficient measurements were ascertained to rate in case of entry for a regatta: Mamie, Chief, Josephine, Siren, White Wings, Mabel, Owl, Ray, Iroquois, Isolda, Daisy, Gipsy, Studio, total 13.

The following have not been measured: Bijou, Effie, Phoenix, Gorilla, Sunbeam, Sophia, LeClignale, Mariquita, Aimee, Gladiator, Lotus, Wacondah, Sinbad, Aeolus, Circe, Decoy, total 16.

I have the pleasure to report also that measurements have generally given satisfaction, very few indeed questioning accuracy, and a moment's explanation satisfied them; hence the club can be congratulated on the absence of disputes and protests arising from questions of measurements, especially as the last season was our first experience in combining or compounding sail measurements with hull dimensions.

Concerning my experience as measurer last season I have found no angular measurements of spars of mainsail yachts bearing resemblance to the S. C. Y. C. for sloops, cutters, etc., can be relied on for giving satisfactory results for our requirements of actual area.

Concerning our rule, actual area for mainsail yachts, I have found difficulty in getting true measurements. At the commencement of my work I took second and third measurements of several yachts to ascertain whether a satisfactory mean could be determined on the basis of the absence of disputes and protests arising from questions of measurements, especially as the last season was our first experience in combining or compounding sail measurements with hull dimensions.

Concerning the future I would recommend measuring mainsail yachts as follows:

Ascertain length of gaff and boom each from after side of mast to end of ensign—the luff (when gaff is hoisted as closely as possible to throat halliard block on mast)—from the underside of the gaff to throat halliard block on mast)—from the underside of the gaff jaws along after side of the mast to top of saddle or lower band of gooseneck, the distance from upper point of luff measurement to the end of the boom and the distance from the lower point of luff measurement to end of gaff when peaked up full extent sail permits, and make a draft to scale and calculate area.

Concerning measurements of other rigs I find the square root of sail measurement generally exceeds the load waterline, which places a tax on the boats. The "compound rating" is the rule of other clubs, and has for a base line an establishment of equality of load waterline and square root of sail plan as delineating a medium rigged boat. We can be scarcely accused of having yachts carrying immoderate sail area, yet the rule puts us somewhat in that position, as most of the boats are taxed. Respectfully submitted.

R. C. HOPKINS, Meas.

FORMY OR FORTY-SIX FEET.—Mr. John B. Paine has a 40ft. as well as a 40ft. design ready, and is not decided which to build from.

during the balance of the season. One member of the race committee gave it as his opinion that when a race was once started there can be no recall. The captain of the Volunteer said he would not abide by any such decision, inasmuch as he had been informed by the commodore that the race would be sailed off, and requested that a meeting of the race committee be called. This was done, and the captains and some of the members of the crews of the leading boats were invited to be present on Aug. 12. The commodore admitted having made the remark that the race would be sailed. Capt. Ritter stated that if the commodore had not given him this assurance he would have gone on and finished the race after the worst of the storm was over. After a long discussion it was decided to resail the race on Aug. 17, which was done, the regular races of the series following as arranged.

About one month previous to the close of the racing season Capt. Fred. Rochell gave notice that he would enter protest against the resailed race of Aug. 17 being counted in the championship series, basing his protest on a claim that he was informed at the meeting of Aug. 12 that without this race the Volunteer could not make ten races, and that in the interest of fair play he had consented to resail the race; but later he had ascertained the fact that the Volunteer could make ten races by counting the race in which she had gone to the assistance of the tuck-up J. S. Lever, which was capsized, and which race netted the Volunteer one point. This question was not acted upon by the race committee, as it was well known that any such action would result in a deadlock in the committee, which is composed as follows: E. P. MacAllister, Commodore; Fred. Rochell, Vice-Commodore; E. A. Leopold, Secretary; Albert Rochell, Timer. The Rochell brothers would have voted that the resailed race should be thrown out, while the other members of the committee would have voted that the race was legal.

A meeting of the club was called Oct. 14 for the purpose of deciding the championship question and awarding the prize.

Capt. Rochell, after making two protests against Volunteer, which were not allowed, objected to the resailed race being counted in the record, on the ground that he had not been notified by the commodore that the race was off and would be resailed. On the other hand, it was contended that the race could have been continued after the storm had the commodore so ordered, but that he ordered a resail at a future date.

A long and heated discussion followed, during which it became necessary at times for the older members of the club to inform some of the hot-headed youngsters that the question must be settled by argument and ballot, and that a resort to any other means of settlement would not be allowed. It was suggested that the Volunteer and Nellie sail one race to decide the championship, but neither would agree to this. It was then proposed to give each a prize, but they would not accept. Mr. William Rochell, Sr., the oldest member of the club, proposed that we "sail it all over next year." This was not agreed to. Five of Mr. Rochell's sons are members of the club, and they were all present. After about two hours' discussion a call was made for a report of the record of each boat for the season. The secretary reported as follows.

Boat.	Captain.	Points.	Races.
Volunteer.....	G. W. Ritter.....	89.42	10
Nellie.....	Fred. Rochell.....	87.29	10
Stranger.....	E. P. MacAllister.....	73.54	10
Iglaious.....	J. E. Hallman.....	71.43	10
J. S. Lever.....	J. S. Lever.....	42.64	10
Iola.....	Geo. Walker.....	31.37	7
Vesuvius.....	Alfred Rochell.....	29.52	6
Gracie.....	E. A. Leopold.....	26.42	10
Sadie.....	G. W. Ritter.....	22.44	3
Stairlight.....	W. M. Mairs.....	20.03	4
Priscilla.....	W. Schripp.....	11.00	2
Mary L.....	W. McCoy.....	7.78	5
Lizzie B.....	W. M. Sullivan.....	5.00	3
J. S. Frith.....	J. S. Frith.....	4.76	2
Pennsylvania.....	J. Adamson.....	6.00	3
Flying Eagle.....	J. Reeb.....	1.00	1

A motion was made to accept the report as read. The motion was lost by a vote of 9 to 6. The treasurer reported all debts paid and a balance of \$21.18 in the treasury. Moved and seconded that the club disband. Carried unanimously.

E. A. LEOPOLD, Sec'y and Treas.

THE "COUPE DE FRANCE."—The permanent organization of the Comité de Yacht Français, to which we have lately alluded, has been completed, and a meeting was held on Jan. 6 at the office of Le Yacht, at which it was resolved to establish a cup to be called the "Coupe de France," as a prize for an international yacht race in French waters, under the rule of the "Union des Sociétés de Navigation de Plaisance Maritime." The race will be sailed in 1892. A public subscription, which promises to be successful, has been opened to secure funds for the venture. The immediate end of the committee is to foster the construction of racing yachts in France, as the first step toward a successful participation in international racing.

CORINTHIAN MOSQUITO FLEET.—At the meeting of the Corinthian Mosquito Fleet on Jan. 19, the following officers were elected: Com., Oswald Saunders; Vice-Com., Walter Thompson; Sec., Harold S. Forwood; Treas., John A. Starr; Regatta Committee, Dr. Theodore S. Ledyard, J. M. Williams and Dr. F. S. Grant.

CHOCTAW.—The new owners of Choctaw are Hon. C. F. Brown, of the Newburgh Canoe and Boating Association, Com. H. C. Higginson and Mr. G. Van Nostrand, of the Orange Lake Ice Yacht Club.

SULTANA, steam yacht, Mr. T. L. Park. Is reported by cable as having grounded stern forward on a rock in the harbor of Port Mahon, Island of Minorca, in a heavy gale, the extent of the damage not being stated. On Jan. 27 she arrived at Marseilles.

WENONAH, cutter, is reported sold by Mr. Jas. Stillman to H. C. Cook, of New Bedford. Wenonah was one of the first large cutters built in this country.

ABBEY & IMBRIE'S tackle was not in the market then, but it is now so go and supply yourself at

Steam Yachts and Launches;

THEIR MACHINERY AND MANAGEMENT.

A Review of the Steam Engine as applied to Yachts; Laws Governing Yachts in American Waters; Rules for Racing; Rules for Building; Pilot Regulations; Specific Types of Machinery; Design of Hulls; Etc. With 96 Illustrations.

By C. P. KUNHARDT.

CONTENTS.

Theory of the Steam Engine.	Extracts from Lloyd's Rules.
Boiler Efficiency.	Racing Steam Yachts.
Boiler Mountings.	Management and Care of Machinery.
The Engine and its Parts.	Principal Types of Yacht Machinery.
The Screw.	The Design of Hulls.
Laws Applicable to Steam Yachts.	Addenda; Tables, etc.

SCOPE OF THE VOLUME.

Few new buyers of steam yachts have more than a vague comprehension of the driving power of their vessels, and few have the time or inclination to enter upon a prolonged scientific study of the theory of steam machinery, particularly when the practical results to them do not seem proportional to the efforts put forth. This volume is intended to be sufficiently comprehensive, and elementary at the same time, to suit the yacht owner's object of acquiring a general understanding of the subject as a whole, with specific information and data covering the most recent practice.—From Author's Preface.

Cloth, 240 pages. Price, postpaid, \$3.00.

GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 shot gives you 120 rounds with your own gun. Practice limited only by shooter's enthusiasm. Our pneumatic auxiliary gun barrels can be inserted in any ordinary breech-loading shotgun in a moment, converting your gun into an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet of No. 1 shot is discharged that will break any clay pigeon or kill small game at short range. No fire, smoke or noise, and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.

FISHCULTURE IN ALASKA.

THE report recently issued by the Fish Commission on the Salmon Rivers of Alaska, brings into prominence the question of preserving the fisheries on these rivers by Government control. This matter is one that can be taken hold of without difficulty at present, and the seizing and holding these streams and permanent control and regulation of the fisheries will interfere with the rights of no one, and need cost nothing.

The science of fishculture is a modern one, and it is only within a few years that we have learned much about it. One of the chief difficulties encountered in carrying on the work of stocking and preserving streams has been the existence of vested rights, which have made it in many places practically impossible to do work which should be effective and lasting.

In Alaska no such difficulty exists as yet. There the streams visited by the salmon for spawning run through territory which belongs to the Government. There are practically no settlements, and a law which pronounced the fishing rights in these streams to be the property of the Government would injure no one. Such a law ought to be enacted. It should provide for the leasing for a term of years at public auction, the right to capture fish in these streams, such fishing to be carried on under the eyes of an inspector of the Government, who should see that it was so conducted that fish should be allowed to ascend the rivers in numbers sufficient to keep up the rate of increase.

The money received from such leases should be turned over to the United States Fish Commission, and by it applied to fishcultural work in Alaska; that is, to the establishment of salmon and trout hatcheries on important streams in that Territory. If carefully worked out in detail and properly managed, a plan such as this would insure the permanency of the salmon fisheries of Alaska, and would pay all its own expenses and provide a constantly increasing revenue for carrying on for all time the work of fish-

culture in Alaska, and on the northwest coast of the United States.

As at present conducted, the salmon fisheries of Alaska are often managed in a most wasteful fashion. There is one case for example—in Karluk Bay—where the salmon assemble in vast numbers before ascending the Karluk and numerous rivers of Alaska peninsula and the Cook's Inlet region. Here they are caught so continuously and greedily that comparatively few are left to ascend the streams, and the fishing in these rivers is already seriously affected and will ultimately be ruined. When this has been accomplished, such streams will have to be restocked and at a very considerable expense.

The chief salmon rivers of Cook's Inlet are the Kenai, Kassilov, Ninilich and Sushitna. The excessive fishing at Karluk, it is thought, affects the supply and the reproduction of the salmon in these and numerous other streams in the route of migration. In 1889 and 1890, fully one-half of the entire pack of Alaska salmon was obtained at Karluk. The effect of continuing such exhaustive fishing will in all probability be the practical extermination of the fish, at least so far as profitable operation is concerned.

If any action is to be taken by Congress on the lines here suggested, it should be done with as little delay as possible. The time between this and the assembling of the Fifty-second Congress could be profitably employed in draughting a bill which should cover the points already referred to, and any others which might be suggested by Col. McDonald, and those most familiar with Alaska and its fisheries, and such a bill should be introduced and passed at the earliest moment possible.

In the event of long delay on the part of the Government, not only will the expensive process of restoration become necessary, but, in all probability, the natives of Alaska, whose main food resource is being ruthlessly squandered by the present injurious methods of fishing, will have to be fed by the Government or will starve. We cannot lay too much stress on the need of prompt action in this matter, a need which must be evident to any one who will acquaint himself with the magnitude of the salmon industry and its future possibilities.

We have heard a great deal of late about the importance of preserving the Alaska seal fisheries, and the value of this industry has not been over-estimated, yet it cannot be doubted that the salmon fisheries of that Territory are worth more in money to this country than are its seal fisheries.

NO EXCLUSIVE RIGHT.

WE have always contended that if a right of way should be granted to one railroad to run through the National Park, it would be impossible to refuse the same right to others. There would be a wild rush for franchises on the part of a number of corporations; the reservation would be gridironed with tracks; along each track would be a little line of settlements, forests would be burned along each line, and the game frightened away and often destroyed. The view that we have taken is confirmed by a petition forwarded recently by the citizens of Gallatin county, Montana, to Messrs. Power, Sanders and Carter, their representatives in Congress. These petitioners ask among other things that Congress "grant a general right to all railroads through the National Park to the New World Mining District [the Cooke City mines] with such restrictions as may seem proper, and urge that no exclusive franchise be granted to the Montana Mineral Railway Company, so called, or any other company, for the reason that such franchise would in our opinion retard development and become a great burden to the miners who, because of their isolated situation, in order to prosper must have the fullest benefit of cheap transportation, which we believe will be soon realized, if the way is not barred by further legislation, and a liberal general right of way bill is granted through the Park by Congress."

This is one very good argument against the monopoly endeavored to be created by the amendment tacked on to the Senate bill by the Public Lands Committee. No such exclusive franchise should be granted by Congress to any corporation.

But no railroads should be allowed in the Park. We repeat what we have so many times said before, that there is a good prospect of a railway being built up Clark's Fork of the Yellowstone River to Cooke City; but if such a road shall not be built, and if it be insisted that the most available route to the New World Mining Dis-

trict is up the Yellowstone from Gardiner or Cinnabar, then let the northeast corner of the Park be cut off from the National reservation, and let all railways that wish to build to Cooke have the privilege to do so over this portion of the public domain.

THE NEW YORK GAME BILL.

THE committee on codification and revision of the New York game and fish laws presented the draft of the bill proposed by them to the Legislature last Thursday. We print the full text. The bill will be examined with an interest by no means confined to New York. Other States have laws which are complex, obscure and contradictory; and now that New York has set the example others may well follow and provide simpler and consequently more effective laws.

As a whole the work has been well done. The proposed measure, it is true, is of great length, but the several sections are clear, concise and consistent. Specific changes with respect to open seasons are shown by this comparison of the old law and the one proposed:

	Present.	Proposed.
Deer.	Aug. 15-Nov. 1.	Aug. 15-Nov. 1.
Hounding.	Sept. 1-Oct. 20.	Sept. 1-Oct. 11.
Wildfowl.	Sept. 1-May 1.	Sept. 15-March 1.
Quail.	Nov. 1-Jan. 1.	Nov. 1-Jan. 1.
Hare.	Nov. 1-Feb. 1.	Sept. 15-Jan. 1.
Woodcock.	Sept. 1-Jan. 1.	Sept. 15-Jan. 1.
Squirrel.	Aug. 1-Feb. 1.	Sept. 15-Jan. 1.
Ruffed grouse.	Sept. 1-Jan. 1.	Sept. 15-Jan. 1.
Brook trout.	April 1-Sept. 1.	May 1-Sept. 1.
Salmon trout.	April 1-Oct. 1.	May 1-Oct. 1.
Landlocked salmon.	April 1-Oct. 1.	May 1-Oct. 1.
Black bass.	May 30-Jan. 1.	June 15-Jan. 1.
Muscalonge.	May 30-Jan. 1.	May 20-Jan. 1.
Salmon.	March 1-Aug. 15.	March 1-Aug. 15.

The deer season remains the same; but the hounding season is nine days shorter; jacking is forbidden; and does are protected. Spring shooting of wildfowl is prohibited, the season closing March 1 instead of May 1. The season for hares (rabbits), squirrels, ruffed grouse and woodcock are made uniform; and the quail season remains the same.

The most important change in the seasons for fishing is that which restores the date of May 1 for the opening of the brook trout season throughout the State, except on Long Island, a change for which, as we have frequently said, there is not good reason, so far as the waters of the State south of the Adirondacks are concerned. Other noticeable changes are those which make the lawful trout size 7in. and the black bass weight three-quarters of a pound.

The committee has at one fell swoop exterminated the famous race of "galli mules," and restored the gallinule to protection. The use of the name "partridge" for ruffed grouse, however, is a sad blunder, which we are surprised to see.

It is to be presumed that the Commission had some reason for the proposed change in the Fish Commission, the number now five being reduced to three; but it is a serious question if three men could do the work so well as five. The business of the Commission is growing more burdensome. The members of the board are asked to perform this public service without remuneration; and the work is at present so divided among the five Commissioners that each one has his special branch of it to attend to in person. The affairs of the Commission are in this way well administered and we fail to see how the interests of New York fishculture are to be advanced by making the duties of each individual member more onerous.

A further consideration of some of the details of the proposed measure must be reserved for a later issue.

We thought we had the best thing out in the tarpon fishing of Florida, but the sailors of Her Britannic Majesty's warships are getting very creditable sport off the coast of Madagascar, a fish being taken there lately whose dimensions were: Length, 6ft. 2in.; girth, 4ft. 4in.; weight, 360lbs. The fish is described as a species of rock-cod, and was hooked by the tindal of one of the ship's boats, who finding he had a big fish on got into a punt, and allowed himself to be towed down the harbor. After half an hour's sport some officers went to his assistance, and an hour later succeeded in getting a line through the monster's gills and towing it back to the ship.

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

POVERTY, KINDLING WOOD AND PHILOSOPHY.

PENOBSCOT BROOK enters Fourth Lake a little to the left of its head, Fifth Lake Stream a little to the right. The two would meet almost mouth to mouth were it not for an island of a few acres which stands between them; and the island itself would have been a point still further separating the streams, had not the land behind sunk in times past so that now there is only a wilderness of moose-ear above water. In former times this island had been Father's favorite camp-ground, and he did not like to pass without seeing it again. He and Sebattis had camped there; he and John Spearan also; there Sebattis had lost his necklace of turtle's claws, and there Lonz as he stood on the shore fishing would swing his pickerel almost into the frying pan or make them run up the beach their whole length after the bait.

We turned out of our course to view the place, but Jot and I having no personal associations to be revived remained in the canoe, occasionally swinging the buel toward the rush bed in front and thinking what an altogether dismal place is Fourth Lake. A hurricane of last year had uprooted the pines along the shore of the island forming a barricade of brush, and on his return Father reported that the cleared space behind was much more extended than formerly and the facilities for camping correspondingly less. Still the old spot looked so familiar and inviting that, although it was not yet 2 o'clock and the lake was calm, he decided to camp.

The fact is that five years before he had hidden here some favorite kindling wood, fat pine the like of which never had been seen in all the country, so black without, so yellow within, so pitch-imbued that even the heat of the sun drew from it great resinous drops; and he had always wanted to go back just to burn that wood. With such an attraction there was nothing to do but to camp. And yet it is my strong impression that before work was begun Father disappeared among the fallen pine brush and drew forth a piece of the shell of an old pine, five feet long perhaps and an inch or two thick, black and mossy and as heavy as if it had lain at the bottom of the lake for the last century. He was proud of it, but a more unprepossessing piece of timber never was seen.

If we camped on account of so small a matter as kindling wood facilities, the decision never was regretted. Four days and a half we stayed there in rain and wind, and yet the elements did not touch us nor the supply of "creatures with bones" fail us. Thus speaks the journal: "Friday—Rained. Lazy. Ate pickerel. Duck stew for dinner. Killed spiders. Had a cold caught on the carry. Saturday—When it rains one can eat and sleep, but there is no time to write journal. It rained a down-pour all night and blew like a piper. Father went out in it to see that the canoe was tied so that she could not blow away. It leaked a little through the tent, but none ran under us. My cold took most of my attention. * * * We washed a little, read a little, fed a little and fished pickerel until the pole broke. Sunday—Clear and beautiful; even after two days' confinement we enjoy staying. Monday—Still rains. * * * As provisions are likely to run low before we get back, Father and Jot went over to Shaw's on Dobey to get potatoes, sugar, salt, flour, etc. I stayed at home mending. When they came back they brought two wood ducks which Father had shot. Stayed in the tent all the P. M. and fought flies. Tuesday—Still foul weather, but we shall wear it out yet."

But we enjoyed our camp here, although every rainy day shortened our vacation and put our desired end further out of reach, diminished our scanty store of provisions and increased the probability that the hidden stores at Nicatowis and Gassobeels were spoiling. But present ease counts for considerable; with good wood to burn, a tent sheltered from the winds, a soil so porous that no amount of rain could saturate it and a never-failing supply of fish just off the landing, there was nothing desperate in the situation. Like our kindling wood, it looked a good deal worse on the outside than it really was.

If we had a good time here it was not on account of the weather, as has been shown, and certainly not because of any luxuries at our disposal except leisure; three people are seldom incumbered with so little of this world's goods when they can have all they want. Our pillows were our spare boots and rubber coats, our candlestick an empty cartridge; we had nothing to sit on except the bag of potatoes and a box which we had found; we had neither cards nor games, and our whole library consisted of one *Harper's Magazine*, "Emerson's Essays," and two very thin pamphlets by Thoreau and C. D. Warner. We lacked even our usual copy of the Maine game laws, which we carry because of the satisfaction it gives when we learn that we have done the right thing in the right time. Indeed, we had very little of anything except pickerel and kindling wood, and none the less we were happy.

There is, of course, no virtue in this self-denial, although it contains a grain of philosophy which may explain our contentment. The secret is that we had nothing to take care of. We had bought our leisure at the price of all our unnecessary possessions and we were satisfied with the bargain. Money is only a convenient fiction, the real purchase is always effected by a barter of time for something which we fancy that we want more. Would you have a new hat or a new book? Then how much time will you give for it? Five dollars does not represent its cost to you, but the amount of time which you must take from your sleep or from your study to earn the five dollars does. Increasing our wants, our leisure diminishes; increasing our leisure, many wants must go unsatisfied. All this is very trite and world-old—the Greek poet far back in the shades of antiquity sang, "The gods sell all good things at price of toil," but in order to realize its truth we usually have to get away from our neighbors. Living in a world where independence is less common than the boast of it, our ideas of what we cannot live without become super-saturated with our neighbor's opinions of what we must have in order to be respectable. We spend, dress, travel, not to please ourselves nor to give pleasure, but to purchase regard. We are the slaves of our possessions, nay the bond-servants of our conveniences also. Even the labor-saving contrivance insinuates itself into our lives as cleverly as the camel of the

fable pushed its way into the tent of its master, it has such good excuses for being there, it will give so much more exactness and leisure; it ends by making life mechanical and ten-fold more burdensome; instead of handwork and free thoughts, the drive of the sewing-machine; instead of the easy-traveling quill, increased correspondence and the galloping typewriter. If bustle, hurry and push are the best of life it is well to make getting the aim of it and use the latest machinery, but if our leisure seems delightful, why not, instead of submitting to the thralldom and slaving for these our servants, buy them off? We can live without them if we only will think so. Go into the woods and let them follow if they dare! For all questions concerning the freedom and growth of the individual where can such satisfactory answers be found as in the woods? From this quiet hermitage the world has a very different aspect, as if we beheld it from the summit of a lofty mountain and saw it spread out below us, all its crooked ways made plain, its rough ones smooth and its jarring din subdued by the distance to a gentle humming. Here we can learn how a man's life is more than food or raiment and how it consisteth not in the abundance of the things which he possesseth.

Evidently many who go into the woods have not learned this. From the tin cans and empty bottles left behind it is plain to be seen that they could not feel themselves happy without everything that could be lugged, dragged or in any wise conveyed up stream and across carries. The only limit to their wants is the inferiority of man flesh to horse flesh. Of course it is no more commendable for Socrates to be proud of the holes in his pockets than it is for Alcibiades to be proud of his new coat; he that hath not a kerosene lantern ought not to despise him that hath one. But to insist on having all the accustomed comforts, to imagine that one's greatest pleasure lies in ingrafting upon the woods life a manner of living not adapted to the situation, shows how little sympathy for the woods is in the man, and foreshadows his almost certain disappointment. The possession or relinquishment of the things themselves is significant only as it reveals the man. He who will not trust the native balsam to give sleep and healing, clings to his inflatable rubber bed. He never learns anything about the woods, though he will talk most feelingly on the "hardships" of camping out. The criminal lawyer, who is one degree more cautious, carries a straw bed with him, and this is his verdict: "It may do—for young folks—but there is little pleasure—in it. The anti-cipations—ex-ceed the real-izations. There are aouts a—baout it. The beds are not what they should be—and the—cooking—is not—always—cle-an." But the two college students whom we knew only as "the plucky boys," who had crossed Moosehead and run down the whole West Branch—fair running, too; not wading—knowing nothing of canoeing, except what experience had taught them on the trip, though alone and with scarcely a handful of baggage apiece, and no food to speak of, said not a word about hardships and "outs," but insisted that they had a good time. This is a life of extreme individualism and self-dependence, and he enjoys it most keenly who has most faith in his own resources and who depends upon himself rather than on the baggage which he carries.

On the one hand then, our contentment in the woods depends on our freedom to invent and imagine, and we declare with honest pride that no boughten article could be half so fine as our rather unsteady makeshift, which requires a little private propping; on the other, having few possessions, each acquires a higher value in our eyes. The empty box which we always expect to find near every camping place and which serves as a table, chair, and wash bench, is a finer acquisition than the most intricate folding camp-stool. The kindling wood which we had on the island was more satisfactory property than government securities. It had given us the pleasure of anticipation in the winter evenings at home when Father told us how he had hidden it against his ever going there again—he has many a cache of that kind or some other through the State, and many of them mouldered years ago, though he could still find the places; then the pleasure of discovery, to find it still there after these years; of satisfaction because it was better than had been boasted; of pure aesthetic gratification because it had so much beauty looked up in it. Whether, if we had gone in well supplied with patent kindlers, distrusting the existence of our own wood or our power of finding it, those four rainy days on the island would have been equally enjoyable, cannot be told, but it is not improbable that such faint-heartedness would have destroyed our good hope and marked the time as a "hardship" of the sort at which guides curl the lip a little. Our wood, however, was something more than an old black slab which started the fire in the morning and hastened the cooking; it had in it a powerful genie—for genii are made from the fire element, you know—which came out whenever a bit of the wood was laid in the fireplace, and not only busied itself about the humble tasks which were expected of it, but quite transformed our meagre belongings with the graciousness of its company, cheered us by its geniality, took to philosophizing occasionally on its own account, and sometimes lectured on life, art, and ethics, to those of us who cared to listen. We burned it sparingly, not stingily, because we liked to see the genie, but as if its right to existence was as good as our own; watched the dense, black smoke, the fierce, yellow flame and the pitch frying out of it, watched it and spoke often of its beauty and good qualities, and no one ever hinted that the remark had not all the charm of novelty.

ON THE MEAN ESTATE OF FOURTH LAKE.

Fourth Lake is about four miles long by a little less than half as broad, and as uninteresting as a butter statue. It has no features to speak of; three streams are connected with it, too sluggish to be called tributaries, and a horse-back walls the eastern shore. Of sand the shore, the steep bank of sand too and of gravel brought here ages ago by the ice—about all the solid land to be found; the land which was always here, miles and miles of it, is largely under water. A few small islands in the lake on a foundation of solid ledge, by contrast with the main shore, strengthen the impression of mistaken economy and general ruin resulting; as if the bottom had dropped out of the region some ages since for lack of good underpinning. Fourth Lake is so unlike the rest of the world that it makes one feel as if he were his own antipode and bound to stand on his head in order to keep up the illusion. Any one who has lived on clean Penobscot waters,

where there is good slate and granite under all, doesn't know what to do with such a Dutch country, and hasn't even a name by which to curse it. Bog it is not, nor swamp, nor marsh, nor meadow, but literally "sunken land;" we of the Penobscot have nothing, unless on the Mattawamkeag, which is not known to me, like this flat desolation of moose-ear, traversed by dead streams of labyrinthine crookedness and overhung of mornings with thick mists and the smell of rotting vegetation. The water is brandy-colored, full of suspended black particles, probably washed from the decaying moose-ear; not fit to use until it has been boiled.

The maps say that Fourth Lake lies north and south, with its outlet to the north; but I beg leave to differ. In September the sun doesn't rise in the north, and by the sun that lake lies about northwest and southeast, with the outlet in the latter direction. We didn't set a compass to determine it, but there are things which one knows without the help of the dictionary; and north is in every good woodsman's head so firmly fixed that he will believe his own instinct against map and compass, disregarding both if they don't agree with him. "Map's wrong," he says, and off he goes following north in his head, as true as the wild goose. He doesn't stop to look at the branches of the trees and the moss on the rocks and the other signs of the story books, he himself is a magnet. But it makes very little difference if the maps of this region are not correct as to direction, for there is no direction to anything here. Even the water doesn't know which way to run; you can paddle up Unknown for the better part of two hours, facing every point on the card, and then not get where you can see out of the moose-ear; or put foot on dry land, or get to any place where, if the year is wet like this year, you can swim, wade or walk ashore.

Unknown is the third stream which connects with Fourth Lake, the largest, longest, dreariest of them all. It winds down from the Unknown Lakes, the crookedest stream in the world, unless perhaps Thoroughfare Brook on the Allegash; and, after neglecting two or three gaps in the horseback by which it might have forced a passage to the lake, enters on the left side about half-way down. It is a wilderness of moose ear, a mile wide at least, fenced with dry kyle—that is, standing dead trees—and fish-hawks' nests. Sebattis used to call it "his farm," it is so flat and wide. The moose-ear, by way of explanation, is the *Pontederia cordata*, better known elsewhere as "pickerel weed;" but as with us the *Brassica peltata* and the various kinds of *Potamogeton* are called "pickerel weed," it seemed best to retain the hunter's name, bestowed because the leaves resemble the long, narrow ears of the moose, both as more exact and more apt; for the *Pontederia* is not, commonly speaking, a weed. In single specimens the moose-ear is a beautiful plant, and as it grows on the margins of ponds in clumps of shining green, as clean and crisp as a calla, with spikes of purple bloom dotted with gold, and played round by sportive insects, it is a pleasant, summery sight; but hundreds of acres of it, left on slimy flats by subsiding waters, or half submerged by the rising floods, browned at the tips and twisted by frost, looking (as Jot used to say) "as if it had been struck by the Spanish mildew," are enough to make one hate a place. Fourth Lake is the rubbish dump of creation; all the world stuff left over after the work was finished was dropped here—all the quag, deadwood, moose-ear, horsebacks and odds and ends not used in polishing that artistically uninhabitable country between Union River and the Machias; only here instead of bogs, barrens and boulders we have the impassable sunken lands of Fifth Lake Stream, Penobscot Brook, the outlet, and chief of all—of Unknown.

There is a hungry, swallowing look about Fourth Lake; like some of the monsters of which we read it seems to be trying to cover its victims with slime, after which the swallowing may be taken as a matter of course. It is entirely in keeping that it should be the greatest rendezvous for sea serpents in the State.

According to the newspapers the sea serpent—he is always called the *sea serpent*, because he couldn't possibly be one—swarms about this lake; his chief business is to keep its waters boiling with his gyrations and to exhibit for the benefit of chance spectators. He is seldom less than 30 or 40 ft. long by the time the story gets to the Portland papers, and as he rolls out of water he leaves a wake behind him proportionate in length to the credulity of the onlooker. He has a way also of raising his head 3 or 4 ft. above water, and no one ever fails to tell how it shines in the sun. In one of the back numbers of FOREST AND STREAM he crossed to a neighboring lake and carried off the body of a lumberman, breaking a 2 in. hawser. At times he goes on shore and gorges himself on deer, and his track has been seen on the snow in winter when he came out to frolic on the land! The length of the tales and the veracity of the observer are always equal, according to the newspapers. Even though experienced hunters smile and say that the Fourth Lake sea serpent wears an otter skin and that his more common antics are precisely those of three or four otters playing together, the serpent has now been on duty for so long a time that he should be relieved and suffered to share the honorable retirement of the dingmaul, the side linger and the walrus which used to frisk and gambol in the neighborhood of Chesuncook in the dimly historic period of thirty years ago.

A premium might safely be put on Fourth Lake as the most unattractive piece of scenery in the State, to which not even the efforts of the sea serpent have been sufficient to draw a crowd. Any one not professedly a pot-hunter has no reason for going there. But that is just why we were there; our first and chiefest care was to get something to put in the kettle, and that can always be provided here. In the summer there must be many deer in the moose-ear land; in the old days, what a paradise for moose. The lake is full of eels, great ones, that come up to the water's edge during the night and carry off all the refuse they find, of white perch with usually blue throats, and of pickerel to tell of whose excellence would require a separate chapter. We had expected to get all the ducks we wanted, but the water was so high that even a woodduck could see all over the country, so that it was impossible to paddle up to them. And, besides, they are scarce, having been drawn north, we were told, by the wild rice planted on Mattagoodus and other Mattawamkeag waters. In the old days, in four successive mornings, Father once shot and saved twenty-eight ducks, which was all they could eat or give away, although Sebattis had a very pretty faculty for putting a great deal of good victual where "the bugs don't got him." A

few still come late and go very early, and after sunset one may hear the good-natured *wack, wack, wack*, of the black ducks and the sharper *wee-eeek* of the wood-ducks as they feed among the moose-ear.

FANNIE P. HARDY.

CORRECTION.—In issue of Jan. 29, *Sabao* for *Sabas*; most school maps erroneously print *Subac*. Also I wrote *Ahwassus* (Penobscot Indian for bear) when *ahwasus* would be more accurate, since it is pronounced *ahwaysoos*; but the shorter form, perhaps more commonly heard in conversation, is *wassus*, pronounced *wasssoos*.—FANNIE P. HARDY. [This is manifestly the name "Awahsoose," familiar to readers of "Uncle Lisha's Shop" as the *nom de plume* of Mr. Rowland E. Robinson.]

THROUGH THE OLYMPICS ON AN ELK TRAIL.—II.

BEFORE dawn the sky was again clouded, and again in the early morning we set out in the pouring rain up the mountain side and through the thick woods.

By and by an occasional gleam of sunlight through the branches showed us that the rain was over. We kept straight up hill—almost perpendicularly up hill—climbing with hands and feet, crawling over and under the fallen trunks; and about 10 o'clock in the morning suddenly came out in the open. We turned to the southward; behind us were the dark and dripping woods; before us a broad green slope of meadowland, here glistening bright green in the sun, there brown with heather; and a little below us lay a little valley on the hillside with a clear pool of water. We made for the valley and lay there in the warm heather. The place was full of a spring-like fragrance. Low blueberry bushes with exceedingly sweet fruit grew here and there. (In the woods the blueberries are very large—nearly as large as cherries, but sour for want of the sun.)

We lit a fire and feasted, and spent an hour or more in the valley drying our clothes and looking about for tracks of animals. The one drawback to perfect happiness was a yellow jacket's nest situated inconveniently near the little pool.

A little before noon we took up our packs and went on over a hill into another valley; but before we had gone far Vick and Joe saw another bear, which they pursued. The Marine, the Cayuse and I rested well content under the shade of a lone cottonwood, for the sun was hot when it had a chance.

Straight above us towered a sharp peak of rock suggestive of a wide view into the mysterious land beyond—the unexplored region in the heart of the Olympics, where the Indian dare not go, and where white men had never been, or had left no record if they had. The Siwash have a legend of a fierce interior tribe, who slay, and perhaps eat at sight, the way-worn traveler—a tribe strong in magic arts and invincible in war. But this I fear is merely an excuse to avoid climbing the mountains, for the Siwash is probably the laziest savage on the face of the earth. His legs are small and weak and his head large and heavy, and as soon would a pollywog take a salmon leap as an ordinary coast Indian a good healthy climb.

But to return to our own sufferings. Chris and I went on up the peak, and the Cayuse, stimulated by that emotion which in the other sex is curiosity, but in ours is that praiseworthy love of exploration that leads to all great discoveries, came with us. The Marine lay for a while content with his surroundings, but soon joined us on the peak. What a sight it was! The air was clear, for the long rain had driven off the heavy cloud of smoke that covers the Olympics in summer for months at a time, and the sun was bright. It shone on the Sound, far away to the eastward, gleaming like polished steel, and Hood's Canal like a narrow silver ribbon threading the dark wilderness of forest. Beyond them, the old volcanic shafts of Rainier and Baker raised their towering forms, mantled in white, like gods in peace and purity and majesty, and the slender cone of another mighty peak stood on the horizon, circled just below its summit with one wreath of rosy cloud.

Below us the north and south forks of the Skokomish, with their several branches, wound away between the hills, their course marked by the brighter green and fuller foliage of water-loving trees and bushes—a pleasant contrast to the fir and cedar. On the further side of the peak, looking eagerly, we saw the frowning wall of the main divide—the great range that parts the waters of the Pacific from the waters of the Sound—on one side of which the rivers flow east, on the other west. The peak whereon we stood was the end and summit of a long spur projecting southward from the main range. Parallel to this ran another higher spur, ending in a sheer wall of black rock, that rose thousands of feet straight from the bottom. This was connected with our peak by a lower and heavily-wooded hill, and between the rock wall opposite and the base of the hill was a deep chasm.

Within the inclosure formed by these two spurs and the main range lay as fair a valley as the eyes of man has ever seen—warm in the sunlight—green with the moisture of the later snows, the snows that yield only to the heat of midsummer. From the meadows below rose a light steam here and there, to seek the clouds or hang in mist wreaths round the crags above.

A stream ran through the valley, rippling and splashing down from the main range, then in the valley spreading out into a chain of little lakes, clear and green as emerald, then through the chasm at the base of the immense cliff, in white rapids to the Skokomish with a rush. We sat and looked.

Presently our comrades joined us—they had not come up with the bear. And they sat and looked too. But by and by, with a parting glance at the eastern side of the Olympic slope, at the dark sea of forest and gleaming water, and the mighty peaks of the Cascade Range beyond, we went down upon the long ridge which connected it with the divide. During the afternoon we saw two large bears, neither of them within range. One, indeed, offered the possibility of a shot; but it is hard to judge the distances in such places, and though Vick took all due care in aiming, there is small reason to suppose that he hit him. The bear, however, abandoned the delights of a blueberry thicket where he had been sitting and revelling in the berries, and went off to the valley through the brush in huge jumps, with a loud squeal of eminent disapproval. He looked for all the world like a gigantic flea on the craggy back of the mountain.

We rested a while, later in the afternoon, on one of the open slopes that now became frequent as the hills grew more precipitous—places where the woods years ago had lost their footing and fallen away into the valleys, leaving sunny pastures for the deer. We split up and hunted in the open among the rocks, but found no deer that day, though the tracks were many; and toward evening descended into the valley and encamped near its head. The valley was full of the tracks of animals—bear and deer, but especially cougar—and those of the others were so frequent and so much fresher than the deer tracks, that it seems probable the savage brutes had driven the deer out of the valley altogether. Several of us went out to look for the Cayuse who had disappeared, and as I went down the valley I saw a bear vanish with a crash up the mountainside.

There was a slight knoll in the lower valley above one of the little lakes, and it was thickly crowded with bushes. I could distinctly hear a large animal moving about through the brush. I could see nothing of the beast, and was almost teased into firing at the sound as it dodged me round and round the knoll, but remembering a former occasion, when I had looked for the cause of such a noise for a long time and found it to be the Cayuse, I refrained. On the occasion to which I refer, the Cayuse and I, each firmly believing the other to be a bear, and thirsting for his life, had spent a large part of an afternoon in trying to locate one another in the brush, and had finally come face to face, one on each side of a clearing; with cooked Winchester ready to fire. Our wrath was great and lasting—and I take this opportunity to warn the reader that in this kind of hunting it is most important that each member of the party should tell the others where he is going to hunt, and that they should give each other a wide berth. For it would be excessively difficult to carry a wounded or deceased comrade down the Olympics, and under such circumstances mortifying as well. Nothing came of my hunt—the noise stopped suddenly and I could find no trace of the animal.

Meanwhile Vick and Joe had found the Cayuse, who had been having a little hunt all by himself; and we went back to camp, where we thoroughly enjoyed supper, and made our plan for the next day—to stay in the valley and hunt and rest before trying the divide.

As the night was clear we did not pitch the tent, but used it as a blanket. Accordingly, as soon as we went to sleep the clouds crept softly up and the wind came sweeping down from the cold heights; and we woke to find it raining heavily. The climate of the Pacific coast, among its other superior characteristics, possesses great cunning in thus catching a man at a disadvantage and thoroughly soaking him when he is trying to sleep and has neither a roof over his head nor a change of raiment. In this respect it is the Eternal Spring that Puget Sound real estate advertisements boast of, but not that part of spring which the phrase generally is intended to suggest to the mind of the reader.

We got up early and spent much of the day in getting together the pitch-knots that lay on the hillside opposite—relics of the fallen woods—and piling them on our huge fire. During the morning I hunted; so I believe did the Marine; but the game apparently had the good sense to stay indoors in such weather. Chris and Joe, however, went out later and came back toward evening with a doe which Joe had shot. He had also killed a buck, but it fell in an almost inaccessible place; and when he went back for it next morning either wolves or cougars had torn it to pieces.

An old raven flew back and forth over the camp and croaked dismally. But when we had the deer dressed and cooking we cared not for the weather or the melancholy prospect, for it was the first time for a month or more that any one of us had tasted fresh meat, except the marmot above mentioned; and fresh meat, after a few weeks of bacon and ham and fish, is a luxury that surpasses the masterpieces of the most inspired culinary genius. It's worth starving a while to try it. Such was the principle that guided the actions of the famous old gentleman who was seen once a week at Parker's eating salt viands with dogged Anglo-Saxon perseverance. When impertinent curiosity got the better of an observer, who asked his motive, the answer was: "I begin to eat salt meats, sir, at seven o'clock, and by doing so persistently—persistently, sir—I acquire by ten o'clock a thirst that I would not take fifty dollars for." I doubt if that man would have bought one of our appetites when Joe's doe appeared.

That night I found a little cave in the rocks, and having carried coals there from the camp-fire in the two frying-pans, I soon warmed the rocky walls with a bright blaze, and had a more peaceful night, far from the snoring and kicking of which only a camp is capable.

The next morning after a search for the lost buck, we went on up the main divide. At the head of the valley was an easy ascent to a narrow opening between two peaks. Here we rested and looked down on the western side of the range.

Thousands of feet below us, in a deep gorge, ran and roared (like Sir John) a good-sized stream, which from our bearings and from the fact that there was but one river on that side that could spring from so large a source, we knew to be the Quinalt. So we were really on top of the wall. A spur of the mountain on which we stood, divided into five or six peaks, formed a horseshoe bend at the head of the gorge. Directly across the river from our position was a huge mass of a mountain, several of whose tops were higher than those of the main divide. This stood within the bend of the spur, and stretching away to the north in a gradually declining range, was broken several miles further down by a deep gap. The river ran nearly round this mountain, flowing from the other side of it, and following the horseshoe bend eastward toward our point of view, then turning northward along the range and finally flowing westward through the distant gap, and southwestward to seek Lake Quinalt and the Pacific. We proposed to cross this stream, and stood for some time gazing down upon its deep channel and listening to its sound—not in a sentimental way, but because we did not know how to get down there.

Finally we turned back a little and kept northward along the main range, following the course of the stream below us and hoping to find some possible way of descent. I soon found one, not only possible, but inevitable. We were somewhat scattered now, looking for a way along the ridge—above us sheer rock, below a steep slope of thousands of feet, broken here and there by shelves. I went too high and lost the rest of the party, and in looking about in slippery places for their trail, lost footing

and found myself shooting down the track of an old landslide. Bits of loose rock rattled about my ears and the little bushes tore out of the loose soil as I clutched them; but I landed, after a coast that put the best kind of tobogganing in the shade—breathless, hot, slightly bruised, disgracefully tattered, but otherwise all right, on a shelf below.

"Oh! how unlike the place from whence I fell."

But I was in a worse position than the hero of Milton's narrative, for my companions had not shared my fall, and were not soon discerned. A "shelf" here does not mean a narrow ledge of rock, but a comfortable stretch of level ground that breaks the slope. Here was a bright moist little meadow, surrounded by woods. The soft ground was full of the tracks of elk and deer. Where were my friends?

I shouted. No words can tell the bitter mockery that the echoes can put into their tones when they answer a man who has lost his way and finds himself alone in an utterly unexplored country—where the foothills are mountains and the trees are towers.*

All this immensity gives a man an indescribable sense of his own insignificance, when he is left alone and has time to think of it, and the echoes rub it in. I shouted, and every mountain seemed to have a great voice of its own, echo after echo came ringing back, from near and far, sharp and clear from the rocks above, deep and loud from the sounding woods, and far below me the river laughed. After the tumult—and that phrase is no exaggeration—had subsided, I gave up calling. A very belated echo came back from the valley, and thinking it might be an answer I went in that direction. A good elk trail led toward it, and it seemed likely that the others had discovered the trail further up the mountain somewhere, and had descended by it. But this proved a mistake; for they could not have done so without leaving a track here and there; and nothing had passed over this trail for days apparently. I called again with the former result, and it turned out afterward that the others never heard a sound, having gone round to the other side of a peak which entirely cut them off from my voice and its echoes, and having been pushing through brush at the time which would have prevented them in any case from hearing. I turned back to the foot of my slide and waited, for as I carried certain provisions highly important to the cuisine of the expedition, I knew that they would want me at lunch time. If not, I could push along down the Quinalt to the reservation.

In a very few minutes I heard Chris far above me. He had come back to pick up the pieces, and I had a hard climb to reach him, up a place where the soil was pretty firm, digging heels and rifle-butt into the ground and pulling up by the bushes, testing each one first, for many of them came out.

The rest of the party were rather discouraged. They were still running about on top of the ridge looking for a place to get down and they would not profit by my discovery and slide. The Cayuse had hurt his knee severely but kept bravely on, refusing to lighten his pack or take any assistance.

We followed the elk trail, that ran along the ridge, for a while, hoping it would take a turn toward the valley. Vick suddenly came upon a bear in an open space among the bushes. His rifle proved to be out of order, and for the first time since he had had it missed fire and the bear ran off with a grunt. At last we took our necks in our hands (not literally but as one does his life) and trickled (if I may use the expression in connection with solids) down the steep descent. The Marine had secured a firm hold of the bushes and a slight rest for his feet. Reveling in the unwonted security of his position he looked up and saw the Cayuse, who was descending triumphantly, sliding at a comfortable angle. The Marine thought he was falling and calling out, "You're all right old boy, I'll stop you!" caught him by the leg as he came. The Cayuse kicked like the beast from whom he takes his name, and down they came, tumbling and rolling through the brush. They brought up on my shoulders and I joined the avalanche, which proceeded merrily till a tree stopped us. The other three were far ahead, but at last we found them by the side of the Quinalt. There we had a hasty meal.

It was growing very cold, and had begun to rain again so we started up the opposite slope. This was the hardest work—except the alders on the foothills—that we had—so steep that we were obliged to stop and rest at about every 30 yds. When we had made a thousand feet or so Joe became aware that he had left his cartridge belt by the stream. The Cayuse, the Marine and I would almost have given our ears not to have heard his remarks. There is no imagining what he would have said had not Vick produced the belt, which he had seen and saved.

All the rest of that day we climbed and climbed; and the work grew harder as we went. Not that we could get more tired or the hill much steeper without our falling off, but the brush was thicker than ever—dense blueberry bushes growing seven or eight feet high sometimes, with gnarled tough twigs locked together. And every bush was dripping, for the rain had now poured heavily for hours.

As we came toward each successive shelf we thought it must be the top; and at each one we were disappointed. When at last it grew too late to go on, not a single level spot could we find for a camp. The best place that presented itself was good in every respect but one. There was plenty of comparatively dry wood; there was balsam for our bed and running water near by, but the pitch of the ground was so steep that we had to drive stakes and lay a log against them on which to brace our feet when we lay down, which we did as usual six in a row. It was comfortable enough for a while. But in the night the camp-fire, originally built at a safe distance, transgressed and burnt off the stakes, so we had to get up and brace our log all over again. FRANCIS DANA.

*My friend, the Marine, was in his early youth a mighty hunter of eggs, and would climb trees where none of us, his comrades, dare aspire, and would enchant us when he came down with tales of what he saw at the top. Soon after he settled in the West he wrote home that "there was just one trouble with the country, that, although there were plenty of trees, they were quite useless, as not one of them was small enough to be climbed, even with irons!"

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Ad.*

Natural History.

A PAIR OF PET LIONS.

PREVIOUS to making up country trips in South Africa I always laid in a supply of calico dresses and pound packages of tea to serve as presents for the wives of the Boers in the outlying districts. Tea is used by them only in cases of sickness, and the donation of a calico dress is always met by an interchange of dairy and hen roost products. In one of my trips, while in the neighborhood of an old vrow, finding that the larder needed replenishing, I jumped on my shooting pony and cantered over to her house, followed by my Kaffir henchman "January," carrying a basket containing the tea and dress. The noise of my pony's hoofs on the sun-baked earth caught the old lady's ears and she met me at the door with the exclamation:

"I'm so glad you have come!"

"Why?"

"Because I have a pair of young lions for you."

"Where are they?"

"Knocking about the house somewhere."

I immediately dismounted, handed the reins to January, started indoors, and finally brought up in the kitchen, where I found the whelps asleep on the hearth. On asking how they were captured she informed me that some two weeks previous her son had shot a lioness, and finding her in milk, hunted around until he picked up the youngsters. I immediately bargained for them with the understanding that they were to be given all the milk they would drink, not teased, and kept until my return, some three months ahead. The tea and dress were then produced and January had to enlist the services of one of the farm Kaffirs to assist in carrying to the wagons the butter and eggs which were received in exchange.

On my return I found they had been partially weaned, which was fortunate, as it would have been impossible to get fresh milk for them daily. Taking them in my arms I started toward my cart, which had been driven up in front of the house, for the purpose of throwing them on my bed; but the oxen bolted on, catching scent of them, and it required a deal of patience before they would allow them to be loaded. On coming up with my train of wagons, loaded with antelope, gnus, etc., the cart was prudently kept some distance in the rear, for fear of a stampede of the teams, and it was fully a week before the oxen became thoroughly accustomed to lion odor. The whelps would pass the time while traveling lolling about on my bed, which I shared with them at night, but so soon as we stopped and the oxen were turned loose for grazing their heads would be thrust out from the front of the cart waiting to be lifted out, so that they could have their customary game of romps with the dogs and myself.

We had reached the more thickly settled portion of the country when one day, just as we were outspanning, a couple of young Boers cantered up to the wagons, one of whom carried a fine chacma seated behind him. On dismounting the reins were handed to the baboon, who had seated himself just in front of the horses, and I started for the cart in search of the "square rigger," i. e., gin flask, in order to pave the way to purchasing the baboon. On reaching it the heads of both whelps appeared, expecting to be lifted out, as was customary. On catching sight of them the baboon gave a scream, the horses a snort of terror, and each one took a separate path across the *veldt*, followed by a pair of blaspheming Boers. I saved my gin, but lost the chance of buying a fine chacma and sulkily refused to join in the usual frolic.

The trip home was made without further incident, and on arriving the youngsters were allowed the run of the house; but at night they would persist in sharing my bed with me. After having been nearly smothered by a trick which they had of lying across my face, I finally compromised matters by arranging a cot alongside my bed with a stout wire screen intervening. Of course the arrival of the young lions was soon noised about, and I did not lack company, especially on Sunday afternoons, when my establishment resembled a miniature zoological garden, and the female whelp seemed to select just such occasions to play pranks on the bipeds of her own sex. Her favorite ambush was under the table of the dining room, the door of which opened on the passage way through the house. So long as males passed, or females escorted by males, she would remain quiet, but as sure as a single female, or a party of them, attempted to pass through, she would spring out and crouch just in front of them, invariably causing a hasty retrograde movement, accompanied by a series of screams. Once while in the rear giving some directions to the Kaffirs, I was startled by a piercing shriek, and turned just in time to see a frightened female dart out of the back door and come at racing speed toward me. In so doing she had to pass directly under a tree, in which was chained a baboon. So soon as she was fairly under it, the brute dropped on to her shoulders, whisked off her bonnet and wrap, and was up on his perch again in a jiffy. She dropped in a dead faint, and before I could dash some water into her face and bring her to her senses the bonnet and wrap were torn into shreds, and on looking toward the house I could see the head of the lioness lying over the doorsill, seemingly enjoying the mischief she had caused. On another occasion, hearing a series of suppressed screams in the house, I hurried in and found a trio of young ladies standing on the dining table, with their skirts pulled up to about the regulation ballet length, and tightly drawn about their limbs, while the lioness was crouched on the floor just in front of them, whisking her tail and acting precisely as if she intended to spring up and occupy a portion of their retreat. Picking her up I carried her into my bedroom, and on my return found that the young ladies had managed to get down without any assistance, and were hurrying out the front door without saying good-bye.

Fearing that something serious might occur if I allowed my pets their liberty any longer, I had a large cage constructed, and for the first week or two was forced to spend a greater portion of my time in it with them. The male did not worry so much, but the female fretted constantly, and the only way I had of quieting her was to go in and lie down, using the male for a pillow, while she would stretch herself alongside of me with her head resting on my chest. A short time after confining them I found that they were shedding their milk teeth, a very painful operation with all cat animals. The female did

not suffer so much, but the male's upper gums became so much swollen as to almost close his eyes, and I determined to lance them. Placing him squarely on his back, with my left hand I opened his jaws, and with a knife in my right quickly slashed one gum, springing aside immediately, as I expected a wipe from his front paws. Much to my surprise he never made the slightest attempt to injure me, but gave a grunt of relief, rolled over on his side and began sucking the blood from the wound. The other gum was served in a like manner with precisely the same actions, and the next day I had the satisfaction of seeing the swelling much reduced, and in a short time it entirely disappeared.

No doubt many of my readers will suppose that my pets only served to get me into scrapes, but I have a very distinct recollection of one instance in which they managed to get me out of one. I was hailed one day by the sheriff, who informed me that he had a summons in his office for me to serve as a jurymen. I tried to beg off, but he was inexorable and said that he had no discretion in the matter, so I told him that the first time he happened out in my neighborhood to drop in and serve the paper. A few days afterward he rode up to my gate and I called January to open it for him, while I hurried out through the back door and made for the lions' cage. But a short time elapsed before I heard him calling for me, and on my answering he gradually found his way out to the den, in which I was seated on the male's recumbent body, while the female sat behind me with her chin resting on one of my shoulders. As soon as he saw me he sprang back and yelled out:

"For Heaven's sake! Come out of there!"

"Hand that summons in here and I will do so."

"Do you want my arm torn off?"

"No; but I want you to make a legal service of that paper by handing it to me."

"I shall not take any such risk, but I will tear it up if you will only come out and save me from seeing you torn into pieces."

"All right, do so, and I will try to get out alive."

The paper was torn up and I stepped out of the cage, much to my friend's relief, whose nerves were completely quieted by a resort to the "square rigger."

A short time subsequent I met the judge in the street, who wished to know if my mode of dodging jury duty was the one commonly practiced in my own country.

FRANK J. THOMPSON.

AN UNSEASONABLE RAIL.

EASTON, Md., Jan. 20.—*Editor Forest and Stream:* I write to ask if it is not very unusual to find a specimen of the Virginia rail (*R. virginianus*) as far north as this locality at this season of the year. The specimen referred to is *R. virginianus*, and not the common sora or Carolina rail (*P. carolinensis*).

It was captured in rather a singular manner. I have a friend who has a terrapin pond, and being annoyed by the muskrats burrowing in the banks of the pond, he set a number of steel traps for them, and found the bird caught by the leg in one of the traps. It is a male bird in full plumage and in fine condition, which would go to show that it was not from being wounded or otherwise injured that it failed to migrate with its fellows. I am having the bird mounted on account of finding it at this season, and it is a remarkably fine specimen.

These birds are rare with us at any time, although we formerly had the common sora by thousands in its season. Although killing these birds in great numbers every season, it has been an unusual thing to kill a *R. virginianus*.

While on the subject of rail, can any of our sportsmen account for the sudden and great falling off in the numbers of these birds since 1883? Up to that season we had them in countless numbers on our marshes, but since that year they have been scarce. I should attribute it to over-shooting if the diminution had not been all at once, and the rail having the immense amount of cover it has ought to be protected, one would think.

SINKBOAT.

[It is, we believe, quite unusual to find rail of any kind so far north as Maryland in winter. At the same time it must be confessed that we do not know very much about the habits of these birds. For example, up in Connecticut it is the popular belief that the sora all go south at the first hard frost in autumn, and it is unusual to find them on the rail grounds after Oct. 1. Nevertheless in high coarse sedge and reeds on the edge of the salt water these birds are occasionally killed, being flushed by accident up to Dec. 1. Here in the north we have always found *R. virginianus* rare as compared with the Carolina rail.]

THE PERSISTENCE OF PESTS.

BELLEVILLE, Ont., Jan. 31.—A wolf which had destroyed upward of seventy sheep was recently poisoned in the town of North Burgess.

Two foxhounds owned by local hunters recently fell victims to poison which some careless individual had set out for the bushy-tailed prowlers.

Foxes are numerous beyond precedent in this neighborhood despite their pursuit by hunters. Seven "reds" were one day recently on foot before three hounds, within two miles of the city.

Foxes are said to be very numerous in the vicinity of Newburgh, some twenty miles east, and on Tuesday Mr. John Jackson sighted a beautiful silver gray one. They are so tame that they have been seen playing with the dogs in the barnyards.

A short time ago two students from Queen's College, Kingston, who were visiting at Odessa, trapped a black fox, and received from a furrier in Kingston \$90 for the pelt. Another was captured on the fourth concession of Hungerford last week. The animal has become almost extinct in this section, and the skins are said to be worth from \$100 to \$150 each.

A silver fox was shot in Hungerford township a couple of weeks ago by Mr. M. Cronkright and sold to Mr. Alf. Dulmage for \$75. The fox is a native of Labrador, and only two have ever been known to be shot in Hastings.

In order that your readers may avoid the mistake of your correspondent, who, after navigating Lake Ontario and the River St. Lawrence in an open boat, described the shores of our beautiful bay as in a state of nature—a country that has been settled nearly a hundred years and has been all but denuded of its forest—let me state that the whole of the region above referred to is one of the oldest settled tracts in the Province.

R. S. B.

FLORIDA BIRD NOTES.

BISCAYNE BAY, Fla., Jan. 25.—For the last two weeks this far southern section of country has been alive with robins. As the oldest settlers have never seen these birds here before, they excite great interest and curiosity. They are fat, saucy, and so tame that one may approach within a few feet of them ere they take wing. They seem also to be very quarrelsome, and fight so fiercely among themselves that in two cases, coming under my personal observation, the vanquished bird has died within a few minutes after the battle.

The native birds seem much disgusted by the presence of these intruders, and the mockingbirds are devoting all their energies to chasing them.

I heard the first song sparrow about a week ago, and the bluejays have been with us for the past two months. Never have I seen so many crows as now fill the woods and line the beaches about here. Their battles are with the buzzards, and when a dozen or more of them get after one buzzard the latter has a poor show. O. K. CHOBEE.

BREEDING OF BEARS.—Van Buren, Ind., Jan. 20.—*Editor Forest and Stream:* I wish information about the breeding habits of the black bear, as I have a male from Wisconsin, a female from Michigan, three years old next spring. They have been kept together in a cage since I got them as cubs, weighing 16 and 14 lbs. respectively. On 25th inst. there was a cub found in the cage dead and partly consumed. I judge it was destroyed by the male, and will say I have never seen anything to make me think there was any prospect of any increase or I would have separated them sooner. How many cubs does the female bring forth a season? Are all at one time or some time between? What is the usual time of the year they bring forth their young? What is the period of gestation? and do the males destroy the young?—M. D. [As we have more than once said, but little is known about the breeding of bears. It is certain, however, that the cubs are usually born in January, that they are from one to three in number, and that young bears produced in confinement are often destroyed by the parents. While in charge of the Zoological Gardens at Cincinnati, Mr. Frank J. Thompson succeeded in breeding black bears, and an account of this occurrence from his pen may be found in FOREST AND STREAM XIII., p. 605. From this it appears that the young are born naked, that they are blind for forty days after birth, and are carefully watched by the mother for nearly three months. We would suggest your separating your bears early next winter and giving the female every opportunity to make herself ready for the possible event.]

REDUCING THE SPARROWS.—Perth Amboy, N. J., Jan. 20.—*Editor Forest and Stream:* I recently scored the fifteen hundredth English sparrow which has fallen to my Stevens .22 since April, 1888. What would the natural increase of the birds have probably been meanwhile, if unmolested?—K. [The data given are not accurate enough for us to figure on with any degree of definiteness. The sparrow is supposed to rear four or five broods of from four to six young each in a season. We think that the natural increase of the sparrows which you have destroyed might safely be placed at from 15,000 to 20,000 as a minimum. We commend this question to our mathematical readers.]

LINNÆAN SOCIETY OF NEW YORK.—A regular meeting of the society will be held at the rooms of the American Geographical Society, No. 11 West Twenty-ninth street, Friday evening, Feb. 6, 1891, at 8 o'clock. A paper will be read by Mr. F. M. Chapman, entitled "The Mammals of the East Coast of Florida," and one by Mr. Leverett M. Loomis, entitled "An Historical Sketch of South Carolinian Ornithology."—JONATHAN DWIGHT, JR., Secretary.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A TRIP TO THE CAUGILON MOUNTAINS.

THE last week has been the most successful from a sportsman's point of view that I can call to mind during the six years that I have been hunting over Texas and New Mexico. We have certainly on other occasions killed larger quantities of game during a shorter space of time and without so much work to get it, but never did we have so much condensed fun in one week. Three years ago we killed six bears and a black-tailed buck in two days. We had eight or ten white-tailed deer in camp at one time, while hunting in Val Verde county, Texas. And the numbers of turkeys that have now and then fallen in our way have been sufficient to supply a large camp nearly all winter with meat. However, I have been more pleased with the reminiscences of this September week than any other on record.

Our party consisted my friend E., André, a Puebla Indian; a Mexican cook and his son to herd the burros; an old half-breed Navajo Indian-Mexican, a faithful servitor of long standing, whom we will call G.; a gentleman from Philadelphia, Mr. Johnson, and his friend Mr. Pickin, and myself. J. and P., who were out for pleasure, and had heard of my camp, came over to consult me on the subject, so it was settled that they should come with us and see how they liked it. Accordingly we took in two or three more days with the trout on the Rio Brazos, during which time several large fish were caught, weighing from four and three-quarters down to half a pound, then we moved to the Ceñolla Plaza, near which the Mexicans informed us several bears had been killed and more been seen. Next day we started out to locate our game. We had ridden quite six miles without receiving any encouragement. At last, however, we came on the track of a large bear and cub. Shortly afterward we found more sign and the carcass of one not long killed. Thinking this good enough to try we returned.

The next day found us camped near the head of a bright little trout stream, known as the Rio Caugilon. Our two friends traveled in a buckboard, and as any one

who has tried it must be well aware, this mode of locomotion when applied to the mountains and entirely off any road requires some skill and plenty of practice; consequently they did not make it quite as soon as we did with our burros; however, they were in time enough, for after pitching the four tents we all went out for a two-hour hunt before dark. Andrés saw and wounded slightly a fine silver-tip, which, however, got off. Next morning we took after the wounded bear, but the dogs soon lost him, and we tried another track with similar effect; then they followed one at full cry, and we followed them for six or seven miles, only to find that they had overrun the one they started on and were running an old one. Of course they were wild and somewhat out of practice, but the dryness of the ground was against them as well; our horses being a little tired we returned. I was anxious that our two friends should see the dogs on their best behavior, for they were quite new to the sport and did not know what to expect, consequently I was not a little annoyed at the day's proceedings.

That evening we went out without hounds. J. and E. were the first to hide themselves in the oak brush, at elevated points where they could see all around without being seen. Just as the sun was about to go down, out of the oak brush, about 600 yds. from the observatories, stalked an immense brown bear. "What an odd-looking horse," thought J., who, however, soon discovered his mistake when bruin began to pace across a small flat between the hedges of brush. J. at once made off to where he expected to meet his highness. E. had, however, also seen him, and lost no time in circumventing such a beauty. No sooner did the bear show his nose than E., who is an old hand, dived into obscurity and was lost to view. So it came to pass that when E. was within shot, but not in sight of his prize, "bang!" went a .50-95 express close to him, and before he could ascertain the cause, "bang! bang!" rung out two more shots in quick succession, and all was still. Hastening to the spot whence came the sound of firing, imagine E.'s disgust at finding his big bear dead, and killed, not by J., but by Andrés, who they thought was hunting in quite another direction. He had, however, sneaked out, and with his usual luck stumbled plump on top of bruin without waiting long and patiently for the chance, as the others had done. J. arrived soon afterward somewhat out of breath (for by his figure one might think him fond of good living when at home); he had seen another, but smaller, bear on his way down, which he fired at and missed. He seemed rather astonished at the size of the dead one, and solemnly declared he had never seen one nearly as large, either stuffed or in any of the zoological gardens.

The next day we took the hounds out again and soon found a track, but whether the ground was too dry, or what, I knew not, possibly the large flock of sheep interfered with the scent, anyway, the dogs would not or could not run; so home we went again. Next day we stayed in camp to rest the horses and hounds, but did not feed the latter. I caught 150 trout in an incredibly short space of time; they were not large, in fact a half-pound fish was rare; but they were not very small and jumped at the flies with avidity. P. killed a few mountain pigeons, some ducks, and a grouse, and Andrés secured a young gobbler.

The following morning was a glorious success long to be remembered in the annals of our bear hunting. We started at about eight A. M. and turned our dogs loose on a track about a mile from camp, some rain had fallen during the night and the scent was perfect. To my horror and disgust, the hounds circled round in the brush and then split in all directions. What could it mean? I must confess I fully expected another blank day, but made up my mind to follow. J., G. and I took one branch, Andrés, E. and P. the other. We had six dogs with us, or rather well in front of us, for they were rapidly ascending the mountain on our right, when G. let out a yell, the cause of which was a large brown bear breaking cover near the summit, but considerably ahead of the pack, who were after another one. Spurs were instantly and effectually applied, G. and I reached the top where we met J., who had gone round another way, the bear had just passed him, but owing to the thickness of the brush he could not fire. There was not a dog within a mile of us, they having torn off down the hill again after another as fast as their legs could carry them. Quick as thought I ran to the edge we had just climbed over and blew my horn with all my might; a dog answered me, and soon I could see them away down below. However, after tooting till my veins began to swell and my breath to depart, I was rewarded by the appearance of six dogs coming up again. In a few minutes they were on bruin's trail and off we went. Not more than 40 yds. from here they split again, but we followed the bunch of three who were after the bear we had sighted. A two-mile gallop through quaking asp, pine and fallen timber brought us to the edge of a cañon, on the other side of which we could hear the dogs baying in one place. Here I stopped to fix my girth before going down. G. and J. rode on and found him sitting across a limb about 15 ft. from the ground; J. dismounted and plugged him in the cranium. Death was instantaneous, G. was then despatched for a jack-ass, on the arrival of which we returned with our three hounds and the bear.

On nearing camp we met two more donkeys coming out. E., P. and A. had been having a rollicking time. While standing in an open space listening to the dogs, which were split up, a big cinnamon broke cover close to them with only one hound behind him. E. dismounted and fired; knocking him down, but he arose and fled in a hurry, as did E.'s horse. After a chase the pony seemed ashamed of his fright and allowed himself to be captured. E. at once galloped off in the direction taken by the bear and arrived in time to see Andrés fire and drop the bear from his perch in a small pine tree. E. then laid down his rifle and went to work with his skinning knife. While thus engaged he heard the hounds yelling at no great distance off; and looking up saw a brown bear pass close to him and disappear before he had time to run for the rifle. There were no dogs with the beast and he got clear away. This time he returned to his work with his Winchester, and lucky it was that he did so, for in a few minutes a two-year-old black bear came out with three dogs at her heels. E. took a quick shot and wounded but did not stop her. Then came a chase. P., who had also seen this bear, got there first, but having only a shotgun and buckshot wisely waited for A., who shot her as soon as she treed. All this happened within an hour, and by 10 o'clock we were all in camp, except

four dogs, which I believe had more bear. Toward evening a Mexican came and told us that one of the hounds had kept a bear treed since the morning at some distance from where we killed the last two; he had no gun and was obliged to leave it, and it was too far away for us to get there before dark. This dog was barely a year old and had not seen a bear before. About midnight the other four dogs returned, one at a time. Five grown bears that we know of left that patch of brush at once; how many more might have gone off unobserved is hard to tell, but P. was sure that the country was full of them. One dog had the pad cut off her foot and another had a swollen face from the fray.

The next day we had a good run for about three miles. I was left behind trying to cut off the bear's retreat, while unfortunately he took off in the wrong direction. E. got there first, and thinking he was alone with the exception of a strange Mexican, who joined him, did not wait; I was not 100 yds. behind, but too late to save my dog, for when E. fired he wounded the bear, which fell off his resting place and instantly arose to his feet, scattering the pack like chaff before the wind. I arrived just in time to see the fatal shot, and there was poor little Julie, a stump-tailed hound, running about with her entrails hanging out. The excitement of the chase had evidently prevented her from feeling, for she was barking and playing around, wagging her stump of a tail for all she was worth. I then called her to me, and finding the intestines bitten in pieces, I saw no hope but to put her out of her misery before any reaction set in. Towser, a yearling hound, fastened on the bear's nose for about a second, but judging from his appearance he will prefer the opposite end of the next bear, for although not seriously hurt, he looked very much like a man whom I once saw after a prize fight. The bear was a large male cinnamon. We packed him home with Julie, to whose memory a monument was erected.

The following day we did not find a track till about 9 o'clock, and then I thought it not fresh enough, so we rode off to look for another, when Andrés, who had been left behind, fired two shots and we retraced our steps; he had seen and shot at, but missed a big brown bear. The dogs were soon uncoupled and ran straight away for a good six miles at racing pace, it was all we could do to keep them in hearing; and when we pulled in our horses J. and I were alone, the others being a long way behind. On coming to the spot where the dogs had bayed, we saw a large brown bear standing on an immense limb, not more than twenty feet up; he looked so much like coming down that we fired at a greater distance than usual, the consequence being that he came down in an extremely lively style. Having a shot through the jaw and one leg broken, he could not get at the dogs well, and as we ran in I shot him through the side and dropped him, and I gave him the *coup de grace*.

The next day we took a rest, having got six bears, five of which were males and above the average size. P. shot a turkey, E. and I caught trout, while J. rode off in the evening to wait by a bear wallow that we had discovered in the vicinity. When he returned this was the tale he told. On arriving at the water hole, he selected a hide from which he could shoot any animal while bathing, and waited. Soon he began to think. His past life, with all its sins, pleasures, fortunes and misfortunes, floated before his eyes; a twig snapped just behind him, and on turning to see the cause, he found himself staring into the small green eyes of the cinnamon bear he had come to meet. Both were astounded, and took a good look at each other to be sure there was no deception. The bear, however, was the first to grasp the situation, and what did he do? Rise on his hindfeet and with a blood-curdling roar dash his enemy to the ground? Oh, dear, no; he skeddaddled and left J. wondering how it was he had never shot him. However, it was too late now, and J. knew well how useless it would be to follow. So he simply remained where he was, only with his thoughts running in a slightly different groove. Here was J. standing bolt upright in the brush, looking keenly about him, when he discovered that another bear, and much bigger one, had stolen a march on him, and was trotting down to the bath in full view. J. thought he would wait till he came nearer and make certain of this one, so slowly he began to sink into the brush to be completely hidden, but this very action attracted the attention of those restless little eyes, and bruin made a plunge, leaving big claw marks in the ground as the only sign that he had ever been near the place. Some bullets flew after, but did not find him. This was too much for J., who got on old Tuskey and galloped home.

The next day we ran the dogs there without success, and the next day J. and P. attended to home industries, and used lots of soap. E., G., A. and I went out and turned our dogs loose on a good looking track. E. and A. followed close on their heels, but G. and A. made for the top of the hill, from where we could guess their destination and possibly take a cut on them. G. was in front of me, and when just at the top I saw him trying to get his gun out of the scabbard, but it was no go. A beautiful black shining bear trotted by us as if there was nothing on earth to bother him, and was gone in the dense quaking asp before either of us was ready for him. I yelled, and blew, and fired my gun off for the hounds, but not a dog appeared this time; they had struck a bunch of deer and were going to have some fun; they came in the next day, good for nothing. That night the rain came, and we had two or three inches of water all around our beds. In the morning our friends, P. and J., departed on business bound, and we rested. The following morning we had another very long run, and finished with a kill for G., who got there just before us. This bear was also a male, brown, and of good size; the hide measured 7 ft. 7 in. by about 4 ft. That evening while in bed a skunk came into the tent, so I got a trout and poisoned it. Next morning E., whose proboscis is extra sharp (and ought to belong to an inspector of nuisances), woke up at about 3 A. M. I always lie well covered, and therefore was enabled to declare my ignorance of any extraordinary smell, and my desire to sleep, thinking that he would remove the cause, which I soon became certain was not far off. However, he did not, for like many human beings he could not endure to see me rolled up apparently asleep when he could scarcely come anywhere near the tent himself. I could not keep the farce up long though, and determined to find it myself, so I arose and soon found the creature under a box near our beds. We moved camp next day for another range of mountains.

A. P. F. COAPE.

CHICAGO AND THE WEST.

CHICAGO, Jan. 29.—Grand Calumet Heights Club held another meeting last night. The tenure of the club on its present grounds remains uncertain and unsettled, although the club has very strong legal rights which would make a sale of that property or an attempted eviction of the club an exceedingly puzzling bit of work for the syndicate purchasers with whom negotiations are now progressing. A committee was appointed to confer further.

The much-talked-of bill for the suppression of pigeon shooting in Illinois has finally been introduced to the State Legislature now sitting. The record of bills introduced this morning reads as follows: "By Senator Bass—Providing for the suppression of pigeon-shooting and similar sports, making the penalty for indulgence in such sports \$50. The bill does not apply to the shooting of game in its wild state." It is suggested to the worthy Senator that his name would be practically as euphonious and more appropriate if he would drop the front letter of his name. Senator Wright, too; he is all wrong. He has introduced a bill "allowing the use of seines for fishing in navigable streams and in streams emptying into navigable streams." We are apt to have some solid chunks of wisdom now, and our beautiful code of laws may be further reformed and adorned by the artistic granger legislator.

Mr. Bird, of the Grand Calumet Heights Club, last night gave me the incidents of a singular and pathetic lake shore tragedy. He was walking along the beach of Lake Michigan not long ago when he came upon a dead sea gull. Examining it, he found protruding from the jaw a large fishhook, quite a length of the line being still attached. The bird had evidently tried to free itself of the hook by scratching at it with its foot, and at some stage of this effort the point of the protruding hook had passed through the web of the foot. The bird was thus pinioned with its foot against its mouth. How long and slow the subsequent struggle for life no one knows, but here the waves had tossed upon the beach the record and picture of the tragedy.

Messrs. Marshall and Metcalf, named earlier as having gone to Mississippi after quail, went to Trenton, in that State, and had elegant sport, averaging 35 or 40 birds a day. They complain of the handicap of close choked guns, and they had only black powder shells with them. There are still a few people left who retain the folly of closely choked guns for field work, and some of them even shoot black powder at quail yet.

They seem to be getting the greyhound fever out in Dakota. The following I notice in this morning's dispatches. "MITCHELL, S. D., Jan. 28.—The most exciting sport ever held at Mitchell occurred to-day in the coursing races between two greyhounds, Nig, belonging to J. W. Seaman, and Tulu, belonging to McDermain & Smith. Jack rabbits were the prey, and there were three races. In the first race Tulu scored eight points and Nig five and a half. In the second Tulu scored seven and Nig five. In the third race Tulu scored seven points and Nig sixteen. Total, Tulu 22, Nig 26½. The third race was an exciting chase of four miles. This gives Seaman the \$200 prize. H. G. Nichols now challenges Seaman's Nig to run his hound Bly in similar chases in April."

There are spiketails and sawbills in small numbers now on the lower end of Lake Michigan. The present rainy and lowery weather should soon give us mallard shooting on the Kankakee. We are having no winter at all to speak of in the banana belt.

I think it was rather hard of Jim Riley, when the telegram announcing the last defeat of Elliott by George Kleinman in the pigeon match here was received at Kansas City, to say, "Well, I reckon Jim'll come back to wearing the G. hat again now." Mr. Riley really oughtn't to talk that way. Yet there is a homely philosophy in his remark which all good sportsmen might study.

John Gillespie, of the Jenney & Graham Gun Co., has been very sick and is only now getting around. Doctor's bills come high, and it costs funds to travel, but really now, I think John will go South for a week or two and rest up. It looks that way. Those people indefinitely but generally known as "the boys" think John ought to go, you know, and what they say, goes. There are worse folks in the world than these "boys."

Jan. 24.—Mallards have appeared on the Kankakee marshes. The winter here has been mild. Mallards are shown in the markets. They come from Paw Paw, Mo.

Messrs. W. A. Van Brunt, of Horicon, and Fred Merrill, of Milwaukee, were in town this week en route for a six weeks' trip at quail shooting in northern Mississippi. They had with them five setters and pointers and five beagles, among them some bench and trial winners. The beagles they are taking down for fun at the cottontails.

I am often asked where to go for good quail shooting in the South. John Watson, of Arcola, La., can take care of hunting parties and assure them good shooting. Holly Springs, on the Illinois Central Railroad, is a good point, and Amery, Miss., the old field trial point, is good for birds. Magnolia Station, about 100 miles north of New Orleans, is another good place.

The members of the East and West trap-shooting company of the U. S. Cartridge Co., who made the big trip last winter, organized into a society known as the "Iolanthes." A reunion was to have been held at Dayton, O., the 27th of this month, but this has been postponed as other plans are on foot. An interesting bit of shooting news is thought to be concealed in this postponement, as will transpire later.

Mr. Rolla O. Heikes arrived in the city last Monday morning and has entered upon his duties as Western representative of the Standard-Keystone Co. His family will come on to their home here within a month.

Jan. 31.—On the corner of 18th street and Wabash avenue, in this city, is a grocery, in the window of which I have often seen the mounted figure of a white animal. Once I looked at it more carefully. It was the figure of a deer, but the coat was a snowy white. Everybody has heard of white deer and knows the superstition about them. I never knew of the actual killing of an actual white deer, and doubted the genuineness of this. I asked for Mr. Tebbetts, senior member of the firm. Together we examined the "white fawn," as it is called in the store. The genuineness of the albino deer was no longer to be doubted. Mr. Tebbetts gave me a letter to Mr. C. E. Roe, a commission merchant of 124 S. Water street, this city, of whom he purchased the carcass of the deer. I saw Mr. Roe yesterday, and he recounted the history of this singular animal so far as he knew it.

"I sold the white deer to Mr. Tebbetts in September of 1887," said he. "It came to me in a shipment of venison made from Abrams, Wis., by L. F. Hale, who was engaged in shipping large amounts of venison. He made no comment about it, only saying in a letter to me that he 'had shipped to me a white deer.' I therefore do not know how or by whom the deer was killed. It was shot directly through the heart by a small ball, about as big as a buckshot. There was another one of these white deer killed in the same region the following year (1888). That one went to Janesville, Wis., but I don't know who got it. Perhaps Mr. J. W. Manning, who knows most of the shooters of Janesville, could tell what has become of that deer."

"When I sold the white fawn to Mr. Tebbetts the coat was pure white. The eyes were a light blue. The hoofs were white, as white as any white-hoofed horse ever had."

"I have been interviewed often about that deer and one newspaper man wanted to know if I knew of any bad luck that had ever happened to the killers or handlers of this white deer. I can't say that I do. I am doing pretty well, I thank you, and I guess Mr. Tebbetts is. Those mallards? They are from the far south mostly just now. It is colder below us, in Missouri, than it is here. The bulk of our ducks last fall came from northwestern Nebraska. Yes, that white deer is certainly a curiosity. It's too bad Mr. Tebbetts didn't have better luck getting it mounted. The body is shown too heavy."

Barring this criticism, and a slight over-slimness of the neck, which a close observation shows, the white fawn is certainly a beautiful, as well as a singular, animal. It is kept under a tight glass case and its snowy whiteness does not show a trace of darker color. No chemicals have ever touched the hair. It is a genuine spirit deer.

And now will our friends over the country please tell us of such other genuine white deer as they personally know to have been killed?

Speaking of albinos, Mr. Roe told me of another case, this time among birds, and equally unquestionable. Mr. Roe lives at Oak Park, a suburb of Chicago, and there are some oak trees upon his lawn. In one of them a pair of crow blackbirds built their nest, and in due time hatched their young. Hearing a great outcry one evening Mr. Roe went out to the tree. He found one of the young birds had flopped out of the nest. To his surprise, it was quite white! At the moment a neighbor called across the fence, "Here is another of your birds over here." They picked it up, and it also was found to be white. These two young albinos were kept by Mr. Roe carefully for about a week, when they both died. They proved beyond doubt that there can be such a thing as a "white blackbird."

Feb. 1.—Mr. Wolfred N. Low, of this city, tells a pleasant story of a little hunt from which he and a few friends are but recently returned. The party consisted of Mr. Low, Mr. Charles Johnson, another attorney of this city, Prof. Bastin and Sam Booth, of Chicago, and Mr. Geo. J. Low, a relative of our friend and resident of Little Rock, Ark. At their hunting station these gentlemen were joined by Mr. Mitchell and Mr. Hightower, both, I believe, of Cherry Valley, Ark. The party hunted between the St. Francis and L'Angeville rivers, in Arkansas, about eight or ten miles from Cherry Valley, which point is accessible via the Memphis branch of the Iron Mountain road, out of St. Louis. Mr. Low is full of the trip, and says he never was really in a game country before in his life, though he thought he had been. The party computed they saw forty deer each day of the four they spent in the woods. Mr. Mitchell killed a deer, Prof. Bastin killed two, as did also Messrs. Johnson and Hightower. The hunting was over the overflowed timbered country, and the walking in the water made it hard hunting. The most of the deer was found in the overflow, often in water knee deep, and Mr. Low learned for the first time that a deer is an aquatic animal. They need not have resorted to the water, apparently, for the dry ridges were abundant. Thus situated, and having the misfortune to be carrying a shotgun, Mr. Low had the hard luck to lose his only chance, a long shot at a deer which got away crippled.

This St. Francis country must be a great game country. Our friends on this trip killed all the quail and ducks they wanted. Mr. Low counted eight squirrels on one tree. Sign of wild turkey was seen every day, though they did not hunt that bird. On one drive, Christmas day, with the hounds, five deer were started. On the whole, it would seem that this is a hunting ground better than any we have around here. Out of Little Rock, they say, it is equally good. And the gentlemen of this party say that the generosity and hospitality they met were simply charming. Say what you like, there is no idea of real hospitality in the North. You have to go South for that.

Feb. 2.—A curious relic is shown by the Jenney & Graham Gun Co., of this city, in a specimen of the old Porter revolving rifle, a box full of which was lately secured by Messrs. Griffith & Semple, gun dealers of Louisville, Ky. During the war a certain gentleman who in those days would have been called by a Northerner just a plain rebel, bought twenty-five of these guns, then thought to be an advanced arm, and thought to arm his friends with them in case the Yankees came. He buried the box in a cellar. Time passed and they were forgotten, only to be discovered lately when some excavations were making for a new building. The arm looks antiquated enough now, and probably few will remember having seen one like it. E. HOUGH.

BLOOMING GROVE PARK.—The sixteenth annual meeting of the Blooming Grove Park Association, which owns or controls 25,000 acres of beautiful woodland and a finely-appointed club house in Pike county, Pa., was held last week. The president, Andrew J. Post, reported that 500,000 brook trout eggs had been placed in the streams, and that only the day before 25,000 lake trout eggs and 10,000 landlocked salmon eggs had been received at the Park club house from the United States hatcheries for distribution in the waters of the Park. Among the improvements made were various additions to the club house and twelve miles of drives. The report of Treasurer Wm. P. Roome showed the association to be in an excellent financial condition. Its assets foot up \$98,728.14, made up of the real estate, valued at \$41,000; the club house, servants' quarters, stables, kennels, barns, and other outbuildings valued at \$25,150, and hatching ponds, personal property, and cash made up the balance.

THE COON HUNTERS' SYMPOSIUM has been unavoidably postponed.

NOTES AND NOTIONS.

Editor Forest and Stream:

I have spent a good many years fighting, hunting, trapping, mining and ranching in the West, and have from time to time sent in to you sketches of experience in the old days. Some of these you have printed and some you have probably placed in the waste paper basket, where very likely they belonged.

In my somewhat extended experience I have heard and seen a good many queer occurrences that I sometimes feel like telling about, but it is not always easy to write of these things. The rope and the rifle come handier to me than the pen. I have also more or less information as to places where game is abundant at the present time. This you would no doubt like to have, but I cannot give it to you. There are too many hunters in the country now.

Of course the old West no longer exists, and wherever farmers and cattlemen have gone in the game has been destroyed. It makes my heart sore to think that I can never again eat "fat cow." There never was any meat so good. Of course mountain sheep and elk meat are good, but like a good many men who are going down the hill of life, I believe that "old things are best."

I am each year more astonished at the increasing number of men who are coming to spend their vacations in the West, and the more I see of this tendency the more I wonder that there is any game at all left alive in the mountains. Most men who go out West to hunt devote themselves after the first year or two to some special kind of game. Bears of course are the favorite game, but moose, elk, sheep and white goats—and of course deer and antelope—are taken in.

It is years since any one has gone buffalo hunting, although a few—perhaps half a dozen—have been killed by accident within the past two or three years.

Some of these Eastern men who go West do valuable work there both by example and precept. Your paper has had several accounts of the good work done by the North Wyoming Game Protective Association, which was organized and is operated by stockmen on Gray Bull River and its tributaries. Hon. W. D. Pickett, Mr. Archibald Rogers, Mr. T. Paton and Mr. Belknap are prominent workers in this association. A good example was set by another Eastern man a year or two since. This was a case where the instincts of the gentleman and the sportsman overcame the savage desire to kill, and to kill something now, which is common to us all. A couple of years ago Mr. Chas. M. Donnelly, a New York man, I believe, found himself within 60 yds. of four bison not far outside the boundary line of the National Park, and although he had his rifle with him, he refused to take the life of even one of these great beasts. A man who is capable of an act like that certainly takes a high view of his duty toward himself and toward others.

Speaking of killing buffalo reminds me of the last attempt made by Buffalo Jones to capture live buffalo for his ranch. The story has been told in your paper more than once, and yet there are some points that have never been brought out.

Up to this time, Jones had captured a good many calves and had been successful in rearing them; and, being rather puffed up, I fancy, by his success, he now determined to take in all the buffalo there were left, young and old alike. Well, he tried it, and after a fearfully hard, laborious, trip he partially succeeded.

The trip was made from Kansas to Texas for the purpose of rounding up and capturing the bunch of buffalo known to exist there. The expedition was carefully planned and no provisions that would tend to make it successful were omitted. Of course they had plenty of the best horses that could be got, lots of grain, and good men. Besides these aids, they drove down south with them a bunch of tame buffalo. It was thought that after the wild ones had been run until they were pretty tired, they could be rounded up among the domesticated buffaloes and could be held in their companionship without much trouble. Well, the expedition went down into the Panhandle, found the buffalo and started after them. They had four teams, and, using these as relays, for forty-two days they followed these buffalo without stopping, except when it was so dark that they could not see the trail. There were only two places where the buffalo could water, and they ran between these, circling around and covering an area probably not more than 100 miles in diameter. The teams followed the trail on the keen jump, and as soon as one team was tired its place was taken by another. When it got dark they would halt and camp, but when the moon rose, or at the first streak of gray dawn in the east, the mules were harnessed and the chase began again. The buffalo would drop down to rest only a mile or two beyond the camp, and as the wagon approached, would start up again and rush away before it. The draught animals could never have kept up this chase if they had not been fed all the grain they could eat; how the buffalo stood it so long I do not understand.

During the last few days the pace became slower, and often the pursuers would be within one or two hundred yards of the herd. Now the buffalo began to separate. One would edge off from the herd and try to slip away by himself, and when this took place the horsemen would follow, rope and hobble him or her, and then continue in pursuit of the herd. At last it became possible to drive the wild buffalo in among the tame ones, but they could not be held there. Suddenly, without any warning, one of them would start away from the bunch and could not be turned back to it. If caught and hobbled it would sometimes stand for a few moments with all its feet spread out stiffly, then it would begin to tremble and presently would fall over on its side and die, apparently of rage. Of the full grown ones so captured and hobbled, all died. It was noticed that the soles of the feet of these buffalo so chased were worn down to the quick and were bleeding.

It is said that Jones saved alive 11 adult cows and 7 calves out of this bunch, but I believe that all the adults afterward died. THE SILENT MAN.

CURRITUCK.—Norfolk, Va., Jan. 21.—I am a member of two clubs in Currituck Sound, both having shares of stock for sale. Our duck, goose and swan shooting is very good, and our bay bird shooting is no doubt the finest in the United States, if not in the whole world. The members of these clubs are scattered all over the Union, from Maine to Virginia. I shall be glad to give any sportsman information concerning these clubs.—J. B. WHITE.

THE NEW YORK GAME LAW.

FOLLOWING is the text of the bill which was presented to the New York Legislature last Thursday:

An Act for the protection and preservation of birds, fish and game.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

CHAPTER THIRTY-ONE OF THE GENERAL LAWS.—THE GAME LAWS.

ART. I.—BOARD OF COMMISSIONERS OF FISHERIES.

Section 1. Short Title of Chapter.—This chapter shall be known as the game law.

Sec. 2. Commissioners of Fisheries, How Appointed.—The governor shall appoint three commissioners of fisheries, who shall constitute the board of commissioners of fisheries.

Sec. 3. Terms of Office of Commissioners.—Not one commissioner shall be appointed from any judicial department and each commissioner shall be a resident of the department from which he is appointed. The terms of office shall be, at the time of the first appointment, one, two and three years respectively; but as the term of each commissioner shall expire, appointments shall be made for the full term of years, but in no case, except by expiration of term, the appointment shall be made for the unexpired term.

Sec. 4. Commissioners to be Paid Sum in Lieu of Expenses.—The commissioners shall receive no compensation for their services, but shall each be paid the sum of six hundred dollars annually for traveling and contingent expenses, payment of such sum to be made quarterly.

Sec. 5. Office and Clerical Force.—The board of commissioners shall have its principal office in the capitol at Albany and shall hold meetings at such office on the first Friday of January, March, May, July, September and November, and at such other times and places as the commissioners shall appoint, for the transaction of business. The board shall employ a clerk at a salary of two thousand dollars, and such other clerical assistance as shall be actually needed, together with the necessary contingent office expenses.

Sec. 6. Duties of Board of Commissioners.—The duties of the board of commissioners shall be to propagate and distribute food-fish and to keep up the supply thereof in the various waters of the State, and for this purpose it shall have the conduct and control of such hatching stations as are now owned or operated by the State and such as may be hereafter established. The commission shall also have the care of the lands under water which have been designated, surveyed and mapped out, pursuant to law, for oyster beds, and power to grant franchises of such lands according to the provisions of laws now in force or which may be hereafter enacted. It shall possess the powers and perform the duties given and imposed by this chapter and by other provisions of law.

Sec. 7. Board to Report Annually to Legislature.—The board of commissioners shall annually make a full report to the legislature of all their official operations for the year ending on the 30th of September previous, with such suggestions and recommendations as they shall deem useful.

ART. II.—GAME PROTECTORS, POWERS AND DUTIES.

Sec. 20. Game and Fish Protectors, How Appointed.—The board of commissioners shall appoint twenty game and fish protectors whose powers and duties are hereinafter defined, and who shall be known as game protectors.

Sec. 21. Terms of Office of Game Protectors.—Game and fish protectors so appointed shall hold office during the pleasure of the board of commissioners, which may summarily remove any of their number and appoint another in his place.

Sec. 22. Chief Game and Fish Protector.—The board of commissioners shall from time to time designate one of such protectors as chief protector, who shall remain such during the pleasure of the board, and who shall have the direction, supervision and control of the other protectors.

Sec. 23. Protectors to Give Bonds.—The chief protector shall give a bond to the board of commissioners with sureties in the sum of \$1,000, and each of the other protectors a bond with sureties in the sum of \$500 conditioned for the faithful discharge of his duties, such bond to be approved by the commissioners. Any action thereon shall be brought in the name of the people.

Sec. 24. Compensation of Protectors.—Compensation of the chief protector shall be \$2,000 per annum, payable monthly, and of each of the other protectors \$500 per annum, payable monthly, and the chief protector or other protector shall receive one-half of all penalties collected in actions brought upon information furnished by him.

Sec. 25. Office of Chief Protector to be in the Capitol.—The chief protector shall be assigned room in the capitol for his headquarters, and he is authorized to employ necessary clerks at an expense not to exceed eight hundred dollars per annum.

Sec. 26. Duties of Protectors.—The game and fish protectors shall enforce all the fish and game laws of the State, and the provisions supplementary thereto, made by boards of supervisors for the additional protection of fish and game.

Sec. 27. Records and Reports.—Each protector shall keep a daily record of his official acts, and at the close of each month shall make a summary of such record with such statements in detail as shall be necessary for the information of his chief and report the same to the chief protector.

Sec. 28. Payment of Salary and Expenses.—Payment of salary and traveling expenses to protectors shall only be made upon a certificate of the chief protector, that the protector has made such report and properly performed his duty.

Sec. 29. Reports by Chief Protector to the Board of Commissioners.—The chief protector shall report to the board of commissioners any negligence or dereliction of duty or incompetency on the part of any of the protectors with the facts relating thereto, and he shall report quarterly to said commissioners the operations of his department, during the preceding quarter, and shall make such further reports as may be required by the board of commissioners.

Sec. 30. Special Protectors.—The board of commissioners may, in its discretion and pleasure, appoint or remove a person, recommended by any board of supervisors or by any incorporated society for the protection of fish and game, as special protector, who shall possess the same powers that are conferred upon the State protectors; such special protectors shall receive no compensation from the State. They shall make similar reports to those required from State protectors.

Sec. 31. Powers of Sheriffs, Constables and Deputy Sheriffs.—Peace officers shall have the same powers as are conferred upon game protectors for the enforcement of the provisions of this chapter.

Sec. 32. Nets to be Destroyed by Protectors.—It is the duty of every protector to seize, remove and forthwith destroy any net pound or other device for taking fish found in or upon any of the waters of this State, where fishing with such nets or devices is prohibited by law, or where the shores or islands of such waters, and such nets, pounds or other devices are declared to be a public nuisance and may be abated and summarily destroyed by any game protector and no action for damages shall lie or be maintained against any person for such seizure or destruction.

Sec. 33. Expense of Seizure of Nets.—The expense of any seizure, removal or destruction of such nets, pounds or other devices shall be a county charge against the county in which the same shall be seized and shall be paid as other county charges are paid, on the certificate of such protector, stating the time and place of such seizure and destruction, the names of the persons employed therein, the time spent thereabout and the money advanced, if any, and to whom, and shall be verified by the oath of such protector making such seizure and destruction. Such certificate shall be final.

ART. III.—QUADRUPES.

Sec. 40. Deer Close Season.—Wild deer shall not be caught, shot at, hunted or killed between the first day of November and the fifteenth day of August following. No person shall kill or take alive more than two deer in any season.

Sec. 41. Deer or Venison, When Not to be Possessed.—Wild deer or venison shall not be possessed between the sixteenth day of December and the fifteenth day of August following, or during the session thereof, between the first day of November and the fifteenth day of December, shall be deemed a violation of this section unless it be proved by the possessor that such deer or venison was killed within the lawful period for killing the same or out of the State.

Sec. 42. Does and Fawns not to be Killed.—No wild deer, unless it be a horn, shall be caught or killed at any time, nor shall any wild deer killed in this State, unless it have or had horns, nor any part thereof, be possessed at any time; possession of does and fawns shall be presumptive evidence of a violation of this section.

Sec. 43. Traps.—Traps or any device whatsoever to catch or entice deer, including salt-licks, shall not be made, set or used, and deer shall not be caught, hunted or killed by aid or use thereof, nor shall deer be hunted, pursued, shot at or killed by means or use of artificial light or by what is commonly known as floating or jacking.

Sec. 44. Hounding.—Deer shall not be hunted with dogs between the eleventh day of October and the first day of September following. Dogs commonly used for hunting deer shall not be permitted to run at large, between such dates, in the forest where deer are hunted. Deer shall not be hunted with dogs in St. Lawrence and Delaware at any time.

Sec. 45. Dogs Killed.—Dogs, while chasing deer in violation of law, may be killed by any person.

Sec. 46. Transportation.—Deer or venison killed in this State shall not be transported to any point within the State from any of the counties thereof, or possessed for that purpose, except as follows: One carcass or a part thereof may be transported from the county where killed when accompanied by the owner. The possession of deer or venison by common carriers, unaccompanied by the owner, is a violation of this section. This section does not apply to the head and feet or skin of deer severed from the body.

Sec. 47. Crusting and Yarding.—Deer shall not be hunted, killed or captured by what is commonly known as crusting nor while they are yarded.

Sec. 48. Moose, Caribou and Antelope.—Moose, caribou or antelope shall not be hunted, killed, or possessed during the close season for deer or venison after the same have been killed.

Sec. 49. Hares and Rabbits.—Hares and rabbits shall not be hunted, shot at, killed or possessed between the first day of January and the fifteenth day of September, except as provided by section one hundred and sixty-nine, nor shall they be caught in traps, nor shall traps be set for them.

Sec. 50. Black and Gray Squirrels.—Black and gray squirrels shall not be hunted, shot at, killed, or possessed after the same have been killed, between the first day of January and the fifteenth day of September, except as provided by section one hundred and seventy-one.

Sec. 51. Hunting, etc., on Sunday Prohibited.—Shooting, hunting, trapping, or setting traps for wild beasts, or having in possession in the open air on Sunday the implements therefor, is forbidden.

Sec. 52. Penalties.—An attempt to violate the provisions of this article shall be deemed a violation thereof. A violation of its provisions is a misdemeanor, and in addition the violator of sections forty, forty-one, forty-two, forty-three, forty-four, forty-five, forty-six, forty-seven, forty-eight is liable to a penalty of twenty-five dollars for each violation, and the violator of sections forty-nine, fifty and fifty-one to a penalty of twenty-five dollars for each violation.

Sec. 53. Bears, Wolves and Panthers. Bounty.—A bounty of ten dollars for each bear, thirty dollars for each grown wolf, fifteen dollars for each pup wolf, and twenty dollars for each panther shall be paid to any person who shall kill such animals in this State.

Sec. 54. Claim for Bounty, How Proven.—The killing of a bear, wolf or panther shall be proved by affidavit satisfactory to the supervisor and one of the justices of the town where the animal was killed and the delivery to them of the skull and skin thereof, which skull shall be by them burned and the skin branded so as to be capable of identification.

Sec. 55. Certificate to be Issued.—The supervisor and justice so acting shall issue to the person making such satisfactory proof a certificate directed to the county treasurer of the county, stating the kind of animal killed, the date of killing and amount of bounty to which the person is entitled.

Sec. 56. County Treasurer to Pay Certificate.—The county treasurer, when such certificate is directed to him, shall pay the amount of bounty specified in said certificate to the person holding the same, out of the funds of the county, and on the presentation of said certificate to the comptroller, he shall allow the amount thereof to the county by which it was paid in settlement of taxes due therefrom.

ACT IV.—BIRDS.

Sec. 70. Wildfowl, Close Season.—Web-footed wildfowl, except geese and brant, shall not be pursued, shot at, hunted, killed or possessed between the first day of March and the fifteenth day of September except as provided by section one hundred and sixty-one, and shall not be pursued, shot at, hunted or killed on any of the waters of this State between sunset and sunrise.

Sec. 71. Manner of Killing.—Web-footed wildfowl shall not be pursued, shot at, hunted, killed or caught in any way, save with gun raised at arm's length and fired from the shoulder without other rest; nor from any boat or floating device except as provided by section one hundred and sixty-two; nor by the use of any bough-house at a greater distance than fifty feet from either the shore or a natural growth of grass or flags. Such fowls caught or killed, in any manner prohibited by this section, shall not be brought to the shore sold or possessed.

Sec. 72. Quail, Close Season.—Quail shall not be pursued, shot at, hunted or killed between the first day of January and the first day of November except as provided in section one hundred and sixty-five.

Sec. 73. Quail, When Not to be Possessed.—Quail shall not be possessed between the first day of February and the first day of November, but possession thereof between the first day of January and the first day of February shall be deemed a violation of this section, unless it be proved by the possessor that said birds were killed within the lawful periods for killing the same or outside the State.

Sec. 74. Woodcock, Partridge and Prairie Chicken, Close Season.—Woodcock, partridge and prairie chicken shall not be pursued, shot at, hunted or killed between the first day of January and the fifteenth day of September, except as provided by section one hundred and sixty-four.

Sec. 75. Woodcock, etc., When Not to be Possessed.—Woodcock or partridge shall not be possessed between the first day of February and the fifteenth day of September, and possession thereof between the first day of January and the first day of February shall be deemed a violation of this section, unless it be proved by the possessor that said birds were killed within the lawful period for killing the same or out of the State.

Sec. 76. Woodcock, Partridge, etc., When Not to be Transported.—Woodcock, partridge, or quail killed in this State, shall not be transported to any point within this State from any of the counties thereof, or possessed for that purpose, except that such birds may be transported from the county where killed, when accompanied by the owner thereof. Possession of the birds named, by a common carrier, unaccompanied by the owner, is a violation of this section, unless it be proved by such common carrier that the birds were killed out of the State.

Sec. 77. Plover and other Birds, Close Season.—Plover, rail, mallard, gallinule, grebe, bittern, surf-bird, curlew, water chicken, bay snipe or shore birds, shall not be pursued, shot at, hunted, killed or possessed between the first day of January and the fifteenth day of September, except as provided by section one hundred and sixty-three.

Sec. 78. Certain Wild Birds Protected.—Wild birds shall not be killed or caught in any way, or possessed after the same have been killed. This provision does not affect any birds the killing of which is prohibited between certain dates by the provision of this chapter, nor does it protect the English sparrow, crane, crow, raven, hawk, shrike, owl, crow-blackbirds or kingfisher. It does not apply to any person holding a certificate under the provisions of this chapter or to any person who shall on his own premises kill any birds in the act of destroying fruit.

Sec. 79. Robins, Blackbirds and Meadow Larks, Close Season.—Robins, blackbirds and meadow larks shall not be shot at, hunted, killed or possessed after they have been killed, between the first day of January and the first day of November.

Sec. 80. Destroying or Robbing Nests.—The nests of wild birds shall not be robbed or destroyed or needlessly destroyed, unless when necessary to protect buildings or prevent their defacement. This section does not apply to the English sparrow, crane, crow, raven, crow-blackbird, hawk, shrike, owl or kingfisher.

Sec. 81. Snaring, Netting or Trapping Certain Game Birds Forbidden.—Partridge or quail shall not be trapped, netted or snared, nor shall any person possess any of said birds so taken, nor shall any net, trap or snare of any kind commonly used for taking partridge or quail be set. Any such net, trap or snare is declared to be a public nuisance and may be abated and summarily destroyed.

Sec. 82. Penalties.—An attempt to violate any of the provisions of this article shall be deemed a violation thereof. A violation of any of its provisions is a misdemeanor, and in addition the violator is liable to a penalty of twenty-five dollars for each bird killed, trapped or possessed contrary to the provisions of this article.

Sec. 83. Authority to Collect Birds, etc., for Scientific Purposes.—Certificates may be granted by any incorporated society of natural history in the state, through such person or officers as said society may designate, to any properly accredited person of the age of eighteen years or upward, permitting the holder thereof to collect birds, their nests or eggs one dollar to defray necessary expenses only. In order to obtain such certificate the applicant for the same must present to the person or persons having the power to grant said certificates written testimonials, from two well-known scientific men, testifying to the good character and fitness of said applicant to be entrusted with such privilege.

Sec. 84. Steps to be Taken to Procure Certificate.—Such person must pay to said person or persons one dollar to defray necessary expenses attending the granting of such certificate, and must file

with said persons or officers a properly executed bond in the sum of two hundred dollars, signed by two responsible citizens of the state as sureties. This bond shall be forfeited to the state and the certificate become void upon proof that the holder of such certificate has killed any bird or taken the nest or eggs of any bird for other than the purposes above named.

Sec. 85. Time for which Certificates Shall be in Force.—Such certificates shall be in force for one year only from the date of their issue and shall not be transferable.

ACT V.—FISH.

Sec. 100. Polluting Streams.—No dye stuff, coal tar, refuse from gas-houses, sawdust, tanbark, lime, or other deleterious or poisonous substance, shall be thrown or allowed to run into any of the waters of this State, either private or public, in quantities destructive to the life of or disturbing the habits of the fish inhabiting the same.

Sec. 101. Taking Fish by Drawing off Water, Forbidden.—No fish shall be taken by shutting or drawing off any waters for that purpose.

Sec. 102. Unlawful Devices and Explosives Prohibited.—No fish shall be caught or killed in any of the inland fresh waters of this State, in any manner or by any device, except angling, save only as provided by sections one hundred and thirty-six, one hundred and forty-one, one hundred and forty-three, and one hundred and forty-six. The use of dynamite or other explosives in such waters is prohibited, except for mining and mechanical purposes. Fish taken contrary to the provisions of this section, shall be deemed a violation thereof.

Sec. 103. Water Not to be Stocked from Streams.—No trout of any kind, salmon trout or land-locked salmon shall be taken from any of the waters of this State for the purpose of stocking a private or public pond or stream.

Sec. 104. Fishing Through the Ice in Waters Inhabited by Trout, etc., Forbidden.—No fish shall be fished for, caught or killed through the ice in waters inhabited by trout, or in any pond or land-locked salmon, nor shall an attempt be made to so catch the same, except as permitted by sections one hundred and thirty-three and one hundred and forty-two.

Sec. 105. Trout, Close Season.—Trout of any kind shall not be fished for, caught, killed or possessed between the first day of September and the first day of May following, except as provided by section one hundred and sixty-eight.

Sec. 106. Trout Not to be Taken unless Six Inches in Length.—Trout of any kind, salmon trout or land-locked salmon, less than seven inches in length, shall not be intentionally taken or possessed, and in case any such fish is taken, the person taking it shall immediately place such fish back in the waters from which it was taken, without unnecessary injury.

Sec. 107. Trout, When Not to be Disturbed while Spawning.—Trout of any kind, salmon trout, or land-locked salmon, shall not be willfully molested or disturbed while upon their spawning beds, during the close season, nor shall such fish or any spawn or mill from any such fish be taken or carried away while upon the spawning beds.

Sec. 108. Salmon Trout and Landlocked Salmon, Close Season.—Salmon trout and landlocked salmon shall not be fished for, caught or killed in the inland waters of this State between the first day of October and the first day of May following, nor shall such fish so caught be possessed, except as otherwise provided by sections one hundred and sixteen and one hundred and sixty-seven.

Sec. 109. Certain Fish Not to be Transported.—Trout of any kind, salmon trout or landlocked salmon, caught in any of the inland waters of this State, shall not be transported to any point within the State from any of the counties thereof, or possessed for that purpose, except when accompanied by the owner. Possession thereof by a common carrier, unaccompanied by the owner, is a violation of this section.

Sec. 110. Black Bass and Oswego Bass, Close Season.—Black bass or Oswego bass shall not be fished for, caught, killed or possessed between the first day of January and the fifteenth day of June, except as provided by sections one hundred and forty-four and one hundred and sixty-eight.

Sec. 111. Bass to Weigh Three-quarters of a Pound.—No black bass weighing less than three-quarters of a pound shall be intentionally taken from any of the waters of this State, nor possessed, and in case any such fish is taken, the person taking it shall immediately return it to the waters from which it was taken without unnecessary injury.

Sec. 112. Muskallonge, Close Season.—Muskallonge shall not be fished for, caught, killed or possessed between the first day of January and the twentieth day of May.

Sec. 113. Salmon, Close Season.—Salmon shall not be fished for, caught or killed between the first day of August and the first day of March following, nor shall such fish taken between those dates in this State be possessed.

Sec. 114. Salmon Must Weigh Three Pounds.—No salmon weighing less than three pounds shall be intentionally taken from any of the waters of this State, nor possessed, and in case any such fish is taken, the person taking it shall immediately place such fish back in the waters from which it was taken without unnecessary injury.

Sec. 115. Size of Meshes Regulated.—The use of seines, pound-nets, gill-nets, or fykes for taking fish, the meshes of which shall be less than two and a quarter inches, is forbidden, except as provided by sections one hundred and thirty-four, one hundred and forty-six, one hundred and forty-seven and one hundred and sixty-eight.

Sec. 116. Sale of Salmon Trout, When Permitted.—It shall be lawful to possess and sell at any time salmon trout, sometimes known as lake trout, if said fish have not been taken from the inland waters of this State during the close season, but possession of such fish between the first day of October and the first day of May following shall be deemed a violation of section one hundred and eighty-eight, unless it be proved by the possessor that such fish were not caught in such inland waters during the close season.

Sec. 117. Signboards Near Fishways.—The commissioners of fisheries are required to maintain, fifty rods from any fishway and on both sides of the stream, signboards, containing substantially the following notice: "Fifty rods in the fishway; all persons are by law prohibited from fishing in this stream between this point and the fishway."

Sec. 118. Fishing Near Fishways Prohibited.—Fishing or attempting to take fish by any device whatever, within fifty rods of a fishway, and any interference with the signboards there maintained by the commissioners of fisheries, is forbidden.

Sec. 119. Propagation of Fish.—The operations of State and public hatcheries, the removal of deleterious fish from the waters of the State under the direction and supervision of the commissioners, the propagation or distribution of fish by State or public authority, and the transportation and possession of fish fry therefrom, the operation of private hatcheries confined entirely to the propagation of fish for purposes of propagation are not affected or prohibited by this chapter.

Sec. 120. Penalties.—An attempt to violate the provisions of this article shall be deemed a violation thereof. Violation of any of the provisions of this article is a misdemeanor, and in addition the violator of sections one hundred and three, one hundred and four, one hundred and five, one hundred and six, one hundred and seven, one hundred and eight, one hundred and nine, one hundred and ten, one hundred and twelve, one hundred and thirteen, one hundred and fourteen, one hundred and fifteen and one hundred and eighteen is liable to a penalty of twenty-five dollars for each violation and ten dollars for each fish so caught; the violator of sections one hundred and one hundred and one and one hundred and two, to a penalty of one hundred dollars for each violation, and the violator of sections one hundred and six and one hundred and eleven to a penalty of ten dollars for each violation.

ART. VI.—MISCELLANEOUS AND LOCAL PROVISIONS.

Sec. 130. Certain Fish Not to be Placed in the Waters of the Adirondacks.—No fish, such as fry, spawn, or mill, except speckled trout, brook trout, white trout, salmon trout, rainbow trout, Adirondack brook fish or landlocked salmon shall be placed in the waters of the Adirondack region unless the fish so deposited are indigenous to the particular water where placed, or are non-preying or non-destructive fish, such as usually constitute food for the species above named.

Sec. 131. St. Lawrence River, Niagara River and Lake Champlain.—Fishing in Certain Devices Prohibited.—No fish shall be fished for, caught or killed in any manner, or by any device, except angling, in the waters of the St. Lawrence River, Niagara River or Lake Champlain, in this State, nor shall fish taken contrary to the provisions of this section be knowingly possessed.

Sec. 132. Lake Ontario, Lake Erie and Niagara River, Fishing Prohibited.—Fishing Within One-half Mile of Shore Prohibited.—No fish shall be fished for, caught or killed in any manner, or by any device, except angling, in the waters of Lake Ontario or Lake Erie, in this State, within one-half mile of shore thereof, or within one-half mile of the shore of any of the islands thereof, nor shall fish taken contrary to the provisions of this section be knowingly possessed.

Sec. 133. Fishing in Lake Ontario, Lake Erie and the Hudson and Niagara Rivers.—The provisions of section one hundred

and four, against fishing through the ice, do not apply to Lake Ontario, Lake Erie, the Hudson and Niagara rivers.

Sec. 134. Meshes of Nets in Lakes Erie and Ontario.—The meshes of nets used in Lakes Erie and Ontario shall not be less than four and one-half inches.

Sec. 135. Nets Prohibited in Hudson River above Spuyten Duyvil.—No fish shall be fished for, caught or killed in any manner nor by any device, except angling, in the Hudson River, north of Spuyten Duyvil Creek, save as provided by section one hundred and thirty-six; nor shall dynamite or other explosives be used except for mining or mechanical purposes in the Hudson River, north of Spuyten Duyvil Creek. Fish taken contrary to the provisions shall not of this section be knowingly possessed.

Sec. 136. Taking Shad and Herring in the Hudson and Delaware Rivers Regulated.—Shad and herring shall not be taken from the Hudson or Delaware rivers between the fifteenth day of June and the fifteenth day of March following, nor from sunset on Saturday until sunrise on the following Monday, at any time. Between the fourteenth day of March and the fifteenth day of June shad and herring may be taken from said rivers by nets.

Sec. 137. Salmon Taken in Nets from the Hudson River to be Thrown Back.—Salmon caught in nets, in fishing for other fish in the Hudson River, shall be thrown back into the water without unnecessary injury.

Sec. 138. Richmond County, Regulation as to Nets.—No device except angling shall be placed, drawn or used for the capture of any fish in the waters of Richmond County, nor in any waters adjacent thereto in Richmond County.

Sec. 139. Richmond County, Non-Residents Not to Hunt.—It shall not be lawful for any non-resident of the county of Richmond to shoot game in said county without a license therefor from a justice of the peace of the said county; such license shall be good only during the year in which it is granted and shall be granted upon the payment of the sum of \$10. The license fees shall be paid monthly to the treasurer of said county by the person receiving the same.

Sec. 140. Nets not to be Used in the Harlem River.—Nets, seines, pounds or fykes shall not be used in Harlem River or East River, or the adjacent waters or confluent brooks within five miles from Middlegate, or between said Middlegate and Fort Schuyler.

Sec. 141. Exceptions as to St. Lawrence County.—In Black Lake, Mud Lake and Yellow Lake, in St. Lawrence county, bullheads, eels, suckers, catfish and pickerel may be caught with spear, except during March, April and May.

Sec. 142. Certain Fish May be Caught Through the Ice in Lakes Erie and Ontario.—Bullheads, catfish, eels, suckers, pickerel, perch, pickerel and sunfish may be caught by hook and line through the ice in lakes Champlain, Seneca, Cayuga and Canandaigua.

Sec. 143. Oneida River.—Eel weirs of which the lair are not less than one-half inch apart may be maintained in Oneida River.

Sec. 144. Black Bass, Certain Localities, Close Season.—Black bass shall not be fished for, caught or killed in Lake George between the first day of January and the first day of August, in the St. Lawrence River and Lake Ontario between the first day of January and the thirtieth day of May; in Black Lake, St. Lawrence county, between the first day of January and the fifth day of May, or possessed on said waters or the shores thereof during such close season.

Sec. 145. New York City.—Nothing contained in this chapter shall affect the provisions of chapter four hundred and ten, laws of eighteen hundred and eighty-two, known as the consolidation act.

Sec. 146. Taking Minnows for Bait by Nets, when Allowed.—The provisions of this act prohibiting the use of nets and unlawful devices in the inland fresh waters of the State, shall not apply to the taking of minnows for bait in ponds, lakes and rivers, but nets used for that purpose shall not exceed twenty feet in length and shall not be used in streams inhabited by trout.

Sec. 147. Size of Meshes in Coney Island Creek Regulated.—The meshes of nets used in Coney Island Creek to the mouth thereof, extending out into Gravesend bay one-half mile each way, shall be not less than four inches square, except that for eel and flounder fishing hoop-nets with suitable meshes may be used within said bay between the fourteenth day of October and the first day of April.

Sec. 148. Penalties.—An attempt to violate the provisions of this article shall be deemed a violation thereof. A violation of any of its provisions shall be a misdemeanor and in addition the violator of sections one hundred and thirty-one, one hundred and thirty-two, one hundred and thirty-four, one hundred and thirty-five, one hundred and thirty-six, one hundred and thirty-seven, one hundred and thirty-eight, one hundred and forty, one hundred and forty-one, one hundred and forty-two, one hundred and forty-three, one hundred and forty-four and one hundred and forty-five, is liable to a penalty of one hundred dollars for each violation; the violator of section one hundred and thirty, to a penalty of five hundred dollars for each violation; the violator of sections one hundred and thirty-seven, one hundred and forty-four and one hundred and forty-six, to a penalty of twenty-five dollars for each violation; the violator of section one hundred and forty-seven, to a penalty of fifty dollars for each violation.

ART. VII.—SPECIAL PROVISIONS AS TO QUEENS AND SUFFOLK.

Sec. 160. Article to Apply to Queens and Suffolk Only.—This article applies exclusively to the counties of Queens and Suffolk.

Sec. 161. Close Season for Wild Fowl.—Web-footed wildfowl, except wild geese and brant, shall not be shot at, hunted, killed or possessed between the first day of March and the first day of November. Such birds may be killed, pursued or shot at from any boat, propelled by hand.

Sec. 162. Exception as to Wild Fowl.—Floating devices may be used for the purpose of shooting web-footed wild fowl therefrom in Great South Bay, west of Smith's Point, and in any part of said counties said birds may be killed from boats propelled by hand.

Sec. 163. Plover and other Birds, Close Season.—Plover, snipe, rail, sandpiper, mud hen, gallinule, grebe, bittern, surf-bird, snipe, curlew, water chicken, bay snipe or shore birds of any kind, shall not be shot at, hunted, killed or possessed between the first day of January and the first day of July.

Sec. 164. Woodcock and Partridge, Close Season.—Woodcock and partridge shall not be hunted, shot at or killed between the first day of January and the first day of November, nor possessed between the first day of February and the first day of November, and possession thereof between the first day of January and the first day of February, shall be deemed a violation of this section, unless it be proved by the possessor that said birds were killed within the lawful period for killing the same or out of the state.

Sec. 165. Robins, Blackbirds and Meadow Larks.—Robins, blackbirds and meadow larks shall not be shot upon Robins Island so long as it remains the property of the Robins Island Club, between the fourteenth day of October and the first day of February following.

Sec. 166. Trout, Close Season.—Trout shall not be fished for, caught, killed or possessed between the first day of September and the first day of April following.

Sec. 167. Salmon Trout and Landlocked Salmon, Close Season.—Salmon trout and landlocked salmon shall not be fished for, caught, killed or possessed between the first day of October and the first day of April following, except as otherwise provided by section one hundred and sixteen.

Sec. 168. Black Bass, Close Season.—Black bass shall not be fished for, caught, killed or possessed between the first day of January and the thirtieth day of May.

Sec. 169. Hares and Rabbits.—Hares and rabbits shall not be shot at, hunted, killed or possessed between the first day of January and the first day of November.

Sec. 170. Deer.—Deer shall not be shot at, hunted or killed for five years from the fourteenth day of August, eighteen hundred and ninety-one.

Sec. 171. Black and Gray Squirrels.—Black and gray squirrels shall not be hunted, shot at, killed or possessed between the first day of January and the first day of November.

Sec. 172. Jamaica Bay.—Fish shall not be fished for, caught or killed by any device except angling, between the first day of April and the first day of December in the waters of Jamaica Bay, the waters running therein. No striped bass, sea bass or blackfish under six inches in length shall be taken in said waters; if any are taken, the same shall be returned to the water without unnecessary injury. The inlet of Jamaica Bay shall not be willfully obstructed by any net or device so as to prevent the passage of fish therein at any time. This section does not prevent the catching of eels by hook and line, or eel weirs, or the capture of fish for bait or shrimp by means of hand or cast-nets.

Sec. 173. Supervisors of Suffolk, Powers Conferred.—The board of supervisors of Suffolk county shall, in addition to the powers herein conferred upon boards of supervisors, have power to pass rules, regulations, laws and ordinances, regulating, controlling or prohibiting the taking of fish and shellfish from or in the salt waters of said county.

Sec. 174. Penalties.—An attempt to violate the provisions of this article shall be deemed a violation thereof. Violation of any of the provisions of this article is a misdemeanor and in addition the violator of section one hundred and seventy is liable to a penalty of one hundred dollars for each violation. The violator of sections one hundred and seventy-one, one hundred and seventy-two, one hundred and seventy-three, one hundred and seventy-four, one hundred and seventy-five, one hundred and seventy-six, one hundred and seventy-seven, one hundred and seventy-eight, one hundred and seventy-nine, one hundred and eighty, one hundred and eighty-one, one hundred and eighty-two, one hundred and eighty-three, one hundred and eighty-four, one hundred and eighty-five, one hundred and eighty-six, one hundred and eighty-seven, one hundred and eighty-eight, one hundred and eighty-nine, one hundred and ninety, one hundred and ninety-one, one hundred and ninety-two, one hundred and ninety-three, one hundred and ninety-four, one hundred and ninety-five, one hundred and ninety-six, one hundred and ninety-seven, one hundred and ninety-eight, one hundred and ninety-nine, is liable to a penalty of twenty-five dollars for each violation and ten dollars for each fish so caught. The violator of sections one

hundred and sixty-one, one hundred and sixty-three, one hundred and sixty-four, one hundred and sixty-nine and one hundred and seventy-one to a penalty of twenty-five dollars for each bird or animal killed, trapped or possessed contrary to their provision.

ART. VII.—SHELL-FISH.

Sec. 180. State Oyster Protector.—The commissioners are authorized to appoint a State oyster protector whose duty it shall be to patrol, under the direction of the commissioners, the oyster regions of the State for the purpose of enforcing the provisions of this act and guarding the oyster property thereof, who shall have the same powers and duties with reference to oysters as is given by law to game protectors for the protection of game and fish.

Sec. 181. Salary and Traveling Expenses.—Salary of such protector shall be one thousand dollars per annum, and he shall be allowed in addition his actual traveling and incidental expenses, not exceeding two dollars per day.

Sec. 182. Assistant to Protector.—The commissioners, in their discretion may allow such protector an assistant, who shall be paid at the rate of two dollars and fifty cents per day for the time of actual service.

Sec. 183. Salaries, how Paid.—The protector and his assistant shall be paid their salaries and expenses in the same manner as game protectors are paid.

Sec. 184. Polluting the Water.—Sludge and other refuse from any oil works, or sugar houses, or from buildings connected with either of the same, or any substance injurious to oyster culture shall not be placed or allowed to run into any waters within the jurisdiction of the State. This section shall not apply to refuse arising from the manufacture of oil from menhaden or other oil-bearing fish.

Sec. 185. Garbage, etc., Not to be Thrown into Long Island Sound.—No garbage, cinders, ashes or refuse of any kind, shall be thrown from any vessel into the waters of Long Island Sound, or into the bays and harbors opening into the same, west of a line drawn from Eaton's Neck due north to the boundary line between New York and Connecticut.

Sec. 186. Close Season in Hudson River.—Oysters shall not be taken from the Hudson River north of the county of New York, between the first day of May and the first day of September.

Sec. 187. Taking Oysters from Hudson River for Replanting.—Oysters shall not be taken from the Hudson River, north of the county of New York, at any time for the purpose of conveying them to another State to have them replanted.

Sec. 188. Close Season in Harlem River.—Oysters shall not be taken from the Harlem River between the first day of June and the first day of September.

Sec. 189. Oyster Beds Not to be Interfered With.—No person shall in any wise interfere with or disturb the oysters of another lawfully planted in any of the waters of the State.

Sec. 190. Non-Residents Not to Gather Shell-Fish.—Only persons who have been actual residents of this State for six months shall be entitled to gather shell-fish from the waters of this State, except when such non-resident is employed for that purpose by a person authorized to gather the same.

Sec. 191. Dredging by Steam Forbidden. Dredging Regulated.—No dredge operated by steam power shall be used in dredging for shell-fish. No dredges exceeding thirty pounds in weight shall be used for the purpose.

Sec. 192. Sale of Lobsters Under Certain Size Prohibited.—Lobsters less than ten inches in length, measured from one extremity to the other, exclusive of claws, shall not be caught, sold or possessed.

Sec. 193. Oysters, how Sold in Shell.—Oysters in the shell may be sold either by count or measure; if not sold by count they shall be sold in a tray or tub, which shall be underlaid in shape, and of the following dimensions: The bottom to be sixteen and one-half inches across from inside to inside, and the top to be eighteen inches across from inside to inside, and twenty-one inches diagonally from inside chime to top, such measure shall be even or struck measure, the measure to be inspected and sealed by the sealers of weights and measures in the county where used. This provision shall not affect the shipment of oysters in barrels to foreign countries.

Sec. 194. Taking Clams and Oysters about Staten Island, Regulated.—Oysters or clams, whether of natural growth, or planted, shall not be dug up, caught or removed between half an hour after sunset, and half an hour before sunrise, from the waters on the south side of Staten Island, lying between a line extending due south from the point known as the Point of the Beach, at Great Kills, and a line extending due southwest from Ward's Point, in the town of Westfield.

Sec. 195. Taking Clams and Oysters in South Bay, Regulated.—Oysters spawn, seed oysters, clams, or shells, shall not be dug up, caught or removed from any of the waters of South Bay, in the county of Suffolk, between the first day of June and the first day of September, nor between sunset and sunrise at any time. Any oyster shells caught or taken from the public waters of said bay, in said county, shall be returned to the water in the locality where taken within ten minutes after being so taken. No blade or scraper-tongs shall be used or possessed on the waters of said bay in said county for the purpose of catching such shell-fish, and possession of a blade or scraper-tongs on said waters is a violation of this provision. This section is subject to the provisions of section seventy-three.

Sec. 196. Penalties.—An attempt to violate any of the provisions of this article, shall be deemed a violation thereof. A violation of the provisions of this article, is a misdemeanor, and in addition, the violator of sections one hundred and eighty-four, one hundred and eighty-five, one hundred and eighty-six, one hundred and eighty-seven, one hundred and eighty-eight, one hundred and eighty-nine, one hundred and ninety, one hundred and ninety-one, one hundred and ninety-two, one hundred and ninety-three, one hundred and ninety-four, one hundred and ninety-five, is liable to a penalty of one hundred dollars for each violation; the violator of sections one hundred and eighty-six, one hundred and eighty-seven, one hundred and eighty-eight, one hundred and eighty-nine, one hundred and ninety, one hundred and ninety-one, one hundred and ninety-two, one hundred and ninety-three, one hundred and ninety-four, one hundred and ninety-five, is liable to a penalty of twenty-five dollars for each violation.

ART. IX.—PRIVATE GROUNDS AND PARKS.

Sec. 200. Trespassing on Private Grounds Forbidden.—No person shall trespass upon inclosed or cultivated lands for the purpose of shooting or hunting any game, or taking any fish from private ponds or streams, after public notice has been given by the owner or person entitled to the exclusive right to shoot or fish thereon, as provided in this article; being on such lands with gun or fishing tackle or apparatus, or allowing hunting dogs thereon, shall be deemed a violation of this section.

Sec. 201. Notices to be Posted on Private Grounds.—The notice provided for in the last section shall be given by maintaining sign-boards at least one foot square upon at least every fifty acres of the premises sought to be protected upon or near the lot lines thereof, or upon or near the shores of any waters thereon, in at least two conspicuous places, or by personal service of a notice containing a brief description of the premises and name of the owner or of the person having the exclusive right to shoot, hunt or fish thereon, and prohibiting the same.

Sec. 202. Laying Out Grounds for Private Parks.—A person owning or having the exclusive right to shoot, hunt or fish on lands, or lands and water, desiring to devote such lands, or lands and water, to the propagation or protection of fish, birds or game may publish in a paper printed in the county within which such lands, or lands and water, are situate, a notice in substantially the following form and containing a clause declaring that such lands or lands and water will be used as a private park for the purpose of propagating and protecting fish, birds and game.

Sec. 203. Notices to be Posted in Private Parks.—There shall be posted and maintained upon such private territory notices or sign-boards not less than one foot square, warning all persons against trespassing thereon. Such notices or sign-boards shall be placed not more than forty rods apart, along the entire boundary of such private territory, when the same shall consist entirely of land, or when it shall consist of both land and water, they shall be placed so that there shall be at least one notice or sign-board for every one hundred acres thereof. When the private property consists of a lake or pond only, such notices shall be placed in at least four conspicuous places on or near the shore of such lake or pond.

Sec. 204. Notice When Territory is Fenced.—When such territory or any part thereof is fenced, notices or sign-boards shall be placed on or near such fences not more than one-half mile apart.

Sec. 205. Fish or Game so Protected not to be Interfered With.—Upon compliance with the foregoing provisions for preventing trespassing fish or game on lands or waters, the owner of such game, all fish, birds and game in or upon territory so protected shall be the property of the person having the exclusive right to shoot, hunt, or fish thereon, and no person shall disturb or interfere in any way with the fish or game on the premises so protected, except with the consent of the owner or person having the exclusive right to shoot, hunt or fish thereon.

Sec. 206. Signs not to be Defaced.—Signs placed pursuant to the foregoing provisions shall not be defaced or removed.

Sec. 207. Penalties.—Violations of the provisions of this article subject the person violating to a penalty of twenty-five dollars.

ART. X.—PROSECUTIONS.

Sec. 230. Actions, How Entitled.—All penalties imposed by this chapter may be sued for and recovered in the name of "the people of the State of New York."

Sec. 231. Authority to Bring Action.—Actions for penalties and as provided in section two hundred and thirty, shall be brought in the name of the people on order of the chief protector or by direction of either the commissioners.

Sec. 232. Action, Where Brought.—Actions for penalties imposed by this act brought in the name of the people may be brought in any county where the penalty shall be incurred, or in any county adjoining, subject only to the right to remove the same to any other county adjoining that in which the penalty shall be incurred, or in which the action shall have been brought as aforesaid for cause shown as provided by the code of procedure. But the same shall not be changed to the county wherein the offense was committed.

Sec. 233. Discontinuance.—Actions for penalties in the name of the people may be discontinued upon the order of the chief protector at any time before trial, except the commissioners otherwise order, without costs or disbursements to the defendant.

Sec. 234. Two or more Penalties in one Action.—Two or more penalties may be sued for and recovered in the same action, whether brought by the people or in the name of an individual or society.

Sec. 235. Witness Fees and Disbursements in Actions by People.—Witness and other fees and disbursements and full costs shall be recovered in any judgment in favor of the people under this act, at the rate fixed by section thirty-two hundred and fifty-one of the code of procedure, without reference to the amount of recovery.

Sec. 236. Actions by Persons or Societies.—Any person or society upon giving security for costs may recover in his or its name all penalties provided for by this act with costs, but on recovery by the plaintiff in such case of a less sum than fifty dollars, plaintiff shall only be entitled to costs to the amount of such recovery. Such person shall be entitled to one-half of the penalty recovered, the other half to be paid to the chief protector or the board of commissioners, but any such action shall be discontinued without costs or disbursements to either party, in case an action shall be thereafter brought for the same violation in the name of the people, and an order to that effect may be entered on motion of the chief protector or one of the commissioners, on notice to all the parties thereto. Such motion shall be entitled and made in both actions. Any person or society bringing an action under this section shall be liable to the chief protector thereof, within fifteen days after service of the summons therein, and failure so to do shall be a defense to the action.

Sec. 237. Judgments Recovered Under this Act, How Collected.—All judgments recovered under the provisions of this act may be enforced by execution against the person; any person in prison upon such execution shall be so imprisoned for a period of not less than five days, and at the rate of one day for every dollar of such judgment when the same exceeds five dollars; no one shall be more than once imprisoned, nor for a longer period than six months upon any judgment; persons so imprisoned shall not be admitted to the jail liberties; such imprisonment shall not be a satisfaction of such judgment.

Sec. 238. Costs and Recovery, How Disposed of in Action by People.—The recovery and costs in all actions heretofore brought and remaining undetermined, or hereafter to be brought under the direction of the chief protector or a commissioner in the name of the people, shall be paid to the board of commissioners, and such moneys shall be by it disbursed as hereinafter provided.

Sec. 239. Recovery, How Disposed of in Actions by Individuals.—One-half of the recovery in all actions heretofore brought, or hereafter to be brought by an individual or society in his or its name shall be paid to the board of commissioners to be by it disposed of in the same manner as other moneys received by it, and it shall be the duty of the person in whose hands such moneys shall come to pay over the same, and in case of failure so to do such moneys may be recovered from the person receiving the same in an action brought in the name of the people under the direction of the chief protector or the commissioners.

Sec. 240. One-half of Recovery to go to Protector.—There shall be paid out of the funds received by the board of commissioners one-half of the penalty collected in an action by the people, to the protector or special protector upon whose information the action was brought, and moneys so paid to the protector or the chief protector that such protector is entitled thereto; such certificate shall be final.

Sec. 241. Expenses of Actions by People, How Paid.—The remaining one-half money received by the board of commissioners shall be applied to the payment of the expenses of actions for violations of this act, on the certificate of the chief protector.

Sec. 242. Inclusion of Receipts and Disbursements in the Report of the Board of Commissioners.—The board of commissioners shall include in their annual report to the legislature a detailed report of their receipts and disbursements under this article.

Sec. 243. Arrest of Offenders by Protectors and Trial Thereof.—Any protector or peace officer may, without warrant, arrest any person committing a misdemeanor under the provisions of this chapter, in his presence, or where such a misdemeanor has been committed and he has reasonable cause for believing the person to be arrested to have committed it, and take such person immediately before a justice of the peace or police justice or other magistrate, having jurisdiction, who shall proceed without delay to hear, try and determine the matter, and give and enforce judgment according to law and the provisions of this act.

Sec. 244. Jurisdiction of the Courts.—Courts of special sessions in towns and villages, and the several courts in cities having jurisdiction to try other misdemeanors, shall have jurisdiction to try offenders in all cases occurring under this chapter, in the same manner as in other cases where they now have jurisdiction and to render and enforce judgment accordingly.

Sec. 245. Punishment for Misdemeanor.—Any person convicted of a misdemeanor under the provisions of this chapter shall be punished by a fine of not less than ten dollars, nor more than at the rate of one dollar for every dollar of the penalty provided for the violation of the section under which he is convicted, or be imprisoned in the county jail or penitentiary for a period of not less than five days nor more than at the rate of one day for every dollar of such penalty, or by both such fine and imprisonment.

Sec. 246. Issue of Warrants of Arrest.—Any justice of the peace, police justice, county judge, judge of any city court, or magistrate having criminal jurisdiction, on sufficient proof by affidavit that any of the provisions of this chapter have been violated by any person temporarily within his jurisdiction, but not residing there permanently, or by any person whose name and residence are unknown, shall issue a warrant for the arrest of such offender and cause him to be committed or held to bail to answer the charge against him.

Sec. 247. Search Warrant, when Issued.—Any justice of the peace, police justice, county judge, judge of any city court, or magistrate having criminal jurisdiction, upon receiving proof of probable cause for believing in the concealment of any game or fish taken or possessed contrary to the provisions of this chapter, shall issue his search warrant and cause a search to be made in any place and to that end may cause any building or inclosure to be entered and may cause any apartment, chest, box, locker, crate, basket or package to be broken open and the contents examined.

ART. XI.—FISHWAYS.

Sec. 260. Commissioners to be Notified of Construction of Dam.—No dam shall be constructed upon any stream more than six miles in length, inhabited by fish protected by this chapter, until the person about to construct the same shall give written notice to the commissioners of such intention, together with a statement of the name, length and location of said stream, and the size and general character of such dam, and the purposes for which it is to be erected, together with a diagram thereof.

Sec. 261. Authority of commissioners to Direct Fishways.—The commissioners are authorized in such cases to direct the construction of suitable fishways by an entry on their minutes and service of a copy of such order on the person constructing such dam, and the person so constructing shall, at his own expense, comply with such directions, and shall be liable to affirm, reverse, modify or alter such direction.

Sec. 262. Owner to Comply with Direction of Commissioners.—Such fishways shall be properly maintained by the owner or person in possession of such dam, and shall be subject to examination and inspection on behalf of the commissioners who may direct such repairs and alterations as they may deem necessary, subject to the order of the supreme court as in case of construction.

Sec. 263. Commissioners to Recover for Construction and Penalty.—In case of failure, refusal or neglect on the part of any person to comply with the directions of the commissioners as to building and repairing fishways, the commissioners may cause such fishways to be constructed or repaired, and the expense thereof may be recovered by the commissioners, or by a person acting against the owner or person in possession, or both, in the name of the people and shall, in addition to the personal liability of such owner or person in possession, be a lien upon the premises upon which such dam is situated. The person refusing or neglecting to comply with such directions of the commissioners as to construction or repairs shall also be liable to a penalty of ten dollars for each day during which they neglect to obey such directions, which penalty may be recovered in like manner in the same or a separate action.

ART. XII.—LAWS REPEALED, DEFINITIONS AND OTHER PROVISIONS.

Sec. 270. Amendments to the Game Law.—All amendments to the game law shall be numbered as parts of this chapter, and additions to the game law shall be numbered as sections thereof.

Sec. 271. Definitions.—Words and phrases under this chapter, and in proceedings pursuant thereto, shall, unless inconsistent with the contexts, mean or include as follows:

1. "Person" shall include persons, copartnerships, joint-stock companies and corporations, and when used with reference to commission of acts which are hereby prohibited, shall include persons *particeps criminis* in the forbidden acts and the officers, agents and directors or trustees and similar controlling body of corporations.

2. Words importing masculine gender may apply to copartnerships, females, joint-stock companies and corporations.

3. Words importing the plural number may import the singular number.

4. Words importing the singular number may extend to and be applied to several persons or things.

5. "Angling" is defined to mean taking fish with hook and line or rod held in hand.

6. "Exclusive right to shoot, hunt or fish" is defined to mean the right of any person owning or having the right to the possession of the premises on which such shooting, hunting or fishing, the exclusive right to shoot, hunt or fish thereon from the owner.

7. When an act is prohibited between certain dates it is not lawful upon the date first named and is lawful upon the date last named.

8. "Commission," "commissioners" or "board of commissioners" as used in this chapter shall be construed to mean the commissioners of fisheries.

9. "Article" when standing alone in this chapter shall be construed to refer to one of the articles thereof.

10. "Close season" is that period of time during which an act is prohibited.

Sec. 272. Ordinances and Regulations of Boards of Supervisors Repealed.—All laws or ordinances heretofore passed by any board of supervisors of any county in the State, except the board of supervisors of the county of Suffolk, relating to birds, fish and game, are hereby repealed, and boards of supervisors, except as provided by section one hundred and seventy-three, shall hereafter have no power or authority to pass any regulation or ordinance relating to birds, fish, shell-fish or game, contrary to the provisions of this chapter.

Sec. 273. Powers of Boards of Supervisors.—Boards of supervisors may pass at their annual session such ordinances as shall afford additional protection to and further restrictions for the protection of fish and game, but no such ordinance shall be operative until a duly authenticated copy thereof shall have been filed in the office of the clerk of the county, and published in the papers in such county in which the session laws are published, and filed in the office of the secretary of state, and it shall be the duty of the secretary of state to furnish a copy of such ordinance to the chief game protector and to print all such ordinances in the volume of session laws for the current years. No such ordinance shall take effect until the first day of May next after its passage.

Sec. 274. Additional Powers of Boards of Supervisors.—The board of supervisors of any county may raise by tax any sum not exceeding one thousand dollars in any year, to aid in the enforcement of the provisions of this chapter.

Sec. 275. Saving Clause.—The repeal of a law or any part of it specified in the annexed schedule shall not affect nor impair any act done or right accruing, incurred or acquired, or liability, penalty, forfeiture or punishment incurred prior to July first, eighteen hundred and ninety-one, under or by virtue of any law so repealed, but the same may be asserted, enforced, prosecuted or inflicted as fully and to the same extent as if such law had not been repealed, and all actions and proceedings, civil or criminal, commenced under or by virtue of the laws so repealed and pending on July first, eighteen hundred and ninety-one, may be prosecuted and defended to final effect in the same manner as they might under the laws then existing, unless it shall be otherwise specially provided by law.

Sec. 276. Construction.—The provisions of this chapter, so far as they are substantially the same as those of laws existing on June thirtieth, eighteen hundred and ninety-one, shall be construed in conformity with such laws, modified or amended according to the language employed in this chapter and not new enactments, and references in laws not repealed to provisions of laws incorporated into this chapter and repealed, shall be construed as applying to the provisions so incorporated, and nothing in this chapter shall be construed to amend or repeal any provision of the criminal penal code.

Sec. 277. Laws Repealed.—Of the laws enumerated in the schedule hereto annexed, that portion specified in the last column is repealed. Such repeal shall not revive a law repealed by any hereby repealed, but shall include all laws amendatory of the laws hereby repealed.

Sec. 278. When to Take Effect.—This chapter shall take effect on July first, eighteen hundred and ninety-one.

[Correspondence of Forest and Stream.]

ALBANY, N. Y., Jan. 30.—Assemblyman Smith has introduced the bill, which appeared in the Legislature two years ago and did not pass, appropriating \$4,000 for fishways in Cattaraugus Creek, in Erie county.

The Legislature has passed a concurrent resolution extending the life of the Special Commission that has been hard at work during the past year in revising and codifying the fish and game laws. The resolution provides that the Commission appointed in pursuance of Chapter 99, of the Laws of the State of New York of 1890, consisting of Gen. R. U. Sherman, Hon. Robert B. Roosevelt and Hon. Edward G. Whitaker, for the purpose of revising and codifying the game and fish laws of the State of New York, be continued until such time as will enable them to confer with the Fish Commissioners of Ontario, who have been appointed by the Province of Ontario, and also with the Commission of Fisheries of Canada, for the purpose of procuring uniform legislation covering the fisheries over the waters between the State of New York and the Dominion of Canada. But nothing in this resolution shall prevent the presentation to the Legislature of the report and bill already prepared by the said Commission of the State of New York.

It is intended that a hearty co-operation shall be given between this special commission and the permanent fish commissioners of the Province of Ontario relative to the supply of whitefish in Lake Ontario. It is further contemplated to confer with the Fish Commissioners of Ohio and Pennsylvania in regard to the protection of all kinds of fish, or more particularly of whitefish in the waters of Lake Erie.

The Commission has reported by a very brief report. Its real report is in the codification of the game laws which were introduced in the Assembly by Mr. W. C. Stevens, on Thursday last. The report is as follows:

To the Legislature: The undersigned, commissioners appointed pursuant to chapter ninety-nine of the Laws of eighteen hundred and ninety, for the purpose of revising and codifying the game and fish laws of the State of New York, for "the protection and preservation of fish and shell fish and of birds and quadrupeds," have the honor to submit the accompanying bill as the result of their labors, and to state in connection therewith as follows:

The commission held meetings in different parts of the State, and gave ample opportunity to all persons interested to be heard. Such meetings were largely attended and arguments and suggestions made by persons representing different interests and opinions.

That the conclusions arrived at by the commissioners are based largely upon the results of these hearings.

The accompanying bill is made to conform as near to public sentiment as it is possible to make a general game law. While it makes very few changes in the substance of the present law, the form is entirely different.

The proposed bill contains no provisions discriminating between persons or classes.

It is the sole purpose of the bill to preserve the fish and game of the State for the benefit of all, and not for a class, and all restrictions upon the use of the game are made in view of this object.

The Commissioners have given the matter long and assiduous study, the bill has been prepared and revised with great care, and the commission strongly recommends its passage without amendment, inasmuch as amendments made during its passage will mar the general harmony of the measure. After the bill has become a law in its present form, amendments may be made, and if properly placed will not confuse the general system.

Dated Albany, Jan. 15, 1891.
RICHARD U. SHERMAN,
ROBERT B. ROOSEVELT,
EDWARD G. WHITAKER,
Commissioners.

SPORTSMEN'S ASSOCIATION OF CHEAT MOUNTAIN.—Pittsburgh, Jan. 20.—At the annual meeting of the Sportsmen's Association of Cheat Mountain, held Monday evening, Jan. 19, the following persons were elected officers of this Association: President, W. M. Kennedy; Vice-Presidents, W. K. Shiras, D. M. K. Lloyd, W. S. Edwards, Utiles Baird, Nathaniel Ewing; Secretary, Theophilus Spruill; Treasurer, D. P. Corwin; Naturalist and Surgeon, Dr. W. J. Riggs; Board of Directors, Hilary S. Brunot, W. G. Brown, A. P. Tallman, C. C. Scaife, Dr. Jos. N. Dickson, J. B. D. Whurst, S. B. Elkins. The Association has control of 157,000 acres of land in Randolph and Pocahontas counties, West Va. The tract has over 150 miles of well stocked trout streams, being the headwaters of the Cheat River and its branches. Deer and other wild game are quite plentiful with the exception of game birds, for which the country is not well adapted. The club house is built of logs and contains twelve bedrooms, dining hall and other necessary apartments. Pure mountain water is supplied through pipes. Numerous permanent camps are located at favorable situations in different parts of the preserve. The Association may claim to be ranked among the largest and best equipped sportsman's clubs in the country.—DEACON.

Camp-Fire Glickeyings.

"That reminds me."

GLAD IT IS SETTLED.

Editor Forest and Stream:

I notice of late that you have devoted a few lines to the woodcock question, and I am glad the matter is so satisfactorily settled. When a thing is settled it ought to be well settled, and the more ways of settling it the better your readers should be satisfied.

From a careful perusal of the letters and comments in FOREST AND STREAM I am perfectly satisfied that the woodcock, poor bird, makes the noise wholly with its wings. I am also completely convinced that he makes the noise wholly with its mouth. I am certainly sure that he makes the noise by the combination of wings and mouth. It is also pretty well demonstrated that the noise is made with the tail as it flirts the bird from "zig to zag."

The theory that the bird makes no noise, but hypnotizes the hunter is not sustained by the evidence offered. The evidence is also lacking to show that the noise comes from the worms in the bird's throat, which have not yet been swallowed, but this lead promises good results.

Take it all in all, I am perfectly contented with the settlement of woodcock vs. noise. I am just as well contented as the boy who spelled a word six ways in one letter, and on being criticised, replied that he was a mighty poor speller who only had one way to spell a word. So it is a mighty poor bird who only has one way of making a noise.

Bird of the wilderness,
Blithesome and cumberless,
Please, Mr. Woodcock,
Tell 'em how you do it.

BLACK BASS IN DEEP WATER.

Editor Forest and Stream:

Having read so many of your letters from correspondents of happy days passed with the rod and reel, I feel satisfied that perhaps a chapter of my own experience may be just a little interesting to others of your many readers who love to handle the elastic bamboo, and I will relate the occurrence of a day some two years since in the month of August. I don't tell this story with any pride as a fisherman, but to show that there are some black bass yet in our small lakes in New England, and good ones, too. My friends George B. and John S., with their wives, and my wife and myself, passed a few days at a small hotel beside a lake in the eastern part of Massachusetts. A fine healthy air, nice scenery and a chance to catch fish were the inducements that tempted us to that place. The lake is one of a chain of four, and is quite a large one, nearly nine miles long by three wide, and is known as Sampson's Pond. The proprietor of the hotel has a number of boats for the use of his guests, and the ladies of the party had plenty of time to row to their heart's content. I was the only one of the party who had ever been there before, so I was obliged to do duty as a guide, which I did with a great deal of diffidence. We had been there two or three days, fished the pond in all the likely places, and some of the unlikely ones, visited the other lakes near by, and we had skittered, trolled and used spoons, mummies, shiners, toads, frogs, and, in fact, almost everything we thought a bass would take; but all with no result. Several good-sized pickerel and more small ones, roaches, red and yellow perch, and bullheads, of course, and now and then an eel; but as yet not a bass had snapped. One evening John said to me, "Suppose to-morrow morning we go out early and try and find the 'Big Hole?'" We had been told that there was a deep hole somewhere in the pond, and if we could find it we could catch a bass sure. That was what the "old resident" said. I agreed with John to go, but it seemed a foolish task to find a deep hole in a lake nine miles long and three wide, with an average depth of nine to twelve feet. Well, the next morning we were up at 4 o'clock; the weather was dull and foggy. The thick film hung close down on the water and was as wet as rain; the shore could hardly be seen at a boat's length. We have all experienced just such mornings and know them to turn out hot, dry and sultry days. So we were not at all alarmed about the kind of day we were going to have.

After our morning wash we went to the shore, put a lunch in the boat that had been prepared over night, and getting in ourselves started off on the search for the place where, if we could find it, we expected to capture a black bass. John rigged a sounding line and I took the oars. I would row a while and, then hold the boat

while he sounded the bottom. We had a little idea where the hole was, for we had heard a man say "the hole" was off a point down at the end of the pond. So we went on; sometimes John rowed and I sounded. I should judge we rowed around for about three times, when I suddenly found—and it almost frightened me—that my sinker didn't touch bottom at ten or twelve feet. I lowered away on the line, and down, down it went until about 40ft. was paid out and bottom was reached at last. Eureka! We had found it. Our anchor was made ready and a long line attached; then it was gently swung over the side, lowered carefully and found a resting place at the bottom of that well, for it appeared more like a well than a part of the pond. John had his line ready first, and he held his rod for a few minutes, but not a nibble; then he laid it down, put a handline into gear with two hooks on it, baited it with a small piece of dead fish and dropped it to the bottom; pulled it up about a foot, when suddenly he felt a twitch. He drew it up hand over hand and landed two beautiful white perch in the boat, three-quarters of a pound each, sure. This roused me. I had been fixing the anchor and "taking a bite" for breakfast. The sun had by this time cut the fog, and it was rolling away in big clouds, and the shore came into view by piecemeal. His catch of the two fish had started me at once from my lunch. I rigged my handline, and for a few minutes we had all the fun we wanted. We filled a large water pail in a short time, but had felt no bass as yet. At last I was possessed with an "inspiration." Putting my rod together, a 16ft. bamboo, I fixed the reel and line all right, put on the hook a live shiner, fastened a small sinker just above the leader, put on a float about 10ft. from the hook, hung the pole on the side of the boat with the butt fixed under the opposite gunwale; then I resumed the perch business and "awaited developments." I guess the rod had lain there half an hour, when I saw the butt give. I dropped the handline, seized the pole and held it in a horizontal position and let the line run. How it did sing! The reel buzzed and the line ran through the leaders with a merry hum, I can tell you. I can hear it now, and no doubt many who read this can tell what music it is to them; our finest orchestra cannot produce its equal. I didn't dare to check the line for fear of not hooking the fish; so I let him have it, and when he slowed up to take a fresh hold on the bait I made up my mind to hook him.

Now a great many fishermen hook a fish by "striking" him with the tip of the rod, but I am not an adept at that, so I use the more homely but, to me, surer way of using the forefinger and a quick short snap on the line. I hardly ever knew it to fail. Away the fish ran. John stopped his fishing and said, "Be careful, don't lose him." I told him that I was as eager as he was not to allow him to escape. After he had run on his first rush a good hundred and fifty feet I pulled him up, gave a short snap on the line and stopped him. As he felt the hook prick him he turned and broke water. I never saw such a sight in my life. At that distance even he looked like a big codfish, and it made my nerves tingle I can assure you, for I wasn't sure of him yet. I commenced to reel him in, and would get fifteen or twenty feet on him, when he would make a dash and away he would go again. John pulled up the anchor, got his rod in, and, landing net in hand, waited for me to get him near enough to "net" him. We had no gaff in the boat, so that there was all the more danger of losing him. Three times I led him around the boat, and finally when John lifted him from the water we were both amazed. My nerves, which had been wrought to a high pitch of excitement, relaxed and I sat down on one of the thwarts almost exhausted. Fully twenty-five minutes I had played that fish with an intense desire to secure him, for I knew he was a "whopper," and when I saw him lying in the bottom of the boat I could scarcely stand up. At last I found my breath and said to John, "Now I'll open that last bottle of Bass' ale and we'll drink to the successful capture of 'a dandy,'" and together we drank the contents of the only bottle of ale we had, and it was a royal drink at that.

After having fished most of the day and catching other bass, but none as large as this one, we returned home, and the large one was put on the scales nine hours after it was taken from the water, and balanced them at 5lbs. and 12oz., and it was a small-mouthed one at that. The next morning we came home, and I placed on exhibition in a fishmarket what I claim was one of the best catches of the season in New England—seven fine black bass, the smallest weighing 3lbs. and the largest, as I have said, almost six. This is the best day's fishing I ever did and I don't think many can say more, do you? NAYATT.

PROVIDENCE, R. I.

A TRUE FISH STORY.—A huge salmon, shipped to Senator Mitchell from Oregon some six days ago by Col. James B. Montgomery, of Portland, formed the *pièce de résistance* at a lunch in the Senate restaurant yesterday afternoon. Among Senator Mitchell's guests were the Vice-President, Speaker Reed, nearly the entire Senate, several Representatives, the Senate officials and a number of correspondents. The salmon had preserved its delicious flavor, despite its long journey overland, and was discussed to the accompaniment of many bottles of champagne. Of course it was a great occasion for fish stories. Many wild and weird tales of battles with giant salmon were related to the great enjoyment of those whose credulity was equal to the task of believing everything that was said. When, however, Representative Hermann, of Oregon, asserted that when he went to the State, thirty years ago, he found the salmon so thick in the smaller streams that his horse had to carefully pick his way from shore to shore, lest he step upon them, his listeners thought that nothing was left to be said. Mr. Hermann acknowledged that his statement was hard to believe, but added that he had the evidence of his own eyes for the fact.—*Washington Post*, Jan. 29.

FISH FALL WITH SNOW.—During the snow storm at Nashville, Tenn., on Saturday morning, countless small fish were seen to fall. They were about an inch long and resembled the carp. The greatest number fell on Broad street. Some were found on Union street several blocks away.—*The Evening Star*, Washington, Jan. 26. Fish are often transported by cyclones and other storms. A few years ago a lot of small fishes fell in the streets of a Nebraska town; these proved to be the common fathead minnow of the region. In the vicinity of Nashville the commonest fishes of the carp family are minnows of the genus *Notropis*.

SPAWNING OF RAINBOW TROUT.

Editor Forest and Stream:

In a note attached to my communication on trout fishing in the South I notice your remark to the effect that the rainbow trout spawns only in May. The spawning season lasts from January to May, and in the Report of the U. S. Fish Commission Mr. Livingston Stone, the agent in California, says the season lasted from Jan. 12 to May 2. When I saw them on the spawning beds here in January, 1889, along with female brook trout, the fish was certainly attending on the female brook trout, rubbing himself on the gravel and stones, as is the habit of these fish when depositing the spawn. I took a 3lb. rainbow trout in September last, a female full of eggs, and unfortunately hooked it so deeply that to my chagrin I had to kill the fish. So that I feel convinced that my belief that this species interbreeds with the brook trout is justified. Moreover, I have taken small fish which had all the appearance of being cross bred. The spawning season of the brook trout here lasts until January, beginning late and continuing all through January.

HENRY STEWART.

HIGHLAND, N. C.

[Our statement as to the spawning season of the rainbow trout was based upon the experience in Eastern hatching houses (see Bulletin U. S. Fish Commission for 1882, page 11), when March, April and May were the usual spawning months. Since then the rainbow has been approaching more and more nearly to its habits in California until at present it is a common occurrence to collect ripe eggs from it early in January. It would be interesting to know whether the eggs of the female caught in September were free in the abdominal cavity or some months from maturing. We have never seen a natural hybrid in the salmon family and hope Mr. Stewart will send us anything of the kind coming under his notice. According to all observations so far recorded a cross between the rainbow and brook trouts would differ widely from both parents in markings, notably in having the body profusely covered with pale reticulations. We were led to suppose that the male trout was eating the brook trout eggs because we have frequently seen them eat salmon eggs.]

VIRGINIA FISH AND GAME.

ON the line of New River we have trout in the streams of Big and Little Stony Creek, in Giles county; nearest point to Norfolk & Western Railroad, Pembroke and Ripplemead. Big Walker's Creek, between Pembroke and Ripplemead, is a very good bass stream.

At Narrows we have Wolf Creek, which is a very good stream for bass, and its tributaries, Mill Creek and Clear Fork, both have trout. East River has some bass in it near the mouth. Clinch River, on the C. V., is a very good bass stream. Salt Pond Mountain, fifteen to twenty miles from Pembroke, has quite a number of deer, a few bear, and some turkeys and grouse or pheasants.

East River Mountain has some turkeys. Nearest point is Narrows, on the Norfolk & Western Railroad. The N. C. Division has but little game outside of partridges and quail. New River above Ivanhoe has excellent catfish and some bass. Chestnut Creek is reported as having some trout near its headwaters. The Pulaski Division has but little game other than partridges. Near Saltville the Holston River has a good many bass, and one of its tributaries, Tumbling Creek, has quite a lot of trout. Twenty miles from Glade Spring, on White Mountain, N. C., there is an excellent stream for trout. I have forgotten its name, but it is well known at Glade Spring.

The greatest number of deer in Virginia you will find in the pine woods of eastern Virginia, bordering on the North Carolina State line, at which point they are quite abundant.

PULASKI, Va.

TROUT IN AN ARTESIAN WELL.—At San Buenaventura, Cal., an artesian well was sunk some years ago on the beach a few feet from high water mark. A strong flow of water spouted thirty feet above the mouth of the well when a depth of 148ft. had been reached. The overflow was found to contain thousands of young trout, and examination of the well showed the presence of numberless trout measuring about 2in. in length, and normally developed. The temperature of the water was 64° Fahr. The fish were supposed to come a distance of several miles from the head waters of the Santa Clara River through a subterranean outlet. It is not uncommon to find fish in artesian wells in California. Mrs. Rosa Smith Eigenmann several years ago published an account, in the Proceedings of the National Museum, if we remember aright, of the finding of sticklebacks (*Gasterosteus williamsoni*) in such a locality. In Missouri recently a small blind fish was found in a well and forwarded to the Fish Commissioner at Washington; the species is a common inhabitant of cave streams.

ONONDAGA CLUB.—Syracuse, N. Y.—At the last meeting of the Onondaga Anglers' Club thirteen new members were admitted. A view of the work done by the club during the last season was made and it was decided to go ahead with renewed vigor this year, redoubling their efforts in protecting the game and fish in Onondaga county. The appointment of Harrison Hawn as State Game and Fish Protector was discussed, and members of the club congratulated each other on his advancement. A committee was appointed to decide on a man to take Mr. Hawn's place as a direct employee of the club. Another committee was named to present a list of eligible officers for the club to be chosen at the annual meeting in March. A resolution was adopted thanking the editor of the FOREST AND STREAM and the State Game and Fish Commissioners for aid in securing Mr. Hawn's appointment. The club now has more than 200 members, and the officers hope to see the membership doubled within a few months.

PICKEREL AND BASS IN WINTER.—It is reported that 500 barrels of pickerel and bass have recently been caught and shipped from Damariscotta Pond, in Lincoln county, Maine. This confirms our statement as to the probability of taking bass in winter by pickerel fishermen. We assume that these bass were captured by "fair angling" and not by one of the numerous illegal devices mentioned on page 52 of the *Book of the Game Laws*, and yet it is difficult to see how such a quantity of fish could be taken in a short time without the use of forbidden appliances.

CHICAGO AND THE WEST.

CHICAGO, Ill., Jan. 28.—Mention has from time to time been made in these columns of the perfectly legal but none the less perfectly abominable destruction of game fish that goes on in the Fox Lake system every winter, when the ice sufficiently covers the waters of that chain of lakes. It may perhaps be futile to spend time in regrets over the unwisdom of a practice which has never been checked through legal enactment by reason of the old cry that "the farmers ought to be allowed to catch a few fish for food during the winter." It will be better to show a few facts, based on actual observation, and let them carry their own weight in a movement which will yet secure an enactment in prohibition of this practice. To what enormous extent of destructiveness this ice fishing, under the "poor farmer's" banner, has in the past been carried, any one familiar with the old scenes around and above McHenry well knows. The fish dealers had regular four-horse sleds which made trips up and down the system of waters and gathered up, for the Chicago market, the fish that the "poor farmer" was supposed to be catching for food. Thousands of tons of game fish have been taken from these narrow waters. The sportsmen stock the waters and the residents rob them. Now I propose to assert and in a limited way to prove a few things, out of an actual experience and observation, brief though that may be. I propose to assert that these constricted waters, more especially since they lie so happily accessible as a pleasure ground and sporting field for a large city, ought never to be drained by market fishing, but ought to be left open for the general public. This is an assertion which needs no proof. I propose to show that, so far from the resident farmers fishing in the Fox Lake system for food during the season of ice, he fishes for the market exclusively, and does not even use a part of his catch for food. I propose to show that the very men who do most of their ice fishing are those who offer hotel facilities for the summer fishing tourists, whom they thus rob not only with the one hand but also with the other. I propose to show that this ice fishing kills infinitely more fish and larger fish than summer fishing, so much so that one man alone will in the winter take more fish than all the fishers added together who fish there in the summer season. I propose to show that the extent of this fishing is kept carefully covered up by these lake dwellers, it being left for FOREST AND STREAM to take the lead in an investigation, as has been the case in many other matters. I propose to show that, contrary to what is popularly understood to be the case, there are more black bass than pickerel taken in this winter fishing, and that these two fish and the wall-eyed pike make the bulk of the catch. And then I want to ask: (1) Is all this right? (2) Can we not come close to stopping it, whether or not we pass a law against it? So impatient do I feel over the whole business that I can not refrain from answering "Yes" to the latter question in advance.

A young sportsman of this city, Mr. W. H. Farmer, who goes up to George Clark's place on Lake Maria nearly every week in the year, lately told Mr. Hirth, head of the tackle department of Spalding's store here, of the extensive fishing going on this winter on lakes Maria and Catherine, Channel Lake and others of the string. Mr. Hirth informed the writer: One evening last week the above-named and Mr. Harryman, also of this city, took the 10:45 Wisconsin Central to Antioch, bound on a little cruise of investigation in the interests of good sportsmanship and a good sportsman's paper. At about 1 o'clock in the morning we were met at the depot by a one-horse buckboard from Clark's place, which vehicle was obliged to carry five men two miles across a snow-clad and ghastly landscape. A more uncomfortable ride could hardly be imagined.

In the morning, when we descended to the washroom, we saw racked up on the floor a lot of fish, all frozen, of course. We counted them, and there were 18 black bass, 9 pickerel, 2 bullheads and 1 croppie. The largest pickerel would weigh about 7 lbs., and the largest bass about 8 lbs. "How long were you in catching these, Mr. Clark?" he was asked later on.

"Two days. You see, we ain't fishing much up around here. I just have a few lines out to keep anybody else out of the lake. My land runs part way round the lake. If I didn't fish, some one else would, you know. The fish haven't been biting much yet."

The farmer told us that in his earlier trips he had seen whole boxes of fish in that same room, packed for shipping, and that he did not think 150 lbs. of fish a day, taken on Lake Maria alone, any unusual catch. Counting in Loon Lake, Catherine Lake and Channel Lake, all lying right about Antioch, and allowing 100 lbs. to the lake on a good day, two good days to the week, and eight weeks to the season, we would still have a total of 4,800 lbs. But this is not a just estimate, for instead of two days in the week, these men fish seven days. Allow 50 lbs. a day for each lake, and seven weeks for the season, and the total for these four little lakes would be 9,800 lbs. This is more than five times the total of fish caught by anglers on these lakes in the fishing season. Bear in mind that this does not touch Grass Lake, where Lewis Paddock fishes, or the Great Fox Lake, where the farming public fishes, or Nippersink or Pistagua Lake, where the rabble fishes. These waters are much larger, and the catch there is much greater in the average year. We have to do now with only a limited area and a few of the lakes most frequented by the bass fishers in the season. We shall later on see the reasons for believing the above estimate of the winter catch for these four lakes to be small, but first must stop to give a few remarks made hereon by honest Geo. Clark, downtrodden farmer, summer resort keeper and winter fisher. In scoring Mr. Clark I have this to say, that he is no worse than his neighbors, and deserves no worse; but they all deserve the very worst that a newspaper, in search of facts that bass anglers don't know, can possibly give them. Mr. Clark said to us, reasoning after the manner of his kind:

"We catch the biggest fish in the winter time, sometimes pickerel of 16 to 20 lbs., and big bass. These big fish don't bite at all in the summer time, and so we might as well catch them as not."

Wise Mr. Clark! It has been said that a mill will never grind with the water that is past. The fish that Mr. Clark catches in the winter will never be caught again in the summer, and that is about all the accuracy there is in his statement. Anglers will make the most of that, Mr. Clark also said:

"It don't make any difference how many fish we catch here, because all these lakes are fed by the Fox River, and the fish run right in again."

Of course it doesn't, Mr. Clark! You have a great head for facts. Your set lines don't make a bit of difference in the fish supply. If yours do not, none of the others do, do they now? None of the set lines, miles of them, out on the ice now below you, from Grass Lake clear on down to Pistagua, make any difference, do they? So if a fish started up from Pistagua to your lake, via the Fox River, and got caught on any one of 400 hooks on the way, why, you would catch that same fish in your lake just the same, wouldn't you now, Mr. Clark? And if 400 fish started up, and all got caught on certain of 2,000 hooks, why, you would catch all 400 of them in your lake just the same, wouldn't you, Mr. Clark? Your reasoning is lucid. Of course, it doesn't make any difference how many fish you catch. It doesn't make any difference that the clubs keep on planting fish for you to catch and sell. It doesn't make any difference about the bottom of a water barrel, so long as it is raining, does it, Mr. Clark. And it will always rain, of course, won't it, Mr. Clark? Allah is great. So are you, Mr. Clark. You are great on facts, and particularly great on logical inferences.

By "Mr. Clark" I mean no one man, except this one as in his capacity of mouthpiece for them all. I mean Asa Paddock, Lewis Paddock, Israel Garwood, the Savages, and, lower down, the Stanleys, and everybody else who is in this same robbing business along the lakes. Personally I have not the slightest feeling against George Clark, and I like his family, which is a large one and a pleasant one. And before I am done I am going to show him that a great sportsman's paper can be so kind to him that he will just be ashamed to keep up this ice fishing, or to allow his neighbors to do so. So much in passing.

Mr. Clark said that no one was fishing Loon Lakes, because the ice companies there kept the ice out too much. He also often said that very little fishing was going on anywhere about the lakes. However, when we were driving over to the station he contradicted this. Some one remarked that the Loon Lakes were the best bass lakes around Antioch, possibly because they were not fished so much in the winter. "They ain't, hey?" said Mr. Clark. "Fished just as much as any, all the time, and they haven't any connection with the river, so 't the fish can run into them." There spoke impulsive the summer resort half of Mr. Clark, whose cottage stands on the shores of Lake Maria. Boats so much a day. Board, so much a day. Bait and tackle always on hand. Best fishing in the region.

When we were riding over to the house on the buckboard, that first night we asked the boy who drove us what luck they had had fishing.

"Oh, not much luck," was the reply.

"How many pounds have you shipped?"

"Oh, not very many."

"Haven't you got the bills of shipment?"

"Oh, I don't know."

Commendable reticence. Mr. Clark was equally reticent. We did not get to see any shipping bills. A stranger going up into that country now would be quietly led to believe that very little, if any, fishing was going on about the lakes. The anglers never go up there in the winter; so they don't know anything about it. The facts don't get out. The evident effort to conceal the facts is the best indication of their seriousness. We had to get at them by indirect methods. It happens that Billy Farmer goes up twice to Clark's nearly every week, including the winter season, when he puts in his time rabbit hunting. We had his statement as to the amounts of fish he had actually seen there ready for shipment. We saw a few fish ourselves. We had Mr. Clark's personal statement that on account of the snow the fish were biting very poorly at that time, and that it was still too early for them to bite very well. He further said that he caught more bass than anything else, and that the bass bite best late in the winter, just as the ice was breaking up. We decided to supplement these bits of information with a look at the means and implements used in this business, knowing that from their extent something of the probable or expected results could be estimated.

Clark's place stands on the neck between Maria and Catherine, and Channel Lake is just beyond. After breakfast we went down to Lake Maria and ran the lines that were out on that lake. We found the method of fishing very simple. The hole in the ice was but a few inches square, and each hole was marked by a "tally ticket," set up in the ice beside it. The line was tied to a stick laid across the hole. The line was about 25 or 30 ft. long, but the hook was suspended only 2 or 3 ft. below the surface, the body of the line being rolled up and confined by a loose loop so arranged that when a fish took the bait the line would unfasten and pay out. The bait used was lake perch, from 3 to 5 in. long. These perch are caught by hundreds with hook and line, out of the fishing shanty we saw standing over a deep part of the lake. The bait used for them is a white worm ("borer") found in the winter in hickory logs. They bite this with eagerness. We found a big bait-box well filled with young perch, sunk out in the middle of the lake. As the holes freeze over during the night, a spade-pointed iron bar is carried along to open them when running the lines. The whole business is carried on in a very practical manner.

Now, about the number of lines. We did not have time to run all of them, but we saw enough. I do not know the exact size of Lake Maria, but it is more than a mile across, and more than four miles around. The fishing shanty was near the center, and from this, roughly speaking, there ran three curving lines of "tally-sticks" toward the shores, whose outlines they followed for a distance. One row ran out toward the shore to the left of the house, one swept far into the bay clear across the lake, by the timber, and another swung around nearly to the point toward Channel Lake. The holes were 15 to 25 yds. apart. I think a reasonable estimate would make the number of holes at least 150. Mr. Clark did not know just how many he had out, but said there were "only a few."

We could see the long line of "tally-sticks" running across Channel Lake, and we saw a man over there running the lines. Mr. Clark said it was Israel Garwood, who had claimed that lake. He supposed his lines also were "only a few." We will suppose 100. After dinner we went over to Catherine Lake and again saw the tell-tale lines of sticks. Mr. Clark said it was "Joe Savage's boy" who was fishing over there. He had out "only a few" lines. Let us say 100.

The lowest possible estimate gives 350 lines out on these

three lakes. Personally I do not think there are less than 500 baited hooks fishing now, day and night, on these three lakes. On the whole system, how many thousand? And this is where we are asked to go and spend our money fishing in the summer time. We are cordially invited to come and live with men who are plain, simple-minded, two-handed robbers.

After this I do not want to hear anything more about the down-trodden farmer who fishes for food. My sympathies are with any poor man, but they are not with these men. Mr. Clark didn't offer us any fish to eat. He doesn't catch these game fish to eat, he catches them to sell. The bulk of the fishing done on this chain of lakes is on precisely the same basis.

We were not out fishing, and we ran the lines hurriedly. We found but one fish of any size, a pickerel weighing about 7 lbs. The fish were not running that morning. When they are feeding, picture to yourself the work that 500 baited hooks, fishing day and night, can do, and this through a winter season. Ed. Howard tells me that they take fish away from Fox Lake, lower down, by wagon loads. Ed. Howard is a sportsman and a sensible man, and you do not find him doing any such work as this ice fishing. He deplores it and condemns it.

Now, we may do a little sum in figures. Mr. Clark—meaning Mr. Paddock, Mr. Garwood, Mr. Savage, Mr. Summer-resort man in general; I would include Ike Smith if he were not too lazy to get out and fish—gets 4 cents a pound for game fish. That is, 20 cents for a bass that many a man would give \$5 to catch, and would spend \$20 in trying to catch, and would have to lay out \$50 before he could catch, and then probably wouldn't catch, and would come again and try to get another season. Let us suppose that Lake Maria turns out to the genial two-handed robber this winter 2,250 lbs. of fish. This would mean \$90, and a lot of hard work. It would spoil angling to the exact extent of 2,250 lbs. of fish, and would rob the lake of the cream of the angling, the large fish which any angler especially desires. Yet it would net our honest two-handed robber just about what three anglers, who did not bring their families, as many do, would spend in their occasional little bass fishing trips to these lakes in a single season, making the estimate a very reasonable one. Boat, boatman, bait and board cost at the lowest \$3 a day. In other words, if this article succeeds in turning away to better and more fair-minded localities only three regular anglers of that region, the winter fisher who has their summer custom will at the end of the year be just even on the deal, barring the winter of hard work, which I am prone to believe the average market-fisher does not love. There are some few hundreds of copies of FOREST AND STREAM, and some few hundreds more, and yet a few besides, that sift in every week within earshot, so to speak, of this lake region. I believe it a modest prophecy to predict that at least three gentlemen will change their minds after they have thought these things over. There are plenty of good bass fishing places near by Chicago in other directions, as I personally learned last summer. Why not go there, and be robbed with only one hand at the time?

I do not wish to assume in the least, but it is true that in the course of a season a good many people come to me and ask where to go fishing for bass. I have sent numbers of anglers to these lakes about Antioch. My friend Mr. Clark has doubtless had some of their trade. He may be assured that while he keeps up his winter fishing he will never get another penny, chance or otherwise, from that source, for I do not think he is doing what is right. I am only one man, with no more influence than many another man in these matters, but each man has his friends, so that I believe it well within reason to say that I alone, or any one of my angling friends, can cost Messrs. Clark, Paddock et al, or the town of Antioch, say, more than that \$90 worth of fish comes to. And that is just what I am going to do. I do not spend spend another dollar in that town while these men insist on robbing with both hands, and if I go up at all will take my own boat, camp out, and buy my grub in Chicago. Some of my friends will be feeling the same way. Each man has his friends. Why, our little party last week left \$7 with Mr. Clark, and we liked him and his family so well that we would be glad to go up next summer and spend five or six times that paltry sum with him. But he has got to get out and hustle in just 175 lbs. of fish to make that \$7, and every other \$7 we might pay him; for not another cent from us does he get while he keeps up this winter fishing which we believe to be not right. Mr. Hirth sells a good many thousand dollars' worth of fishing tackle in a season. Naturally, some few of these purchasers will ask for a good place to go fishing. Will it be natural for Mr. Hirth to say, "Why, go to the lakes up at Antioch, where they have 500 lines fishing day and night, the winter through?" I think not. Let us go further on yet. Next Wednesday the Fox River Fish and Game Protective Association holds its meeting. Those men are pushers. They are out for results. They have more enthusiasm, and more energy and more money than any of our little party can claim. They mean business. It will be too soon to lay this paper before them at that meeting, but I shall take pleasure in presenting these same facts to them. It will go hard if we do not find there two or three men who will push this thing along a little, and these two or three will have their friends among the bass fishers, and these again will have theirs.

Thus you may see, Messrs. Clark, Paddock and all dwellers in and around the slab-sided city of Antioch, where they sell emaciated bacon and tough coffee in the summer at \$1 a day and dear at that, that even two or three men can knock the last dollar of profit out of your winter fishing, and moreover they are going to do it. What can the body of Chicago anglers do, when it gets to thinking about this? It can make your fishing still more profitless, can't it? Now, do you want it that way? Your fishing is perfectly legal, but perfectly abominable, and also unfair and unjust. You can fish if you want to. You can sit in the road and pound sand in your eyes if you want to. But do you want it that way? Come now.

But, gentlemen resident about the lakes—for to you as much as to the public this letter is written, and every one of you shall have a copy of this letter, as far as I can leave your names—let us mark off all the above and leave it as unsaid. I would much rather have it that way. What would you do then? You are not doing right, you are not acting on the square now. You are not being just to the men who pay you most of your income. Aside from the fact that your ice fishing if persisted in will not earn you anything but will cost you

money, it is not the right thing to do. Have you looked at it in this way? Now, suppose you join the Fox River Association, and instead of trying to kill all the fish you can, try to save all you can. Suppose you use your influence to stop this winter fishing on the Fox Lake system, which influence is worth more than anybody's. Don't you think that the Fox River Association would shake hands with you with all its heart? Don't you think that the Fox River Association, and this paper, and the friends of both, would gladly help you all they could, and would not that help aid you financially each season more than you can just now exactly measure? Make it a plain matter of farmers and right, gentlemen, that is all that is asked. FOREST AND STREAM would, I know, infinitely prefer to see the matter settled in that way. Meantime, any one who is wronged or misrepresented by this paper can have his day in court, and it would be a pleasure to see any inaccuracy corrected. E. HOUGH.

SUNAPEE TROUT.—Cambridge, Jan. 30.—*Editor Forest and Stream:* My attention is called to the fact that in your journal, Nov. 27, 1890, I gave the date 1885 for the first Dan Hole trout received here. This mistake arose from placing the specimen with others from Sunapee, for which the date is correct. Subsequent discovery of Mr. Hayes's letter fixes the date as April 14, 1884, as printed in *Shooting and Fishing* for Jan. 1, and in the Report of the Massachusetts Commissioners for 1890. Will you kindly set the matter right?—S. GARMAN.

FISH DESTROYERS IN MINNESOTA.

MINNESOTA has no game wardens, more's the pity. The last Legislature appropriated \$200 for a fish warden on Lake Superior. Capt. Jake Hector, the appointee, has done as well as any one could under the circumstances. He appointed a deputy and pays him \$100 more than he gets himself, which I think is pretty liberal and shows he believes in the office and that it should be maintained.

Considering our resources, we made a record of which we by no means feel ashamed. Our planting of brook trout has been particularly successful, and our trout fishing is good wherever streams have been stocked. The streams and lakes which the Commission has planted show unmistakable results as to the benefit of such stocking, and the interest in the work by the intelligent public is undoubtedly on the increase. Our State, as is to be seen by a glance at our map, has thousands of lakes and streams scattered in almost countless numbers. It is, indeed, most bountifully provided with lakes and streams of the purest water, and nothing but the wanton, extravagant and destructive modes and times of taking fish would render it necessary to introduce artificial propagation. Thousands of summer visitors who come to Minnesota for the season, slaughter uselessly day after day and week after week with relentless persistence, going from lake to lake indefinitely bent on piscine murder, and to simply be able to shamefully boast of enormously large strings of fish taken within the shortest number of hours. Our visitors, however, are not all of this kind. Many of them take an intelligent interest in the matter, and are really beneficent and try to educate our native fish killers, who outnumber the tourists and sojourners and out-kill them in the desire to slaughter, but lack the appliances and leisure to destroy. Thousands of pounds of fish are yearly killed by such people at spawning time in the spring, when running up the narrow and shallow streams from the rivers or connecting lakes. I have been told that fish have been pitched forked out by the cart load for bog food, manure, and in many cases "just for fun, to see the damned things squirm." Such wanton waste and cruelty has its just and inevitable results, and the only regret is that the innocent have to bear the penalty equally with the guilty. When I get to thinking of it I almost wish old Pollio had an eel pond in this vicinity. I think I could point out lots of people that even Augustus would not object to having pushed in for eel food, much less get mad and smash the balance of Mr. Pollio's crockery. R. O. SWEENEY, SR.

DULUTH, Minn.

SAWDUST IN TROUT STREAMS.

Editor Forest and Stream:

As the season will soon be upon us when those of our brother anglers who take delight and rest from business cares by enticing the spotted beauties from the cold streams in which they are found, a great many disciples of Izaak Walton are inquiring where to go and shall we find trout, or shall we find the streams where trout used to abound now depleted of fish and the waters filled with sawdust?

The reply, although hard to give them, yet from general as well as individual experience, would be: You will probably find a few trout and a great deal of sawdust. This, according to sportsmen who have followed the brook fishing in New Hampshire for years, is undoubtedly true. It was only a few years ago that one could get good brook fishing. New Hampshire has a great many large wide streams with deep pools, where could be caught a string of trout large enough to satisfy the longings of any true fisherman; but what is the fishing to-day? With but a few exceptions those now caught are small fish. These trout when small are found at the head of the small streams, which are the headwaters of the larger streams, and which as they grow in size naturally seek larger and deeper waters, and as they work down toward the deeper holes in the large streams what do they find? Generally a sawmill emptying large quantities of sawdust, which flows down stream, filling the water and depositing itself along the banks as it goes, until the shores along the entire length of the stream are covered with it.

One stream I had brought to my notice last summer: on a trout trip to Ossipee I had planned to fish Lovell's River and its branches, there being about six miles of good water for trout, but there was so much sawdust floating down from the sawmill at the head of the river that fishing with any prospect of success was out of the question. For several miles you could see the sawdust floating down as well as piled up on the banks, in some places from a foot to three feet deep, so that when wading the river you did not know whether you would sink down a foot under the surface or go over your waders. In Gulf and Colby brooks, which run into the head of Lovell's River, by going up stream far enough so as to be above the sawmills, plenty of small trout were found and no sawdust.

In the Saco River, from Crawford Notch to Conway, there used to be good fishing, also in Swift River, a branch of the Saco, and which joins it at Conway Corner; this is a stream which has from ten to fifteen miles of wide, deep water with plenty of large pools, out of which trout used to be taken, but now the same fishermen who have followed this stream for years are satisfied if they catch a few fair-sized fish.

Is there no way by which the sawmills can be stopped from emptying their sawdust into these streams?

On referring to the fish laws of New Hampshire, I find no clause which gives any definite information on this point, but find the following law: "Poison and Explosives.—Sec. 10. Any person who shall take, catch, kill or destroy any fish

in any waters of this State, by the use of any poisonous, deleterious or explosive substance, shall be fined not more than fifty dollars for each offence, or by imprisonment for not more than ninety days, or both."

Now, does this law relate to this difficulty? Can the State stop the mills from letting out their sawdust, which by so doing spoils one of nature's greatest gifts, and instead compel them to burn or otherwise destroy it?

Our brother anglers would like to be informed on this subject. In asking for information, I would state that at Ossipee Lake, which is leased by a water power company, is a sawmill which is not allowed to empty its sawdust into the lake, but is obliged to store it on the shore and then burn it.

Why should not mills that are on State waters be obliged to dispose of their sawdust in the same way as mills that are on waters leased by private concerns? OSBORNE.

NEVADA FISHCULTURE.—The inaugural message of Governor R. K. Colcord to the Legislature of the State of Nevada, transmitted Jan. 19, contains the following favorable notice of the recent report of the Fish Commissioner: "The report of Hon. Geo. T. Mills, as Fish Commissioner, is full and complete. It is a most careful résumé of his work and contains many interesting facts and details. The attention of your honorable body is particularly called to the Commissioner's statements relative to the depositing of sawdust in the Truckee River. The best of results are being obtained by Mr. Mills, and as an encouragement to the conscientious fostering of our fish interests I ask a judicious reading of the report and such an appropriation as you in your discernment may then deem suitable."

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.
March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, Secretary.
March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Little, Secretary.
March 14 to 18.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.
March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.
April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

I have read the controversy over the cocker in the late issues of FOREST AND STREAM with great interest. Having been an exhibitor of spaniels at most of the principal shows since 1883, I have carefully watched the decisions of the different spaniel judges. My observations do not lead me to the same opinion as "Gothamite." At the New Haven, Conn., show in 1885, Mr. James Watson judged spaniels, and did it satisfactorily. Among the entries on that occasion were such celebrities as champion Obo II., champion Miss Obo II., champion Shina, champion Juno W., champion Sport, Young Obo, Obo, Jr., Dido W., Woodstock Belle, besides others of lesser note. I don't think a class of cockers of the same quality has been got together before or since. I met Mr. Watson and Mr. Mason for the first time at that show, and have frequently discussed cockers with both gentlemen, and I know that the statement by "Gothamite" that these men started the long and low craze, as he calls it, lacks fact as a foundation. I fancy that the best informed breeders will agree with me that the craze, so-called, originated in breeders importing cockers from England, where the long and low notions prevailed, and these importations having more quality, as a general rule, than the spaniels then in America, were taken as the standard. It is pretty well known that Mr. Mason considers Miss Obo II. the best cocker spaniel in America (or did when she was at her best). No one will claim that she can properly be classed among the long and low division. In my opinion there is no more competent and conscientious spaniel judge in America than Mr. Mason, notwithstanding the statements of "Gothamite" and any other writers to the contrary. I hope that this discussion will result in benefit to the little cockers, and also hope that the classification for cockers at the different shows this year will be better than it has been. Surely the cockers are deserving of the same attentions as fox-terriers. ANDREW LAIDLAW.

WOODSTOCK, Ont., Jan. 26.

Editor Forest and Stream:

"The end justifies the means," is a well-known tenet of the Jesuit faith. I am not a Jesuit, but I am a convert to this belief of theirs to a certain extent. Therefore I set this cocker pot-a-boiling by writing the "Gothamite" letter.

Mr. Mason is right in so far as the identity of the anonymous writer went, but he altogether misconstrued the motive for my action, as the letter written by me to Mr. Wade very near the beginning of the warfare, goes to prove.

Had it not been for my Hulton friend's advice I should have explained the matter ere this; but he thought it best to "bluff" it out a little longer to keep the pot at boiling pitch. It has boiled over and it is now time to remove the lid.

The "prominent fancier" need not trouble to bring up a motion for my expulsion at the next meeting of the Spaniel Club. His "energies" can be "reserved" for some future occasion. I resigned as a member of the club about a month ago. There is nothing of whatever has been done by "Gothamite," and on my shoulders must rest the entire blame. Not even to my good friend the editor, was the revolutionary scheme confided, and until within one month Mr. Wade was my only confidante. Later Messrs. Watson, Fellows and Winemering were enlightened.

"Obo" insinuates that this was a mere advertising dodge and that others were concerned in a disreputable scheme with the writer. Not one living soul knew anything about it, save myself.

As my letter to Mr. Wade explains, the "Gothamite" letter was written simply to provoke a controversy that would draw the usually Sphinx-like spaniel men in, and well has it succeeded, though besides boasting cockers my petard has blown up the man with the match!

When before has such an array of spaniel men taken part in a public controversy? Watson, Willey, Oldham and other usually silent ones! My point is gained—every one seems ashamed to declare in support of the long and low cocker spaniel. That letter was difficult to concoct, but it has been as effective as a ton of "blue pills."

For the misstatements intentionally made by me as

"Gothamite" I apologize. Of those gentlemen whose feelings I *advisedly* hurt, I crave forgiveness. They have given me harder knocks than any I dealt them, and I bear no ill will for the "punishment" received. Good has been done to the cocker spaniel cause by this turmoil, and to achieve such an end I would gladly "take" far more.

Now that your readers have been satisfied as to the identity of "Gothamite," I trust we shall read something on the "Cocker Spaniels of 1890." With added apologies for the sins of "Gothamite," I sign myself, *in propria persona*, F. H. F. MERCER.

OTTAWA, Canada, Jan. 31.

[Mr. Mercer's letter to Mr. Wade, dated Jan. 1, has been forwarded to us, but as it contains nothing more than appears in the above letter, there is no use in publishing it.]

Editor Forest and Stream:

I was asked some time ago to take part in the spaniel warfare raging in your paper, but deferred, and now simply write to express my sympathy for Mr. Mercer, who is undoubtedly the sinful "Gothamite." Not that this gentleman has any claim upon my consideration, for I have a faint recollection of his having attempted to make capital at my expense, but as he failed in this I harbor no ill-feeling. It is rather in his having to contend against such overpowering odds, and against such unmerciful critics, that I hold up my hand and call a halt. "Gothamite" has had more than enough, he has had too much for his own good, and the desire to kick him because he is down is being indulged in a trifle too freely. Mr. Mercer is certainly an enthusiastic spaniel man, an interesting writer, and when he has paid sufficient attention to the different varieties—other than Clumbers—he may perhaps be able to write a technical report, or pose as a critic. Some of those who so strongly condemn the kind of scribbling "Gothamite" has indulged in, have made great errors in their own reports and awards. One particular instance is in my mind where one of these judges awarded the spaniel prizes in such a manner that even I, who was only then a junior in the show ring, could not help saying that I got more than my due. This honest, straightforward expression was met by a shower of complimentary language, but I afterward demonstrated that my modest opinion was right, and when I think I have acquired sufficient knowledge to speak with authority on spaniels, I will try to tell my fellow members of the club something to interest as well as enlighten them. I am not contemplating a book, oh, no!

I like Mr. Willey's advice, and think Mr. Mercer will do well to take it to himself. It is folly for a child to attempt to teach his father, but there is no reason why the son should not commence where the father left off. There is, for instance, in Mr. Willey's kennel a cocker with a head which ought to be the form and mould of the future cocker. Mr. Willey has been years in reaching this and other points, just as it took Mr. Burdett, Dr. Spurgeon and Dr. Boulton years to make the Beverly strain of field spaniels. May we hope that Mr. Willey's followers will not be novices of the "Gothamite" order, who will take but as many months to undo the work of years, as was the case with the Beverly breed. Let us praise what is worthy of it, condemn what should be condemned, but let it be done more as the gardener acts with plants he wishes to train and improve, and not as the woodman felling the tree. Conscientious, honest, and above all experienced judges and reports, are as much needed as the independent medium, to guide the novice as well as the skilled breeder. EDWIN H. MORRIS.

NEW YORK, Jan. 31.

THE MARYLAND KENNEL CLUB SHOW.

Editor Forest and Stream:

The second annual bench show of the Maryland Kennel Club will be held here on the 3d, 4th, 5th and 6th of March next, and because of our great success last year, we have this time secured the 5th Regiment Armory, which is three times as large as the hall we had last year. The Armory is centrally located, well ventilated, and will accommodate 750 dogs. The show will be benched and fed by the well-known Spratts Patent, and will be disinfected by "Sanitas." Mr. John Reed, of New York, who every one recognizes as the man best qualified to look after dogs at a bench show, will be here in the capacity of superintendent, which insures to those entering, the best attention for their dogs. The prize list is more than double that of last year, and to principal breeds we offer \$15, \$10 and \$5, besides a kennel prize for the best four of each breed of \$10.

We have engaged the following judges: Mr. James Mortimer for Russian wolfhounds, pointers, field, cocker, Clumber, and Irish water spaniels, collies, fox-terriers, pugs, King Charles, Blenheim, Prince Charles, Ruby and Japanese spaniels, Italian greyhounds, Mexican hairless and miscellaneous class. Mr. Harry Lacy, of New York, for mastiffs, St. Bernards, bloodhounds, Newfoundlanders, Great Danes, foxhounds, deerhounds, greyhounds, poodles, Basset hounds, dachshunds, beagles, Irish, Dandie Dinmont, bull-Skye, Clydesdale, black and tan, Yorkshire and toy terriers. Dr. H. Clay Glover, of New York, takes English, Irish and Gordon setters. Mr. Chas. D. Cagle, Baltimore, bulldogs. The Chesapeake classes have not yet been assigned. We hope to be able to announce the judge for this class in next week's paper.

The following specials have been offered to date: The Pointer Club of America offers \$10 for the best pointer dog in open class and \$10 for the best pointer bitch in open class, to be competed for only by dogs owned by members of the Pointer Club.

The St. Bernard Club of America offer: Club medals for the best American-bred smooth-coat dog, smooth-coat bitch, rough-coat dog and rough-coat bitch. To be competed for only by members of the St. Bernard Club.

The Bulldog Club of America offer: The Bulldog Club's silver medal for the best bulldog or bitch in the show; also the club's silver medal for the best American-bred bulldog or bitch in the show. To be competed for only by dogs owned by members of the Bulldog Club.

The Collie Club of America offer: Silver club medal for best collie, not over two years old, in the open class. Bronze club medal for the second best collie in open class. Bronze club medal for the best collie in the novice class. To be competed for only by dogs owned by members of the Collie Club.

The National Beagle Club offer: A suitable piece of silver, value \$15, for the best kennel of four beagles entered and owned by one exhibitor. A suitable piece of silver, value \$10, for the best beagle dog in the show. A suitable piece of silver, value \$10, for the best beagle bitch in the show. To be competed for only by dogs owned by members of the National Beagle Club.

Other specialty clubs have offered special prizes which we will announce in next week's papers.

All railroads centering in Baltimore will carry dogs free in baggage cars when accompanied by owner or care-taker. Adams Express Co. have agreed to return all dogs free on which the full rate has been paid one way, provided they are returned to the original shipper and are accompanied by a certificate from the secretary stating that the dogs were on exhibition at the Baltimore Dog Show. The United States Express Co. have also agreed to return all dogs free when accompanied by a certificate from the secretary.

Our premium lists are now ready and can be had on application to the secretary's office, 220 North Charles street, Baltimore, Md. W. STEWART DIFFENDERFER.

BALTIMORE, Md., Jan. 31.

THE ELMIRA SHOW.

[Special Report for Forest and Stream.]

THE second dog and poultry show given under the auspices of the Elmira Poultry and Pet Stock Association was held at Elmira, N. Y., Jan. 22-26. On account of some red tape they were not admitted to the A. K. C., but the show proved such a grand success that a kennel club will be organized to look after the interests of the dogs in the city and vicinity. I have attended all the shows in America for the last 12 years and I never saw so much quality at a small show before; out of the 125 dogs banded there were only two poor ones, and as they were wrongly entered, the prizes were withheld; one was a Boston bull-terrier, entered as a bulldog, and one was a soft-haired Scotch terrier; this new breed originated in Boltonbrook, Ga.

When Elmira people like anything, their ecstasy knows no bounds and their joys no limit. This was the case with the fancy chicken and dog show. The exhibition was highly meritorious and was liberally patronized by the best citizens. The wealthy and poor touched elbows in their ecstatic admiration, and everybody seemed happy and well pleased. The Elmira Poultry and Pet Stock Association is to be commended for providing so fine an exhibition.

The benches were the old-style open benches, the food was Challenge food, and the dogs did not have to be starved before they would eat it. Sanitas was the disinfectant used, and the place was at all times free from bad odors. C. S. Wixon, of Covert, N. Y., was superintendent, and of course the comfort of the dogs was well attended to. The committee and citizens generally did all they could to make it pleasant for visitors and exhibitors. Your correspondent is under many obligations to C. C. Thacher, of Inter-State Fair fame, Ray Tompkins, C. A. Bowman, Dr. Ross, H. Gaylord and others.

J. Otis Fellows judged all classes; he must have given satisfaction as there was no kicking. As usual, he made many friends, and the *Telegram*, one of Elmira's great institutions with a circulation of 170,000 copies a week, published his portrait and a short sketch of his life.

Mastiffs were a good class of ten, with the well-known and often described Ilford Chancellor and Lady Colens in the challenge classes; only one dog in open class, J. Ott's Kenwood; he is a large dog but light in bone and fiddle-headed; has good action. In bitches, the Flour City Kennels' Cautious Girl and Miss Cautious were first, with Ott's Embla reserve. Mr. Whitney's dogs were shown in fine condition, and he is laying the foundation for what will soon be the best kennel of mastiffs in the United States. Abe Geis is a good handler, but I rather think his dogs have too much to eat and not enough exercise.

The Swiss Mountain Kennels' Arch Duke was alone in the open St. Bernard dog class and won; he is a fine large dog of good type and expression, a real good-fronted dog, but like the lamented Otho, not right behind. Mr. J. H. Clark exhibited quite a fine bitch by Alton. The puppies as a whole were not first-class.

Great Danes had only one entry, Don, a harlequin dog of the mastiff type.

Newfoundlands one entry, a second-class dog which was awarded second prize.

Russian wolfhounds had two entries, Valdimir and Princess Irma, of the now celebrated Krlituk-Elsie litter. Valdimir is an extra fine dog, whose head is just 12 in. long, he stands 29 in. at shoulder, and it will take a good pup to beat him. Irma is a trifle smaller.

The Hornell-Harmony Kennels exhibited four good greyhounds. Harmony, Hazlehurst and Fannie M. have been shown and have won so often that they are well known to your readers. I consider the handsome black and white bitch pup Marguerite the best pup that has ever been shown from the celebrated champions Balkis and Cassandra. She is just about as near perfection as I ever saw, and if she does not go off, has a great future before her.

Pointers had only one dog in the open class, Wagg; he is thick in skull and does not move right. The bitch class brought out as fine a light weight bitch as I have seen in a long time, Beppo Lass (Beppo-Christmas Vic). She is liver and white, perfect in head, outline, legs and feet. If Mr. Anthony wants Beppo blood he should try to secure her. Abe Geis, of Rochester, won second with Cora, quite a fine bitch, but her feet are too open. Harry Flood's handsome liver and white pup was alone and won first in the puppy class; she is as near perfect as we can hope to see them.

There was only one English setter, a fine dog, King's Rocket, fit to show anywhere. Irish setters brought out a good class. Mr. Ray Tompkins' Friar Tuck, first, is a dog of many fine points, just a bit off in head and shown a little too fat; perfect in legs and feet, color and coat. He was south all last season, but was shown in perfect condition; he only lost the special by a very small margin; he will be shown at New York. Nimrod and Gip are both good, but lack the color, coat and form of Tuck. In bitches C. A. Bowman's Quail is a beauty, a little on the small size, perfect in legs, feet, head, type, color and character. The Glendyne Kennels' Bristol, R. L. Sedan II. is the opposite type to Quail, quite a large bitch of good style, short of coat and feather. The same kennels' Lucelle is a bitch of good quality but shows age; she got the reserve card. J. H. Arnot's Eileen, third prize, is litter sister to Quail, but does not stand on as good legs and feet. Dr. Ross's fine puppy Juno has a queerly shaped skull, but it will improve with age.

Gordon setters—only one shown, Trite, not a crack but a good business dog.

In Clumber spaniels, Dash, a dog by Boss III., who has Boss's field spaniel head, was given second; first withheld. The bitch Floss, who is a more typical Clumber, was first in bitches.

Beagles were a good class in challenge dogs; the well-known Royal Krueger added another to his long list of wins, beating Racer, Jr. As soon as Royal Krueger had won Mr. H. L. Kreuder offered \$500 for the dog, which offer was refused, as the H. H. Kennels want the Boston special and could not win without Royal Krueger. In challenge bitches, the H. H. Kennels' Una won over the Rockland Kennels' Myrtle. In open dogs, Tomboy, alone, was first. I believe this is Dan O'Shea's old dog, and should be in the challenge class. Rockland Kennels also won first in bitches with Belle of Rockland; she was not on her bench when I was taking notes, nor Emeline, who won first in bitch puppies. Little Wonder, first in dog puppies, and Zillah, second in bitches, are both a good type of beagles. The unbeaten Ava W. was first in the under 12 in. class; both kennels had good dogs in fine condition; the H. H. Kennels had the most sorry lot.

In cocker spaniels the Swiss Mt. Kennels' Hornell Lady was absent, and J. Ott's Topsy P. won first, a fair type but undeveloped.

Elmira was always famous for her foxhounds, and the name of her greatest breeder, Terry McCann, is known throughout the land. He won first with Sing, a fine large black and tan, second with Loud, third with Jack, and vhc. and reserve with King; also first in bitches with Belle. All are good type with the best of legs and feet. Your kennel editor knows that they can run, and should be proud of the fact that in the fox chase at the Inter-State Fair, Elmira, in 1889, they finished all the races just as he placed them. And yet some judges (?) do not look at the legs and feet. W. A. Goodrich also won vhc. in dogs, second in bitches, but his dogs are too much of the harrier type.

Collies.—The Rev. Father Kelby, of Towanda, Pa., is now the owner of Prince Charlie, a large dog of great character, who has often been written up. Second prize was given to a black dog who did not deserve it; but his owner is a fine old man who belongs to the club, attends all the meetings,

is prompt in paying his dues, and so he was entitled to the prize, even if his dog was a little off. In bitches Sable, owned by G. E. Stevenson, of Clarks Green, Pa., won first; quite a good type of collie, but coat not correct; and the same may be said of Drive, first in puppies.

In bulldogs the prizes were withheld. In bull-terriers quite a fair dog was shown—Velder's Patsy—but he is getting awfully thick in skull.

Bacchanal, alone in the fox-terrier challenge class, is still keeping in good condition; his excellent coat and feet are still as good as ever; his only failure is his teeth, which is to be expected at his age. Le Logus is a fine and greatly improved dog; he has a splendid head, good coat and legs; feet a little large, but he will do a bit of winning yet in the best of classes; he was placed first. Second went to Valens, a good dog in head, body and legs, but one of his ears is stiff and upright; he has improved since I saw him at Binghamton a few weeks ago. Hillside Gaudy is an excellent young bitch, just the type I like; good cobby body, good legs and feet; it will take a good one in her class to beat her; she was placed first. Second went to Oriole Verona, a nice young bitch, rather shy yet in the ring, has good head and body; does not carry her ears in good shape. Third went to Blemton Rapture, a fair bitch, but too long cast and does not carry her ears right. Yorktown Fussy, vhc., was shown much too fat. In dog puppies J. Ott's Clinker, a rather coarse dog, was alone and won first.

Every one knows Harry Smith, superintendent of the Buffalo Driving Park, but not as an exhibitor of Yorkshire terriers; but he has them—four of the best I ever saw owned by one kennel; and the dog that beats Merry Prince, Jr., or the pair that gets away with Prince and Rose, will have to attend to their toilets early, late and often. Sandy and Dolly are also good, but not in as fine coat. Mr. Smith won everything in Yorkshires. He also had two very fair Irish terriers, Young Peddler and Sybil; both won firsts.

In Welsh terriers, Mephisto Dick and Rowton Vixen each won first. I don't know much about this breed, but as Vixen won second at Liverpool she must be "a good 'un." They are quite unlike T'other and Which, shown some years ago as Welsh terriers. As I remember them, they looked like mongrel Airedales, and they were certainly much too large according to the W. C. T. Club standard.

The Howard Kennels' Penrice I think is the best and proudest little pug dog I ever saw. He is perfect in head, ears, body and tail; and will no doubt make it hot for some of the cracks at New York. Mrs. C. S. Wixom's Viva, first in bitches, is of good size, but her head is too small and lacks wrinkle. B. U. Covert's Lady Vick is too large; she was given second.

An extra fine Italian greyhound bitch, Dolly, was shown by the Howard Kennels; splendid head, body, etc.; good all round, except that her ears are a trifle large. Jo.

AWARDS.

MASTIFFS.—CHALLENGE.—Dogs: 1st, Ilford Chancellor Bitches: 1st, Lady Colens.—OPEN.—Dogs: 1st, J. Ott's Kenwood. Bitches: 1st, W. J. Whitney's Cautious; 2d, Lady Dorothy; 3d, Miss Cautious. Very high com. and reserve, Ott's Embla.—PUPPIES.—Dogs: 1st, Beaufort, Jr. Bitches: 1st, Queen City Kennels' Agnes Wakefield.

ST. BERNARDS.—1st and 2d, Swiss Mountain Kennels' Arch Duke. Bitches: 1st and 2d, J. H. Clark's Nancie Bell and Belle Girl.—PUPPIES.—Dogs: 1st, E. W. Andrews' Anthony; 2d, Swiss Mountain Kennels' Duke. Bitches: 1st and 2d, Swiss Mountain Kennels' Lovely and Princess.—SMOOTH-COATED.—Bitches: 1st, Queen City Kennels' Lady Wakefield.

GREAT DANES.—1st, Ed H. Van Atta's Don.

NEWFOUNDLANDS.—2d, Justus Hide's —.

RUSSIAN WOLFDOGS.—Dogs: 1st, Hornell-Harmony Kennels' Valdemir. Bitches: 1st, Hornell-Harmony Kennels' Princess Irma.

GREYHOUNDS.—CHALLENGE.—Bitches: 1st, Hornell-Harmony Kennels' Harmony.—OPEN.—Dogs: 1st, Hornell-Harmony Kennels' Hazelhurst. Bitches: 1st, Hornell-Harmony Kennels' Fannie M.—PUPPIES.—Dogs: 1st, E. M. Douce's Blue. Bitches: 1st, Hornell-Harmony Kennels' Marguerite.

POINTERS.—Dogs: 1st, McCaffrey Athen's Wagg. Bitches: 1st, John Longworthy's Beppo Lass; 2d, J. W. Whitney's Cora; 3d, L. Wells's Princess Bang. Puppies: 1st, Harry Flood's Lillie.

ENGLISH SETTERS.—1st, J. S. Haymaker's King's Rocket.

IRISH SETTERS.—Dogs: 1st, Ray Tompkins' Friar Tuck; 2d, L. Keane's Nimrod, Jr.; 3d, E. W. Davis's Gip. Bitches: 1st, C. A. Bowman's Quail; 2d and very high com. reserve, Glendyne Kennels' Sedan and Lucelle; 3d, J. H. Arnot's Eileen. Puppies: 1st, Dr. G. W. Ross's Juno.

GORDON SETTERS.—1st, Dr. Davis's Trite.

CLUMBER SPANIELS.—Dogs: 2d, J. W. Roberts's Dash. Bitches: 1st, J. W. Roberts's Floss.

BEAGLES.—CHALLENGE.—Dogs: 1st, Hornell-Harmony Kennels' Royal Krueger; 2d, Rockland Kennels' Racer, Jr. Bitches: 1st, Hornell-Harmony Kennels' Una; 2d, Rockland Kennels' —.—OPEN.—Dogs: 1st, Rockland Kennels' Tom Boy. Bitches: 1st, Rockland Kennels' Belle of Rockland.—PUPPIES.—Dogs: 1st, Hornell-Harmony Kennels' Little Wonder. Bitches: 1st, Rockland Kennels' Emeline; 2d, Hornell-Harmony Kennels' Zillah.—UNDER 12 in.—1st, Hornell-Harmony Kennels' Ava W.

COCKER SPANIELS.—1st, J. Ott's Topsy P.

FOXHOUNDS.—Dogs: 1st and 2d, very high com. and reserve, T. McCann's Sing, Loud, Jack, and King. Very high com., W. A. Goodrich's Dash. Bitches: 1st, T. McCann's Belle; 2d, W. A. Goodrich's Floss.

COLLIES.—Dogs: 1st, C. F. Kelly's Prince Charlie; 2d, John Terwilliger's —. Bitches: 1st, G. E. Stevenson's Sable. Puppies: 1st, John Longworthy's Drive; 2d, Geo. E. Stevenson's —.

BULLDOGS.—Prize withheld.

BULL-TERRIERS.—Dogs: 1st, J. C. Velder's Patsy.

FOX-TERRIERS.—CHALLENGE.—1st, Oriole Kennels' Bacchanal.—OPEN.—Dogs: 1st and 2d, Oriole Kennels' Le Logus and Valens. Bitches: 1st and 2d, Oriole Kennels' Hillside Gaudy, Oriole Verona. Very high com., Yorktown Kennels' Fussy. Puppies: 1st, J. Ott's Clinker.

SCOTCH TERRIERS.—Prizes withheld.

IRISH TERRIERS.—Dogs: 1st, H. Smith's Young Peddler. Bitches: 1st, H. Smith's Sybil.

YORKSHIRE TERRIERS.—Dogs: 1st and 2d, H. Smith's Merry Prince, Jr. and Sandy. Bitches: 1st and 2d, H. Smith's Dolly and Rose.

PUGS.—Dogs: 1st, Howard Kennels' Penrice; 2d, Frank C. Harper's —. Bitches: Howard Kennels' entry absent; 1st, Mrs. O. N. Wixom's Viva; 2d, B. V. Covert's Lady Vic.

ITALIAN GREYHOUNDS.—1st, Howard Bros. Kennels' Dolly.

WELSH TERRIERS.—Dogs: 1st, A. Russell Crowell's Mephisto Dick. Bitches: 1st, A. Russell Crowell's Rowton Vixen.

SPECIALS.

Handler with most dogs, Hod King; best kennel, H. H. K.; best mastiff, Ilford Chancellor; St. Bernard, Arch Duke; greyhound, Harmony; pointer, Beppo Lass; English setter, King's Rocket; Irish setter, Quail; Gordon setter, Trite; field spaniel, Floss; cocker spaniel, Topsy P.; beagle, Royal Krueger; foxhound, Sing; collie, Prince Charlie; bull-terrier, Patsy; fox-terrier, Bacchanal; Yorkshire terrier, Merry Prince, Jr.; pug, Penrice; setter, Quail.

LYNN DOG SHOW.—Editor Forest and Stream: The Bulldog Club of America offers the following to be competed for by members at the second bench show of the Massachusetts Kennel Club, Lynn, Mass.: The club's silver medal for the best bulldog or bitch in the show, and the club's silver medal for best American-bred bulldog or bitch. The Pointer Club of America offers \$10 to the best pointer dog in open class, \$10 to the best pointer bitch in open class, to be competed for by members of the Pointer Club. Wyoming Kennels, Melrose, Mass., offers a silver cup for the best beagle in the show. The general special prize list provides generously for all breeds. Entries will positively close March 12. The club has secured John F. Williams to superintend the show.—D. A. WILLIAMS, Secretary.

WHY DO MANY MODERN NOTED DOGS DIE COMPARATIVELY YOUNG?

Editor Forest and Stream:

In your issue of Dec. 18, 1890, under heading "Dog Chat," you reply to a letter in the *English Stock-Keeper* with reference to nearly all the best dogs dying comparatively young. As a breeder of some experience perhaps you will be willing to make space for a few remarks from my pen on this subject, seeing (as you say) it is one of moment to breeders of large dogs. I may premise my remarks by saying the reasons adduced in your issue of Dec. 18 are in my opinion all wide of the mark, and as you point out, in the instance of the mastiff Minton, evidently not the true cause. Next allow me to comment on these remarks *seriatim*:

1. "Most have died at from five to eight years, at ages when they should be just about their prime." The italics are mine; and I may say experience shows large dogs, like St. Bernards, mastiffs or great Danes, are in their prime from three to seven years; at seven to nine are on the decline, after eight may be considered old. Few mastiffs I have known under any conditions have lived much over twelve years.

2. "The artificial manner in which they are prepared for the bench" may have to a certain extent in some cases something to do with the brief life of some of the more noted modern cracks, especially those coming from the London kennels; but by comparing the length of their lives with those of outsiders, the so-called artificial system would seem not to make very much difference.

3. "Excessive stud work as a factor." This I cannot help thinking is a mere idea, for few of the short-lived modern cracks have done the amount of stud work of such dogs as Old Jack, Buffer, Rattler and other noted fox-terriers who lived to a great age; and in mastiffs, Lukey's Bruno II., Old King, Rajah, Old Turk, my Young King and Exley's Victor. Again the show specimens Amer, King II., Taurus I., Taurus II., Montgomery and others lived to a good age in spite of exhibiting and stud work.

4. Forcing—I believe to be partly one of the true causes of short life, also excessive fat is not only calculated to render dogs sterile, but moreover to induce disease.

5. The arsenical doses probably do as much good as harm, for they tend to keep the blood pure and are a corrective of the radically bad treatment many dogs (especially those of the London breeders) are subjected to, and it is only too true, "they soon go to pieces," unless in experienced hands.

Having thus criticised the evils mentioned, in order to show that while they are evils and probable accelerators, they are not probably the real cause, there is something more potent underlying all these.

High feeding and arsenic, no doubt, deteriorate stamina, but the four chief active causes I believe to be:

1. Want of sufficient regular exercise.
2. Breeding from sires while they are too young.
3. The selection of the largest sized specimens for stud purposes.
4. Breeding from short-lived families, which show early symptoms of premature decay.

The following remarks I deem are worthy the consideration of breeders: Giants, or those above the average size in any variety of animal, as in man, are seldom long lived.

The deduction, therefore, is, the largest are not likely to be the longest lived, or beget the longest-lived progeny. In human beings longevity runs in some families.

And in thoroughbred horses we see sires used for stud purposes up to 20 years of age and then often begetting their best and stoutest stock. These things suggest the advisability of selecting dogs for stud purposes of not less than 4 to 7 years of age. It may be laid down that early maturity suggests early decay. Therefore, if people want dogs to last they should select for breeding purposes both parents of from 4 to 7 years old and for healthy progeny a middle-aged, medium-sized sire, in regular exercise and hard condition, and well fed. I do not think it matters a dog having been used for stud purposes extensively, providing he is strong, active and healthy.

These remarks I have gathered from experience, but they are thoroughly borne out by what Thacker wrote, as long since as 1834, in his "Breeder's Guide," Vol. II., a work perhaps less known to many of your readers than "Newton on the Prophecies," nevertheless full of practical common sense.

Under the "Proper Age for Breeding," he says: "Many of the most celebrated greyhounds of their day have been produced from aged parents, some of which were very old, both sires and dams. You cannot always rely on the constitutions of very old ones being unimpaired; but you may rely with great confidence on those of middle age and something more, having their stamina remaining, when you find that they continue good runners at that age."

As an instance of the advantage of breeding from matured sires. Dreadnought (9,320), whelped Sept. 5, 1875, was the son of an old dog, of rather below the average size. Dreadnought's only fault was want of size, but for mastiff character, symmetry, muscular points and fighting properties, there are few mastiffs of the present day equal to him. He took the first prize at Bidegorth in 1881 (midsummer), and was just turned six years old when I sold him for £21, strong, active and in perfect health, on breaking up my kennel to be used as a keeper's night dog. I do not know how long he lived or what became of him subsequently.

The noted Wolf (2,353), by Bill George's Tiger, a noted sire, born in 1859, took first prize at Northampton for me, in 1871, being eleven years of age, and beating Nero (2,317). Wolf lived to be about thirteen years old, becoming very rheumatic the last years of his life.

Finally, people often breed from their females as soon as ever they can, mating them with some young dog who has created a sensation, and thus breed an offspring of forced giant babies of short-lived family. Breeders thus go the very way to select a short-lived artificial race, a race that has not had due exercise for several generations. When I look back to the muscular, active mastiffs I had in Leicestershire, and how when even puppies they would and used boldly to plunge into the stream (which I could only just jump across) after me, I sometimes think it is a pity men attempt to breed mastiffs in the heart of large towns, where it is almost impossible to exercise them properly; and this continued reproduction of and from unexercised mastiffs or St. Bernards is sure to result in deterioration in points not carefully cultivated by selection.

With regard to longevity among my mastiffs, I had champion Empress poisoned to get rid of her when past breeding, but still active and in sound health; and when I broke my kennel up in January, 1882, several old favorites I destroyed, two I gave away and they have since been shot, owing to old age and becoming blind, and some I sold, then not very young dogs, are still alive.

At the present time I have a small Maltese, thirteen years old, and it still can run about and take pleasure in hunting after a rabbit. I merely mention this to show dogs duly exercised may live to a good age. M. B. WYNNE.

Author of the "History of the Mastiff."

CIRCUMSTANCES ALTER CASES.—Hulton, Pa.—Editor Forest and Stream: "On the record," Mr. Murphy's dog was shot by a party on whose grounds he had trespassed, done damage, defiled, etc.; Helen Keller's dog was shot simply and solely because it was at large, but doing no harm whatever. The difference seems miles wide. Perhaps I owe an apology to the policeman. He may have acted entirely from an elevated sense of public duty to discharge all obligations laid on him, but my observation of policemen leads me to doubt this.—W. WADE.

THE NATIONAL GREYHOUND CLUB SHOW.

THE gathering of greyhounds, deerhounds and Russian wolfhounds in the specialty show at the American Horse Exchange, on Tuesday last, must have been very gratifying to the National Greyhound Club. With the exception of the Fox-terrier, this is the only specialty club which so far has had the enterprise and pluck to hold a show "on its own hook," and I trust that their efforts will meet with the success they deserve. That this would certainly have been the case had the weather been in any way propitious there is little doubt. It rained with slight intermission throughout the day. Among those members of dogdom whom I noticed round the ringside were Messrs. N. G. Pope, Geo. Shepard Page, L. C. Whiton, H. W. Huntington, F. F. Chevalier, J. Herbert Watson, James Mortimer, C. S. Wixom, B. W. Grovtag, Frank Windholz, R. F. Mayhew and Mrs. Mayhew, Dr. and Mrs. Foote, Mrs. M. J. McCleery, Miss Ida Orme, N. Tallman, James Black, E. H. Morris, Mrs. Wheatleigh, German Hopkins, Percy C. Ohl, and several others. Mr. Chas. H. Mason began judging about 11 A. M., and it did not take him more than a couple of hours to run through the classes. The benching was ranged round two sides of the horse ring in the building, and as Spratts Co. had the contract everything was in good order. The building, owing to the damp, chilly weather which prevailed, was uncomfortably cold, and those dogs which owned a blanket made the most of the covering, for they needed it. Many of the competitions were interesting, notably those for the medals, where the winners of the different classes came together. As most of the dogs that were shown will appear at the New York show this month it may be as well not to go into their criticism very deeply. In the challenge class for dogs Balkis and Highland Chief came together, and the former, owing to his gross condition, had no easy win. He was altogether too fat, and though this may do for the lazy breeds, it does not look well on a greyhound, still Balkis' harder flesh, better legs and feet, ribs and hind parts pulled him well to the front. Cassandra was alone in the corresponding class; she was in good flesh and showed up better than when we saw her last.

In open dogs a new face appeared, Charles Davis. He is not a very taking dog, being full in eye and a bit long cast, but stands on a good set of pins; the well-known Conspirator, looking in better shape than last spring, was an easy second. Highland Warrior is coarse, ring-tailed, heavy in shoulder, wide in front and was shown too fat. Waverley is a fairish dog, but rather loosely put together. The others in the class were poor, more on the pet-dog order. Maud Torrington was soon picked out in bitches. She is a nicely-modeled bitch, and will have little difficulty in keeping to the front. Dry Time loses to her in back, chest, ribs and before the eye. Spinaway, who, was at Charleston, and will be better with age. Princess Ida and Dell are big, fair, faulty in head, feet and hindparts. Bijou is a poor one. Puppies saw two nice ones from the Pope kennel. Highland Donald but for his lameness would be an easy winner, but was thrown out on that account, and Highland Clan, faulty in eye and head, but good otherwise, took the prize, followed by Balkette, a promising pup rather flat-ribbed. Blackthorn beat Harmon in legs and feet, in which important parts King Leo is also faulty.

In deerhounds the well-known Robber Chieftain gained the champion ribbon over his kennel mate Clansman, excelling in coat and loin and front, though Robber moved queerly behind. Chieftain was absent. In bitches Wanda was placed over Ramona, though I think the latter beats in legs and feet. Olga, reserved, was a little outclassed. Nora showed the effects of her southern trip. In dogs a splendidly-fronted one, Douglas, beat his kennel mate Warrior, the winner at New York and Boston last year. Douglas is straight behind. Argyle is a bit bitch-headed, but was good in coat. Bruar II. lacks depth of chest, has a bad tail and is flat-sided. Highland Lassie was given the ribbon in bitches. She loses in coat and bone to Hillside Ruth. Alyda and Nina are both of nice stamp with good coats and bone.

The dog class for Russian wolfhounds had the winner in the new arrival Ziolem. He was closely pressed by the pup Valdemir, one of the Elsie litter. The older dog is of course better furnished, but loses greatly in front to the pup, while he beats the youngster at present in ribs and chest. Ivan is lathy and out at elbows, and not class enough for the others. Czar had skin disease and was sent out. Princess Irma had an easy win in bitches, her evident look of quality, nice front and head being far in front of Czarina, who hardly looks a Barzoi. In puppies the clean-headed and better-fronted Princess Irma beat her mate Valdemir handsly.

An auction sale was held after the judging, but there was hardly an auction company present, and the animals scarcely brought enough to pay for collars and chains. Thirteen dogs were put up, but the only ones which brought a bid were King Leo, c. in the puppy class, which brought the magnificent sum of \$7. A black bitch pup by Balkis, out of Loissette brought \$9, and another dog of the same litter went for \$15, and another bitch \$7. A black pup, by Balkis out of La Gitana, was bought in at \$10. After the sale Dr. Foote purchased a brindle bitch pup, by Conspirator, for \$15, for Mr. Chas. E. Rowland, secretary of the Toledo Kennel Club.

H. W. L.

PRIZE LIST.

GREYHOUNDS.—CHALLENGE—Dogs: 1st and 2d, N. G. Pope's Balkis and Highland Chief. **Bitches:** 1st, N. G. Pope's Cassandra. **—OPEN—Dogs:** 1st, Dunrobin Kennels' Charles Davis; 2d, Devon Kennels' Conspirator. Very high com., N. G. Pope's Highland Warrior. High com., E. C. M. Fitzgerald's Waverley. **Bitches:** 1st, Dunrobin Kennels' Maud Torrington; 2d, J. H. Watson's Drytime. Very high com. and reserve, Woodhaven Kennels' Loissette. Very high com., Woodhaven Kennels' Spinaway. High com., Mrs. M. J. McCleery's Princess Ida and A. N. Youngdorph's Dell. **Com., Mrs. M. J. McCleery's Bijou. Puppies:** 1st, N. G. Pope's Highland Clan; 2d, C. F. R. Drake's Balkette. Reserve, C. E. Johnstone's Blackthorn. Very high com., H. W. Lacy's Harmon. **Com., Mrs. M. J. McCleery's King Leo.**

DEERHOUNDS.—CHALLENGE—Dogs: 1st and 2d, John E. Thayer's Robber Chieftain and Clansman. **Bitches:** 1st and 2d, John E. Thayer's Wanda and Ramona. Reserve, Dunrobin Kennels' Olga. **—OPEN—Dogs:** 1st and 2d, John E. Thayer's Douglas and Hillside Warrior. Very high com., Dunrobin Kennels' Argyle and Bruar II. **Bitches:** 1st and 2d, John E. Thayer's Highland Lassie and Hillside Ruth. Very high com. and reserve, Dunrobin Kennels' Alyda.

RUSSIAN WOLFHOUNDS.—Dogs: 1st, Paul H. Hacke's Ziolem; 2d, Hornell Harmony Kennels' Valdemir. Very high com., Paul H. Hacke's Ivan. **Bitches:** 1st, Hornell Harmony Kennels' Princess Irma. **Puppies:** 1st and 2d, Hornell Harmony Kennels' Princess Irma and Valdemir.

SPECIALS

Best greyhound dog, N. G. Pope's Balkis; best greyhound bitch, N. G. Pope's Cassandra; best deerhound dog, John E. Thayer's Robber Chieftain; best deerhound bitch, John E. Thayer's Wanda; best wolfhound dog, Paul H. Hacke's Ziolem; best bitch, Hornell Harmony Kennels' Princess Irma.

DOG CHAT.

THIS is surely an age of organization. The next to claim our attention is no other than "The Dog Breeders' Protective Union of America." Its object is "the reduction of the rates of advertising and the punishment of notorious and flagrant swindlers in dogs, the mutual improvement and the strengthening of the public confidence in the raising of thoroughbred dogs and in dog breeders." This vast scheme originates in blizzard-swept Dakota, and like its chilly blasts the promoters intend to swoop down on those who depart from the path of rectitude in dog dealings and so forth. This is all very well, but we fail to see where the connection comes in about the reduction of advertising rates. It is intended to call a meeting in Minneapolis, Minn., to elect officers about March 1. The call will also include the name of some responsible person to whom those who cannot attend in person can send their proxies and their \$5 bills, the amount of annual dues. Dr. Bradley, as may be surmised, is the promoter. Is not this taking the bread out of the mouth of the A. K. C.?

Professor Romanes says in "Animal Intelligence" that 'pride, sense of dignity and self-respect are very conspicuously exhibited by well-treated dogs. As with man so with the friend of man, it is only those whose lines of fortune have fallen in pleasant places, and whose feelings may therefore be said to have profited by the refining influences of culture, that display in any conspicuous measure the emotions in question. 'Curs of low degree,' and even many dogs of better social position, have never enjoyed those conditions essential to moral refinement, which alone can engender a true sense of self-respect and dignity. A 'low-life' dog may not like to have his tail pulled, any more than a gutter child may like to have his ears boxed; but here it is physical pain rather than wounded pride that causes the smart. Among high-life dogs, however, the case is different. Here wounded sensibilities and loss of esteem are capable of producing much keener suffering than is mere physical pain; so that among such dogs a whipping produces quite a different and a much more lasting effect than in the case of their rougher brethren, who, as soon as it is over, give themselves a shake, and think no more about it."

THE GREYHOUND CHAMPION CASSANDRA.

Owned by Mr. N. G. Pope, Brooklyn, N. Y.

Some of our trainers and handlers of high-bred dogs should carefully read this, and bear it in mind when prompted to lay on the lash too thickly.

The *Canine World* had a colored picture recently of the well known St. Bernard breeder, Mr. Sydney W. Smith, and a good likeness too. Again we are treated to something the greyhound men will appreciate, pictures of the noted coursers Henmore King and Chips. The latter beautiful bitch has just been bred to Aberbriant (Misteron—Promotion), who is one of the fastest dogs ever slipped, having won 36 out of 41 courses in the best of company. There is some of his get in Mr. Black's kennels at Sheepshead Bay.

Mr. Mortimer writes us that the following railway companies have kindly consented to carry all dogs free of charge, exhibited at the W. K. C. show, provided they are accompanied by their owner or keeper, who will be required to present for inspection the necessary identification ticket: The Long Island R. R., Old Colony R. R. (as far as its Shore lines are concerned), all New York and Boston lines (other than the Sound lines); New York, New Haven and Hartford R. R., the Trunk Line Association (embracing the Gd. Trunk, N. Y. Central and H. R. R., West Shore; N. Y., Ohio and W. R. R., Lehigh Valley R. R., Central of New Jersey, Phila. and Reading R. R., Penna. R. R., Balt. and Ohio R. R., Ches. and Ohio R. R.) will convey for each passenger ticket three dogs free of charge. The Providence and Stonington Steamship Co. will accept dogs at regular tariff rates and return the same free of charge, when accompanied by owner, etc. The following express companies will return dogs free of charge, provided the regular rates have been prepaid one way: The Adams, N. Y. and Boston, United States American and the Wells, Fargo & Co. The following specials will also be given: The W. K. C. offers \$10 cash for the best exhibit of four poodles, also \$10 cash for the best exhibit of four Irish terriers. There will also be a class for Scotch terriers, with three prizes of \$10, \$5 and \$3 respectively. The poodle classes should now read: Class 106, open class dogs (black); Class 107, open class bitches (black); Class 107 A, open class dogs or bitches (other than black). W. L. Germaine, Esq., Bank of Montreal, Ottawa, Can., offers \$10 for the best exhibit of four water, Clumber, Sussex or field spaniels entered and owned by one exhibitor. Messrs. Du Vivier & Co. offer a case of Perrier Joust (reserve) for the best brace of pointers in the open classes owned by one exhibitor. Also one for the best brace of bulldogs in the open classes owned by one exhibitor. A novice class will be provided for beagles should the management receive five or more entries.

This is what the secretary of the English Toy Spaniel Club says in *Stock-Keeper* in answer to a letter written by a lady who hardly agrees with the rule which says that any King Charles spaniel showing white must be relegated to the Prince Charles class. "Sir—The regulation Mrs. Beavan refers to in her letter, published in your issue of the 2d inst., is not a new one, but has been in force ever since the founda-

tion of the T. S. Club, I believe. I fully agree with her that it is very hard to breed a King Charles spaniel free from white, but that is not a reason why a faulty specimen (according to the present rule) should be accepted. Personally I should be glad to see this hard and fast rule relaxed, for it seems against common sense to place a King Charles, perfect in all toy spaniel points, but with a very few white hairs on the chest, below another King Charles, which may be inferior to the other in all points save that of color. But until the existing rule is amended it would save entrance fees being wasted and consequent disappointment for owners of these 'faulty' King Charles not to send them to any show, for a club judge must uphold the scale of points of his club. —HUGH T. C. COLLIS, Hon. Sec. T. S. C." There is a need of a hard and fast rule of this description in this country, and in future it would seem best to adhere to it, rather unfair though it may seem at first sight.

At the annual meeting of the Hamilton Kennel Club, held Jan. 25, Mr. W. Hendrie was elected Patron; Mr. A. D. Stewart, President; Mr. Andrew Murdoch, First Vice-President; Mr. Charles Ricketts, Second Vice-President; Mr. C. W. Mulligan, Secretary; Mr. George T. Tinsley, Treasurer; Messrs. W. J. McDonald, Frank Olse, E. Tinsley, J. Hackett and Henry L. Breyer, Committee of Management. There was a show of terriers open for members, Mr. George Bell, of Toronto, being the judge, and his criticisms will be found in next week's issue. Dr. Mole, the veterinary surgeon, read an interesting paper on "The Anatomy of the Dog."

In a rat-pitting contest at Newark, recently, a fox-terrier, domestic cat, and black and tan terrier were tried on a big rat. The rodent bit the cat twice, and she retreated. The fox-terrier played with the rat for a time, and finally nipped it from behind, but couldn't be persuaded to shake the rodent. The black and tan gave one bound, nipped it by the head, gave a shake, and the rat was dead. Dr. Foote would have walked a good way to see that bit of fun. The black and tan is always a terrier where rats are concerned.

A correspondent, who is a well-known exhibitor, writes us suggesting that some action be taken regarding the far too easy road that is at present provided to the challenge class. There was some suggestion made by Mr. Mercer to the A. K. C. that wins should be graded in value, but nothing seems to have been done about it as yet. In view of the many small shows being held in the fall and winter, it has become altogether too easy a matter to put a dog in the challenge class, and then a win at a similar show in that class dubs him a champion, and he at once assumes a fictitious value either as a stud dog or from a marketable point of view. That this is wrong is patent to all. Take the three Southern shows just past, for instance. There was an opportunity for a dog to win three firsts, say in the mastiffs, without material competition. At one, Charleston, there was not a mastiff entry. These three wins and one gained at Binghamton puts that dog in the challenge class at New York, simply because these shows were held under A. K. C. rules. This dog appears at the New York show, and alongside dogs of merit he cuts a somewhat sorry figure, still he is in the challenge class, and if his owner is capable of rushing his dog round to gain that end, he is just as capable of thrusting his dog into public notice as a challenge dog, and therefore one of presumably superlative merit. Of course the *cognoscenti* are not taken in, but the dear public, which does not know a dog from a window shutter, may be. Now we come to the point the A. K. C. ought to take in the matter simply as a safeguard against possible fraud or for the protection of dogs of merit. Grade the wins. Let every win count by all means, at the little shows as well as the large ones, for we cannot afford to despise these little gatherings which do so much good in certain districts in creating an interest in dogs and dog breeding; but let these small show wins count one point toward a possible eight and such shows as New York, Boston, Chicago Baltimore, Lynn, Washington and Pittsburgh, in fact any show which is sure to poll over 350 entries, count as two point shows, for though the first three named shows will, of course, have more entries in the different classes, the principal dogs will very likely be seen at the other shows as well, so that the actual competition will be almost the same. Then let a challenge win at New York, Boston or Chicago only, count a dog a champion. This question is one that requires immediate attention and should be a subject of discussion at the annual meeting of the A. K. C. this month, and from what we can gather from exhibitors some such plan would meet with the approval of the majority.

The Brunswick Fur Club's officers are busy getting ready for their grand meet at East Wakefield, N. H., on the 9th. The country round there is well adapted for the purpose, and foxes are reported plentiful. The club is restricted to 100 members, and so popular has the sport become in the two years the club has been organized, that there are now many names on the waiting list. The members own some 250 hounds altogether, and as most of them attend the meet, it will be seen that the master's position is an arduous one, for on him devolves the special charge of the kennels, the comfort of the dogs and selecting those for each day's hunt. Bugle and handkerchief signals are used to indicate the direction the hounds are running. Each hound entered costs its owner a \$1 fee, and this, with a sum added by the club, is divided into six purses and three prizes given in each class. Sometimes these different packs are made up of a dozen hounds each, which start off in different directions. After the day's hunt and dinner is partaken of, the master lays out the programme for the next day, and so it goes on till men, hounds and foxes are tired out. The six classes are hunting, trailing, speed, endurance, tongue and puppy class.

A writer in *Week's Sport* makes a good point when he says that "sportsmen, when traveling, should be as careful of the comfort of their dogs as would the owner of a great thoroughbred enroute to enter for the fall races. The dog is certainly as worthy and has by far the more delicate constitution, yet how many sportsmen, when on car, steamer or stopping in transit, take the trouble to inspect the quarters of their faithful companions? Many of the fraternity I know consign their dogs to the care of a servant, and trust implicitly to their assurance that they had been well taken care of: the dog can't talk, and the glib servant pockets his fee and that is the end of it. I have had some rough experience on that subject, which has caused me to follow this rigid rule, viz., not only to feed my dogs with my own hands, but to insist upon seeing their sleeping quarters for the night. Some hotel keepers look upon the finest bred and best trained dog as they do a brute; all dogs are alike to them, from the stumptail dandy, scalded skin street cur to the aristocratic setter or pointer; they make no provision for the care of them, and every true sportsman should carry his custom elsewhere when they discover that fact."

We hear that Mr. Freeman Lloyd ("Thames Tattler") has resigned his position as English correspondent to the *Turf, Field and Farm*.

Our thanks are due to Mr. Francis G. Taylor, of Philadelphia, for the handsome picture of his no less handsome English setter, Breeze Gladstone, a dog which is—and this is of more importance in his owner's eyes—a thorough field dog. It will in due course appear in our gallery of celebrities.

In view of the many deaths of noted field dogs this year and the serious illness of others, it would seem as if the time was ripe for the different field trial clubs to take some action in the matter. Bench show committees make it compulsory for dogs to undergo a veterinary examination before entering the building, then why should not the field trial clubs appoint a competent person to keep an eye on the dogs at their trials? These trials are held in country places where vets who understand dog doctoring are very scarce and the handler must depend on such simple remedies as he may procure from the village drug store. A competent vet. should be appointed by every trial committee, whose duty it should be to make the round of the several kennels, where the field dogs are located, every day, and have power to isolate any case at once which to his experienced eye may seem suspicious. The amount of time, money and experience required to bring these dogs to the state of perfection in their work necessary for the trials, certainly demands some action being taken to this end, and we trust that this suggestion may receive the attention it deserves.

We hear that Mr. Geo. Raper, of England, enters the fox-terrier Raby Trigger at New York. By the way, the entries at this show, notwithstanding the increased entry fee, are twice as large as at the corresponding date last year.

Dr. Meyer has purchased through Mr. Brett the crack Gordon setter Heather Bee from Mr. Chapman, of Glenboig. She is counted one of the best of the breed on the other side.

The National Greyhound Club must be congratulated on their first show. Everything was well arranged, a neat and well printed catalogue was issued, and in fact everything ran very smoothly. A more pleasing feature of the show is, that despite abominable weather and consequent poor attendance the club will clear something like \$60. The only thing that marred the complete success was the rumor that the wins will not count. It is difficult to understand the wherefore of this, as a member of the A. K. C. in good standing the N. G. C. is entitled to all its rights. Later—Interviewing Mr. Vredenburgh on the subject, he said that the wins would most certainly count.

We hear that the advisory committee have notified the National Greyhound Club that their proposed stud book meets with their disapproval, and must therefore go by the board. Will it?

The little black and tan community over here is greatly agitated just now. The great dog Beaconsfield is on his way over, and judging from the number of "cables" which are passing between the owner of Meersbrook Maiden and the owner of Broomfield Sultan it is more than likely we shall see that dog at New York too. If these dogs are shown the competition will indeed be keen, and black and tans will make themselves felt in spite of everything.

Dandie Dinmonts have not been a popular breed in this country, and there is lots of room for improvement. It is therefore with pleasure we note the fact that Mr. Edward Brooks, of Boston, Mass., has purchased from Mr. Armstrong, of Bellingham, England, the Dandie, Gypp, said to be the pick of his well known strain of terriers.

Messrs. Vicary have sold a pup of the Result—Vesuvienne litter to Mr. T. C. Chalmers, of Washington, D. C. This is Villanelle and is well spoken of.

The *Cantine World* publishes this week an excellent colored picture of the noted great Dane, Vendette, who is regarded as the best specimen of its breed ever seen in England.

We learn that Mr. K. E. Hopf has at last parted with the smooth-coated St. Bernard which brought his kennel into such prominence a year or two back. We refer to champion Hector. This dog, until the coming of Watch, was certainly the best smooth dog ever seen in America. The purchaser is Mr. Reick, of the New York *Herald*, and he may be congratulated on his good judgment. The price was \$750.

Our report of the Pacific Kennel Club's field trials has not yet arrived, but we learn that the trials were most successful. The grounds were well adapted to the purpose, and though game was not very plentiful, there were enough bays found to give every dog a chance. The following officers were elected: President, J. G. Edwards; Vice-President, R. Porter Ashe; Secretary, J. M. Kilgariff; Directors, W. Schreiber, J. M. Bassford, Jr., W. E. Houghton, Andrew Jackson and C. N. Post.

Sir Bedivere has arrived. After a tempestuous voyage the S. S. Umbria came to her dock on Sunday last. Mr. Sears came down from Boston on Saturday to welcome him. On Monday morning Sir Bedivere held a reception on the upper deck and those few St. Bernard men present expressed themselves delighted with his appearance. His grand head, legs and feet, depth of chest, and general look of quality and type, filled every one with enthusiasm. Mr. Edward Booth, who brought him over, had an anxious time of it, as the crack was affected by *mal-de-mer* to some extent. At Boston Sir Bedivere held another reception at Mr. Sears's fur store, where by actual count forty-four hundred people paid their respects to the crack. Just as we go to press we receive the following: "Bedivere received eight thousand people in two hours and thirty minutes."

There was to be a grand dog race with whippets last Tuesday at Newark, N. J., for the Derby sweepstake.

We learn from the Boston *Herald* that the members of the Worcester Fur Company, to the number of 40, accompanied by about 30 dogs, had their annual snow hunt after foxes Jan. 25. The hunt ended with a supper at a roadhouse in Millbury. The net result was the death of two foxes and temporary loss of about a dozen dogs.

The Mechanic's building has again been engaged by the New England Kennel Club for their show in March.

Mr. Comstock writes us that having found that Mr. W. Medbury claimed the name of Narragansett Kennels two years ago, he has changed the name of his kennels to "The Park Kennels," for his Irish and black and tan terriers, Japanese spaniels and schipperkes.

Mr. Geo. Bell is not the breeder of Idea, the cocker spaniel, but Mr. G. N. Levens, Belleville, Ont.

Our illustration this week is Mr. Pope's champion greyhound Cassandra. This bitch is so well known and has been before the public so long that it is needless to republish her wins. She is by Debbret out of Dead Setzer.

WARM QUARTERS FOR PET DOGS.—New York, Jan. 23.—*Editor Forest and Stream:* No building have I seen that is better adapted for a grand bench show than is our new Madison Square Garden, if all of its conveniences are taken advantage of. It has always been a problem to properly heat a bench show. Many breeds are most comfortable in a cool atmosphere, while others require warmth; but freedom from draughts is necessary to all. At the Garden the long-coated dogs can be benched on the ground floor, and they will not take up so much room but that we can have a larger exercising and judging space than ever before. This space will be valuable in parading the winners afternoon and evening, permitting visitors to see them to the best advantage. Prof. Parker too will appreciate it. The ground floor should not be heated to a higher temperature than from 50 to 60 degrees, comfortable both to the long-coated dogs, to all dogs exercising in the ring, and to visitors, who find it inconvenient to remove their wraps. In the basement where the furnaces are, the temperature would be at least ten degrees higher—such was the case at the recent horse show—and here the short-haired, hairless and pet dogs could snooze in comfort, without wearing blankets or being bundled up in a way that prevents their classification and quality being determined. It can be kept clean and light in the basement, and as an exhibitor of a short-haired breed, I ask that my suggestions receive the attention of the superintendent and the bench show committee having charge of the coming W. K. C. show, which will beyond doubt eclipse all previous efforts in the dog show line.—AN EXHIBITOR.

SOLID SILVER CLUB MEDAL OF THE BULLDOG CLUB OF AMERICA.

GORDON SETTER CLUB.—New York, Feb. 2.—The executive committee of the Gordon Setter Club will hold their next meeting at 1393 Broadway, on Friday evening, Feb. 13, at 7:30 o'clock, for the election of new members and the transaction of such other business as may come up. Several new members will then be proposed, and it is requested that any further names be sent soon as possible to the secretary and treasurer, L. A. Van Zandt, Yonkers, before the date named. The exhibit of Gordon setters at the N. Y. show promises to be a good one, and it is hoped that every member of the club and lover of Gordons will exert himself to make the occasion a notable one and the best yet. At the annual meeting of members at Madison Square Garden on the evening of the second day of the N. Y. show, Feb. 25, it is believed that a plan will be adopted for the next autumn field trials (in connection with the Irish Setter Club or otherwise) that will bear good fruit. Let there be a good attendance at the meeting and a full interchange of views. Then, if owners of Gordons will send their dogs in good time to good trainers, we can hope for a creditable showing at the field trials of 1891. By this course, pursued annually, we can in a few years place our favorite in the front rank of field dogs.—MEMBER OF THE GORDON SETTER CLUB.

A NEW IRISH SETTER.—Greenville, S. C.—*Editor Forest and Stream:* I mail you to-day a marked catalogue of our recent bench show. We had a fine show for a beginning, and everything passed off pleasantly, the awards by Mr. Davidson giving universal satisfaction. The weather was bad and the attendance, except for one day, light. We hope to have a larger and better show next time and feel much encouraged by the result of our first effort. I have purchased the Irish setter dog Pickens, winner of first and special in open class, and will enter him in the shows of the eastern circuit. He is a dog of great field merit and has been hunted every season since his puppyhood. Pickens is by Tim out of Florid and was bred by Max Wenzel. It took a pile of money to pay for him, but he is a grand dog, just in his prime, and is bound to come to the front. I have had a fine picture made of him from life by Mr. Franklone Sewell, the artist.—F. F. CAPERS, Sec'y-Treas.

EARLY MASTIFF DATES.—Hulton, Pa., Jan. 31.—*Editor Forest and Stream:* I have just discovered a most provoking blunder in the pedigree prints I have sent out. The dates of births of Holdsworth's Lion, Gibson's Nero and Mrs. Scott's Tiny are all given as 1820. As Lion was sire of Nero, the error is evident. Any one who has the pedigree of Edwy, Egbert, Eurner, Emma, Eoppa, Ethel and Elgiva, will oblige me by noting thereon the correct dates thus: Holdsworth's Lion, 1816; Gibson's Nero, 1820; and Mrs. Scott's Tiny, 1823. The blunder was that of the copyist who made the tracing of the original pedigree.—W. WADE.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.
Alan Brock. By Geo. McDougall, Butte, Mont., for deerhound dog, whelped March 5, 1890, by Fergus out of Brenda.
Weasel. By Geo. McDougall, Butte, Mont., for deerhound bitch, whelped 1889, pedigree at present unknown.
Ro's Lassie. By Geo. McDougall, Butte, Mont., for deerhound bitch, whelped December, 1889, by Robin Adair out of Cluthan.
Whitefoot and Miss Blue. By H. G. Arnold, Louisville, Ky., for black, white markings, cocker spaniel dog and black bitch, whelped July 5, 1890, by Black Dash (Oberon—Susie) out of Renah W. (Black Pete, Jr.—Gilt).
Ruffian. By G. H. Bush, Buffalo, N. Y., for black and white cocker spaniel dog, whelped Oct. 18, 1890, by Adonis (Hornell Mikado—Yams) out of Fashion (champion Brant—Bonita).

BRED.

Prepared Blanks sent free on application.

Lina K.—Hundesport Zaenker. W. Loeffler's (Milwaukee, Wis.) dachshund bitch Lina K. (Feldman K.—Lina L.) to his Hundesport Zaenker, Dec. 24.
Bessie K.—Hundesport Zaenker. Ohas. Klacke's (Pittsburgh, Pa.) dachshund bitch Bessie K. (Feldman K.—Lina L.) to W. Loeffler's Hundesport Zaenker, Jan. 10.
Weasel—Alan Brock. Geo. McDougall's (Butte, Mont.) deerhound bitch Weasel to his Alan Brock (Fergus—Brenda), Jan. 29.
Fashion—Oho II. Geo. H. Bush's (Buffalo, N. Y.) cocker spaniel bitch Fashion (champion Brant—Bonita) to J. P. Willey's champion Oho II. (champion Obo—Chloe II.), Jan. 23.
Renah W.—Brush W. H. G. Arnold's (Louisville, Ky.) cocker spaniel bitch Renah W. (Black Pete, Jr.—Gilt) to Lake Shore Kennels' Brush W. (Pompadour—champion Bene), Nov. 27.
Marguerite—Jubilee. H. A. Harris's (North Wilmington, Mass.) bull-terrier bitch Marguerite (champion Count—Young Venom) to his champion Jubilee (Bendigo—Queen), Jan. 27.
Miss Norah—Grenhill General. W. L. Harris's (North Wilmington, Mass.) bull-terrier bitch Miss Norah (Dutch—Norah) to H. A. Harris's Grenhill General (Prince—Kit), Jan. 20.

WHELS.

Prepared Blanks sent free on application.

Junio. Mrs. J. M. Nicholson's (Albany, N. Y.) St. Bernard bitch Junio, Jan. 10, six (four dogs), by S. W. Smith's Scottish Prince.
Katie Connor. W. J. Comstock's (Providence, R. I.) Irish terrier bitch Katie Connor (Benedict—Breda Florence), Jan. 24, two bitches, by his Mars (Benedict—Ierne).
Renah W. H. G. Arnold's (Louisville, Ky.) cocker spaniel bitch Renah W. (Black Pete, Jr.—Gilt), Jan. 31, seven (one dog), by Lake Shore Kennels' Brush W. (Pompadour—champion Bene).

SALES.

Prepared Blanks sent free on application.

Ben Hill—Daisy Hunter whelp. Orange and white English setter dog, whelped May 22, 1890, by Messrs. J. H. & J. A. Hunter, Sanborn, Ind., to W. J. McElligott, Waterbury, Conn.
Nellie Hunter. Orange and white English setter bitch, whelped May 22, 1890, by Ben Hill out of Daisy Hunter, by Messrs. J. H. & J. A. Hunter, Sanborn, Ind., to V. L. Bassa, New Haven, Conn.
Zetta Hunter. Orange and white English setter bitch, whelped May 22, 1890, by Ben Hill out of Daisy Hunter, by Messrs. J. H. & J. A. Hunter, Sanborn, Ind., to D. M. Oyster, Washington, D. C.; since died and replaced by Babe Hunter, same breeding and marking.
Ben Hunter and Dot Hunter. Orange and white English setter dog and bitch, whelped May 22, 1890, by Ben Hill out of Daisy Hunter, by Messrs. J. H. & J. A. Hunter, Sanborn, Ind., to W. J. Fisher, Milwaukee, Wis.
McGinty. Liver, white and tan English setter dog, whelped June 9, 1889, by Ben Hill out of Daisy Hunter, by Messrs. J. H. & J. A. Hunter, Sanborn, Ind., to J. O. Cole, Washington, D. C.
Balkis. Black and white greyhound dog, by H. W. Huntington, Brooklyn, N. Y., to N. Q. Pope, same place.
Cassandra. Brindle and white greyhound bitch, by H. W. Huntington, Brooklyn, N. Y., to N. Q. Pope, same place.
Highland Chief. White and blue greyhound dog, by H. W. Huntington, Brooklyn, N. Y., to N. Q. Pope, same place.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

J. L. W., Phila., Pa.—I have a fox-terrier, about 4 years old, who appears to have lost her appetite, as for the last 5 or 6 days she has scarcely eaten anything, that is from about the time she was taken where she is at present. Do you think that it is merely being in a strange place and that she will come all right? I have tried her with different kinds of food but she eats so very little. Ans. Very likely the change may have affected her. You might give her a two grain quinine pill every night for a week.

C. J. C., Ridgewood, N. Y.—Inclosed find two or three lice which I found on my setter dog. Will you please tell me through your valuable paper what they are and how I can rid him of them. Have tried Little's Phenyle without effect. The dog is healthy in other respects and in good spirits. Ans. The best remedy you can use is whale oil rubbed thoroughly all over the dog. At the same time be careful to keep him warm, and after a few hours wash off with warm water and soap. If the lice are not very numerous a good washing with whale oil soap will be found beneficial. Repeat several times, at intervals. You had better burn his bedding, and if he is in a kennel have insect powder blown freely into every nook and crevice.

W. S. R., Ridgewood, Va.—My favorite foxhound Belle has entirely lost her voice, without any apparent cause. She is in as good condition otherwise as I ever saw her, and runs as well as she ever did. She became so suddenly. Can you tell the cause of the trouble and give a remedy? Ans. Rub the throat well morning and night with camphorated oil, and keep free from draught after treatment.

N. H. F., Columbia, Pa.—Kindly answer the following questions: 1. At what age should a fox-terrier puppy's tail be docked? 2. The proper length to dock it? 3. How is the operation generally done? Ans. 1. About a fortnight. 2. At that age, about an inch and a half. 3. Either with the teeth, the thumb and finger nails or a sharp pair of scissors.

Rifle and Trap Shooting.

RANGE AND GALLERY.

REVOLVER WORK.

THE above target is of 25 consecutive shots at 12 yds. off-hand with a Colt's .44 revolver, without cleaning. It was done by Wm. E. Carlin, at Conlin's gallery, this city, Dec. 17, 1890.

BROOKLYN, Jan. 22.—The snow on the Dexter Park grounds was not conducive to the making of remarkable scores to-day, especially as many of the birds were of white plumage and afforded but a small resting place to the marksman's eye. Nevertheless, the general result in the monthly competition of the Glenmore Rod and Gun Club was high, only 29 birds being missed in the regular shoot, although 18 members participated in the contest for the Midas badge. H. W. Bookman, of East New York, and J. Bennett, the Long Island farmer, tied for first place, the latter capturing the championship emblem in the shoot-off of the tie. A sweepsake at live birds which preceded the club event was won by Hen Bookman, while the prizes in the last sweep were divided between J. Schlemann, E. Helgans, G. Pfohlmann, and J. Bennett. The scores: Club handicap shoot, modified Hurlingham rules, 7 birds to each man. E. Helgans, J. Bennett 7, W. Selover 5, G. Pfohlmann 6, C. Engelbrecht 4, P. Suter 4, A. Eppig 5, L. Eppig 5, W. Levens 5, H. W. Bookman 7, H. Schlemann 5, J. Youngs 5, W. Lennington 6, F. Mair 4, Dr. H. Boehm 6, J. Still 4, A. Jardin 5, J. H. Schlemann 5. Shoot-off of the tie for the Midas badge, 3 birds each, then miss and out. Bookman was out-shot on the second round, Bennett killed 3 straight and won the medal.

BROOKLYN, Jan. 23.—There was not a very large attendance at Woodlawn Park, Long Island, to-day, when the Eric Gun Club had its regular monthly shoot. Ten members shot for the Midas badge, which was won by C. Jericho after tying with Jankoski and Schiller. The score of the shoot is as follows: J. Craef, 22yds., 6; C. Jericho, 27yds., 12; C. Plate, 27yds., 5; H. Dohrman, 22yds., 7; C. Luhrsens, 22yds., 5; J. H. Schmadeke, 21yds., 5; W. Schiller, 25yds., 7; H. Jankoski, 22yds., 11; M. Alseffer, 22yds., 5; W. Lynch, 22yds., 2. C. Plate, C. Jericho and J. Schmadeke of the Eric Gun Club shot a sweepsake at 3 birds each, then miss and out. Bookman was out-shot on the second round, Bennett killed 3 straight and won the medal.

TORONTO, Jan. 31.—An interesting shooting match took place near Turner's baths, at the Island, this afternoon. Teams were chosen by Messrs. Spanner and Davis, the former winning after an exciting contest. Owing to the rain, and to the fact that several of the marksmen had not shot over a trap before, the scores were low. Thirteen Keystones each man were shot at first, followed by six sparrows each. Following are the scores: At Keystones.—Capt. Spanner's team: Harrison 9, Reeves 6, Spanner 4, Jenkins 1; total 20. Capt. Davis's team: O. Spanner 6, Cross 5, Thurston 4, Davis 2; total 17. At sparrows.—Capt. Spanner's team: Harrison 4, Spanner 2; total 6. Capt. Davis's team: O. Spanner 4, Cross 3; total 7.

THE INTER-STATE ASSOCIATION TOURNAMENTS.—New York, Jan. 30.—Editor Forest and Stream: We will claim dates in fixtures for the Saratoga Gun Club shoot, assisted by the Inter-State Manufacturers' and Dealers' Association, 2d, 5d, 4th and 6th of June. In all cases where the Inter-State Manufacturers' and Dealers' Association assist these clubs, there will be \$1,000 guaranteed by this association. In Washington we expect \$1,000 added, and in Saratoga \$2,000 added, which will make the largest purses ever offered to shooters in America.—STANDARD KEYSTONE TARGET CO., H. A. Penrose, President.

NEWARK, N. J., Jan. 31.—Many people saw the live bird shooting at Erb's grounds to-day. The damp weather and light wind was unfavorable to the shooting. Jewald Von Lengerke, of Newark, and W. Walker, of Englewood, a new hand and a promising one, shot in the first event, the former at 80yds. rise and the latter at 28yds., at 50 birds each. Von Lengerke scored 40, Walker 59.

CLINTON, Ia., Jan. 30.—Clinton Club diamond badge shoot. 15 live birds, 5 traps, 30yds. rise, 30yds. boundary. American Association rules: W. B. Leff, 11121022122111—14 O. P. Ankey, 111112111111—15 B. P. Ankey, 2101021221110—11 T. M. Leff, 222222222222632—13

SOUTH SIDE.—The spring season's shooting of the South Side Gun Club of Newark, N. J., commences on Feb. 4. The club grounds are open every Saturday during the year from 1 o'clock P. M. and are within fifty minutes of City Hall, New York. Visitors always welcome.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.

COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH E. BRADY, Jr., Central street, Lowell, Mass.
REGATTA COMMITTEE: A. G. Englewood, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:

VICE-COM: C. V. Winsor, Albany, N. Y.
REAR-COM: T. P. Gaddis, Dayton, O.
PURSER: Howard Brown, Albany, N. Y.
EX-COM: J. K. Bakewell and H. M. Stewart.

NORTHERN DIVISION.

Officers:

VICE-COM: W. H. Cotton, Kingston.
REAR-COM: J. C. Edwards, Lindsay.
PURSER:
EX-COM: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION.

Officers:

VICE-COM: J. W. Cartwright, Jr.
REAR-COM: G. L. Parmele, Hartford.
PURSER: R. Appollonio, Winchester.
EX-COM: Paul Butler, E. S. Towne and Sidney Bishop.

ATLANTIC DIVISION.

Officers:

VICE-COM: I. V. Dorland, Arlington.
REAR-COM: E. D. Anderson, Trenton.
PURSER: Richd. Hobart, Newark, N. J.
EX-COM: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 139 Kialto Building, Chicago, Ill.
Applications for membership should be made to the Sec'y-Treas. on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

FEBRUARY.

AUGUST.

6-27. A. C. A. Meet, Lake Champlain.

THE BAT, GENERAL PURPOSE CANOE.

THE canoe BAT, whose lines are here given, was designed just two years since by W. B. Stephens, for L. B. Palmer, Esq., of the Ianthe C. C.; the idea being at that time to produce a boat that would stand in large proportion to the speed, and be fast enough to keep up with the feet on Division cruises and runs about New York and the Passaic. While cruising qualities were not sacrificed to speed, it was intended that when a racing rig was shipped, for which provision was made, and the canoe in light trim, she would be able to compete in the races of the Division and A. C. A. meets. Owing to various circumstances the boat was not built in 1889, as first planned, but last winter the St. Lawrence River S. C. and S. I. Co. set to work on the lines, and turned out the Bat and two other boats. Of the three, only Bat has done any racing, but though handicapped from the start by rather heavy construction and poor sails she has made a very creditable record during the past season.

When the design was first made the rage for big mizens had by no means reached its present proportions, and the attempt was made to keep the centers well forward so as to give a large and roomy well for sleeping or carrying two. To this end the keel was well rooked up aft, while the depth was preserved forward, which with the position of the board brought the center of lateral resist-

ance but 7ft. from the stem, or nearly 2ft. further forward than in some of the latest boats. Thus with the trunk forward of the middle of the boat, a distance of 6ft. between bulkheads and 4ft. 6in. from the trunk to after bulkhead, and with room for the feet on each side of the trunk, owing to the beam being carried well down, there was plenty of room for all cruising purposes.

In cruising trim the mainsail was carried but 1ft. from the bow, with a mizen of moderate size, a second tube being provided forward in which the mainsail might be stepped at times, making a single sail rig. For racing a fourth tube was provided, stepping in a moveable cross beam which fitted across the well, as shown, 6ft. from the stern. With this rig a special long hatch was fitted over the after part of the cockpit, making the well much smaller. This mast beam was made to fit into chocks on the inside of the coming, being held down by brass bolts.

The boat possesses the requisites of a cruiser, closed air spaces at each end, with deck hatches giving access to them for stowage; another space between two bulkheads amidships, in which are fitted two long drawers, one on each side of the trunk, used for stowage, while abaft the body is a space of 18in. long with the usual sliding bulkhead and movable hatch, giving altogether a great deal of stowage room, much of it being readily accessible from the well. Within the well there is room for the canoeist to sit at ease, prepare a meal when afloat, to make a good bed, or to carry a cabin passenger. The model of the boat is fitted for rough water, and she is in all ways a staunch and powerful craft, particularly stiff under sail, and capable of going anywhere that a canoe should venture.

While her model, build and fittings are by no means those of a racing machine, with the racing rig shipped and spare fittings removed she is a very fair sailer, and if well rigged and sailed should show a satisfactory record for a season's work. Probably her weakest point is racing under paddle, as the model is not one that can be driven easily at high speeds. In fitting a canoe with the movable racing mizen tube the sliding bulkhead may be made to fit in two positions, one for the short cruising hatch and one for the long hatch that goes with the racing mizen; by which means the well is shortened some 2ft. The dimensions of the Bat are as follows:

Length over all	16ft.
Beam extreme	2ft. 6 in.
L. W. L.	2ft. 5 in.
Draft	5 in.
Least freeboard	5 in.
Sheer, bow	6 in.
stern	3 in.
Displacement	432 lbs.
Area midship section	78 sq. ft.
midship section from stem	9 ft.
lateral plane	6.10 sq. ft.
board	2.90 sq. ft.
total	9.0 ft.
C.L.R. from stem	7ft. 1 in.
Fore side of stem to	
First mainmast	1ft.
Second mainmast	8ft. 10 in.
First mizen	10ft.
Second mizen	12ft. 8 in.
Fore bulkhead	4ft.
Shifting bulkhead	6ft. 6 in.
After bulkhead	12ft. 6 in.
Fore end of slot	4ft. 0 in.
After end of slot	7ft. 1 in.
Fore end of coaming	6ft. 6 in.
After end of coaming	12ft. 6 in.
Fore hatch	3ft. 6 in.
After hatch	13ft. 1 in.

CANOEING NOT A DANGEROUS SPORT.

THE accident on the Conemaugh River in August, 1888, whereby the Rev. Mr. Comingo and his friend were drowned while descending that stream in a canoe, will be recalled by a recent trial, which has been brought about by that accident.

It is interesting to note that the witnesses, James K. Bakewell, G. H. Singer and William H. Rea and others, are well known and experienced canoeists, and it was their testimony as experts, that enabled the jury to decide the point at issue.

In order to understand the testimony a statement of facts involved in the case will be briefly stated:

The Rev. N. B. C. Comingo had a \$5,000 policy in the People's Mutual Accident Insurance Association of Pittsburgh. On the 22d of August, 1888, he embarked at Johnstown on the Conemaugh River in an Osgood canvas canoe, having with him a companion who was unable to swim. He was an experienced canoeist; had traveled about eight hundred miles in the same canoe on different streams; had gone down the Conemaugh two or three times before; once when the river was as high as at the time of the drowning. He was a good swimmer and an able-bodied man about thirty-eight years of age. The stream was almost bank full, probably 10 or 12 ft. deep. He was standing in his canoe, perhaps to observe the course, and was thrown headlong by a sudden lurch, supposed to be from striking a log; disappeared from view and did not rise. When found there was a deep gash on his forehead and it was supposed he had struck a log, was stunned and drowned before recovering consciousness. His companion clung to the canoe and was carried down stream two miles and then drowned. In the policy there was a clause providing that the company should not be liable in case of death by "voluntary exposure to unnecessary danger or perilous adventure." The company defended on the ground that embarking on such a rapid and swollen stream was a voluntary exposure within the meaning of the stipulation. Upon this quest the expert testimony was taken. The case lasted about four days, and the jury found a verdict for the plaintiff for the full amount.

Quite an array of legal talent and witnesses appeared before Judge Magee in the Court of Common Pleas of Allegheny county, Pittsburgh, on Jan. 5 last. Counsel for plaintiff, W. K. Jennings and F. R. Stone; for defendant, C. C. Dickey, W. K. Shiras and C. P. Martin.

Mr. James K. Bakewell was the first witness for plaintiff, and after some preliminary questions Mr. Jennings asked:

Q. Have you had any experience in canoeing? A. I have for a number of years, since 1881, I think.

Q. Since 1881? A. Yes, sir.

Q. Upon what kind of streams and waters? A. Been on the Allegheny, the St. Lawrence, the Potomac and the Ohio.

Q. Any lakes? A. Yes, on Lake George and Lake Champlain.

Q. Have you had any experience, Mr. Bakewell, in using a canoe in swift water? A. Yes, sir, rather swift. The swiftest water I have ever been on was the Potomac. I think below the Little Falls. I have been up above the Chain bridge, the water is very swift, very rough, full of rocks, especially when the tide comes in.

Q. Which in your opinion would be the safer for navigation, in a stream that was rocky in its bed and precipitous, when it was at low water or when it was at high water? A. High water.

Q. Why? A. Because you would be able to go over rocks that you would strike if the water was low; and in high water the current is swifter and carries you through better, that is as to safety to the canoe. The canoe might be damaged in low water where it wouldn't in high. Of course, high water makes a certain amount of eddy, but we can always tell those by looking out for them; you can always see a sunken rock by the eddy it makes.

Q. Do you know the Conemaugh River at or about Johnstown? A. I have seen it from the train quite frequently, three times, I think, more than that, I can't say how many, but I know three times anyway I have seen it from the train.

Q. Did you pass there at or about the time or shortly after the time of this accident? A. I did, I passed the next day, the 23d I think it was.

Q. The 23d of August? A. Yes, sir.

Q. Where were you coming from? A. I had been at the canoe meet at Lake George. I went to Washington to argue a case, argued a case on the 22d and came home on the 23d; left on the night of the 22d, got home on the 23d.

Q. What was the condition of the stream at the time you passed Johnstown? A. The river was quite swollen, a good deal of water in it. There had been an accident I think further down the road and we had to come home by the way of the West Penn road. I went to see the conductor and asked him if he would let me—as I lived up the Allegheny River—if he would let me out at a station above Freeport, that is opposite my house; he wouldn't do it. Then I said to him, I think that I wished I had brought my canoe with me instead of sending it home by freight, and I would go down the river, because I would lose the day any way—at least we didn't get in I think until about 3 o'clock that afternoon.

Q. Mr. Bakewell, if a man with considerable experience in the management of a canoe, who was also a good swimmer, should undertake a voyage from Johnstown down the Conemaugh, the river being in the condition described in the testimony, and as it was the day before you saw it, would you or would you not consider it a dangerous undertaking? A. I don't think it would be dangerous. The matter was discussed in our club to-day. By the court: Your own opinion. A. I don't think it would be dangerous at all. I gave that opinion once before. I was just going to relate the circumstance when I gave the opinion.

Q. Now you state, Mr. Bakewell, why you would not consider it a dangerous undertaking? A. Because I think there are worse rapids than the waters in the Conemaugh when I saw them on the 23d day of August, I think, about ten o'clock in the morning. I am always accustomed to look at every river I pass on the train to see what sort of a canoeing river it is, in case I might want to take a canoeing trip on any of these rivers, and I gave especial attention to the river that day. I wouldn't have considered it dangerous, and if I had my canoe with me I would have gotten out of the train and launched my canoe in the river and come down, getting home that evening almost as soon as I did by the train.

Q. You may state, Mr. Bakewell, whether it is or is not a common thing for a man canoeing to be thrown out into the water? A. Yes, if he don't care very much about that; I have been upset myself, I never got scared at the upset, I have seen quite a number of them. I have seen races where the canoes go out under sail

DESIGNED BY W. P. STEPHENS, 1889.

and upset at a signal, the canoeist right his canoe, bail it out, jump in again and sail to the finishing stake.

Q. What was the widest stretch of water, Mr. Bakewell, that you ever saw a canoe cross? A. I am not sure whether Lake Champlain is wider or the St. Lawrence, both are pretty wide. I saw a sailing race in canoes on Lake Champlain from the deck of a steamboat as I was going home from the meet, I had to leave early, where the people were seasick on board the steamer, which was as large as one of the Sound steamers, very large.

Q. From your experience in canoeing, do you consider canoeing as it is practiced within your knowledge, in all kinds of waters, mountain streams, placid streams, lakes, lakes in times of storms, when the waves are high enough to make people sick on steamboats, under such circumstances do you consider canoeing a dangerous sport comparatively speaking? A. I think all out-door sports are more or less dangerous; I do not think canoeing is more dangerous than any other out-door sport, such as boating in the ordinary sense of the word, horseback riding, driving or any other of the ordinary sports. I have never considered it dangerous myself or been in a place that I would consider perilous. A certain amount of skill is of course required, as it takes a certain amount of skill to ride a horse; but it is not as dangerous, and a canoe in my opinion is not as dangerous as an ordinary Tarentum skiff, working boat, shell. By the words "Tarentum skiff" I mean the usual kind of skiff used on the Allegheny River, with which I am most familiar.

Q. Major Howe testified yesterday, if I remember correctly, that a wooden boat would be safer in going down rapids where there were rocks than a canvas boat for the reason that it would slide over the rocks while a canvas boat was liable to have a hole torn in it. What have you to say to that? A. I don't agree entirely with that. A canvas boat—I think a wooden boat would be safer than a birch bark, to a certain extent, or about equally as safe. A birch bark, on the other hand, has more lightness, would slip over more easily than a wooden boat. A canvas boat would be apt to give, and although on a sharp rock it might be torn in certain cases, yet on anything other than a sharp projecting rock it would be safer than a cedar boat.

Q. Mr. Bakewell, you have testified that you thought, comparatively speaking, canoeing was not more dangerous than other out-door sports. I wish you to consider that question in regard to loss of life, and I ask you if you have any opinion, and if so, upon what basis it is formed? A. I have made a study of canoeing.

Q. If you had gotten off at Johnstown that morning and had an offer of an Osgood canoe would you have been willing to have come down in it? A. Yes, I have already testified that I think that Osgood canoe would be as safe as a wooden canoe. I don't think I would have hesitated at all. And so far as I am concerned I think I would have been perfectly safe.

Q. Mr. Bakewell, would the fact that that canoe floated for a mile or two as has been testified, supporting Mr. Orth, be any factor in your judgment as to its being one safe to trust to? A. Yes, because where a canoe will float and support a man if he is able to swim there would have been no trouble about Mr. Orth saving his life in my opinion.

Q. You have heard the testimony describing the manner Mr. Comingo fell head foremost from the canoe. Are you able to express any opinion as to what was the cause of his death? A. From the testimony it appears it struck me he struck his head against a rock, that might have been the occasion of being stunned; not being able to help himself he drowned. If it had not been for something of that sort, he being a swimmer as has been testified to, he could have held on to his canoe, and the river being a comparatively narrow one, there would have been no trouble in swimming ashore even if he had been carried down some distance before he reached the shore.

Mr. G. H. Singer was the next witness called. Q. Have you had any experience in canoeing? A. Yes, sir, more or less in the past ten years.

Q. On what streams have you ever been? A. I have been on the Ohio River, the Allegheny, Lake Chautauqua, Conorango Creek, the St. Lawrence River, Chartiers Creek.

Q. Have you ever taken a trip in a canoe where there was swift and rushing water? A. Yes, sir.

Q. On what creek or river? A. Well, the swiftest water I was ever on was on Chartiers Creek.

Q. Can you give any idea how rapid the stream was? A. Well, I should say in some parts it was not less than ten or twelve miles an hour.

Q. Between what points did you go? A. We started at Canonsburg and went down to Bridgeville the first day, and during that night it rained all night; the creek rose I suppose 4 or 5 ft.; then we came down from Bridgeville to a little below Mansfield.

Q. What was the condition of the bed of Chartiers Creek, rocky or otherwise? A. Pretty much all rock in the lower part; up above Canonsburg there, about Canonsburg, there was more or less slack water dammed.

Q. Suppose that a man that was full grown, of mature years, strong and well, with considerable experience in canoeing, who was a good swimmer, should undertake a voyage in a canvas canoe on the Conemaugh River in the condition in which the river was at the time of the accident, what would be your judgment as to whether it was a very dangerous undertaking or not? A. I think the trip could be made; I would be willing to try it myself. I wouldn't be surprised if I would be upset, but I wouldn't consider that a very dangerous feature of it. I have been upset quite a number of times. I consider that as long as a man can swim that he is all right.

Q. Mr. Singer, from your experience in canoeing, how would canoeing, as practiced in this country and Canada at the present time, compare as to danger with other outdoor athletic sports? A. Well, I don't think it is more dangerous than a great many other athletic sports.

Q. Can you specify what ones you mean? A. Well, it is not as dangerous as foot ball or as polo. I don't think it is any more dangerous than yachting.

Q. Have you heard detailed, Mr. Singer, the manner in which Mr. Comingo was precipitated from this canoe? A. Yes, sir, I have.

Q. What would be your judgment as to the cause of his death under those circumstances? A. I think there is no doubt that he was rendered helpless by being struck on the head, striking his head on a rock, otherwise I think he would have had no trouble in getting out.

Q. In which stage of water do you think the Conemaugh would be more safely navigable at high water such as this was, or at low water? A. Well, I think at high water they would have more chance of meeting with no obstructions; they would have a clear channel.

Mr. Wm. H. Rea was next duly sworn. Q. Have you had any experience in canoeing? A. Yes sir, some.

Q. For how long? A. Ten years.

Q. In what stage of water, low or high water, would you consider the Conemaugh River more safely navigable for a canoe? A. Rather high water.

Q. Have you heard the testimony here as to the manner in which Mr. Comingo was thrown out of the canoe? A. Yes, sir.

Q. What in your judgment was the cause of his death? A. I think he hit his head on a rock or some log that was there, I believe was testified to.

By the Court: Q. You say that you regard a high stage of water as better for canoeing than a low stage of water? A. I do, yes, sir.

Q. Do you mean by that it is safer for life or better for canoeing in high than in low water; because that is the question that is particularly involved in this issue? A. I am basing my answers entirely on my own experience coming down the rapid stream, the rapid Allegheny, and, of course, if there was only half the water there is no danger to life at all, a man couldn't upset and drown; but I think it is safer to navigate a canoe on a comparatively high stage of water, where the majority of the rocks are hidden by the water, or so far below the surface that they do not interfere with canoeing, than it is on a lower stage where there are more rocks appearing.

Q. You think it is safer for a man's life? A. I do, yes, sir.

Messrs. J. B. Slack, J. T. Myler, J. W. Hague, C. W. Robb were also sworn and gave testimony similar to that already mentioned. Myler testified in answer to the questions. Q. Isn't it customary for good canoeists to kneel or stand up at the approach to rapids in order to see the course? A. Very often, yes, sir; it is absolutely necessary, yes sir. I came down the Clarion River one time, and there they have brush dams largely, and the only way you could get near the brow of the dam was to stand up till you see a clear course, then make for that and let yourself go.

Q. Suppose Mr. Comingo was standing up for that purpose, and the canoe unexpectedly struck a concealed rock or log, and he was thrown out, to what would you attribute his fall? A. Accident entirely. I don't assume any man is going to expose himself.

It is therefore gratifying to have a court and jury decide that this was not a case of "voluntary exposure to unnecessary danger or perilous adventure."

A. C. A. MEMBERSHIP.—Eastern Division—George Reardon Lowell, Mass.

PEQUOT CANOE ASSOCIATION.

THE Pequot C. A., of New Haven, has in hand a scheme for a novel club house at Morris Cove, as follows:

The scheme, an entirely new and original one, both in style of architecture of the buildings and purposes of the club, contemplates a main building with a ground floor room of about 80x40ft., off from which at the left is a raised platform for music, speaking, etc., and opposite this an old-fashioned fireplace, sufficiently spacious to admit six foot logs. This main hall would have a fine floor and be tastefully finished in natural wood, after the style of the new southern inns. Opposite the roadside entrance to the main hall will be folding doors opening on to the broad piazzas, which run along the front of the dormitories. These dormitories, two in number, diverge from the main building on the right and left, the ground plan appearing like the letter V. They are each 72ft. long, two stories high and face the water. They contain eighteen rooms each and open upon the piazzas which front the court or lawn leading to the beach. They are to be not less than 8x12ft. and 9ft. clear and have a sash or panel door, also a rear window. The galleries along the second story of the dormitory wings are reached by stairways at both ends of each wing. The wing at their outward extremities are separated 70ft., which makes an open wedge-shaped court or lawn, upon which all the rooms front.

From the main hall stairways reach a gallery, which runs across its two sides, opening from which are to be two rooms on each side, leaving the main hall clear to the roof in the center and front. These side rooms may be utilized as smoking and billiard rooms, etc. It is expected that each room holder will fit up his or her room to suit convenience or purpose.

The scheme involves the outlay of something like \$5,000, about \$3,000 on buildings and \$2,000 for land.

Forty subscribers to two or more shares of \$25 each in the proposed building company will be entitled to hold without charge, as long as they remain members of the association, one of the forty private rooms in the buildings, location to be decided by lot; and excepting certain restrictions which the house committee might formulate, could do with their rooms as they saw fit, either occupy them or rent to any non-room holding member, or to any outside party not objectionable to the house committee. It is believed that such rental alone would be a profitable investment for those members not desiring to personally occupy their rooms during the summer season.

The building company, composed wholly or in part of members of the association, would simply purchase the site, erect the building and then lease the whole property for a term of years to the club, the latter paying an annual rental sufficient to pay interest on the investment, taxes and insurance, the club also agreeing to keep the property in repair. Therefore fixed annual charges would be say 5 per cent. on \$5,000, \$250. Taxes and insurance \$50; total \$300. The club as lessee would agree to pay \$300 annually as rent and keep the premises in repair; \$100 of this rent would return to the room-holding members in the shape of dividend on their stock in the building company.

WAR CANOE RACING.

THE following letter has been sent by Mr. E. H. Barney to Vice-Com. Cartwright. Both of Mr. Barney's suggestions are timely and practical, and, as usual, he is willing to give something more than advice. We believe that the war canoe race will in a very few years become a feature of the annual meets, but at the same time it is an experiment, and before a considerable sum is spent in building canoes it might be well to try for one season with existing boats provided by the clubs owning them, which some limits to size, etc., can be permanently fixed.

J. W. Cartwright, Jr., Vice-Com. E. D. A. C. A., Boston, Mass.—Dear Sir: After this year the competitions between the Divisions in racing their war canoes will be very exciting, so much so that in my opinion the present A. C. A. regatta committee should decide the size, weight and number of paddles to be used on a canoe. When the above dimensions are decided call on me for \$10 to be used toward building a canoe for the Eastern Division. Above everything else the canoe must be made to take apart at midships, as no canoe is safe on a platform car. Most every club now rents a box car to send their canoes in to the Meet and war canoes if made to take apart could go in with our boats.—Prowisic.

TATASSIT C. C.—The annual dinner of the Tatassit C. C. was held at Kessell's, in Worcester, on Jan. 24, the following officers being elected at the same time: Com., F. P. Dean (re-elected); Vice-Com., F. A. Sears; Purser, F. W. Johnson. The limit of membership, 25, being reached it was decided to remove it and admit a number of candidates. It was also decided to make membership in the A. C. A. a condition of membership in the club. A regatta will be held next season. The club owns a war canoe, the Wachawewak.

A CANOE RACE TO SANDY HOOK.—The New York C. C. will hold a Sandy Hook race on Saturday, June 20, open to all canoeists. The race will start at the club house at 9 o'clock. The course will be to Sandy Hook and return. A suitable prize will be offered. More particulars will be given later in the season.

Yachting.

Yachtsmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kennel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman*, *Zeus*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising* Departments.

KNOTS AND MILES.

THERE is, unfortunately, a growing practice of making an improper use of the word knot, not only with landmen, engineers and shipbuilders, but also with sailors, who ought to know better.

The prevailing idea at present appears to be that the knot is the same thing as the geographical, nautical, or sea mile; and the word knot is used to prevent any possible confusion with the statute land mile.

But this usage is quite wrong. The knot is the cosmopolitan unit of speed employed at sea by sailors of all civilized nations; knots in English is *nudos* in French, *nudos* in Spanish, *nodi* in Italian, *knopen* in Dutch, *knöten* in German, and probably the equivalent word would be *knout* in Russian, and *knut* in Scandinavian.

One knot is a speed of one nautical mile an hour, the nautical mile (French *mille*, Spanish *milla*, etc.) being the mean sexagesimal minute of latitude on the earth's surface; so that it is 60x60=5,400 miles from the equator to the pole; and this is the only mile the sailor knows and uses.

The nautical mile is a little over 6,080ft., the Admiralty measured mile (we do not say the Admiralty knot) so that one knot is a speed of a little more than 100ft. a minute, more nearly 101 to 102ft.

a minute; thus on a log-line, with a half-minute glass or interval of time, the distance between the knots should be 50ft., or a little over, say 51ft.

The knot is derived from the knots on the log-line: the number of knots which pass over the ship's tailrail during the half-minute or other interval of time giving the speed of the ship in knots.

The only occasion, then, in which it is permissible to use the word knot as the equivalent of a length, is in spacing the knots on the log-line; and then, by a familiar tendency in language, the "distance between two knots" is abbreviated in speech to the "length of a knot." All this is explained very carefully and clearly by Sir W. Thomson's *Lecture on Navigation* (Glasgow: Collins, 1876), an excellent little book, now, unfortunately, out of print.

But by a curious perversity and straining after precision, the incorrect expression "knots an hour" to express the speed of a ship, is creeping into general use with the effect of displacing the word mile by knot; so that now it is quite common to read a steamer's daily run as given in knots (e.g., *Leutonic's* daily runs 473 knots, 493 knots, etc.), total distance 2,806 knots, and the coal endurance of a man-of-war given as say 20,000 knots at 10 knots speed; thus using the word knot where mile should be used. No real sailor would say that a rock or the land was half a knot, one knot, etc., away.

It is often urged that the expression "knots an hour" is so much clearer and more definite; but we might just as well measure pressure in "atmospheres per square inch."

Besides, in strict dynamical language, "knots an hour" would mean an acceleration; a steamer, going at 20 knots an hour, starting from Liverpool would use the long expression "knots per hour" by the formula $t = \frac{v}{a}$ ($\frac{20}{1} = 20$), or $\frac{1}{20} = .05$ hours, about.

When we read of the Russian yacht, *Polar Star*, that "on second trial an average speed of 18.85 knots was got over a four knots' course, and the last of four knots gave 19 knots per hour," we do not know whether the four knots' course means a course on a tide making four knots, and whether the last of four knots meant that the speed increased from 15 to 19 knots; in fact, the whole sense is obscure.

In the discussion on Mr. Ravenhill's paper, "Twenty Minutes with our Commercial Marine Steam Fleet," in the *Transactions of the Institution of Naval Architects*, Vol. XVIII, Mr. C. Lampert is quoted as saying: "May I ask Mr. Ravenhill if he has not made a mistake in putting down 18.85 statute miles per hour as being the mean speed. I have always been under the impression that the term knot had been done away with; that when nautical men use the term knots they mean miles; and that the 15 knots mentioned should not be made into 18.85 miles." "A member: 'Not in all cases,' etc."

There is a very typical instance of the confusion prevalent in the minds of general users of the word knot, and shipbuilders, who never leave the log and who always require speed to be translated into statute land miles an hour, to make a mental comparison with their own rate of walking, or the speed of a train.

Chief Engineer Isherwood, of the United States Navy, in his reports on speed-trials of vessels, is so anxious that there should be no mistake, that he always uses the long expression "geographical miles an hour" to express speed, which he has the clear simple word knots to hand all the time; however, he does, at least, avoid the abomination "knots an hour," and the worse still conversion of speed, expressed as 16 knots an hour=19 statute miles.

Sir W. Thomson (*Navigation*, p. 45) says that: "The existence of the British statute land mile of 1,760yds., 5,280ft., is an evil of not inconsiderable moment to the British nation, and that no navy intends to use the unequalled word mile to mean anything else than the geographical nautical mile."

The land mile varies in the most extraordinary manner in different countries, and even for England, Scotland and Ireland. We inherit our statute mile of 1,760yds. from the Romans; in their military mile, *mille passus*, a thousand paces, the paces, the military pace being a little over 5ft. Sir W. Thomson's paper on the foot rule has shrunk in the course of ages, due to a continued tendency in commerce (very observable in the so-called pint bottles of wine or beer.)

It was well known to our early Elizabethan writers on navigation, such as Norwood, Wright and others, that 60 to 70 statute miles went to a degree of longitude, and that the writers on geography ignored the fact (perhaps from a temptation to make round numbers), and for a long time afterwards taught that 60 land miles went to the degree.

It is a matter of history that Newton's Theory of Gravitation was retarded for 19 years, in consequence of this error.

Newton, sitting in his garden in 1655, so tradition records, and feeling an apple fall looked up and saw the moon in the sky. As a mathematician he immediately proceeded to generalize from the apple to the moon; and knowing from the moon's parallax, 57', that the distance was roughly 10 times the earth's radius, he argued that if the apple falls 16ft. in the first second, the moon, or apple, if carried up so far, would fall 16ft. in the first minute towards the earth, gravity decreasing on the square of the distance. But, taking the minute of latitude as the land mile of 5,280ft., Newton found that the moon would fall only 14ft. in the first minute, with the periodic time of the moon as 28 days; the discrepancy was sufficiently large to make him lay aside the theory; and it was not till 19 years afterwards, in 1674, that he perceived where his error lay, and resumed his calculations, this time with complete success.

When the Metric System was brought out, about 1795, it was intended that all sub-divisions should be decimal and centesimal, and the sexagesimal sub-divisions were to be completely thrown over.

To begin with, the day was to be divided into 40 centesimal hours, each hour into 100 minutes, and each minute into 100 seconds.

To correspond in longitude and latitude, circumference of the earth was divided into 40 degrees, and the quadrant into 100 degrees or grades, each grade into 100 minutes, and each minute into 100 seconds, so that the number 10 (instead of 15) should turn time into longitude, and *vice versa*.

A centesimal minute of time was made into the kilometre, intended to serve as the centesimal sea mile; and now the centesimal knot would be a speed of one kilometre per centesimal hour.

Thus, 5,400 miles=10,000 kilometres, or 1 kilometre=.54 mile; and the centesimal knot would have been 0.9 of our usual knot.

But, unfortunately for the completeness of this system, so beautiful in conception, the world refused to accept it, and the centesimal time; and sexagesimal time, and, therefore, sexagesimal angular measurement being retained, the kilometre is useless for purposes of navigation; and even the French retain and print on their ordnance maps the *mille*, alongside of the kilometre.

It is very easy to see, geometrically, how superior is the sexagesimal division of the angle, first by making six complete steps round the circumference of a circle, and then by dividing the radius, and afterwards by drawing the inscribed equilateral triangle, square, pentagon, hexagon, octagon, and quindecagon; when sub-divisions of the circumference, down to as small as 3 degrees, will be made.

Why this smallest division should have been trisected into degrees, and the degrees into 60 minutes, etc., is not very clear now; except that the number 60 was a sacred number with the Chaldean astronomers, and the 360 degrees corresponded with what they thought ought to have been the number of days in the year; so that the sun's daily motion in longitude would be one degree.

The minute of latitude and the mile being thus convertible in navigation, a ship is springing up among navigating officers of the world, the latitude and longitude as so many degrees or miles (not minutes). With latitude this does not matter, but with longitude it must lead to confusion and danger; as the word mile is then used to denote a quantity varying in length as the cosine of the latitude.

The dictionaries are much to blame for confusion in language. The makers rarely know the meaning of scientific terms, and their anxiety to make the dictionary complete, the compilers give all usages of a word, incorrect and even improper, without carefully pointing out the only true meaning.

Again, the same tendencies, which made the Chaldean astronomers maintain that if the year did not have 360 days, it ought to have; and which made writers on geography even in Newton's day, say that the sun's daily motion was 1 degree, and still work with the framers of our tables of weights and measures. Already in America the "short" ton of 2,000lbs., and the short cwt. of 200lbs. is in use, the gradual tendency of commerce being to shorten the standards.

In the tables of weights and measures, all the units are adjusted so as to become aliquot parts of each other. Thus 12in.=1ft., 16oz.=1lb., 100gr.=1oz., and so on. But if 1 fathom=8ft., exactly, there is no need for the fathom as an independent unit, and it would drop out of use as redundant.

But the fathom is the sailor's and fisherman's favorite unit for measuring the length of a rope, and is used all the world over.

If the sailor is to be allowed to make his own tables, he should take the nautical mile as his unit and divide it into fathoms, and this would make the sailor's fathom just about 6ft. 1in., as above.

Not only in navigation, but also in astronomy, the nautical mile

should be the unit of length and the knot the unit of velocity; the distance of the sun with a parallax 8".3, being 90x90 co-sec. 8".3=84,246=84 million miles, while the velocity of the earth round the sun is 90x90 co-sec. 8".3=3,686x24=88,416 knots, while the speed of a point at the equator due to the earth's rotation is 900 knots.

The sun, in going round the earth once in 24 solar hours, travels at the rate of 900 knots past the equator from east to west, and at 900 co-sec. 8 knots in latitude; thus in latitude 60° the sun overtakes a steamer, going west at 20 knots, at a speed of 450-20=430 knots, and the times between successive noon on board will be 24x450÷430=25 hours, while returning on the eastward voyage the time will be 24x450÷470=23 hours.

From noon to noon the steamer will go 40 miles more in the westward than in the eastward voyage; and nowadays, when voyages are timed to the minute, the slight apparent increase of the speed on the westward voyage is taken advantage of in the records.

To summarize, distance at sea is measured in miles and speed in knots; and the expressions knots an hour for speed and knots for distance in miles are nautical barbarisms.—G. in *Nautical Magazine*.

BISCAYNE BAY YACHTING.

COCOANUT GROVE, Biscayne Bay, Fla., Jan. 25.—We are so far from news centers in this remote corner of the world, that on yesterday I received my *Forster* and *Smith* of Jan. 8. While reading with interest of the arrival in this country of *Lient*, Henn and his wife, and of their intended movements, I looked up and, far across the bay, just coming into Bear Cut, saw a strange sloop. She headed directly for this port, attracted, as we afterwards learned, by the fluttering yacht flags at the club anchorage, and it was not long before we made out the signal of the Royal Yacht Squadron for her mast head. Then we knew that *Lient*, Henn had followed the news of his coming so closely that the arrival of it and himself were almost simultaneous.

He was of course warmly welcomed, and has been extravagant in his praise of Biscayne Bay as a cruising water ever since his arrival. The present supplanter of *Galatea* is a wall-sided skipjack 25ft. over all, with a beam of 24ft., and spreading an immense area of canvas. She rejoices in the name of *Minnehaha*, and hails from Titusville on the Indian River. Within an hour after his arrival the genial Lieutenant was off on a trip up to the head of the bay as a guest on board the *Allapatta*. Tomorrow he is to join the same yacht for an outside cruise and a day's kingfishing, while *Minnehaha* undergoes some repairs. On Tuesday he proposed to sail for Charlotte Harbor on the west coast, the obvious point and terminus of his first cruise. He expected to return here in time for the annual regatta of the Biscayne Bay Club, after which he will probably spend some weeks hunting and fishing in this vicinity.

The weather here is glorious, there having been but one rainy day in the past six weeks; and though we have cold nights, the days are invariably warm and bright. Unless all signs fail, however, there must be some very cold weather somewhere, for never have ducks and other water fowl been more abundant. At the upper end of the bay, where lie the best feeding grounds, ducks and coots are to be seen in flocks of thousands. The ducks are principally mallards, blue-winged teal, wood ducks, redheads and canvasbacks. The coots—known elsewhere as *poulet d'eau* and "Blue birds"—are also numerous. They are all fat and plump when properly prepared, namely, skinned and parboiled before being roasted, fried or stewed.

The kingfishing season is now at its height, the fish being in capital condition and voraciously hungry, and swarming about their chosen feeding grounds in incredulous numbers.

In the yachting line our prospects are good for a very lively season. The *Minnehaha* is the first stranger to arrive, barring *El Colera*, which was in here a few weeks ago, we are daily expecting *Atala*, *Awixa* and *Gipsy*, with the promise of many more to follow.

Commodore Munroe has sold the *Presto* to two recently elected members of the Biscayne Y. C., Messrs. J. Herbert Johnson and Mr. Geo. Munroe, of New York, and she leaves here tomorrow for New West, where she will meet her new owners. Meantime Brown, of Tottenville, is building a new 50ft. schooner for the commodore, who will sail her down the coast next summer.

At the annual meeting of the club, held on the first Saturday of this month, the officers elected for 1891 were: Com., R. M. Munroe; Vice-Com., Thos. A. Hiner; Sec'y, Kirk Munroe; Treas., Walter H. Browne; Meas., Jean de Hedouville. At the same meeting six new members were admitted to the club.

A proposed feature of our forthcoming regatta is a Seminole Indian canoe race.

Peacock has built a large addition to his hotel, and is now prepared to accommodate any number of yachtsmen and fishermen who may find their way to this most charming of winter resorts.

O. K. CHORNER.

P. S. Mrs. Henn's late lamented coon "Seminole Sam" has already been replaced by another, which, as it is a lady coon, has received from her sponsors the euphonious name of "Cherokee Kate," and is called "Cherry" for short.

NEW 46-FOOTERS.

WHILE New York is doing nothing at all in yachting, Boston is busy building up a fine fleet of racers in a new class, with the probable result, so far as can now be foretold, that the bulk of the racing next season will be on the wrong side of Cape Cod. For some time past, all the new boats of 46ft., have been built in Boston, and within the past week two more have been commenced. The first four are all Burgess craft, but the two new ones are by other designers, so that what promised to be but a family party has now developed into a very different and far more important class.

Of the two new additions one is by Mr. Will Fife, Jr., designer of *Clara*, *Minerva*, *Dragon* and *Yama*; while the other is by Mr. John B. Paine, son of Gen. Paine, an amateur, who has already designed and raced two very successful boats, the 23ft. *Swordfish* and the 20ft. *Hornet*.

The new Fife cutter, *Barbara* by name, is for Mr. C. H. W. Foster, owner of the Burgess 40, *Ventura* last year. She will be built by Hawley Son, from full-size lines furnished by Mr. Fife, the construction being similar to *Clara*; steel frames in alternation with bent wood. Her dimensions are given as 46ft. l.w.l., 12ft. 10in. beam and 11ft. 8in. draft. This beam, if correct, is greater than Mr. Fife has yet taken, being about 10in. more in proportion to the added length than in *Minerva*, but after his visit here last year he expressed a belief in rather more beam for American rules and conditions. This beam brings the *Barbara* between the *Minerva*, Mr. Belmont's boat, of 13ft. 6in., the *Turner* boat of 15ft., and the *Vanderbilt* boat of 12ft. 6in., and the *Thayer* of 12ft. The sail plan is large, very similar to that of *Minerva*. The general form of the boat is similar to *Minerva* and *Yama*, with the exception of the wider beam, the rake of post and the rise of the keel being very similar, with the same sheer and the same midship section. It is simply a widening of the familiar Fife section.

The new Paine boat, for whose success General Paine is likely to be credited, justly or unjustly, with a large share of the responsibility, will be the most powerful of the lot, her beam being 14 and draft between 10 and 11ft., with a strong bilge and the largest sail plan. Like the *Hornet*, her mast will be well forward.

As there is the possibility of any more sport this year than last in the schooner classes the 90ft., 70ft. and 50ft. singlestickers, and as the 40ft. class is in a very doubtful state, the 46ft. class is likely to monopolize all the racing, and as but two yachts, *Jessica* and *Minerva*, are owned outside of Boston, those who wish to see any racing will probably have to go to Marblehead for it.

The close matching of the boats, making little difference in their allowance, and the close competition between them, three designers endeavoring to make the racing of special interest. Thus far Mr. Burgess is ahead in the matter of skippers, having Capt. Nat. Watson for the *Thayer* boat and Capt. Chas. Barr for the *Turner* boat, while young Capt. Haff will sail *Minerva*. Mr. John B. Paine is a very clever skipper, as he has proved in *Swordfish* and *Hornet*, though his experience has been in smaller boats; however, he may have Capt. Hank Haff at his elbow. Mr. Foster will sail the *Baboon* himself, with his boatkeeper, Sam Dolliver, to help him, as in *Ventura*.

ATLANTIC Y. C.—The nominating committee of the Atlantic Y. C. have presented these names for election as officers for 1891: E. C. Hove, President; E. E. Lawton, Vice-Commodore; Thomas L. Arnold, Rear-Commodore; James Weir, Jr.; Treasurer, H. C. Wintringham; Measurer, Henry J. Gielow; Recording and Corresponding Secretary, Geo. H. Church; for Trustees, Stephen Loines, Edward N. Norton, J. Rogers Maxwell, J. P. Howell, Thomas P. Fiske, W. W. Kenyon; for Committee on Membership, Henry A. Gouge, Henry W. Banks, Jr., J. C. Seely, for Regatta Committee, Henry J. Gielow, Henry W. Banks, Jr., J. C. Seely, for Regatta Committee, Henry J. Gielow, Henry W. Banks, Jr., J. C. Seely. The annual meeting of the club will be held at the Clarendon Hotel, corner of Washington and Johnson streets, Brooklyn, on Monday evening, Feb. 9.

THAT MARKBOAT QUESTION.

Editor Forest and Stream:

I have been an interested reader of the "Markboat Question," and up to date I fail to see where the opportunity for dispute comes in. As I understand it, the question is settled by the rules under which the race is sailed.

If sailed under any club rule, such as the Y. R. A., rule 13, or the S. C. Y. C., sections 13 and 14, rule 24, which you quote, then A must give B room, but under the regular rules of the road A could hold her course and it would be B's fault if she got in such a position that she could not make the mark. I cannot see why A should give up the leading position unless a rule under which the boats were sailing called for it, which, while an unjust rule, as long as the boats agreed to it beforehand it would be binding.

It has been a mystery to me why clubs adopt rules many of which nullify the common rules of the road.

A merchant vessel, failing to recognize the starboard tack, running into a vessel ahead or crowding another on an obstruction or ashore would be liable for damages, why are more laws required for yachting?

In modern yacht racing the more laws laid down the more chance there is for dispute, and instead of a captain that can make his boat go through the water fastest, it requires an expert tiller-juggler on deck and a sea-lawyer below to interpret vague rules and regulations, and by the time they are looked up the crisis has passed or some one has come to grief. CYRETTA.

SAN FRANCISCO, Jan. 20.

CORINTHIAN NAVY.—The annual meeting of this organization was held at the Hotel Marlborough on Jan. 27. The acting admiral's report showed the Navy to be in splendid condition. Notwithstanding the fact that the dues are only \$2 per year, the Navy gave seven regattas and has held a number of lectures. The purser's report showed close on to 300 members on the roll and a tidy balance of cash on hand. The officers elected for '91 are: Charles M. Connolly, Admiral; Thos. T. Tabor, Vice-Admiral; Frank B. Jones, Chief Purser. Commodore Center presented a silver cup to the Navy, the same to be sailed for under the Navy rules, except that no more than two persons shall be aboard of any competing boat. The Admiral has appointed John Jarvis, Jr. Fleet Captain. Proposed for membership: Howard Patterson, William T. Davis, M. Gates, W. A. Hamilton, Albert A. Simpson, C. P. Bruch, J. H. Rushton, William Dressler, C. P. Tuttle, H. E. McCormick, C. G. Winslow, Winfield Van Deusen. Mr. Gideon is now ready to form the Delaware River Squadron, and will be mustered in at an early date.

NEPTUNE BOAT CLUB.—This club, located at Baltimore, Md., is now building a house on piles at Ferry Bar. It will be two stories high, 61x32 ft. The club is devoted to sailing as well as rowing, its fleet including one steam launch, two large cabin sloops, one cutter, four open canoes 26 to 30 ft. long, and some small open boats. The membership is about 80, with prospects of a large increase in view of the new house.

CHESAPEAKE BAY Y. C.—I inclose list of officers for 1891: Com. F. C. Goldsborough; Vice-Com. Col. E. Lloyd; Rear Com. W. H. Bartlett, Jr.; Sec'y, J. G. Morris; Treas. Col. F. H. Johnston. Board of Governors, above officers and Col. F. H. Johnston, G. R. Goldsborough and J. H. Wheeler.

VISION, steam yacht, Mr. Clarence McKim, is now fitting out for a Southern cruise at Astoria. A new front wheel has been shipped. Her owner will join her at Charleston about Feb. 15, sailing for Jacksonville.

CAPT. JOHN BARR.—It is reported that Admiral Tweed, of the Corinthian Y. C., has engaged Capt. John Barr, of Clara and Thistle. At present Admiral Tweed owns only the 5-ton Shona, but he is likely at any time to have a more fitting successor to Minerva.

HARLEM Y. C.—On Jan. 30 Mr. Chas. J. Fagan delivered a very interesting lecture before the Harlem Y. C. the subject being "Sail Plans: How to Design, Correct and Sheet Sails so as to Obtain the Best Results."

SEAWANHAKA C. Y. C.—On Jan. 27 a lecture on "Some of the practical uses of electricity as applied to vessels," was delivered by Mr. S. Dana Greene before the Seawanhaka C. Y. C. The annual dinner of the club took place on Feb. 3 at Delmonico's.

TOMAHAWK, cutter, now owned by Com. Crowninshield, Corinthian Y. C., will be altered at Lawley's, her keel being cut off about one foot, making the new keel wider. The mast will be moved 18 in. forward and the rig will be reduced.

MANHATTAN ATHLETIC CLUB.—On Jan. 20 Capt. Howard Patterson lectured before the Manhattan Athletic Club on "The instruments of navigation dealt with from a practical standpoint."

KELPIE, sloop, has been sold by R. H. Henderson to E. E. Chase. Mr. Chase is an old New York yachtsman, once well known as the owner of the schooner Clito.

GREAT HEAD Y. C.—On Jan. 31 the members of the Great Head Y. C. enjoyed their annual dinner at Young's in Boston.

A NEW 30-FOOTER.—Mr. Burgess will design a 30-footer, of but 6 ft. beam, for Mr. C. F. Lyman, of Newport, owner of Mopsa.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

A. T. J., New York.—Address J. F. Sprague, Monson, Me.

CONSTANT READER, San Francisco.—We cannot undertake to tell you why the authors of arithmetics adopt special methods.

FR.—You will find early reports of the London fur sales in the *Hatter and Furrier*, or the *Fur Trade Review*; both are published in this city.

J. A. B., Washington, D. C.—Will you please inform me, through your answers to correspondents, who was the owner and breeder of Glendole, A. K. R. 2580? Ans. Owner, Mr. J. B. Stevens, Jr., Dover, N. H. Breeder, Mr. A. G. Stott, Shilville, N. Y.

N. S. H., Clinton, N. Y.—Has the case of hydrophobia described in inclosed clipping from the *Mail and Express* come to your notice, and if so, is it approximately correct? Ans. Yes, but whether it was really hydrophobia we are not prepared to say.

C. B. F., New London, Conn.—Will you let me know through the columns of your paper the pedigree of the pointer dog Lachem Boy, registered Aug. 18, 1888; also, if possible, of pointer dog Rust, sold when a pup at the Westminster Kennel Club's show, I think in 1884, to Mr. J. D. Lynch? Ans. We can find no mention of either dog in any stud book or in the A. K. C. show reports.

FOXHOUND.—I am about to purchase a foxhound. Could you inform me where I can obtain the best one, and also inform me what qualities and points a good hound should have? Ans. Mr. F. H. Hayes, Dexter, Me., has a good kennel of American foxhounds. A foxhound, whether of the English or American type, should have good straight legs and feet compact and hard through the pads; a well-ribbed body, with deep chest and plenty of heart room, and a good, hard, wet-resisting coat, what is called a hound coat.

CONNETQUOR, New York.—Will the English partridge live and increase if put out with our native quail? I have heard that the latter drive them away and destroy them. Have you any information on the subject to give your readers? Ans. We have no doubt that the English partridge, if put out here and protected until it got a fair foothold, would do well. We do not believe that our bird would drive them out. The English partridge has never yet, so far as we know, had a fair start in this country, but it does well in the cold countries of Europe.

T. C. St. Paul, Minn.—Would you kindly give me your opinion as to the best dog for all-round field sports and purposes? I am not a constant sportsman, but when I go out, once or twice in a season, I would like a dog not so headstrong as the Irish setter or one that needs constant handling to keep him in trim. Some dogs have more natural hunting qualities than others, and this is my reason for asking you to give me your idea on the subject. Ans. A well-broken spaniel, English setter or pointer, would suit your purpose in the order named.

OLD READER, St. Paul, Minn.—What plausible reason can be assigned for the entire disappearance of those swarms of wild pigeons which formerly could be seen in such vast numbers in the early part of spring and autumn of every year? They surely have not been exterminated, nor is it likely that the whole family of these birds has come to an end by some unknown cause; they must still exist somewhere, and by enlightening me on the subject you would greatly oblige. Ans. Our issue of Oct. 24, 1889, had a notice of an article by Mr. Wm. Brewster in the *Auk*, showing that the wild pigeons still resorted in large flocks to the uninhabited regions north of the Great Lakes in British North America.

J. G. S., Brooklyn.—Please inform me through the columns of the *FOREST AND STREAM* if a plaintiff gets a judgment against the defendant and the plaintiff fails to have the same satisfied by law, what extreme legal action can the plaintiff then take against the defendant? 2. Is there any law on pickering and perch on Long Island? 3. Is there a 12-bore breechloader shotgun in the market that will shoot No. 4 shot through an inch pine board at 85 yds., if so what is the name of the arm? 4. What would you consider a fair price for five years subscription of the *FOREST AND STREAM* in good order? Ans. 1. Consult a lawyer. 2. No. 3. The probability is that you will not find such a gun. 4. They are worth whatever you can get for them.

W. J. S., New York.—1. I wish to have a gun made for quail shooting, 12-gauge, from 6 1/2 to 7 lbs., 26 in. barrels. How should it be bored? When I shoot, the first barrel is nearly always used at about 20 yds.; the second inside of 35 yds. How large would the killing circle be at 30 yds. using 3/4 drs. powder, 1 1/2 oz. shot, for a true cylinder barrel? Would you advise any other length of barrel than 26 in.? Shooting mostly done in brush. 2. What is the proper load for a 20-gauge gun for field shooting? Ans. 1. It would be better to keep to a cylinder bore with perhaps a moderate choke in the left barrel. If the gun shoots evenly 1 1/2 oz. shot would make a killing circle of 30 to 35 in. diameter at 30 yds.; 26 in. barrels are rather short, better go to 28 anyhow. 2. For a 20 use 2 1/2 drs. powder and 1 oz. shot.

J. S., Albany, N. Y.—1. What pattern will a shell loaded as follows equal 3 or 3 1/2 drs. powder and 1 1/2 oz. of shot discharged from a 12-bore, full choke gun, shot separated in two equal layers with card wads? A friend said cylinder. 2. Will a full choke gun of \$100 trade shot equal or nearly so every time? 3. If a full choke gun is re-bored to a modified choke will it shoot as good as a new

modified choke gun? Ans. 1. We don't know; nobody can tell what any cartridge in any gun will do except by trial. If it is a good gun, choked and properly loaded it will pattern 75 per cent. of its charge at 50 yds. in 40 in. circle. Dividing shot by cards scatters it some, but not regularly, especially from a choke. 2. Yes; nitro powders as ordinarily loaded show wider variations than black. 3. It should be, but having put it through the borer's hands try it and find out whether it is improved or ruined.

C. M. F., Pittsburgh, Pa.—Will you kindly inform me in the next issue of the *FOREST AND STREAM* where I can procure English pheasant eggs in this country? I have an idea of trying to introduce these birds into Gloucester county, Virginia, by having their eggs hatched out under a hen and caring for the young birds until they are able to take to the fields. Can you tell me whether they will thrive in the Virginia counties lying contiguous to the southwest shores of the Chesapeake Bay? The greater portion of Gloucester county is level, dry and heavily wooded; portions of the county are hilly. The forest is mainly pine, although quantities of chestnut, oak, beech and trees of like kind occur. Ans. You may procure the eggs from Jekyl Island Club, Brunswick, Ga. Write to Col. R. L. Ogden, 52 Broadway, New York. Or Tuxedo Park may supply you write to Mr. Jas. L. Bressé, Tuxedo Park, N. Y. The birds will probably thrive in the section named.

CHUNKS OF HARD SENSE.

From the *Argus and Patriot*.

IT is important for Vermont that its waters should be well stocked with the varieties of fish desirable thereto, and then that those fish should be properly protected. The Legislature at its late session provided for the establishment of a fish hatchery. After young fish are deposited in suitable waters the most vitally important thing is that such fish should be protected, if the State is to get the best return from its investment. There is a mistake far too prevalent among people that where there is water there must necessarily be fish, and that when there are none their introduction will be followed by a great and continual increase without further care or consideration. Nothing can be more erroneous. You may stock and continue to stock waters, but if the fish are not effectually protected by laws providing for a close season during their spawning time, and by the prohibition of seines, pounds, and all other kinds of nets, spearing, the use of dynamite, and the like, all the money that has been, and shall be expended by the State in this direction will be worse than wasted. The laws on the statute books of Vermont for the protection of fish are not perfect, but they are decided steps in advance, and the penalties for their violation should be enforced with a thoroughness and promptness that shall cause them to be respected. The cultivation of the summer visitor crop will bring more money into Vermont than any other one thing, and that crop can best be cultivated by thoroughly enforcing the laws for the protection of game and fish.

From the *New York World*.

The Yellowstone National Park is no part of any State or Territory. It therefore has no law except such as Congress may provide, and as Congress has provided none the region is without law or the means of enforcing justice.

There is a range of mountains adjacent to the Park. It is a worthless range for any possible purpose except inclusion in the Park, for which it is very valuable.

The gentlemen who have charge of the Park interests have been trying for years to get Congress to pass a bill to provide the Park with the protection of law and to add the range of mountains to its area.

The Senate, which has several times passed such a bill as is required, has done so again this year; but in the House, where former bills have come to grief, a rider in the shape of a railroad job of purely speculative character has been attached to the bill, imperiling its passage and very seriously marring it if passed.

This rider provides for a railroad through a part of the Park, not for the use of Park visitors but for the benefit of a mining camp called Cook City. It is not a genuine railroad project, but an effort on the part of a little ring of speculators to secure a charter for a railroad monopoly which they can market at their own price.

Obviously the rider ought to be voted out of existence and the bill ought to be passed. The Park is a great National possession and is destined to be one of the country's glories. Its borders should be enlarged, as proposed, while it costs nothing to enlarge them; the protection of law should be extended to those who visit the district, and no railroad should on any account be permitted to invade a region set apart as a permanent home for the beauties of untamed, unspoiled nature. Least of all should a gang of traders be permitted to secure a speculative charter for such a railroad, to be used as a lever with which to extort money hereafter.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price \$2.50. For sale by *FOREST AND STREAM*.

FOREST AND STREAM, Box 2,533, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

THE WINTER CAMP-FIRE.

THE chief requisite of a winter camp-fire is volume. The feeble flame and meagre bed of embers that are a hot discomfort to the summer outer, while he hovers over coffee-pot and frying-pan, would be no more than the glow of a candle toward tempering this nipping air.

This fire must be no dainty nibbler of chips and twigs that a boy's hatchet may furnish, but a roaring devourer of logs, for whose carving the axe must be long and stoutly wielded, a very glutton of solid fuel, continually demanding more and licking with its broad red tongues at the branches that sway and toss high above in its hot breath.

So fierce is it that you approach cautiously to feed it and the snow shrinks away from it and can quench of it only the tiny sparks that are spit out upon it.

You must not be too familiar with it, yet it is your friend after its own manner, fighting away for you the creeping demon of cold and holding at bay, on the rim of its glare, the wolf and the panther.

With its friendly offices are mingled many elfish tricks. It boils your pot just to the point you wish, then boils it over and licks up the fragrant brew of celestial leaf or Javanese berry. It roasts or broils your meat to a turn, then battles with you for it and sears your fingers when you strive to snatch the morsel from its jaws, and perhaps burns it to a crisp before your very eyes, vouchsafing you but the tantalizing fragrance of the feast.

Then it may fall into the friendliest and most companionable of moods, lazily burning its great billets of ancient wood while you burn the Virginian weed, singing you songs of summer, its tongues of flame murmuring like the south wind among green leaves, and mimicking the chirp of the crickets and the chickadee's cry in the summer of exuding sap and vent of gas, and out of its smoke

blossom sparks, that drift away in its own currents like red petals of spent flowers.

It paints you pictures, some weird or grotesque, some beautiful, now of ghosts and goblins, now of old men, now of fair women, now of lakes crinkled with golden waves and towers on pine-crowned crags, ruddy with the glow of sunset, sunny meadows and pasture lands, with farmsteads and flocks and herds.

The ancient trees that rear themselves aloft like strong pillars set to hold up the narrow arch of darkness, exhale an atmosphere of the past, in which your thoughts, waking or sleeping, drift backward to the old days when men whose dust was long since mingled with the forest mould, moved here in the rage of war and the ardor of the chase.

Shadowy forms of dusky warriors, horribly marked in war paint, gather about your camp-fire and sit in its glare in voiceless council, or encircle it in the grotesquely terrible movement of the war dance.

Magically the warlike scene changes to one of peace. The red hunters steal silently in with burdens of game. The squaws sit in the ruddy light plying their various labors, while their impish children play around them in mimicry of battle and the chase.

All then vanish, and white-clad soldiers of France bivouac in their place, or red-coated Britons or Provincial rangers, unsoldierly to look upon, in home-spun garb, but keen-eyed and ever alert, and the bravest of the brave.

These dissolve like wreaths of smoke, and a solitary white hunter, clothed all in buckskin, sits over against you. His long flint-lock rifle lying across his lap, he is looking with rapt gaze into the fire, dreaming as you are.

So, growing brighter as the daylight grows dim and the gloaming thickens to the mirk, and paling again as daylight creeps slowly back upon the world, but always bright in the diurnal twilight of the woods, the camp-fire weaves and breaks its magic spells, now leaping, now lapsing, as its own freaks move it.

Then, perhaps when it has charmed you far across the border of dreamland and locked your eyes in the blindness of sleep, it will startle you back to the cold reality of the wintry woods with a crash and roar of sudden revival.

ONTARIO GAME LAW INQUIRY.

WE call especial attention to the brief note of Mr. A. D. Stewart, published in another column, in which he requests, from sportsmen who shoot or fish in Ontario, Canada, information for the Commissioners of Game and Fish for that Province. There are many of our readers who are interested in the work of this Commission, and who can render it efficient aid, and we hope that the responses from dwellers on this side of the line may be many.

An examination of the question blanks sent us leads us to believe that the Ontario Fish and Game Commission have hit upon the most intelligent and practical plan yet devised for obtaining the information they seek. Their questions are addressed to sportsmen who are interested in quadrupeds, birds and fish, but besides inquiring as to the aspect of sport which has to do merely with recreation, they wish to consider its economic side. Thus there are special questions addressed to dealers in game and fish, to dealers in guns and tackle, to hotel and storekeepers in sporting localities, to managers and supervisors of railways and steamboats, to conductors and pursers, to boat and canoe builders and to guides.

It cannot be doubted that when the answers to these questions have all been received and the information and opinions contained in them carefully digested by the Commission, the results will be of very great value. The outcome of the intelligent inquiry set on foot by the Ontario Fish and Game Commission will be watched with great interest.

The very general interest taken in the new game bill proposed by the codification committee appointed by Governor Hill, is shown by the comments on its provisions, which we publish elsewhere. It was the knowledge that this proposed law would be eagerly read by sportsmen, not only in this State but all over the country, which induced FOREST AND STREAM last week to print it in full—something that no other paper has done. This action has enabled those who intend to be present to-day at the hearing before the Fisheries and Game Committee of the Assembly, to inform themselves on the proposed law and to discuss its provisions intelligently. The bill should be fully talked over, and, as finally adopted, ought to represent the best sentiment of the State.

DEATHS FROM SNAKEBITE.

THE number of persons annually destroyed by wild animals in India is something almost beyond belief. The latest official statistics published on this subject are those for the year 1888. These show that in that year no less than 22,970 people were killed by snakes and other wild beasts, which destroyed besides 76,271 cattle. No less than 20,571 persons died from being bitten by snakes; tigers killed 975, leopards 184, wolves 139, bears 110, elephants 57; the deaths of the remainder being due to dogs, crocodiles and other animals.

Notwithstanding that for years most vigorous efforts have been made in India to exterminate snakes and other animals destructive of human life, the fact remains that the mortality from this cause, instead of diminishing, increases. The result of the attempts made in 1888 to destroy these noxious creatures was the killing of 20,709 wild beasts and 511,948 snakes. In some places bounties have been offered for snakes killed, but it is believed that instead of causing a reduction in their numbers, this has led to snakes being bred for the bounty.

It is thought by some of the local governments of India that the best method for reducing the terrible annual mortality from snakebite will be to destroy the cover in which the snakes live near the villages, and it is said that this plan will be tried. It may be doubted, however, whether it will prove effective. The problem is a difficult one, and, considering the wide range of country affected, the climate and the character of the population, the prospects for its solution are not bright.

SNAP SHOTS.

AMONG the items included in the Sundry Civil Service bill now before Congress is one appropriating money for roads in the National Park. It reads as follows:

YELLOWSTONE NATIONAL PARK: For the improvement of the Yellowstone National Park, seventy-five thousand dollars, the same together with the unexpended balance of appropriations already made, to be expended by and under the direction of the Secretary of War. For the repair, maintenance, relocation and completion of roads, bridges and paths already in use and necessary to reach objects of natural interest in the Park. For the construction of a road from Grand Cañon to Yellowstone Lake outlet, thence to the thumb of the Yellowstone Lake, thence by the shortest practicable route to Fountain Geyser; any unexpended balance to be applied to the construction of additional roads, bridges, footways and bridle paths, as the public service may require, in the discretion of the Secretary of War.

In some respects this measure is an improvement on previous items for this purpose. The contract system has been struck out and the money is to be expended under the direction of the Secretary of War. Just what is meant by "the shortest practicable route" from the Thumb of Yellowstone Lake to the Fountain Geyser is not quite clear. We presume that it is not intended to build an absolutely straight road between these two points over the dreary, bleak and uninteresting summit of the Elephant's Back Plateau? "The shortest practicable route" is no doubt the one best adapted to tourists and travelers, and that is the route by way of the beautiful Shoshone Lake. People do not go into the Park merely for the purpose of riding through it in the shortest possible time. They go there to see its beauties, and of these beauties Shoshone Lake is not the least.

The suggestion having been made that the Castle Garden building, in this city, should be converted into a public aquarium, Mr. E. G. Blackford, president of the State Fish Commission, has written to the Comptroller stating that if the city should carry out this idea the Fish Commissioners will heartily coöperate with the authorities. Of the site Mr. Blackford says: "The location of Castle Garden is absolutely perfect for the successful maintenance of an aquarium, situated as it is on New York Bay, from which could be drawn a supply of pure salt water at a minimum of expense. The facility with which specimens of marine life could be placed in the tanks makes the establishment and maintenance of the plant a comparatively easy matter. No location could be chosen which would be so accessible to the people of New York. I believe that the running expenses of such an institution could be paid if it were free to the public on all but two days of the week, when a small admission fee could be charged."

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

VIII.—THE FOURTH LAKE HORSEBACK.

IF anything about Fourth Lake is worthy of special notice it is the "horseback," as kames, or the moraines left by glaciers are called from their shape.

Kames are so common here that we have ceased to regard them as curiosities, and wonder equally that strangers should see anything remarkable in them, and that they should fail to recognize as quickly as ourselves any trace of them. Kames usually show as rounded ridges, in appearance sometimes like an old railroad embankment, at other times a long, low hill, varying in height from a few feet to a hundred, of sand or loose gravel either clear or bearing pebbles and boulders, usually of granite and sometimes of great size. They cross the country every few miles, usually flowing southeast, some barely traceable, some interrupted, others like the Whale's Back of Aurora continuous for miles, a conspicuous feature of the landscape. Some can be distinctly traced for more than a hundred miles, at their lower ends most spread out into kame-plains, of which the great blueberry plains of Cherryfield are an example. The presence of ice-worn pebbles and disintegrated soil, usually sand or gravel, are enough to show even the tyro the road that the glacier used to travel: and on the tops of the mountains, northwest and southeast, almost as exact as the compass itself, are the scratches of the nails in the glacier's shoes.

The Fourth Lake horseback follows the left shore of the lake most of the way from one end to the other; at the upper end it crosses the lake—our island was a part of it—and reappearing, follows up the side of Fifth Lake Stream; at the lower end it turns at the carry to Dobsy Lake (for the very good reason that if it didn't turn there the carry would have been somewhere else) and runs in a double ridge across to Dobsy; thence it follows up the shore of the lake for half a mile to the end of Norway Point. Whether it still continues up the lake or across it to Pocumpus and the Machias system of kames must be determined by those who know the country; as also whether the other end goes down past Fifth Lake to the Pleasant River system. But its general course is of less interest than its action about Fourth Lake. Here it does something peculiar: it flows in a westerly or northwesterly direction for about three miles. Kames rarely take this course, and when they do so, unless compelled by some local cause, they flow from west to east. But this apparently flowed from east to west—for it is probable that it belongs to the Pleasant River system. What makes it vary from the normal direction? It would not be surprising if some things concerning the courses of glaciers yet remain to be explained, for wherever I have noticed the west and east horsebacks, as on the way from the West Branch to Katahdin about Middle Joe Mary Lake there seems to have been no obstacle in the way sufficient to have forced them out of their natural southeasterly course. And here at Fourth Lake there is no apparent cause for a deflection, much less for such an unusual westerling; if ever a glacier had an opportunity to run just where it wished to it ought to be in this flat country, with nothing to oppose or turn it aside. Exact observations may prove the real deviation to be less than I think; but the course of this horseback, if carefully studied, should throw some additional light on the causes of the direction of glacial movements.

The Fourth Lake horseback is from thirty to forty feet in mean height, composed of fine materials, sand, gravel and small stones. In places its whole side is laid open to the weather almost back to the line of its greatest height; at other points the side is just beginning to slip, and again the rounded top is entirely unbroken. Many kames are in worse condition, but I do not remember one which seems doomed to destruction in so short a time, from natural causes only. Father says that within the years he has been there his island has worn away perceptibly, although it is only a few feet above water. How much faster will the rain and melting snow wash down the loose drift of the main kame, and the undermined trees tear away with them great masses of its substance. When once the kame is laid open to its main axis, the work will go on with quintupled rapidity. It is only a matter of time for this horseback to be reduced to a bar of pebbles and gravel. Then what? On a lake without a dam it might not be so easy to predict; but where a dam alters the level of the water many feet during the year, so that at one season it washes the top of a bar and at another it mines its roots, changes go on much faster than under ordinary conditions. We can depend upon men to keep dams wherever there is a good water power or logs to be driven out. To go back a little, the sunken land of this lake was undoubtedly caused by the flowage of the dam, which killed all the trees on what was once a flat cedar swamp, washed them away and planted moose-ear in their places; and, at whatever time the snow and rains shall succeed in carrying off all the fine materials of the horseback, the dam and the ice will combine to remove the gravel bar left behind, and high water and ice together, in no long geologic future, but in time measured by centuries if not by scores of years, will scour out the sunken land of the unknown, behind what was once the horseback, until Fourth Lake will occupy a position nearly at right angles to its greatest length at the present day.

IX.—FORWARD.

If it had not been that our ultimate point on the Machias, the old Hemenway Farm on Fletcher Brook, and the climb of Fletcher Mountain for a view of Fifth Lake, required two consecutive days of fair weather, one for drying the bushes, the other for the trip, it would have taken worse weather than this to keep us four days on an island. But on Tuesday, although it was foggy and foul, we caught a few more pickerel, packed up our goods and started down the lake, determined either to run into better weather or to make it come after us.

The dam at the foot of Fourth Lake is not in good condition; and as some logs had been left side-boomed into the outlet there was a poor chance to unload our goods and take the canoe by. As we crossed the dam to look at it, a great blue heron that had seen the advantages for fishing afforded by a stream which had forced its way under the shore end of the dam, rose within 10ft. of us. His neck was drawn back behind his shoulders, his head extended a little beyond the breast, wings only three-

fourths unfolded and legs trailing, not dangling nor stretched out behind as in full flight, but held just as they had been when he had sprung upward—precisely the attitude in which the Japanese paint cranes rising to fly, a striking confirmation of the spirit and exactness of their pictures.

There is a carry of a quarter of a mile past the quick water below the dam, and we lugged one turn across; but as the carry had not been much used of late and bark-peelers had fallen hemlock logs across the path during the summer, Jot declared that rather than carry the second turn, "he guessed he would run it past," which he did, affirming that "the water was just nothing at all." It might not be well for the inexperienced water man to take Jot's word for this, though no one in camp ever doubted it even in the eleventh degree. On the way across we came upon a flock of four partridges and shot all of them.

Below the carry the stream is very pretty, resembling stretches of the East Branch Penobscot, notably that just above Stair Falls. Gnarled swamp maples, just turning red, and ash trees grew among the meadow grasses, and by the water's edge *Osmunda regalis spectabilis* with its masses of tropical foliage, and scarlet cardinals, as we call the red lobelia, reduplicating its redness in our speech just as in nature it is always doubled by its own reflection in the stream. There were bits of meadow, some current and rocks in places. At the head of an island was a gravel bed, which we had to walk past, and not far below we heard the noise of a smart little fall, which Jot ran. Then we came into the flowage of Third Lake, like that about Fourth Lake, a long stretch of moose-ear and dry kyle.

A mile or two down the lake we landed on a sandy beach on the right side where a sea-wall is forming, and had our usual feast of pickerel. Jot said that he was getting ashamed to look a pickerel in the face. A log cock (*Ceophleps pileatus*) flew by cackling, the only one I remember hearing on the cruise, and little maple seedlings were growing in the crevices of the drift-wood.

We had hoped that it would clear off by noon; instead, it began to rain and blow hard in our faces, smiting us with heavy gusts whenever we came out from the lee of a point or an island. But we put on our rubber clothes and called it the best weather we had seen, since it could not keep us back. Third Lake, though seven miles long, is narrow and has islands in it, so that it is impossible to raise a dangerous sea, and the shore, being rocky, bold and good, without sunken rocks, is a safe one for canoeing. Granite predominates, but it alternates with trap, with such abrupt lines of demarcation that if I only knew something of geology I think I might tell a pretty story about it. The islands in the lake are small and pretty. At one place they make narrows only about one-fourth the average width of the lake, undoubtedly a great crossing place for animals, especially for bears. On the right the shore growth is cedar, signifying a swamp behind, the left has considerable birch growth, pretty beaches and the look of a shore that affords good camping places.

We held to the right, although it was the lee shore, because this is straight, while the left is broken by deep bays and pockets and a long arm at the lower end. Father had told us this at the start, advising us to face the wind rather than take the longer cruise under the lee of the other shore. He had been here once only, twenty-three years before, when he had come up the lake guided by another canoe and had returned by a different route; yet now, after all this lapse of years, retracing the course in reverse order, his memory did not fail even details. The outlet is blind. Usually one sees a break in the woods, a bit of low shore, the gates of a dam, or some sign of river driving which serves as a guide; but here all these were lacking at the real outlet, and at its right is a logan which has every appearance of the natural exit from a lake. The real outlet lies under a point almost entirely concealed by a long spit of sand which runs out from the right shore almost across to the point, so that one is tempted to sheer away thinking that the shore is continuous. Originally a narrow stream must have flowed quietly out of the lake between wooded banks, but as there was no chance to shore a dam at the outlet, the dam was placed about half a mile down on the stream. Its flowage makes a large pool which the sand spit already mentioned divides from the lake.

It was still raining when we landed above the dam, raining so hard that the camp stuff and myself were temporarily deposited under a river-driver's shelter of hemlock bark, which we shared with a large spider until the tent was ready. I tried to keep the water off the guns and to observe the spider; but she curled up her legs and observed me, the usual way with wild creatures when one has time to watch them.

Our larder was well supplied this night—one duck, four partridges, five good pickerel. Why then the temptation which came to Father when he took his gun and followed the road along the stream to look out the country? In the yard of a lumber camp, feeding among the grass and sprouts, was a two-year-old deer. He saw the deer first; as it was raining, the deer did not smell him, nor see him until they were not more than two rods apart; even then he lay so low, hat off, only his rubber coat showing, that the deer showed no alarm but continued to pluck grass and chew it slowly with one end sticking out of the corner of his mouth as he gazed curiously over his shoulder at the unnatural object in the hollow. He went away unmolested. Even when there is no novelty or excitement in shooting game most people would like to know whether the gun would go or miss fire, or, at least, what would happen if they pulled the trigger. It was not from respect for the law that this deer saved his life, nor from fear of the wardens, but because he was a pretty wild creature and there were those four partridges, the duck and the pickerel to be disposed of. When Father told the story he met with our approval, which is more than good deeds sometimes receive.

X.—WHEN IT RAINS.

The journal says nothing about it but I have an impression that it rained that night. At least, one of Father's rubber boots had been carelessly left leaning against the tent and in the morning it was partly full of water, as Father discovered when he put it on. I know that it rained in the morning, for the journal mentions it casually.

Even in fair weather Third Lake Dam must be about as dull as a sanitarium, but in a rainstorm there is positively nothing for a woman to do unless the fire burns

holes in the family clothing or the men wear out their stockings. The men tried fishing which amused them and did the fish no hurt, they caught but one in two days. They also hunted for cranberries, but the water had been kept on so late that the cranberries were just in bloom and they found but a pint.

In the afternoon Jot came up to the tent jugging a great mud-turtle which he had seen asleep in the sluiceway, crawled up to and captured. His turtleship was highly indignant; he pawed and kicked, and bit at everything that was held out toward him; nor was he any better pleased when he found himself tethered to a stake in the dooryard, tied by the tail, as that part of his anatomy best suited for such a use. He tramped about his limited course with the vigor of a thoroughly enraged fat man, looking ridiculously like a small elephant as he lumbered along with a swinging but uncertain stride, lifting himself high on those club-footed legs that were as loosely enveloped in skin as the true elephant's. His shell was about 12in. long, smoothly plated, of a greenish color, narrow beneath. Jot called him a "load turtle." Henceforward Old Turk, as we named him, was a fixture in the dooryard; that is, as nearly a fixture as anything can be that several times in the day pulls its tail out of the nooses, hitches, knots and combinations by which he is successively made fast, or failing in this jerks up stake and all and walks off with it. Turtles know just where to go in order to reach water, but Turk always marched off into the bushes and crouched there with his head up, ugly and belligerent, when one of us followed up the trail. If he had not had this disposition to stop and fight, we might never have seen him again after some of his nightly escapades; for in a stern chase it was not easy to overtake the old fellow. He was not a flyer, but he had a good, long stride, and attended strictly to the business of getting away until he reached the cover of the bushes. If any one thinks that the hare of the fable had a long nap that day when the tortoise passed under the wire first, it shows that he doesn't understand the paces of a turtle that knows where he is going. As for our keeping Turk, it was positively necessary. Having refused to eat deer meat when we might have had it, we were going to eat mud turtle when we had nothing else.

Thursday morning was misty, but I could get down to the shore to wash, which was an improvement on ablutions in the camp-kettle cover, that cover being pointed and unable to stand straight unless propped up by all the spare boots. But just after breakfast the rain remembered what was expected of it, and came down in torrents. In half an hour over an inch of water was caught in a straight-edged basin. We streaked the tent, and streaked it to make the water run down the sides and still it leaked. Then streams began to run in under the sides of the tent and to make little lakes in the middle of the bed. The blankets were snatched up, table knives seized and the overflow soon reduced through a channel which was called Case-knife Sluice, which may be described as rising in a bed of fir boughs and flowing directly into a fire-place.

It rained all the rest of the day, the only variety being Old Turk's occasional escapes and recaptures and speculations as to what kind of stew he would make. Six meals had made a decided hole in our four partridges, six pickerel and one duck, but the pickerel were of good size, and by making the birds into stews we had been well fed, and had supper and breakfast insured before Turk's life was endangered. A stew is a very economical form of living in the woods. It is really a meat chowder, into which goes all the spare victuals you have, to be cooked together in a very black kettle. The advantages are that everything tastes of the meat in it and there is only one cooking dish to wash. Stews are prime favorites with woodsmen, who sometimes call them by the lumbermen's name, *sudagan*, and sometimes by the Indian term *cosombo*.

In the afternoon Father went down stream and reported a foot of water in the road where there had been none the day before. He thought that by wading to the hips one might get down as far as the logan on the stream. Altogether, our prospects of seeing Fletcher Brook and mountain were no brighter than the weather. That night we heard a mill whistle clear and distinct, and knowing that it must be the tannery on Grand Lake Stream we set our watches at half-past five. A little later we heard a gun fired somewhere on the eastern arm of the lake. It seemed strange to hear these evidences of man's presence when all around everything looked so solitary and remote.

After the supper dishes were washed it was our habit to spread down the blankets, and reclining on them look at the fire and talk as the mood came upon us. We did not meddle with general themes, but many were the stories of deer, moose and caribou, of hunters and lumbermen, and of points of woodcraft which would have made Thoreau forget all his lofty philosophy in undisguised envy of the material that there went to waste. Father had his own store of good things, and Jot's experience had been wider and more varied than falls to the lot of many. Everything had an interest for him. He had noticed and remembered with the instinct of a born naturalist. He told me that the gray land turtles eat strawberries; he had seen them in fields with their faces red with strawberry juice. When I asked what ate the turtles he answered that he knew nothing that did except bears. He told how he had seen a small hawk take five young kingbirds from the nest at one swoop, two in each claw and one in her bill perhaps, he could not tell the arrangement, but he knew fact. He brought me the *Epiphegus virginiana*, which I never had seen, and told me that the root was good for cancer. It had never occurred to me that it was any harder for young sheldrake to get out of their lofty nest than for young robins, although I knew that the young ducks had no quills for a long time, I had always supposed that they tumbled out with the heedlessness of the robin. But Jot told me—he had seen it—that the mother duck got them upon her back and flew down with them, leaving a string of ducklings behind her as she touched the water and they slid off. From the first they could run and slapper on the water just like the old birds; when they were tired they climbed upon their mother's back again. Of course some one will doubt this. Perhaps the books do not tell this—I have taken particular pains not to see what they do tell—but Jot said so, and if the books disagree, they, like the maps and the compass, are wrong. The ducks may do something else; it is certain that they do this also, for it is an impossibility to doubt the word of an intelligent hunter when you know anything about woods' matters yourself. To doubt it argues, yes and proves, your own

ignorance. They have strange things to tell, and the beauty of it all is that they expect you will believe them and do not think it necessary to prop up their own statement with the affidavits of Dick and Harry. I do not know whether hunters tell these things to every one, or whether, like the Ancient Mariner, "the moment that his face I see I know the man that must hear me." Certainly the good hunter tells strange tales, but as Robin Hood said of Little John, "I have ever found him a very truthful man."

These were our usual evenings, but at Third Lake Dam there was a change in the order. We could not see the fire for the wind blew so hard that we had to keep the front of the tent tied in. Forced to depend on a candle for our light and cheer, and to listen to the beat of the rain on the canvas, which soothed us to sleep all too readily, we substituted reading aloud for conversation. As a means of keeping awake I do not think it was a great success. My conscience is clear, for I was the reader; but my audience were apt to seem suspiciously quiet until the reading ceased, when they suddenly became very much interested in the subject, but not quite sure what it was. They are acquitted, however. It was an odd sight. The tent was not pitched quite straight so that there was a gap between the ground and the foot of it, which had to be filled in with the baker, our box (which we had found, as usual) and other articles; one tiny candle tied to a stick stuck into the earth shone no brighter than a good deed in a naughty world, and flickered in the draught; the family were wrapped in the blankets; I reclined on one elbow and in the intervals of streaking the tent when it rained through read, in a voice yet husky with a cold, "The Uncle of an Angel" and "What Some People Call Pleasure." Could the genial author of the latter paper have imagined circumstances better contrived to make us appreciate the point of his tale—three people rainbound, with nothing to eat but two or three messes of flour, a few potatoes, a little stew for breakfast and an old turtle tethered in front of the fire ready to be "next" whenever the word should go forth, and no prospect of its ever clearing off? We called it pleasure, and the proof is that we never regretted not killing that deer and leaving half of it to spoil.

In the morning when we rose the sun rose also, welcome sight. Old Turk had evidently lost his courage, for instead of his nightly escape he had buried himself in the earth with only the top of his shell out. When we roused him he put up his head with a mild, patient air, as if resigned to his fate. I was impressed that it was the same look which a captive missionary would cast on his cannibal captors and (without any disrespect to that gentleman in comparing him to a mud turtle) for much the same reason—not from grace but because he couldn't help himself. It was Friday—nothing on hand but a little flour and the turtle to whom we had become somewhat attached. To go down stream would take two days of pleasant weather. Then came Sunday, we could not get back to Fourth Lake until Monday if we had all good weather. We turned Turk adrift, and such was the affection that he showed for us that he came directly ashore again; the second time he was thrown in he went down stream, but our bows were turned in the opposite direction.

FANNIE PEARSON HARDY.

THROUGH THE OLYMPICS ON AN ELK TRAIL.—III.

NEXT day we took an early start and made for the peak. The Cayuse's knee, which had held out so bravely through yesterday's march, was now too lame for use, so he stayed in camp and cooked. We decided to hunt on this mountain for a day or two, and as soon as the knee was well enough to travel safely, to go home.

Joe, Chris and Vick hunted together, the Marine and I left them at the peak. On the western side we could see range after range of mountains, with green pastures on their slopes, and occasionally snow on their peaks; but there was no long stretch of level land in view. Directly below us on the western side was a huge snowbank, and another lower down the peak. Below that, apparently at the bottom, a patch of woods, which sloped a little on either side into valleys where the Quinault had its rise. The Marine and I, attracted by the snow and the probability of elk near it, went down on that side with as little precipitation as possible, over the treacherous soil, sharp rocks and frozen snow, into the most northerly of the two valleys, and crossed the patch of woodland, which proved when we reached it to be the top of a very high hill, but which from our point of view above it had looked almost level with the valleys. We went up through the second meadow and ascended the slope. Elk tracks were frequent in the mud and soft turf, and in many places the brush had been stripped of its foliage, which showed that a considerable band of elk had been grazing there.

In half an hour we reached the top of the slope and looked over. There on a broad green shelf some 75 yds. below were six great beasts. One of them was a huge bull with as high and wide a pair of antlers as I ever saw. We stood trembling with excitement. "How shall we ever pack those antlers down the Skokomish?" said the Marine.

Then we both remembered our rifles, and aimed together at the bull. At that instant he seemed to get wind of us and tossed his splendid head with a sniff. Our rifles cracked. He leaped high in air, fell and disappeared. The rest of the herd tore along the hillside and were lost in the woods.

We hurried to the spot where they had stood, and looking over the shelf saw several hundred feet of sheer precipice ending in a narrow ledge. There lay the bull elk. The Marine's difficulty about the antlers was settled. They were broken to pieces, and the place was quite inaccessible. We were not only disappointed, but couldn't help feeling ashamed of the death of such a magnificent creature. We had needed the elk for food; but now that he was lost we gained nothing; it seemed like wanton destruction.

The Marine said afterward that he felt like a robber with just the least vestige of a conscience, who had killed a man and then found nothing in his pockets, when he expected at least a watch. At the time we said nothing, but after trying every possible way to get at our victim, had to give it up and turn back. We found nothing more that day.

A Scotch mist came up and turned to a cold drizzling rain, and we had none too much time to find our way back to camp. The mountain down which we had come

was shrouded now in dark clouds, and looked sullen and threatening, and the woods roared with the increasing storm. The dry bed of a mountain stream seemed to offer an easy ascent. We knew that it led up toward the nearest snowbank, for we had seen it from a distance as we came down. The beds of mountain streams are rather risky, because of loose stones; but we had no choice and determined to go up this one as long as it gave a foothold, and turn off to one side and go up where the woods offered a better chance of climbing. The footing proved good, and for some way we had a perfect flight of stairs. It passed between banks which grew higher and steeper as we went on. At last the stones began to grow looser and the ascent harder, and finally we came to a wall of rock about forty feet high. Turning to go round it by climbing the sides of the ravine, we found that they were of a loose, sandy soil, and that we could not climb them, the sand giving us no foothold.

It was too late to go back and our only way was to climb that wall, which we did. Although it was, as I said, only about 40 ft. high it took us at least half an hour to scale it. Our only footing was on little jutting points of rock an inch or two in breadth—sometimes less—just enough for one to put the edge of his sole on, or hold on by with the edge of his fingers. With one foot resting on such a support one of us would feel with his hands of all the points within reach, then finding the safest he would lean flat against the wall, holding on with one hand, while with the other he took both the rifles; then the other one would climb a little ahead of him and take the rifles in turn, and so on. Above the middle the rock showed a tendency to crumble, and several large pieces came out like loose teeth and went rattling away down the ravine. Fortunately we had no time to wonder how many pieces a fellow would be in before he reached the bottom; and when we came over the edge, at last, we scrambled away up through the woods and over the snow, till we got a firm footing on the peak, and saw far below on the other side the smoke of our camp rising from the woods.

We went into camp pretty well exhausted. It was dark now and the others had almost ceased to expect us for that night.

They sat glumly about the red fire and said very little. They had a surprise for us. When we had hungered a little longer Joe rose and took a great piece of meat from under his coat. He said it was elk. It was really bear, but the Marine and I had only one thought, it was meat! and we treated it accordingly.

It was better than venison. A young bear about two years old living on the cold peaks, fat and fed on berries, is a very different article from a tough old customer who lives on fish by the salt water. The bears on the sound are too oily for food—but in the mountains they are prime.

For one more day we lived on that bear and hunted, having moved our camp to the place where he was killed (by Joe). The Cayuse still stayed in camp with his knee and loaned his rifle to Chris, who had brought none with him. While he was there alone a cinnamon bear (very rare in the Olympics) came and looked at him. This was too much for the patience of our friend, who threw a stone at the beast and hit him. The bear ran toward the Cayuse, who jumped behind the fire—and the bear turned with a sort of grunt and made off into the woods.

None of the rest of us saw any game, though the tracks showed that a great band of elk had been there recently, and for a long time before—and in one place, where the trees were wide apart and there was no underbrush, the beaten trail, which is generally only wide enough for a bridge path, was a road on which two carriages might have passed each other. We went back toward evening to find the Cayuse in a state of intense disgust at not having been able to shoot his bear. A cinnamon in the Olympics is as great a prize as a grizzly in the Rockies. There are no grizzly bears in the Olympics—at least none have ever been seen there. The black bears are very timid, and I have heard of two instances of females running away and leaving their cubs to the hunter.

The beauty of that night I shall never forget. We lay in the open, above us a sharp rocky peak, from which a long green meadow—the track of some former landslide—sloped steeply down toward us on the left, below and beyond it woods and a deep gorge that hid a singing stream. On the heathery shelf of meadow where we lay were two clear pools, and on the right the dark sea of forest which stretched away to the foot of the mountain. Right opposite stood the main range that we left two days before, and far below rushed the Quinault, louder than ever in the still night.

The sun set, and the camp-fire died away. Then on the peak above us came a soft gleam, and crept, slowly widening, down the landslide, and shone on the pools of water and touched our camp, then the moon rose over the opposite range and bathed the whole mountain side in glory. Later in the night I awoke to find the bushes and the heather sparkling with hoar-frost, and I rose and poked the fire and piled on wood till it blazed and crackled merrily and made the shadows of the great trees dance on the hillside. But beauty is not everything, and next morning when we found the frost thick on our boots, it failed to elicit even a murmur of admiration.

We thawed them out and made a start for home. We had seen what the unexplored heart of the Olympics was like. Vick and the Marine, being on the peak when it was clear, the day before had seen the Pacific, across the multitude of mountains. And now we were out of food very nearly, and the Cayuse's knee was well enough to travel. Again we forded the Quinault and went up the place that two days before had seemed impossible to come down. For just as it is easier to fall down than up, so it is easier to climb up than down. Chris, being in high spirits and disposed to gayety—which generally exhibited itself in his case by tremendous and uncalled for exertion—climbed right up the rocky bed of a stream which dashed over us, as the Cayuse and I followed him, in foaming cascades. With us came the dog, whose feet were by this time sore with the rocks; and we lifted him up from shelf to shelf. The others avoided the ravine and went up through the woods. Their way was even harder than ours, though safer perhaps.

We climbed for a few hours, and about noon made the place whence we had first looked down on the Quinault. Then we went down into the valley where we had encamped before crossing the divide, and stayed there that night, dining on what was left of the deer, which we had not taken with us, and on soup made of the last relics of the bear.

Then going down the north branch of the west fork of the Skokomish, we marched in the stream, through cañon and gorge, down cascades and foaming rapids. Once more we encamped, this time in the lowland, and next afternoon about three o'clock, came to the Marine's, where we reveled in a bath, a change of raiment and immense quantities of supper.

I hope this gives the reader a clear idea of what the interior of the Olympic system is like. It has been stated in one or two articles that there is a broad lowland shut in by the outer ranges, but there is none. It has also been affirmed that the waters which flow from the inner slopes must either be pent up within or have an underground outlet, but this is not so; the source of the Quinault is within less than a mile of the head waters of the Skokomish, and drains the whole interior of the Olympic system. There is just a confusion of sharp peaks and jagged broken ranges of mountains, shaggy on the lower and middle slopes with primeval forest, crowned with eternal snow and holding high on their breasts valleys and fertile pastures, where deer and elk may graze in peace, and bright lakelets of clear green water. There are rocky caverns and deep chasms, and on the sides of the mountains and at their feet wind and leap countless brooks that fill the air with music.

After a thorough rest at the Marine's, we parted, I stayed near Lake Cushman to study the settler in his native, or rather his adopted, wilds.

The woodsmen there live on their claims and hunt in summer, and in winter work in the logging camps, and the hard work and active life, and the combined sea and mountain air, sweet with the scent of cedar and balsam, give them great physical development in almost every case. The Marine told me that when he first came to that part of the country he was rather in awe of the inhabitants because of their remarkable size and strength. But there was one man whom he was quite sure he could, if necessary, vanquish—the weakest of his neighbors—and so my friend decided that if he ever had any difficulty with any of the inhabitants it should be with this one. One day he went out with the man to get firewood, and the settler picked up a piece of wood that in the East would have been a tree of respectable size, and walked off with it over his shoulder as easily, to all appearances, as if it had been a bamboo pole. The Marine is a strong man, and at college was mighty on the football field and strong in the tug of war. But he had to content himself with a log about half the size. "What makes you carry such a stick as that?" said he to the settler. "You'll strain yourself." "Waal," said the settler, "it's jest sheer laziness makes me carry them things. I'd order hitched the ponies to it, that's what I had, and let 'em draw it; but I was too indolent to harness 'em—jest sheer laziness, that's what." The Marine marveled. If this was the result of indolence, what might not industry accomplish? And he resolved not to differ with his neighbor on any subject if it might conscientiously be avoided.

The Cayuse spent the winter on the Skokomish reservation and last summer acted as scout to the U. S. A. exploring expedition under Lieut. O'Neil in the Olympics. During the winter the reservation doctor fell sick. Now, the Cayuse was the only other white man on the reservation at the time, and he is, moreover, an excellent nurse, so he went to take care of the physician, who recovered in about two weeks. During this time the unhappy Cayuse had been trying his best to sleep on a hard little sofa and was very much exhausted. The doctor opened the sofa and displayed to the Cayuse's regretful gaze a most comfortable folding bed within that he might have used. "Of all sad words," etc.

In the camp in the valley at the head of the north branch of the west fork of the Skokomish, I left a bowie knife. If the reader, passing that way, happens to pick it up he will confer a lasting obligation by returning the same to

COONS CATCH RABBITS.

Editor Forest and Stream:

I made a discovery yesterday. It interested me very much, and as I am sure it is not generally known am confident it will be of interest to such of your readers as hunt coons. About a week ago we had our first heavy snow, and last Friday it rained hard all day, and at night it was warm and foggy, so, knowing the coons would come out that night and make tracks, I concluded to drive over to some good coon grounds and look around by day.

The coons had been out, and so had the rabbits. I noticed two different rabbit tracks that had coon tracks along with them, followed the second and found where the rabbit had run into a hole, and the coon had left. A third track made by both rabbit and coon was followed at least a half mile; it led through a swamp, through a stone wall, across a brook and through an apple orchard, finally through briars and hazelnut bushes. There he "holed." This rabbit was followed by the coon by scent or by seeing the tracks in the snow, and not by sight, for at least three times the trail ended, turned back for perhaps twenty feet in same track, then off in another direction. Although it was daytime and the tracks quite plain it troubled me not a little to straighten it out in the thick bushes and briars. Had the coon been chasing the rabbit by sight he would have been too near for the rabbit to have "doubled" on his track. Soon I came to another one of these tracks, and by following it found where the coon had caught a rabbit under a fallen limb, where the rabbit must have stopped from fright; certainly the coon did not steal upon him, as could be seen by the length of the jumps. The rabbit was carried to some water near by and eaten. I should like to know if any one else has noticed anything like this.

I saw six tracks in traveling about four miles, where coons were following rabbits, but only one was successful. These tracks were all made in one night, as the next day it came off cold and has been so ever since.

JAS. G. LATHROP.

MAINE WINTER BIRDS.—Portland, Feb. 7.—We have had a large flight of snowy owls, but other winter birds, such as snow buntings and grosbeaks, have been small.—D.

SOME INTERESTING PETS.

FOUR years ago last September I found and brought home four young flying squirrels. Casualties overtook two of them, leaving a pair which were given the liberty of the kitchen. They grew very fast, and became very tame and playful, but were withal very timid, the least unusual noise causing them to run for a hiding place, and making them very nervous. They were provided with a box to sleep in and showed their instinct by storing it full of nuts, but liked best to sleep in the pockets of any clothing within their reach. During the day they kept closely hidden, but in the evening were very active and delighted in jumping from shoulder to shoulder of those at the supper table, stopping now and then to taste the dainties offered them. After supper the squirrels would accompany the family to the sitting room where they would immediately climb to the highest accessible point and begin to jump, not stopping their romp until we retired.

After our little squirrels were grown I captured another, also full grown, and took it home to them, but for a time they would have nothing to do with the stranger. They moved their entire store of nuts to a new hiding place and stayed on the opposite side of the room from the intruder, not allowing him to come near their nest. After a time, however, they overcame their jealousy of the little stranger and made friends with him, their friendship being interrupted very soon by the escape of the wild squirrel through a door, left open by accident.

The female died when two years old. They had never bred. After this, for a long time, the male seemed very lonesome, then became more sociable than ever and has become quite domestic. He is fond of music and when some one plays the kind of music he likes he will sit and listen very attentively. He has no inclination to escape from captivity, but on the contrary, if he does get out by mistake, he immediately returns and seems glad to be at home again.

In the winter, when the fires are built, our little pet comes out to hunt up his friends; entering when he finds the doors open and going to each bed to see if we are awake.

Our squirrel is as intelligent as any dog and manifests great affection for all the family, especially my father, whom he trusts implicitly, and with whom he will play much after the manner of a kitten. This squirrel is so small that you can close your hand around him and hold him quite easily, and he seems more like a bird than a mammal, yet he can make us understand almost anything he wants. He is neat and cleanly, seldom gets into mischief, and does not make any trouble except by filling things full of nuts.

We often wonder how long our pet will live and shall all be sorry when we have to part with him, as he is the most affectionate and entertaining pet we have had.

F. B.

OTTAWA, Kansas.

When L. I. Flower propounded his query regarding the porcupine, I was not sure that he would receive an answer so agreeable to me, as that given by Edward Jack in your issue of Jan. 28. Last fall while on a hunting trip to Maine, I had an opportunity to observe much of the porcupine. Our camp was located in an oak growth on the side of a hill. We found that these creatures were very plenty; and as I had been strongly urged by an Indian guide, who was with me in the fall of '88, to cook the first one I should get, we soon had "venison" in camp. Our whole party were much pleased with the feast, which we made of a couple of them. As we did not care to do much shooting near camp, we set some traps for them in a ledge close by. The second night we made our first catch, and it proved to be a white female porcupine of large size. She looked so pretty and harmless with her pink nose and eyes that we kept her alive in an old box and took her out of the woods when we left. She is perfectly white with pink eyes, nose and skin. I left her at my old home in Maine, where she now is. My mother formed quite an attachment to this strange pet, and the feeling seems to be returned. The porcupine is always glad to see its mistress and shows its pleasure by a peculiar squealing noise. It will take food from the hand and is so tame that when let out of its box, it begins to look for food instead of trying to escape. As the dogs in my neighborhood seem to be of an inquisitive disposition, I have been talking of bringing Mrs. Porcupine up here to meet them. If I do I have no doubt they will be "very surprised to meet her."

MALDEN, Mass.

A SYSTEM OF SPARROW DESTRUCTION

Editor Forest and Stream:

Nearly every one now agrees that the English sparrow is an unmitigated nuisance, and various, yet ineffectual, are the methods so far proposed for his abatement, his entire extermination being seemingly out of the question. Two grave objections lie against any plan so far proposed, one being the destruction of some of our native birds resembling the sparrow along with him, and the other is the expensiveness of any efficient method of destruction.

Allow me to suggest a plan that to me seems thoroughly feasible. It is to try and induce the Northern and Western States to pay a small bonus on sparrows destroyed between Nov. 1 and March 15 only. This, as all will easily see, would effectually protect our native birds, which are during these months all safe down in "Dixie." The sparrows at this time are much easier decoyed and can be much more cheaply killed than during the summer, for the reason that their food is now scarce, and also through their habit of packing in large flocks. The spreading of seeds now easily decoys them, when large numbers can be killed by each discharge of the gun or they could be trapped in a fine meshed net. But the most effectual way to destroy them in my opinion would be by the use of poisoned seeds. Now, I have no doubt that there are poisons whose effects the early spring rains would entirely dissipate and render innocuous to our native birds (when they return from the sunny South) any stray seeds that might escape the sparrows.

As the preparation of the seed by poison should be carried on with the greatest care and under proper supervision, the other part of my plan would be for the State Agricultural Departments to prepare the seed and distribute it at cost at the proper time of year. The seeds could be obtained very cheaply and in any quantity from the flouring mills, using, of course, the refused seeds left by the cleaning of grain, which seeds being largely of

weeds, should be so treated as to destroy their vitality. If there should be those who would object to the spreading of the poisoned seeds upon the ground, a low, light platform of cheap boards might be made on which to spread the seeds, and any remaining next spring could then be swept up and burned.

If you think well of the idea will you not try to induce some of the experimental stations to take the matter up this winter, trying different poisons and modes of preparing the seeds at the different stations, watching carefully all their effects, particularly next spring upon our native birds, and then send in reports of the same next summer, on which there would of course be free discussion, the object being to decide upon the least objectionable poison and best method of preparing it, with the avowed intention of waking up the whole country to enter upon a general and active campaign against these little marauders next fall and winter.

GEO. O. GOODHUE.

DANVILLE, P. Q.

NATURE IN CENTRAL PARK.

Editor Forest and Stream:

Though living in town, we have not lost our love for the woods and meres and meadows, Tom and I, and when we have not the time to go further afield, take occasional rambles in the annexed district, or even in Central Park, and enjoy them too. Tom may object that the park is only a romping ground for the town crowd that goes there and becomes offensively numerous, but possibly Tom has a selfish vein in his otherwise genial make up, and thinks that because the crowd cannot distinguish between the differing beauties of the Scotch and American pine, it should not intrude where they grow. We have discovered, though, that there is a time to wander in the park when you will meet but few kindred souls. In the morning hours, especially of a frosty day, the crowd is absent, and the rustling trees speak to us only, and it seems almost as if they were saying that they also liked it best without the throng. But we must not let selfishness control us, and deep down in our hearts we are glad that this pleasure ground affords joy to so many.

It is in quite another direction that we want to grumble. It is gradually becoming apparent that a constantly increasing number of cats are making their home up there. At this time of the year their principal game is probably the ever present English sparrow, for whom few of us have sympathy, but during the summer months, when the song birds are here, no doubt many of them become martyrs to puss's inclination for outdoor "sport," and it would seem that much more good than harm would result if the police were instructed to take away puss's life with a leaden pellet whenever he is found within the boundaries of the park.

I believe the cat does not molest gray squirrels. I have seen instances which showed unmistakably that he feared them, and altogether the New York squirrel is a bold chap. Apparently he has everything his own way and fears nothing. If he meets you in his path he will, out of courtesy, go up a convenient tree to let you pass. Perhaps you stop to watch him and he becomes impatient. You notice that the tree is a small one and stands alone, so that he cannot pass on without coming down, and he has important business on the other side of that hillock. Mischievous inspires you, which you interpret as a desire to study nature and you step up to the tree and encircle it with your arm to prevent him coming down until you wish it. But you have barely assumed your position when the squirrel lands on the turf, and you wonder how he got there, while he scampers off, stopping now and then to turn around and laugh at you.

C. H. M. ROSE.

69 WALL STREET, N. Y., Jan. 19.

LIFE OF THE SAN FRANCISCO MOUNTAIN REGION.

AN extremely valuable contribution to our knowledge of the life of this continent and of some of the laws which govern it is the one before us. It is a publication of the Division of Ornithology and Mammalogy of the Department of Agriculture, and is entitled No. 3 of the American Fauna Series. Although paper bound and containing only 185 pages, it has thirteen plates and five maps, and abounds in information.

It announces the results of a biological survey of the San Francisco Mountain region and the desert of the Little Colorado, Arizona, and is divided into five chapters, of which the first four are by Dr. C. Hart Merriam and the fifth by Dr. Leonhard Stejneger. These chapters give (1) the general results of this survey with special reference to the geographical and vertical distribution of species, (2) the results of a visit to the Grand Cañon of the Colorado, (3) list of mammals, with descriptions of new species, (4) list of birds and (5) a list of reptiles and batrachians, with descriptions of new species. The last three papers are quite fully annotated.

The expedition of which Dr. Merriam gives us the results in this paper was in the field from the last of July to the middle of September, 1887. The area of country carefully surveyed comprises about 5,000 square miles, and the additional territory roughly examined was enough to make in all 30,000 square miles. Most of this region is an arid plateau, from 4,000 to 5,000ft. above the sea level, and in the midst of this desert rises San Francisco Mountain, whose volcanic peak towers to an elevation of nearly 13,000ft. This region was chosen by Dr. Merriam for its sharp contrasts; this high mountain standing by itself so far to the south, and in the midst of a dry desert, offering conditions peculiarly favorable for the observation of different forms of life. No less than twenty new species and subspecies of mammals were discovered, and besides these many reptiles and plants hitherto unknown, and from the study of the distribution of the fauna and the flora Dr. Merriam had drawn the following generalizations, which he announces as the most important results of his explorations:

- (1) The discovery that there are but two primary life areas in North America, a northern (boreal) and a southern (subtropical), both extending completely across the continent and sending off long interpenetrating arms.
- (2) The consequent abandonment of the three life areas commonly accepted by naturalists, namely, the Eastern, Central and Western Provinces.
- (3) The recognition of seven minor zones in the San Francisco Mountain region, four of boreal origin and three of subtropical or mixed origin.
- (4) The correlation of the four boreal zones with corresponding zones in the North and East.

The seven life zones of the region under consideration are named by Dr. Merriam the Alpine, above 11,500ft.; the Sub-Alpine or Timberline Zone, 10,500-11,500ft.; the Hudsonian or Spruce Zone, 9,200-10,500ft.; the Canadian or Balsam Fir Zone, 8,200-9,200ft.; the Neutral or Pine Zone, 7,000-8,200ft.; the Piñon Zone, 6,000-7,000ft., and the Desert Area, 4,000-6,000ft. These various zones are identified by the forms of life found in them, and the results of the exploration are highly interesting.

On the summit of San Francisco Mountain, and so in the Alpine Zone, were found nine species of plants brought back from Lady Franklin Bay in the Arctic by Gen. Greeley. One or more of these species is found at the following localities: Points in Alaska, Melville Island, Backs Great Fish River, Labrador, Baffins Bay, Greenland, Iceland, Spitzbergen, White Mountains of New Hampshire, etc., etc. Most of the plants are circumpolar species. Many of the plants of the Timberline Zone are also circumpolar species, found throughout the northern regions of North America. The Balsam Fir Zone is characterized by the presence of the giant Douglas fir and of the Rocky Mountain pine, whose range extends north to the Kootenai and Calgary country in Canada. Other examples might be given, but these are enough. On the desert plateau, on the other hand, are found forms of life which extend far down into Mexico.

The thirteen plates are devoted to diagrams of the mountain and to figures of the teeth and skulls of some of the new mammals discovered in it. The five colored maps will well repay the study of the biologist in whatever field he may be working.

It is impossible to consider in this space the interesting points brought up on almost every page of this report. It tells of important work well done, as is, of course, understood when speaking of anything undertaken by Dr. Merriam.

WINTER RAIL.—Binghamton, N. Y., Feb. 9.—*Editor Forest and Stream:* The article "An Unseasonable Rail" attracted my attention, as I saw a king rail that was shot on the ice in the river at Greene, Chenango county, about the middle of January. During the same month seven fine specimens of snowy owls were shot in this vicinity and brought to this city to be mounted. An old gentleman told me that he saw two near Middleburg, Schoharie county; one of them, a very large one, was shot, and sold for \$4.—W. A. H. [The term king rail is applied to several species of the family *Rallidae*. Can our correspondent tell us what species this bird was?]

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE NEW YORK GAME LAW.

Editor Forest and Stream:

In examining the draft of the new game law submitted to the New York Legislature this winter and published in your issue of Feb. 5, I find a section that may meet the disapproval of canoe and small boat cruisers as well perhaps from sportsmen who shoot over decoys.

Sec. 71 of Art. IV. of Chap. 81 reads as follows, according to the text of your printed copy: "Manner of Killing—Web-footed wildfowl shall not be pursued, shot at, hunted, killed or caught in any way save with gun raised at arm's length and fired from the shoulder without other rest; nor from any boat or floating device except as provided by Section 162; nor by the use of any bough house at a greater distance than 50ft. from either the shore or a natural growth of grass or flags. Such fowls caught or killed in any manner prohibited by this section shall not be brought to the shore, sold or possessed."

My first objection to lay before your notice is the prohibition of shooting from any boat. Under the old law the restrictions that applied to sailing and steam vessels was a fair measure, but to encroach upon the domains of the canoeist and small rowboat, where not dressed up as a blind, which would make it simply a floating device, is to unjustly discriminate against the autumn cruiser who shoots for food and in favor of the decoy shooter who slaughters mainly for sport or market. No adequate protection is thereby afforded, but an error committed.

Considerable cruising on inland waters is done during the open season for game, and for one I protest against being forbidden to supply the camp menu with an occasional web-foot that I would like to shoot while voyaging in my little craft. Again, will not a construction of this section No. 71 forbid the use of a boat or a retriever for the pursuit of cripples shot over decoys? Up here on Cayuga Lake, we frequently have a few broken wings to look after while shooting from the blind or bough house, and as the water attains considerable depth, we are obliged to go after the cripples in a boat for a finishing shot or send a dog for the more seriously wounded that can not swim rapidly out into the broad waters of the lake. But this section says that if the fowl are "caught or killed" in any manner therein prohibited that they must not be "brought to the shore, sold or possessed." Therefore sportsmen who have humane feelings must catch and kill their cripples in a boat and then sink them to the bottom of the lake, or having pursued and shot them under these conditions they may leave the dead fowl out on the water, which to say the least is harrowing to one's feelings. But even this humane act is prohibited. The section permits you to wound them from your bough house and requires you to let the wounded swim out beyond range and die a lingering death. This is no fancy image, for statutes are to be strictly construed and although a kind-hearted or fair-minded magistrate, would be inclined to a liberal construction, a technical game warden would have an excuse for making some innocent sportsman a great deal of trouble and expense.

Another objection to this section as it is at present worded may perhaps be viewed more in the light of criticism on the niceties of the art of shooting which the commission on codification endeavors to teach. This refers to the prohibiting of the use of a gun fired from a rest. Now, there are some duck shooters who carry a small caliber rifle with them even into a bough house who desire to take a pot shot at some solitary and shy outlying duck, and while he may consider himself masterful as a wing shot with No. 8's at a swift flyer, still he does not care to take any chance with a single bullet, and there-

fore takes a rest with his .25 or .32-caliber through the opening of his duck blind, or perchance over the limb of some tree growing along shore. But the Legislature is invoked to prohibit this lack of confidence in shooting abilities, and deprecates such want of skill. The law says that particular duck is within its own special protection, and if you can't hit him at 150 yds. off-hand shooting he is not your meat, so to speak.

It is decreed that this single pet duck of legislative solicitude is guaranteed immunity from the shooter with a rest, together with an additional lease of life, until some fiend, armed with a 6 or 8-bore gun, loaded with from 2 to 40z. of coarse shot, with intent to defraud by fair promises, otherwise painted effigies, yclept decoys, lures the confiding and unsuspecting duck within range of treachery and destruction.

The law, therefore, calls the 8-bore murderer, who can stand in his shoes and take the recoil of his small cannon squarely on the shoulder, a sportsman, but the shooter of a small-caliber rifle over a rest is another sort of person and not entitled to be classed among artistic (?) shots nor privileged to kill wildfowl.

Probably I have written more than is really necessary to invoke thoughtful consideration of this section of the proposed new law. It certainly is not intended as a captious criticism. The bill, as a whole, is a meritorious production and the plan indicated admirable. The revisers have labored well, but there are certain sections that must be viewed from all points in order to predicate the effect of legislation that shall operate justly. While in Section 71 some confusion may be avoided by rewriting, still the explicit prohibition of shooting from a small open rowboat or canoe where the shooter is not concealed, should be modified.

In the light of protection, no man will be able to get the number of fowl from an open small boat that he will behind blinds, using decoys. On the other hand, the decoy shooters want the moving small boat suppressed so that the wildfowl will be less wary and decoy better. At any rate, it would seem that the small boat cruiser has some claims for respectful presentation for legislative recognition.

CAYUGA.

Editor Forest and Stream:

The codified game bill now before the Legislature is, to me, in the main acceptable, but has some very objectionable features. That relating to wildfowl, I think, will be generally regarded as unsatisfactory, excepting as applying to Queens and Suffolk counties.

Sec. 71 prohibits shooting from any boat or floating device, etc.; but this is the only way that wild geese and ducks can be successfully hunted in most parts of this State, excepting in said favored counties, where shooting is allowed in boats, although such prohibition would be far less objectionable there for the reason that shooting waterfowl is done largely best from sink-boxes and blinds on the Long Island bays.

From the middle of November until April, or when the ice breaks up, there is not much opportunity to shoot waterfowl in this State, excepting Long Island, where, in some parts, waterfowl remain and can be baited and shot from blinds much of the time during the open season; yet in Queens and Suffolk counties the open season for wob-footed wildfowl is made a half month longer, and two and a half months longer for plover, snipe, rail, sandpiper, curlew, mud hen, gallinule, grebe, bittern, surf bird, water chicken, bay snipe, or shore birds of any kind. Plover and other of the shore birds mentioned, that are found here, have mostly passed from this State, excepting on Long Island, by the middle of September, and since comparatively few of the birds mentioned in Sections 77 and 163 are shot elsewhere in this State, it seems very unreasonable to shorten the season in the north more than in Queens and Suffolk counties, or beyond Sept. 1.

From my own observation and opinion I have heard expressed by others who have shot wildfowl in Great South Bay and other places in this State, I think it safe to assert that more wildfowl are shot (besides many netted) in the two counties mentioned than in all the rest of New York State.

The law to be most fair to all interested, including the birds, should rather reverse the provisions of the bill, by making the open season commence earlier north of the latitude of Long Island. The season, being short at best, should here commence by Sept. 1, to get teal ducks; and, waterfowl being less numerous and more difficult to get, at least as much privilege should be allowed as is provided in the bill for Great South Bay, west of Smith's Point, where is found the best wildfowl shooting in the State. Yet this locality is favored even more than the remainder of said favored counties by this bill.

This bill passed as introduced would benefit those localities to our detriment. These facts are so self-evident that to rightly amend ought not to mar the general harmony of the measure in its passage. It is easier to amend before than after the bill has passed, and unless amended previous to its passage, at least next season's shooting of waterfowl would be almost wholly prohibited in this State, excepting in the two favored counties mentioned.

W. H. HART.

HUDSON, N. Y., Feb. 7.

Editor Forest and Stream:

I note with regret, in your issue of to-day, that in framing a game law which presumably has for its object the interests of the people, the Commissioners have seen fit to withdraw protection from both hawks and owls. It is not surprising that the long-standing prejudice in regard to these birds should be difficult to overcome in the popular mind. It might be expected, however, that a body of men chosen for their especial knowledge of the requirements of the law, should, to some extent at least, be influenced by the recent investigations in the food of hawks and owls, which, conducted by the Division of Economic Ornithology and Mammalogy of the Department of Agriculture, have proved beyond all question that with the exception of five species these birds are not injurious, but undeniably beneficial to agricultural interests.

It seems unfortunate that investigations of this nature, having for their object the proper direction of legislative action, should not be considered by those to whom such action is intrusted.

FRANK M. CHAPMAN.

AMERICAN MUSEUM OF NATURAL HISTORY, Feb. 5.

ALBANY, Feb. 7.—The Committee of the Assembly on Fisheries and Game met on Thursday the 5th inst.; and as no one was present to be heard on the new revised

code, adjournment was made to Thursday the 12th inst., when it is expected a large number of parties will be heard on both sides of the bill. Assemblyman Schaaf has introduced a bill amending the game laws so as to make the close season for quail, partridge, hares and rabbits from Jan. 15 to Nov. 15 in the counties of Queens and Suffolk; also a general bill, an amendment to the law of 1879, making the same provision for the rest of the State.

FISH AND GAME IN MAINE.

THE all-important fish and game question has scarcely been reached in the Maine Legislature yet. Both the enemies and the friends of the much discussed protection seem to dread the final issue. Petitions are numerous for this and that form of legislation, and newspaper articles are the feature of the most of the live papers in the State—discussing methods and making suggestions. The terrible disregard for the fish and game laws, already explained in the FOREST AND STREAM, is admitted in the most of these articles, and even worse features are laid before the members of the Legislature and the public. A recent communication from Bangor, in the Lewiston Journal, says that on a certain pond in the northeastern part of the State three men encamped with 200 lines set for the purpose of taking trout through the ice, and that these men have gone about their work openly and not for fun, their camping outfit costing hundreds of dollars, being hauled in by well known teamsters, and that they are openly sending the trout they take to the Boston market. This latter feature I doubt. There are no trout in the Boston markets handled openly, and it would not be easy or profitable to handle them on the sly.

The article also claims that moose and deer are being killed without the least regard to the law in Washington county, and says that deer have been sold openly from a meat pung in Patten since the close time came on. The idea expressed is that no attention whatever is paid to the game laws by the citizens of the north towns of Washington county, who have any desire to poach. The law is not only openly broken, but the idea of arrest and punishment is laughed at. Mr. Jonathan Darling is reported to be fostering a petition to the Legislature to make dog-hunting deer legal, and it is getting some signatures. The opposition to opening the month of September for deer hunting is stronger among the lumber land holders than I had imagined. They will oppose such a measure with all the power they can bring to bear. They fear the sportsman's fires, and they will not willingly grant another open month to him in their woods. They are obstinate to pigheadedness about the matter, and can see no difference between the real sportsman, who would as deeply regret a forest fire as they would themselves, and the worthless, thieving poacher of their own State.

Only the other day the papers had an account, from this very Washington county, of the sad shooting of one brother by another. They were out deer hunting—in close time. One of the brothers is reported to have fired at the deer, wounding it, but the rifle bullet, in its course, first passed through the head of the other brother. The accident is a sad one, and all at once it turns out almost impossible for the papers to get any news concerning it. The hunters were poaching, and their friends are apparently determined to keep the facts from the public. The fact of the matter is that poaching is the popular thing to do in many of the back towns of Washington, Hancock and Penobscot counties. In some of these towns honest citizens do not dare to proclaim that they are not in favor of breaking the majority of obnoxious game and fish laws on every occasion. Such a person would immediately be under suspicion, and there are so many persons guilty that they would make life a burden to any one whom they had reason to suspect of giving information concerning their wholesale slaughter of deer and trout. They have no more regard for the close time than a Hindoo has for the Sabbath, and they don't like such people as would be glad to see the game laws enforced. Why, they have only shot down wardens in cold blood in that part of the State, and they are ready to commit almost any crime against any man who may attempt to restrain them. They even look with suspicion on the hunter they are guiding till he has performed some act that is contrary to the fish and game protective laws. Then they laugh and quietly remark that "You will do. You are one of us," or some acknowledgment of that sort.

Maine backwoodsmen are peculiar people when they happen in their ignorance to believe that their rights are about to be infringed upon. It is not out of the recollection of many people when some of the inhabitants of the town of Kingfield attempted to "resist the draft." Men actually armed themselves, and were ready to defy the United States Government, but when a few squads of soldiers marched into town from Augusta, the armed citizens slunk away or took to the woods. I have not the slightest doubt but what a game warden would come to harm who should singly and openly attempt to enforce the law against crust-hunting deer in some sections of the above mentioned counties this winter.

But where is the government of a civilized State? Where is the love for law and order found in the other New England States? It is claimed that the Commissioners have no means with which to enforce the game laws, and this is, without a doubt, the truth. But where is the Governor of the State? Has he no power in the matter?

Pickering fishing through the ice begins to be popular sport, on the ponds about Boston. The weather has been very cold till of late, and those that have been the first to start out have had good sport. Good strings are reported from the Plymouth county ponds. Pickering are being taken even in Charles River, above the dam at Watertown. None are taken in tide water, which flows up to the dam, but above unusual numbers are reported this winter. Hardly the usual amount of pickering fishing has been done on the ponds in Maine this winter, up to the present time. The weather has been extremely cold and the snow unusually deep. This, with the ice nearly 2 ft. in thickness, has been sufficient to keep the average pickering fisherman at home and in some warm corner. But pleasant weather now will set the ball in motion, and it only takes a single string of pickering brought into a town to bring out the tackle of all the other boys, and the next day they are off.

The first hearing before the Committee on Fisheries and Game of the Maine Legislature was held last Wednesday. The hearing was largely attended by noted sportsmen and guides. T. W. Vose, Esq., of Bangor, represented the Fish and Game Commissioners. He recommended amendments to the present laws as follows: That September be added to the open season on bull moose, deer and caribou; December should be closed; that special protection be placed upon cow moose at all seasons; that nothing shall prevent any marketman having an established place of business in the State from purchasing any moose, caribou or deer lawfully caught, killed or destroyed, and selling the same at retail in open season to local customers; that no person or corporation shall transport moose, deer or caribou, unless open to view, tagged and plainly labeled with the name of owner and accompanied by him, under a penalty of \$40, and any one not the actual owner of such game who represents himself to be the owner shall be liable to penalties; that any officer authorized to enforce the fish and game laws may without process arrest any person found violating or who has violated any of said laws; and he shall with reasonable diligence cause him to be taken before the neighboring trial justice in any county for a warrant and trial; that no person at any one time in open season shall kill, expose for sale or have in possession except alive, more than fifteen wood ducks, wild ducks, teal, partridge, woodcock, quail or prairie chickens, under penalty of \$5 for each bird in excess; nor shall any person or corporation carry from place to place any of the above-mentioned birds unless they are open to view, tagged and accompanied by their owner; that one-half the fines recovered for violation of the game laws shall be paid to the complainant, and the other half, with costs, to the county; that fishermen can only catch or have in their possession 25 lbs. of landlocked salmon, the limit now being 50.

At the evening session of the committee these amendments were reviewed and explained to some extent by Commissioner Henry O. Stanley, and doubtless a bill of some such form will be reported by the committee. The proposed amendments met some opposition in the discussion which followed before the committee and they have been pretty severely handled in the newspapers of the State since. The lumber land owners of Washington and Hancock counties are bitterly opposed to opening September, because they regard the month as particularly undesirable to have sportsmen in the forests, on account of their fires. The closing of December was opposed by Capt. F. C. Barker. F. E. Timberlake, of Phillips, would not limit the number of pounds of trout to 25. He was in favor of opening September. If the lumber people were very strenuous about the opening of all of the month of September the matter might be compromised by making the open season begin Sept. 15.

A gentleman, evidently not a citizen of the State, deplores the opening of September to shooting in the State and suggests that the partridges will greatly suffer from such action. He forgets, if he ever knew it, that September is an open month on these birds in the Pine Tree State.

D. H. Blanchard, of Boston, enters an earnest plea for the moose. He has visited the State every year for thirty years, generally with rod and gun, in legal open season. He has never killed a deer or a moose. He regrets to note the wholesale slaughter going on under the present laws. He would put an absolute close time of seven years on the moose, and would shorten the time for the killing of deer to two months, instead of lengthening it to four.

Another citizen of Maine would prohibit the hunting of partridges with the ordinary yelping dog. He would allow setters and pointers to be used in hunting that game, but the dog that trees the partridge and barks, he would abolish. A Boston sportsman objects to the limiting of the number of partridges killed in one season, by any one hunter, to fifteen, as proposed to the committee by the representative of the Game Commissioners, M. Vose. He thinks that a hunter should be allowed to take all the game he can get in the open season. It happens that this same sportsman makes an annual trip to Maine for partridge hunting. He goes in October. He employs the best guide that he can get and hunts all the time for two or three weeks. His record has frequently been 100 partridges in a season, and seldom has it been less than 50. A law limiting the number he might kill to 15—enough for any reasonable hunter—would distress him exceedingly.

The Piscataquis Fish and Game Protective Association has memorialized the Maine Senate. They refer to the great value of the fish and game about Moosehead Lake to the citizens of the State interested there, some 15 hotels being maintained there in the summer season and 25 steamers run on the lake. The committee deplores the trouble between the Game Commissioners and wardens and the people of Washington county (already touched upon in the FOREST AND STREAM). The committee prays that the laws be so amended that one-half of the fines for conviction be again given to the wardens. The committee recommends that the State might very profitably expend \$25,000 annually in the proper protection and propagation of fish and game.

Another very curious feature has come under my notice of late in regard to the Maine game law. Is in the form of an item like this. It appeared in the Lewiston Journal:

"N. C. Locke, of Salem, Mass., has offered a liberal reward for the apprehension of any one unlawfully dogging or killing a deer in the towns of Roxbury, Byron, Mexico, Dixfield, Weld and Carthage. This reward would be in addition to the State fines already imposed."

Another gentleman in Massachusetts offers a reward of \$40 for evidence presented to the game wardens that shall lead to the conviction of any person for dogging deer in either Oxford, Franklin or Somerset counties in that State. He also offers the same reward to any warden that shall of his own efforts work out the conviction of any person for dogging deer in the same counties. This is a decidedly new feature of game law enforcement. There is a chance for wealthy men who love to hunt and fish in Maine to do a good work.

SPECIAL.

FOREST AND STREAM, Box 2332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Gloan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

COONS BY DAY AND NIGHT

METING OUT JUSTICE TO A COON.

YOU folks have all been telling your stories of coons and coon hunts; and now I want to tell mine. It happened in Florida, and was entirely an impromptu affair, and began by my being kicked out of bed. Henry did that sometimes, and often remarked that when it came to kicking people out of bed I wasn't in it. But, however, this particular night when I landed on the floor I realized that this kick was for some other reason than pure cussedness. Somebody outside was calling "Helloa!" at the top of his voice and the dogs were evidently bent on his destruction, judging from the racket they made. I found Henry's shoes and put them on, struck a light and opened the door. "Well, what's up?" "Well, you be up at last, and I'm glad of it, for I ben a-bevin' a regular time callin' me and the pups. Call 'em in, will you! Where's Henry?" "Inside," said I, "looking for his shoes. What can we do for you?" "I'm the sheriff." "Come looking up a coon?" "Yes; somebody's broken into the section house down the road, taken a rifle, a coat and himself a kitin'. One of them niggers from the 'sap camp,' I reckon. I know he came as far as here; seed his tracks yonder, and I got my mule, so what do you say to saddlin' and runnin' him?"

At this point Henry made his appearance in a pair of boots with fire in his pipe, and of course, as always, ready for come what might.

Now, our dogs were the pride of the ranch, and what they wouldn't trail couldn't run; so Henry and the sheriff thought that if once we could get old Julia "straightened out" after the erring ducky, it was all over but the shouting.

Henry and I went out to saddle up. It was certainly the witching hour of night. A bulk in the darkness, a voice—that was a man. A form under foot, a step, a howl—and that was a dog. At last, after more saddling than was usually necessary, we were ready to mount. A blast on the horn brought a yell of delight from the hounds, and with Brag and Julia in the lead they bounded out of the gate down the road.

Down through the pine woods to where the railroad crossed the branch the sheriff led us, there we dismounted and with matches and a piece of "light wood" searched for the footprints. A man, and evidently a savage from "darkest Africa," had been here, and not liking the looks of our "light in the window," or hearing Henry breathe (he does heavily sometimes), had taken to the woods.

"Here Julia! here Brag—hunt 'em up! fetch 'em out old boy!" Blasts on the horn, encouraging yells, every manner of affectionate persuasion we wasted on those dogs. No go. "Well Sheriff!" said I, "we had better give it up until morning. Dogs don't seem to—*ow, ow*—hold on, Julia! I'll fetch him. Hunt 'em up, old maid." Running down to where Julia was holding forth in a clump of palmetto, I struck a match; and there in the center of the boot track was the hand-like print of a big coon. "Here you go, Sheriff! Here's the trail. Yes! boot prints, gone this way." That was enough—however tardy justice may be on occasions, this time the Sheriff was up with the hunt, and already well on toward the swamp where the dogs were now evidently going.

"Harry," said I, as we came together, "it's a coon. Up a tree." That was enough, the fun was on. An old owl down in the swamp ended his hoot with a chuckle as the sheriff and his mule crashed through the palmetto in the wake of the hounds. Along the branch through the thick bushes we forced the ponies, our only guide the swelling chorus chanting the coon's requiem. At last we reached the edge of Turnbull hamak, and from here on we must go on foot.

The gallant constable was evidently out of the race, for we could hear his halloo away back through the pines where the trail had turned, but from the very forcible arguments Julia and her consorts were just then making, it was about time for "summing up." The moon was coming. What a glorious sight it was. Sheltered by the thick growth of swamp, on the edge of which we stood, I could glimpse the dodging shadows away yonder through the trees and almost seem to see the goblins of our childhood scamper across the moonlit glades. Turn and peer into the swamp. There are curious shadows of stalwart sentinels, swinging shapes amid the moss, and where the moon beams dodging the shelter of the trees fall on the water, bits of mirror create the fantastic shapes anew. Not a sound save the faint and eager baying of the dogs, and an owl making big eyes at his lady love, as he tries her "To whoo."

I wondered if Henry saw the beauties of the night. He said he didn't see anything, not even the sense of getting out of bed at such an hour. I proposed going back and leaving the coon. But no, that coon had to be treed; he didn't intend coming out for nothing. So without more delay than was necessary in extracting each other out of bogs, and persuading briers and vines to believe they were too clinging, we reached the foot of a big cypress, around which night was surely hideous. Undoubtedly a pair of bright eyes watched the welcome the dogs gave us and the building of a fire, but except for the sight of an occasional star winking at the jolly face of the moon, all overhead was as vague as a political argument.

There was only one thing to do, and that was to wait until day came and threw some light on the subject. Henry got his back up against a tree and his feet to the blaze, and then commenced an emphatic argument with Julia, as to the necessity of so much noise. I think I must have dozed, for suddenly the fire seemed less bright, the shadows were stealing away their vigil spent, and through the trees came a stronger light that seemed to glide from tree to tree, waking all nature by its subtle touch. A gentle breeze rustled the leaves as though bidding them be up and stirring. Away through the hamak an old gobbler heralded the coming dawn; I could fancy the hens of his harem waking at this breakfast call, and soon after heard the united household leave the roost.

Henry at this roused himself and blew a blast on the horn, which brought the dogs about the tree with a rush. There he is! See him! That hall of gray with a glimpse of black nose over the edge of that limb.

Poor fellow! What a terrible night for him! Henry expressed deep pity for him once he fell among the dogs. I said it was a pity to let the poor fellow go to the dogs. To be sure he was a midnight desperado, a desecrator of

peaceful roosts, but might it not be well this time to simply reprimand and bid him beware. Henry agreed, doffed his hat, faced the tree and cried:

"Criminal at the bar. You are a fugitive from justice. This night the sheriff was on your track; but knowing the virtue lying in a piece of chicken, we sympathize with you. Depart in peace—but be warned in time. Desist from breaking into section houses, or you yet will bring your gray hairs in sorrow to the grave."

We found the ponies anxious to end the trip in a measure of oats, and after a pleasant ride in the dew-washed woods we reached our door. The sheriff had arrived an hour or so before, having bogged his mule and been obliged to lead her home.

The criminal was unfound, and over a warm breakfast we told him of our sylvan court and its mercy. D. K.

COON HUNTING IN TENNESSEE.

ATTENDED school for two years at Sewanee, Tenn., which is situated on a spur of the Cumberland Mountains designated as the "Cumberland Plateau," with an altitude of two thousand feet above the sea. Sewanee is the site of the "University of the South," and a rather popular summer resort. The surrounding country, or mountain, more properly speaking, is thickly wooded for the most part with large oak, chestnut, black gum and other trees native to that region, and the pedestrian's progress is very much impeded by a rugged surface covered with a vigorous undergrowth and broken here and there by sinuous ravines and dales, which mark the descent of the meandering mountain streams to the adjacent valley; these, and the semi-civilized mountaineer's corn patch, comprise in that locality the habitation of the raccoon.

The school session extends from the middle of March to the middle of December, and on Saturdays and holidays during the summer and early fall I used to frequently visit the coal mines, about three miles distant from the school, in company with four of my most intimate schoolmates and have a pow-wow with the miners. In this way we made the acquaintance of an old veteran coon hunter, who, while the hunting season lasted, used to hunt coons nearly all night and dig coal all day. This old hunter's name was Bill Farrest. He kindly invited us to "come out an go a coon huntin' this fall," and of course the invitation was readily accepted. Accordingly, about the first of October, after several pretty heavy frosts, and Farrest sent us word that "the coons was a gittin' in eatin' order," we obtained the school proctor's promise not to inspect our rooms the following Friday night, and ventured forth when that time arrived on our first coon hunt at about 8:30.

After losing our way two or three times and falling in half a dozen mudholes, we reached our chieftain's house (if I may be permitted to apply to it that term) about 10 o'clock. The hut was built of chestnut logs, roughly hewn with a common axe, and chinked with blocks and strips of wood, secured by clay. The roof consisted of saplings laid crosswise and covered with cornstalks, leaves, etc., which were held in place by logs. The door was made of plain boards rudely constructed, and a clumsy swinging shutter stood proxy for glass in the windows. After kicking and pounding on the door for some ten minutes or more, we heard a voice within cry out, "Hellow, thar," followed by the sound of footsteps moving about the room. It turned out to be Farrest, and he gave us a hearty welcome, saying: "Come in, while I chuck up ther fire; we are goin' to git a coon to-night sure." On entering we found that there was but one room in the house, with a large open fireplace, which, when it glowed with a big wood fire, counterbalanced to a great extent the discomforts above mentioned. After poking up the fire our hunter began putting on his socks and boots, that being mainly the preparation necessary for him to make, as in other respects his day and night attire were very much the same. In one corner was Mrs. Farrest reposing on a low bed made of straw boards supporting a straw mattress, with coarse and heavy blankets for covering. In another corner was Mr. Farrest's brother-in-law wrapped up in blankets and lying on sheepskins, and in another were the coon hunting dogs Sing and Mat, which were the very sublimated essence of our hunter's pride. After we had been sitting before Mr. Farrest's large open fire for an hour more talking, singing and getting ourselves thoroughly warmed and our clothes dried, our host proposed that we should start for the woods; so after releasing the dogs we were ready to penetrate the dark, black forest in quest of the crafty raccoon.

Before going any further, however, permit me to observe a rather perplexing mistake on my part while under the roof of our leader's mansion. When we arose from our seats I happened to glance into a flour barrel that was by the door and in it I perceived something which appeared to me very much like a puppy, and after careening the barrel a little toward the fire, in order to get a better view of its contents, I inquired of our host if the "puppy" had the material in him for a good coon dog; but much to my astonishment he replied, "Ikod, that's the baby, he has better material in him for a coal digger than a coon dog." I discovered later that the flour barrel superseded, in many of the isolated houses of the Cumberlandlands, the baby's cradle and, indeed, seemed to be preferred, for when the youngster fretted or was sleepy the barrel was laid upon its side and rocked till baby's cries were lost in slumbers. But enough of this, let us see about that coon. We hunted through corn patches and strayed along branches for several hours without even striking a rabbit trail, until we were quite disheartened and finally seated ourselves upon an old fallen tree to endeavor the detection by lots of the "Jonah," when hark! the dogs struck a trail, and oh how their clear and musical voices rang out upon the frosty air! Away they started in hot pursuit of the ill-fated coon, encouraged and incited by the shrill and keen yells of their master.

Gradually their voices began to die away in the distance, and ere an hour had passed, were almost inaudible, when our conductor sprang to his feet and ejaculated, "Ikod boys, we must follow the dogs or say good-night to the coon!" With one voice we replied, "follow the dogs," and accordingly we were soon bending our way in the direction from whence their distant yelps were wafted; Farrest in the lead, of course, with his mining lamp hooked in his large slouch hat and it was to that lamp we owed our ability to keep the striding coal miner in sight. Suddenly he came to a dead halt, and placing his hand to his ear in a shape adapted to catch the faint sound of the dogs, exclaimed, "Ikod boys, they have treed, come on!"

Flushed with new anticipations, we accelerated our gait to the utmost speed consistent with a long and rough tramp ahead, and trudged along first through briers, then undergrowth, then swamps, sometimes falling in a blind ditch or sink hole, but encouraged and stimulated by the nearer bark of the dogs at every step we took. Finally emerging from a dense growth of young trees we came upon the dogs in a swampy and shady place jumping and barking around an old broken-off and hollow tree. The first thing we did was to build a good fire, and then set to work to capture our prize. The old decayed tree was not a formidable one, either to the axe or to the climber, which is not the kind that a coon will usually take to. This was evidence that the dogs were close upon him, and it was his last resort. A coon will never take refuge in a tree when pursued until it is absolutely necessary in order to avoid a encounter, but prefers to exercise that strategy for which he is so renowned in making his retreat.

After building a fire we all loaned our coats to Farrest, who climbed the old remnants of a tree and stuffed them in the top of it. He then descended and began work with the axe. In about fifteen minutes the tree commenced to sway to and fro, and we boys stood around with clubs in our hands so as to attack the coon should he jump before the tree fell, as Farrest informed us they would frequently do. But our coats proved equal to the purpose for which they were used and kept the coon our prisoner. In a few minutes more Farrest yelled "Look out!" and the old trunk of a tree was precipitated with a crash to the ground.

We then cut a hole in the log about midway of its length, and after removing our coats from within the upper end ran the coon out with a pole. The instant the dogs sprang at it the coon rolled on its back, and with its teeth and claws "made" (as Farrest exclaimed) "the wool from the dogs fly." For some moments the excitement was intense. The coon seized one of the dogs by the lower jaw with his teeth and a heartrending howl from our favorite canine made us fear that the coon would come out victor; but with a quick and sudden jerk the dog extricated herself from the grasp of the coon, and crazed with pain and rage made a desperate lunge for the coon's throat, and secured a hold which she did not relinquish until compelled by several kicks and cuffs from her master. In the din and confusion that prevailed during the fight one of the boys had his hat knocked in the fire and could find only a smouldering remnant of it when we were ready to resume the march. This, however, was soon replaced by a handkerchief with a knot in each corner. After the smoke of the battle had cleared away and we had regained our senses some one inquired the hour, when much to our amazement we learned it was nearly 3 o'clock and we were about ten miles distant from our abode. Unanimously agreeing that we had done well enough for the initiatory night we began to retrace our steps.

We reached Farrest's house about 4:45, and after making arrangements for another hunt the ensuing Friday night, we bade him adieu and steered for our quarters, where we arrived about 5:30 in the morning. We then retired to our rooms and had the proctor to put our names on the sick list, and enjoyed a good rest until Monday morning.

The fun we had that first Friday night sealed our devotion to coon hunting, and it is needless to say that every subsequent Friday night during the session was spent in the same diversion; usually with better results, yet sometimes with not so good, as one little opossum about the size of a baseball would occasionally be the fruit of our labors; and there is no telling how many hours we have spent in digging for an opossum, which would invariably prove to be that little bushy-tailed animal that plays havoc with the hen yard and terrifies mankind when its presence is perceived. But Farrest maintained that his dogs would not "run a skunk," and whenever they dened, it was either "a possum or a groundhog;" and only when we had dug far enough to reach the inmate with a pole our point would be carried. The largest number of coons captured by us in one night was five, average about two.

Before closing my remarks I wish to observe a few characteristics of the raccoon. He is remarkable for his cunning. When discovering himself pursued by a dog he takes the shortest course to a stream of water, if such is near enough, and will cross and recross in order to thwart the endeavors of the dog to trail him. The coon seems also to have a predilection for a watercourse when seeking sport. This inference is drawn from the multitude of tracks I have often noticed in the mud along the edges of mountain streams. When there is no water near by, a coon, when trying to evade a dog, will resort to his ingenious method of "barking trees." That is, he will climb a tree and jump from the end of its most projecting limb to the ground. By sticking his head under his belly he can assume the shape of a ball, and when he jumps, alights upon his shoulders, and will roll over and over for quite a distance, then continue upon his course for some length of time, when he will repeat the performance, and so on until overtaken by the dog. Naturally, when the dog goes up to the first "barked" tree he thinks the coon is there, and sets up a slow and steady bark to inform his master to that effect, and only when he has circled out from the tree and strikes the trail again, he finds how he has been circumvented. The time thus lost by the dog is of course advantageously employed by the coon in effecting his escape, and were it not for the much greater rapidity with which a dog travels than a coon, coon hunting with dogs would be profitless. R.

VIRGINIA GAME.—Lexington, Va., Jan. 31.—To-day is the last of our open season for birds. In consequence of the mild winter of 1889-90, our fields were in the beginning of the season better stocked with birds than at any time for years; and large bags were made. As our open season does not begin until Nov. 1, fewer small birds were killed than when the shooting began on Oct. 1. This is a good change and will, I trust, be maintained. Hares abundant, and in my opinion a great nuisance, unless the hunt is for them and for them alone.—T. M. S.

NORTH DAKOTA GAME.—Mandan, N. D., Feb. 2.—Never have prairie chickens been so thick at this season as this year. We have had no cold weather yet, and they are in prime condition.—F. S. L.

A TRIP TO THE MEGALOWAY.—C. M. advertises in another column for companions in a trip to rough it on the Megalloway next October.

CHICAGO AND THE WEST.

CHICAGO, Feb. 7.—Mr. John Soderberg is just back from a trip to Florida. He visited Bernardino, Jacksonville, St. Augustine and other points on the east side, and also St. Petersburg on Tampa Bay. Mr. Soderberg appears to have made this chiefly an orange-eating expedition, and did not fire a shot or cast a line. In view of this fact it is a comfort to add that although he was in love with the Florida oranges on sight, he got into this city just in time to meet the only cold snap we have had, the thermometer being 8° below.

Mr. C. S. Burton tells of a pickerel weighing 26½ lbs. lately caught through the ice on Lake Mukwanago by Wm. Tuohy. This fish had a smaller pickerel weighing 11b. 6oz. in its maw when opened. The Mukwanago fishermen use a great many small pickerel for bait in their ice fishing. There is a very deep small lake not far from Mukwanago where the large fish are sometimes taken. Lately one was hooked too large to be taken out through the hole in the ice. While the men were enlarging the hole the fish broke the stick to which the line was attached and escaped.

Mr. Aaron Longstreet, of this city, leaves Monday for an extended fishing trip in the best country of the Pacific Coast.

All Chicago shooters will be much pleased to know that Mr. Andy E. Thomas, of Kansas City, has come to Chicago to live. Mr. Thomas will be a decided acquisition to Chicago shootingdom, as he is one of the best of the Kansas City shots. He has already been elected a member of the Fort Dearborn Club, of Chicago, whose membership is now full. Mr. Thomas will shoot as a member of the Illinois team on the Southern trip which starts to-day.

Mr. W. L. Wells, of the Shober & Carqueville Lithograph Company, an artist of ability and fame as handler of wildfowl topics, has just finished a very good thing in his "Mallards Going Out." The central figure is a piece of very strong and well-conceived drawing.

The Indiana Legislature has introduced a bill to permit shooting of wildfowl in that State only on Tuesdays, Thursdays and Saturdays of each week. This was at first reported as allowing shooting on Wednesdays, Thursdays and Fridays only. The bill is not yet passed, and it is much a question whether it would be much observed if it were a law. I wonder if everybody knows that it is against the law of Indiana to shoot on Sunday. This law is dreadfully broken.

Mr. John J. Shortall, leader of the Humane Society, is gaining fame by his efforts to abolish pigeon shooting in Illinois. Mr. Shortall in his bill (introduced, as mentioned last week, by Mr. Bass) exempts wild fowl and game birds, and kindly allows the sportsmen to hunt a little, though it is his tenet that no shooting should be allowed for food or for sale as food. In other words, this humane gentleman would think it cruel for sportsmen to shoot for sport, but all right and perfectly proper for market shooters to shoot for the market. Like many other great men, Mr. Shortall is occasionally tangled in his logic. He may not have been quite himself when he got up this bill to suppress pigeon shooting. He may not know that every pigeon killed at the trap in Illinois is sold and eaten. Really, when you come to get down to the brass tacks in this bill, you can't help seeing that the measure is too manifestly spiteful, boyish and absurdly unreasonable to entitle it to very much serious concern. Some Chicago man has suggested to the hysterical Mr. Shortall that he introduced a bill to compel us all to chloroform our oysters before eating them from the half shell. Humaneism is all right, when it is not spurious, or biased, or spiteful, or pseudo humaneism, such as this of Mr. Shortall's. True humaneism, *bona fide*, real and actual humaneism, is as near the heart of every genuine sportsman as it is to that of Mr. Shortall, and probably much nearer.

On Feb. 12 the Illinois State Sportsmen's Association meet to discuss this pigeon law. Yesterday afternoon, at 3 o'clock, the game dealers of South Water street met at Produce Exchange Hall and held a caucus of their own about game law matters. The game laws as now arranged suit the dealers pretty well. The chicken law date will almost certainly be altered to read Sept. 1, instead of Sept. 15, as was originally intended. This is a misfortune, but almost a necessity, for the Southern portion of the State never will agree on a date later than Sept. 1. Our chickens must go, the great big glorious birds, we don't half way appreciate them.

A funny thing appeared in the telegraphic reports of yesterday morning's dailies about Clinton shoot. The reporter in his special said: "Mr. George Leffingwell made the highest score and would have won all the first prizes if two of his birds had not lied out of the line." We can imagine Mr. George Leffingwell explaining that to the reporter!

Last week I said John Gillespie would go South for a trip for the benefit of his health. He starts to-day. His wife goes with him. They have round trip tickets. They will remain perhaps six weeks with friends near Jacksonville. John has a brand new sole leather pocketbook, which cost \$2.75 at wholesale. In this pocketbook is \$340 of cash. All this is just a little idea of the "boys," who thought they would compliment John in this way as a pleasure to themselves. John is getting gray now, and he has been sick a long time. He must get better while he is South, for the "boys" need him around here in their business. John Gillespie is one of the oldest and best known figures in the gun trade of Chicago, and where he goes he takes his own clientele with him. No man was ever more popular, or more reliable, or more loved. The "boys" have enjoyed their little scheme about him. Billy Mussey had a paper, and on the head of it was one line, "They all love John." Below there was place for names and amounts, and the whole business took but a very brief time, up at Billy's. Below is a copy of this little paper, which ought to be printed, read and preserved, as a proof of what sportsmen are and what they will do. There is a curious little incident related about one of the names on this paper. They laid the list before Mr. A. G. Spalding, the "Magnate," as the papers call him, and Mr. Spalding said "\$25." Years ago, before John Gillespie worked for A. G. Spalding & Bros., A. G. Spalding used to work for John Gillespie, and it is said that John paid "Al," the first dollar he ever earned in base ball.

There is something half pretty about this whole business, and it is only marred in one way. I would point out that the name of Mr. John J. Shortall, the pigeon law man, does not appear upon this list. The names on this

list are all those of cruel, wicked, barbarous sportsmen. It reads:

THEY ALL LOVE JOHN.

W. P. Mussey, C. B. Dicks, C. D. Gammon, George T. Farmer, C. R. Babeuf, H. W. Loveday, H. D. Nicholls, R. S. Cox, Abner Price, W. A. Barton, J. P. Card, A. J. Featherstone, W. W. Duffley, Henry Smith, FOREST AND STREAM, Geo. Hofman, F. A. Place, C. S. Wilcox, R. B. Organ, L. A. Williams, Thos. Newman, Robbins & Palmer Co., R. A. Turtle, O. F. Malcolm, J. W. Murdough, F. W. Ludlow, H. W. Jenney, W. W. McFarland, A. S. Kleinman, C. S. Burton, B. J. Sweeney, J. S. Orvis, J. A. Sharp, J. C. Durgin, Alfred Hammer, E. S. Hartwell, M. W. Shay, Joel A. Kinney, F. B. Bowes, L. R. Brown, C. H. Mears, J. W. Sheahan, Percy F. Stone, T. H. McNeill, W. H. Mortimer, N. F. Pfeffer, A. C. Anson, J. M. Hutchinson, H. A. Foss, W. T. Clark, T. W. Wilmarth, C. E. Willard, C. E. Felton, M. J. Elch, W. W. Foss, H. B. Foss, C. S. Petrie, C. K. Herrick, John Watson, W. L. Wells, A. W. Knox, N. Rowe, Frank Willard, F. P. Taylor, G. M. Davis, E. P. Hilliard, W. H. Haskell, J. O. Blake, F. H. Andrews, F. W. Gerould, Wm. T. Brown, E. C. J. Cleaver, Fred C. Donald, Chas. Kern, Wolfred N. Low, A. W. Cobb, A. M. Fuller, D. P. Wilkinson, Edward Eagle, R. C. Cox, John R. Adams, J. C. Edwards, Frank Floyd, Chas. E. Deane, Jas. A. Sexton, A. G. Spalding, G. L. Deiter, Geo. Barnard, W. L. Shepard, H. J. Milligan, R. W. Stafford, Jos. J. Gore, Wm. Kent, Henry Ehlers.

The Southern shooting trip referred to earlier in these columns was pulled off to-day at 3:20 P. M., a very nice company indeed being on hand to start, including some of the prominent shooters of the country. The party goes on the Illinois Central through train, made up for the Mardi Gras excursion trade and a hummer, two special Pullmans being devoted to their use. They shoot at New Orleans Monday, Mobile Wednesday and Thursday, Pensacola Friday, Saturday and perhaps Monday following, and the Southern gentlemen, with characteristic hospitality, have arranged so pleasant a programme for them that they cannot fail to have a delightful time. At Pensacola there will be championship races at live birds between the Northern and Southern teams and between the Illinois and Florida teams, the entertainment at that city being in the hands of the well known Dixie Gun Club. At this writing the personnel of the Northern team is not decided, but Capt. McMurchy will probably just shoot those who are out of bed at the time. Col. Chas. E. Felton will captain the Illinois team, which will probably be made up of the following besides himself: Messrs. C. E. Willard, C. D. Gammon, Rolla Heikes, Ben Dicks, F. A. Place, A. E. Thomas, Thomas Marshall, G. W. Andrews, and another not yet certain. Colonel Felton has issued a printed manifesto to his troops, in which he urges each man to do his duty, to take along plenty of oil, plenty of good cartridges, and guns which have been carefully dissected and examined for misfires. The Colonel feelingly remarks that inattention to such details may result in the team's having to walk home. At the start of the train to-day there were noticed among others the following: Mr. Harvey McMurchy and a new white box coat, two rows of buttons; Mr. Rolla Heikes, with his smile and his banjo; Mr. John Gillespie and his wife, Mr. C. E. Willard and a new pair of stunning patent leather shoes, Mr. Fred Quimby, of New York, with a fine pair of \$6 plaid trousers, almost new and a bargain; Capt. L. C. Cranmer, also of New York, on his first trip to Chicago, who is sailing into a lot of friendships out here already; Mr. Milt Lindsley, of New York, who has a lot of those already; Mr. Frank Parmalee, of Omaha, and his lip, and his popularity, and his two friends, Messrs. John Field and J. Gwinn, also of Omaha; Mr. Tom Marshall, of Keithsburg, and his wife; Mr. C. F. Stokes and his bicycle. Mr. C. D. Gammon and his wife, Col. Felton and his Scotts, Mr. G. Harry Squires, of New York, and his Greeners; Mr. J. Robbins and his new cap, Messrs. F. A. Place, C. B. Dicks, A. E. Thomas, E. Goodrich, J. W. C. Haskell, A. D. Cancross, L. "Davenport," Harry Smith and others. The party boasts a mascot, Clarence Duval, the colored boy who traveled around the world with the Spalding base ball aggregation. "Tee Kay," of New York, is not on, but conspicuous by his absence, we don't know why.

Mr. Geo. I. Maillet, of Crown Point, Ind., is in town to-day, looking around among his friends. Call again George. In the words of the great country editor, our latch string is always hanging out.

Mr. J. A. R. Elliott, of Kansas City, was in the town earlier in the week, looking up arrangements for his proposed live bird park here. Mr. Elliott thinks it wiser to wait until the action of the Legislature on the pigeon law bill is known. Mr. Elliott went to Clinton shoot, divided a tie with Mr. Geo. Kleinman and to-day, so the wires say, beat Charlie Budd in a 100-bird race by the remarkable score of 98 to 96. Details later.

In a morning paper to-day Dr. Chas. Moorum, of Portland, Oregon, gives estimates made after careful study of the speed of flight of various species of ducks. He places the canvasback as the swiftest, two miles a minute, hour after hour; the mallard slowest, about a mile a minute under pressure; the gadwall 80 miles an hour; the broadbill nearly as fast but not so enduring as the canvasback; wild geese, 80 to 100 miles an hour.

E. HOUGH.

SPRUCE CABIN RUN GAME AND FISH ASSOCIATION.—This association was organized last Friday, Feb. 6, at the Astor House, New York. The officers elected were: Col. E. L. Price, President; Charles G. Bennett, Secretary; John E. Blake, Treasurer. The association has purchased 100 acres of land in Canadensis, Monroe county, Pa., which includes the stream known as Spruce Cabin Run. This stream begins on the top of one of the highest peaks of the Pocono Mountains, and flowing down into the Canadensis Valley, mingles with the waters of the turbulent Brodhead Creek, which empties into the Delaware. The preserve will make an extensive and valuable trout preserve. The association is negotiating for the purchase of a large tract of land for the purpose of making an extensive game preserve.

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Advs.*

ONTARIO GAME LAWS.

HAMILTON, Ont., Feb. 6.—*Editor Forest and Stream:* Will you allow me space in your valuable columns to state that the commission specially appointed by the Ontario Government is now making inquiries on the subject of game and fish in this Province, with a view of recommending such changes in the game laws as will protect the game and fish, and thereby benefit the country and help to promote the pleasure of honest and legitimate sportsmen?

As many of your American readers are aware, the indiscriminate slaughter of deer in Ontario is rapidly thinning out that animal, while the wholesale netting and poaching of fish and the indiscriminate shooting and trapping of game birds out of season is also depleting the country.

A number of questions relating to these matters have been carefully prepared and printed by the Commissioners for distribution to the sportsmen of Ontario, and should these lines of mine meet the eyes of any of your American readers who make it a habit to shoot or fish in Canada, I would be glad, upon application, to send them copies of the questions, which, when filled up, would no doubt be helpful in aiding the Commissioners to arrive at a solution of the work by them undertaken.

I am sending you copies by this mail of all the different questions prepared for issue by the Commission, so that you may see for yourself what we are doing. In addition to this method of reaching those interested, sessions are being held throughout the Province, at which witnesses are being examined *viva voce*; so that, by the time the inquiries of the Commissioners are ended, we hope to have had a very general and thorough consensus of opinion on the matters under consideration.

If this note will induce your sportsmen to express their opinions on these matters in your columns it will be a matter of interest, and I think that much good will accrue.

A. D. STEWART, Sec'y.

THE OLD CAMP ON THE CASS.

Editor Forest and Stream:

I was greatly interested in the pen and ink sketch of the "Old Camp on Cass River," by the late Dr. Sterling, of Cleveland, Ohio. It is natural for me to be interested from the fact that I have lived for over twenty-eight years within eight miles from where the old camp used to stand, and I live a short distance from it at the present time. Although I was not old enough to enjoy the hospitable shelter of this ancient landmark, I am able to find many of the present citizens of our town (Caro) who have.

That cabin was situated at what was called the Limestone Rock, or near it, from what I can learn from those who have seen it, and was about three miles above the present town of Vassar and about twelve miles from Caro. It is also true that it was one of the greatest "deer crossings" on the river.

I understand the picture represents the way it looked about forty years ago. That was a little before my time, but I can distinctly remember how this country looked twenty-eight years ago; at that time there was abundance of game of all kinds, and even at the present time considerable game is found. A short time ago several deer were seen not over seven miles from our city, and one very large bear was shot. Frequently bear and deer are seen here, but the old, old days as represented in your pen sketch have passed; they only live in our memories and history.

Mr. M. A. Jones of this place has hunted on the grounds and has passed many a night in that camp in the wilderness; at one time in particular he tells me he started a deer near the crossing, and before it crossed the river it was accompanied by twelve others. That was a chance for an amateur sportsman. That was the time when it was no uncommon thing to see from twelve to twenty deer in a drove. When the village of Vassar became an incorporated town the old cabin was yet standing, and could it have talked it would undoubtedly have told some great hunting stories. But the cabin is gone; the deer are gone; and with them the best hunting days ever recorded in the history of Michigan.

For the past ten years parties in this section of the State have gone up to the northern part of the Southern Peninsula for game, and I can verify the statement that we have great sport. In the vicinity of Grayling, St. Helens, West Branch, Gaylord and many other places on the M. C. R. R., game is numerous. I have been one of a party of five that has taken this trip once a year for the past six years, and perhaps in the future I will, for the benefit of the readers of FOREST AND STREAM, relate some of our adventures.

A. C. MORELAND.

CARO, Mich.

ROCHESTER AND VICINITY.

Editor Forest and Stream:

The county game law was passed by the supervisors Jan. 29 with the following amendments: Open season for quail, Oct. 15 to Nov. 15, instead of the month of November. For woodcock, Sept. 1 to Nov. 1, instead of Sept. 1 to Nov. 30. The word "penitentiary" inserted instead of "jail" wherever that word occurs.

Of course it is now known that these open seasons conflict with the new State game bill, and evidently the county board were not aware that they could not open the season for quail Oct. 15, and if both the laws—the county and the proposed State—should stand, we would have rather a short season on quail in this county.

The other dates in county law, while conflicting with the text, do not with the spirit of the proposed State law.

The Monroe Sportsman's Association have received a large number of applications for birds, and a new scheme is being worked in regard to putting them out, that is, of getting parties who own lands adjoining each other to the number of one thousand acres to club together in the care and protection of the birds, thus securing a large range of protected territory for each lot of birds sent out.

The birds did not do as well in the small lots in coops as was expected, so they were turned out in the large building where the coops were, and are now doing much better. Several loads of straw and evergreens were distributed around for them which they seem to appreciate.

Bunches of them get on a spot where the sun shines in and pile up like a swarm of bees, in the shape of a pyramid, four or five layers high, the outside ones all standing with tails toward the center of the swarm, making an altogether novel appearance.

OSCEOLA.

ROCHESTER, Feb. 9.

POTTSVILLE GAME AND FISH ASSOCIATION.—*Editor Forest and Stream:* The annual election of officers of the Pottsville Game and Fish Protective Association was held last Wednesday evening, Feb. 4. The following officers and trustees were elected to serve for the ensuing year: President, J. M. Wetherill; Vice-President, H. J. Hendler; Treasurer, Cyrus Sheetz; Secretary, F. C. Palmer; Solicitor, Chas. C. Matten; Trustees, Chas. Parkins, E. G. Hoover, Jas. Russell, H. R. Foster, Geo. Rose, Al Bindley, Chas. Schimpf. This association has been in existence one year, and during that time has done much to protect the game and fish. It is acknowledged by all that there was more game in this vicinity during the last season than there has been for many years, and the association claims some credit for this. The association is making a determined effort to put out a great many trout fry this spring. The initiation fee is fifty cents, annual dues one dollar. Any person who believes in the protection of game and game fish and the propagation thereof is eligible to membership. During the year the association paid men to act as wardens, who traveled the mountains in search for violators of the laws, and continually advertised rewards for the arrest and conviction of violators of the game and fish laws. The association has now over a hundred members in good standing.—P.

RIFLE AIMING AT GAME.—*Editor Forest and Stream:* Your correspondent J. J. Meyrick (in Nov. 6) speaks of certain positions in making long shots at game. The leading idea, if I understand correctly, is the using a stick to steady the aim. He thinks that aid must be generally unknown in America. In this he is mistaken. On the plains, when muzzleloaders were in use, it was a common occurrence for the hunter when making a long shot, taking the military position, fire kneeling, to steady the aim with his ramrod. In 1864 I was at a camp of Cheyenne Indians in Wyoming. A number of the Indians had good rifles, and we shot at targets with them. They each carried a long stick. (To the best of my recollection, about 4 ft.) When firing they squatted, or sat upon their heels, and steadied their aim with the stick. For a number of years past I have occasionally hunted deer in the Northern Peninsula of Michigan and would frequently find parties of Chippewa Indians also hunting deer. They all used a like stick to steady their aim, even when firing standing. Those Indians I saw rarely fired at running game.—H. S. [Our experience has been that Indians in old times almost always carried two slender sticks, which were used for wiping sticks and also to form a crotch for a rest when aiming. We have seen this done among the Utes, Snakes, Pawnees, Blackfeet and many other tribes.]

MICHIGAN GAME LAWS.—The Muskegon (Mich.) Fish and Game Protective Association have petitioned the Legislature to prohibit spring shooting (except jacksnipe to May 1); to repeal the law against deer hounding; to restore the quail season as it was two years ago; to prohibit the sale of game; to continue the office of State game warden. They also ask that beaver, mink, otter, muskrat, raccoon, martin and fisher may have protection from May 1 to Dec. 1.

MICHIGAN QUAIL.—Holland, Mich., Jan. 27.—Rabbits are plentiful here this season. A party of six bagged 44 yesterday. Quail are numerous and are increasing fast, although from what I can hear, some lawless persons have been shooting them. We had no duck shooting to speak of last fall, but hope for a good flight in the spring. I saw one robin and heard another last Sunday.—A. G. B.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ANGLING RETREATS OF MAINE.

III.—THE ELLIOTTSVILLE LAKES AND PONDS.

ELLIOTTSVILLE PLANTATION is north of Monson. Its south line by the way of the only traveled road there is some five miles from Lake Hebron. An ancient roadway, scraggy, moss-grown and hoary, overhung by the low branches of old trees, skirted by primeval forests, ledges of huge rocks and ragged boulders, and crossed by numerous brooks and streams, leads from the "Savage road" to Wilson River. From the Wilson River bridge the road divides into three different branches, one leading north and winding around the brow of Boar Stone Mountain to the two lone habitations of Nymphus Bodfish and Trustrum H. Brown. The dwelling of the latter is the last residence this side of the great untrodden wilderness, which is unbroken from there to the Canadian country. The easterly road from the Wilson bridge leads to Greenwood Pond. The westerly branch is just in one of the isolated and now uninhabited farms which represent a former civilization. Many years ago when the settlement thrived on the "Savage road" this was a hamlet of thrifty and busy farmers. There were also mills, a post-office, school-house and a store at the bridge. All is changed now. A few old and scattered houses alone remain to tell the tale of bygone days. Until its few settlers were awakened by the sound of the locomotive of the Canadian Pacific Railway it was not altogether unlike Goldsmith's deserted village.

Brown is a recluse and lives in his primitive residence alone in one of the wildest spots in that region. He is withal a good and reliable guide, and is well acquainted with all of the trout ponds and the haunts of the deer and caribou. It is six miles from his place to Hedgehog Pond, which can be reached by an old lumberman's "tote road." A fair fly or bait fisherman can there readily secure 100 spotted trout in a day, for it is not as easy of access as many others and is yet comparatively secure from the intrusion of the multitude. It is also six miles from Brown's to Long Pond, which is a lake eight miles long, of an irregular and crooked shape and contains large quantities of spotted and lake trout and landlocked salmon. Its outlet flows into Onaway Lake at the south. The fishing here is most excellent, as this is also inaccessible with carriages. The last two miles of its outlet,

which is called Long Pond Stream, is very picturesque and the scenery is beautiful. On it are a succession of falls known as "Slue Gundy." It winds gracefully along for several miles under charming elm and white birch foliage. In the spring season it is an excellent stream for brook trout fishing.

From Wilson Falls, at the bridge before mentioned, which are eight miles from Monson, it is one and one-half miles to the shore of Greenwood Pond. The shore of Greenwood is reached by wagons. Here the eye gazes upon a beautiful sheet of water, and at first sight one supposes it to be only a small pond. But an exploration discovers that what appeared like its head is only the "narrows," so called, or a small channel surrounded on either side by high and abrupt shores. Then your craft is in quite a large expanse of water under the shade of Boarstone and Greenwood Mountains. Caribou Cove is on its easterly side and is about one mile in length. A few rods to the west lie the two smaller ponds, known as the Little Greenwood, hidden away under the hoary brow of Greenwood Mountains. These ponds have the spotted and the larger one has both spotted and lake trout.

A boat or canoe ride of one and one-half miles across Greenwood and a carry or walk of one mile, which is through a wide, open and dry path in the woods, bring the angler to the shores of Lake Onaway, or what is often called Ship Pond, about four miles long. Onaway is said to have been its original Indian name, but the lumbermen and pioneers called it Ship Pond, because its shape is very much like that of a schooner. In the days when the red men were the denizens of this country the principal route of travel from the Penobscot River and bay to Canada was by the way of this lake, thence by Moosehead Lake and Moose River. The form of this lake is odd and curious, having many quaint coves and irregular bays and within it several islands. It is in the midst of a very dense and vast forest. Its waters are fringed by comely and graceful white birch trees, whose shadowy forms in a moonlight evening give the surroundings a weird appearance. It is surrounded by Boar Stone, Greenwood, Barron, Benson and Chairback mountains, all grand and magnificent, whose venerable tops look down upon its placid waters, making a picture of rare beauty and a scene of grandeur seldom equalled. That great highway of nations, the Canadian Pacific Railway, now passes along its southern shore, although no settlements have yet been developed. There are some camps here which are comfortable abiding places for the visiting angler. Besides the same species of trout which invest all these neighboring ponds, this is well filled with landlocked salmon and smelts.

During the season of 1886 the writer, with three friends, spent five days there and during the time took and carried to camp 69 salmon. They were all caught with light rods. None were saved that weighed less than 1 lb. and the largest one captured tipped the scales at 6 lbs. These fish are fighters worthy the skill of the most expert fishers. They take a fly, though the most universal mode is with bait in about 60 ft. of water. At Flood Cove and other points around the head of the lake many large spotted trout are taken trolling with flies and worms. The smelts are similar to the salt water smelts and are exceedingly sweet tasting and delicious as a food fish. In the summer of 1893 a gentleman from Providence, R. I., captured there, with an 8 oz. rod, a lake trout that weighed 19 lbs. Since then one other trout has been taken near the same spot that was his superior in weight by about 2 lbs. The shores are rough, uneven and rocky, huge granite boulders being seen in all directions. They remind one of another place described by Thoreau as "the raw materials of a planet dropped from an unseen quarry." The only real smooth shore is what is known as Haynes Beach, about midway of the lake on the easterly side in a pleasant and pretty cove. Boar Stone Mountain stands like a grim sentinel, lofty and majestic, overshadowing all. An ascent to its peak is often made by tourists. Near its summit are three small ponds of pure, clear and very cold water. In one of these the water is of remarkable depth. The outlets of these ponds rush and tumble over the mass of rocks, over the waste and desolation of ages in their rapid flight to the waters of Onaway. There is one cove called Duck Cove, which is grassy and where are numerous little bays, firths and lagoons extending into the marsh. About this cove and among these lagoons ducks in their season are quite plenty.

MONSON, Me.

SALMON IN WINTER.

Editor Forest and Stream:

In your paper of the 8th inst., on "Salmon Fishing in Winter," you write that salmon, especially in the months of March and April, are caught with hook and line in the Baltic along the north coast of Germany at depths varying from 16 to 32 fathoms from 6 to 20 miles off shore, and in the open sea near Sweden through the autumn and winter; and quote a statement that Eastern salmon spawn in the fall, yet there is a later run which spawns in January and February and return to the sea as kelts in June. "Scarlet-Ibis" writes truthfully that probably more would be heard about the taking of salmon during winter were it not against the law. Living on the River St. John, New Brunswick, I write what I know of the salmon frequenting it. In the months of June, July and August quantities are caught in nets in the Bay of Fundy and all along the river on their way to the spawning grounds. Later this net fishing for salmon is prohibited. But years ago, before such laws were very strictly enforced at points on the river within 30 miles of its mouth, bright fish 8, 9 and 10 lbs. were caught, and a few, though contrary to law, are now caught in the months of October, November, December and later where the current is rapid and the ice does not make in January, February and March.

At the Belle Isle Bay, thirty miles up river, fishing for bass is permitted during the winter, and nets are set under the ice and salmon are at times caught in those nets as well as bass. Last winter one of 40 lbs. was caught; whether it was a spent or bright fish I cannot say. But the autumn and winter fish I speak of and have seen were bright round fish and did not show signs of early spawning. In the months of March, April and May an occasional bright salmon is caught in the gaspereaux fishing nets at the north of the river, thus showing that salmon enter the river St. John every month in the year. Whether those that enter it in the autumn and

winter come to spawn I will not say, but from the state of the fish that I have seen opened am of the opinion that they do not in the winter time. The black or spent fish that I and others have caught on the rivers flowing into the Gulf of St. Lawrence with a fly in May and June we have looked upon as fish that had spawned late in the autumn and remained in the deep pools, ice-bound, through the winter and were making for the sea. What the bright fish that are with us in the winter come for if not to spawn is to me an unanswered question; possibly they, like the Baltic fish, having spawned early go to sea and recuperate, that their haunts, not yet known to us, are not very far away, and they are ready to visit their fresh-water homes when nature calls or when annoyed with the lice that gather on them in the sea and that fresh water relieves them from; or there may be some kinds of food in the rivers even in winter that attracts some. The Kennebecasis, a fresh-water tributary of the St. John, swarms with cod, pollock and hake, strictly salt-water fish—all winter feeding on the smelt that are in it at that time and are caught through the ice.

JAS. A. HARDING.
St. John, January.

ANGLING NOTES.

MOST anglers have pet theories of their own about fly-fishing, and the less experience they have the more firmly they believe in these theories. In fact, after one season's fishing the majority of fishermen know more than they ever will know again. The truth is, it will not answer to put forth any decided theories or rules for fishing unless one has had experience covering the whole country. For instance, in one water trout or bass will take the fly only early in the morning or late in the evening, while on other waters, perhaps only a few miles off they will rise only in the middle of the day. Or the fish may show a decided preference for a certain fly in one season and refuse it the next.

On Lake Colder, in the Adirondacks, the trout prefer a black-gnat at night, while in most waters they can only be taken on very light-colored flies after dark. One angler claims that flies should be dressed very thick and bushy, and others insist they never should be made that way.

Mr. W. C. Prime has a theory that trout always kill natural flies with their tails before taking them, and treat the artificial insects the same way.

One afternoon I was fishing in a pool noted for big trout that were exceedingly difficult to catch, and though I tried all sorts of flies I could not coax up a single fish. In despair I looped on a salmon fly that had rested unused for several years in the back of my fly-book. To my astonishment a trout rose for it with a startling splash the moment it touched the water. After leading him to the shallows and landing him, I took a second and a third in quick succession and then lost the fly on a fourth. Now, I thought to myself, I know what these fish want; so the next day I took a four-mile tramp to this pool, well supplied with these big flies; to my great disappointment the trout never looked at it. Had I not tried them again, I should have felt certain that those fish could always be taken on a salmon fly.

There was a piece of water just above the famous second fall on Rock Run, Pa., in which it was said trout would never take a fly. Every one that fished there agreed to that theory, though they could give no reason for it. I certainly was astonished when I tried it, for though the fish were rising well all along the stream I could not get a trout on this stretch; so I waded back carefully, and to my surprise could not see a single trout. After a thorough examination I made up my mind that the reason no one could take them with the fly was because there were none there to take. This stretch of stream was about one-fourth of a mile long and situated between two falls, and was evidently barren water with a smooth bottom of solid rock, affording no food and no shelter.

According to Rudyard Kipling's story in one of the daily papers he and his friends must have had grand sport fly-fishing for salmon on the Pacific coast. Every season we hear of some one's success with these fish, and it would greatly aid the solution of this problem if anglers would mention the time of year, kind of fly, etc., so that others could profit by their experience. We have always believed that under proper conditions these western salmon could be killed on the fly.

The warm weather of the past few weeks has brought the tarpon to the Florida coast, and many have been hooked, though owing to want of proper tackle few have been saved. We advise those interested to read "Angling Notes" in our Jan. 8 issue. SCARLET-IBIS.

THE BISBY CLUB.—At the annual meeting, held in Utica last week, the following officers were elected: President, Gen. Richard U. Sherman, New Hartford; Vice-President, Gen. James W. Husted, Peekskill; Second Vice-President, T. R. Proctor, Utica; Secretary, T. R. Proctor, Utica; Treasurer, W. H. Boardman, New York; Legal Counselor, R. F. Wilkinson, Poughkeepsie. Trustees—President Sherman (*ex-officio*), T. R. Proctor, H. Lee Babcock, of New Hartford; W. H. Wooster, of Seymour, Conn.; W. H. Boardman, R. F. Wilkinson. The executive committee consists of the president, first vice-president, secretary, treasurer and legal counsel. President Sherman read an interesting report, in which he described the progress of the club during the past year. It was shown to be very prosperous. Various improvements were recommended, especially the enlargement of the ponds at the hatchery, and the clearing of more ground for agricultural purposes.

CUMBERLAND COUNTY ASSOCIATION.—Portland, Me., Feb. 7.—*Editor Forest and Stream:* We have formed an association, to be called the Cumberland County Association of Game Fishermen, with the object of assisting in stocking and protecting the Sebago waters. Nearly all the business and professional men of the city and county who shoot or fish (most of them do both) are in it. When more definite plans are laid out I will keep you informed if you desire.—D.

PIKE FISHING IN TORONTO BAY.

WHEN the great majority of anglers have wound up their tackle and retired from the waterside to ruminate and swap yarns over their successes and failures with the bass and perch during the season, the pike fisher puts himself into commission and prospects around the bay to discover the haunts of this good game fish. The pike has been more than usually abundant this autumn, owing no doubt to the partial protection from the netters, clubbers and shooters afforded them last spring while they were spawning. More stringent measures, however, must be taken before the fishing will be anything like what it should be in this splendid stretch of water. Poaching is still carried on in the most open and destructive manner.

The pike here have also suffered terribly from the attacks of the lamprey. These creatures attach themselves to the sides or belly of large fish and suck or rasp a hole through the skin and flesh, often reaching into the intestines. When this occurs the pike of course dies. Many fine fish are to be seen floating about the bay killed in this fashion, and very few are caught that do not show marks of having suffered from a more or less prolonged visit of this wretched parasite, two or three holes being found in some cases. Black bass and suckers are served the same way.

I do not recollect having seen this habit of the lamprey mentioned by any writer, nor have I ever in any other water seen any damage done by it to fish, though I did once in Manitoba take a pike with a lamprey attached to it. Perhaps some of your readers on the other side of Lake Ontario can furnish further information on this subject.

I suppose in calling the pike a good game fish I shall incur the contemptuous wrath of "Kingfisher" and others who love the black bass and him only; and I can fancy I hear them ejaculate "snakes" and such like uncomplimentary things. But in spite of that I am prepared to maintain that the pike (*Esox lucius*) is fully equal to the much-praised black bass, and in one respect superior. It is inferior to the black bass on the table, but in no other place nor way, and it has the advantage of growing much larger, this to me is one of its greatest attractions, for I don't like catching fish I can flick out with my rod, and one don't catch many pike he can serve that way. Then there is always the chance of hooking a big one—something to be remembered as long as you live. These big fellows are scarce here, but I am always in hope that the next will be the one. The largest I saw taken this year weighed 12½ lbs., my own largest did not quite reach 9 lbs.

There are here besides the northern pike lots of grass pike. These frequent the weedy ponds in the marsh and over on the island, and are worthless in comparison, being dark-colored things, all head with long, thin bodies, making no fight when hooked. These are the fellows that "Kingfisher" has caught and turned up his nose at, I suspect, and not the bright beautiful fish with large oval gold spots and markings that we catch in the open water, and which can and will fight as hard as anything that wears scale armor.

By far the greatest number of pike caught here are taken with a spoon, and the tackle used is of the prop and clothes-line variety. The method is to use two very stout bamboo rods with lines strong enough to hold a horse; to these spoons are attached, the rods are arranged one on each side of a boat, and the fisherman rows quietly about the bay. The pike hooks himself and is hauled in and knocked on the head. Perhaps there are people who find sport in this; there must be or it would not be practiced to the extent it is, but I cannot see it. It seems to me about on a par with shooting into a bevy of quail on the ground, the object in each case being simply to bag the game no matter how.

To get the greatest amount of sport together with a fair share of fish I use a 12ft. bass rod, 30yds. of the finest made linen bass line, a plain brass reel and a float. In open water I use one hook whipped on fine gimp; the hook is passed through the back of the bait just under the dorsal fin, care being taken to injure the bait as little as possible. If I am fishing from the shore (which I much prefer) I cast my bait quietly into the water and allow it to remain in one spot for perhaps a quarter of an hour. If nothing comes of that I move on a few yards and make another cast, and so on, carefully trying every likely spot. When a pike seizes the bait I pay out line until the fish stops running; then I wait a minute or two or even longer if the bait is a large one and strike sharply, and play the fish gently until I can slip my landing net under him.

In this method of fishing there are two things to be carefully avoided; the first is striking too soon, always give plenty of time to allow the pike to get the bait well into his throat; the second is putting too much strain on your fish after he is hooked. A pike's mouth is very bony and it often happens that the hook has only penetrated the skin which lines the jaws, in which case a heavy pull will tear it out and a fish will be lost that a lighter hand would have landed. However, with the greatest care and the lightest hand accidents of this kind will happen, and the man who lands nine out of every dozen hooked has reason to think himself lucky.

If the water is weedy, and particularly if there are many lilies about, I use treble hooks on gimp, about 2in. above which I whip on a small single hook; on this single hook I put the bait in the same manner as before, the treble hooks then should hang just below the belly of the bait. With this I use a float also and rather heavier shot, so as to prevent the bait from swimming off among the lily stems. Drop the bait into the clear holes and the instant the float goes down strike sharp and keep a light line on the fish. In this way I can get pike out of places where no other method is available.

I find the best baits to be small creek suckers, shiners and chubs. The suckers are the best by far. Pike will also take perch and other small fish, but nothing like so readily as the first three named. They should be about 3in. long (if larger, many fish are missed in striking), bright, and above all, lively, so as to swim about and make a good showing when on the hook.

In warm weather I generally keep my bait about mid-water; later on as the weather gets cold about 1ft. or 18in. from the bottom.

Pike fishing here can be pursued from the end of April so long as the water remains open, but the best of the season is from the first of September until the middle of November. The fish are then in prime condition, beautiful in appearance and full of life and vigor; they will bite at most times, but the best days are the fine, clear

ones of autumn, when there is just enough breeze to ripple the surface of the bay and the water is clear; if at all thick it is useless to try for them. They are also caught here through the ice in the depth of winter, but it is hard, cold work and not sport.

C. W. NASH.

WATER LIFE.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

FEEDING HABITS OF THE SKATE.

THE rays do not generally live well in small aquaria. In the cases of a great many of them which the writer has had under observation, none, with one exception, lived for a great length of time or were observed to take food.

The exception is a specimen of the common skate (*Raja erinacea*) now in an aquarium at Washington. It is usually very quiet, and rests flat against the back of the tank—which is sloping—where the water supply enters, and is, therefore, almost completely hidden from view by the steam-like cloud of air bubbles at that point.

On one occasion when some small fish were introduced as food for the flounders inhabiting the same tank, and which eat them greedily, the skate was noticed to be more active than usual, moving about nervously and raising itself free from the slate by means of the extreme edges of its body, which had the effect of raising the head and central part of the body an inch or more. The small fish were from fresh water and were, therefore, too buoyant to swim down into the water without very great and continuous efforts, which when relaxed would allow them to float to the surface again. They were much in the condition of a drunken man. Presently it was thought that a fish was noticed to pass under the skate and a flattening of the body against the slate and a convulsive movement, which had the appearance of that produced by swallowing, made it apparent that it had caught and swallowed a fish. Later it was seen to catch them against the glass front of the tank, so that all doubts were removed. The body of the skate will be raised on its edges so as to allow the small fish to swim between it and the glass on which it is resting. When the fish is felt the skate suddenly flattens itself against the glass in such a way as to hold it securely and by a series of rapid muscular movements brings it to its mouth, into which it is sucked as into a vortex.

The skate has now become so tame that it will come to the surface of the water and take small fish, or pieces of fish and meat, from the hand of the attendant. It has lately laid four eggs, but as there is no male, and as it has been in the aquarium since October, it is not likely that they are fertilized.

The eggs (or empty egg cases) of the skate are familiar objects to those who visit the seaside, as they are very common; but few, probably, imagine that they are the eggs of a curious fish. The egg may be described as pillow-shaped, in the present case about 1½ in. wide by 2½ in. long and ½ in. thick in the middle, and with a flexible horn longer than the egg itself extending from each corner. When found on the sea beaches they are generally black or very dark brown, but when first laid they are a lustrous light brown tinged with sulphur yellow and are quite transparent, so that the contents are very easily seen. The shell or skin is a very tough but flexible integument of a horny consistency.

WM. P. SEAL.

THE LOON CLUB.—Monson, Maine, Feb. 2.—Some of the sportsmen and angling fraternity of this place recently organized a local sportsmen's club, which is named the Loon Club. L. S. Hall is President; E. A. Bullard, Vice-President; E. R. Haynes, Secretary; D. J. Jackson, Treasurer. They will erect a club house on the southerly shore of Lake Hebron in season for early spring fishing.—F.

LEXINGTON, Va.—During the last season black bass were fairly abundant, but for some reason they seem to be either decreasing in our waters or becoming more capricious as to bait. Fly-fishing is not followed to the extent it should be. The largest strings were caught with the fly.—T. M. S.

FERRULE CEMENT.—Mandan, N. D.—In your issue of Jan. 29, "R. O. S.," of St. Johns, asks for a ferrule cement. I have used Dodge's for the past four years, and think it the best in the market. He can buy it at any tackle store.—F. S. L.

THE SALMON RIVERS OF ALASKA.

WE have received from the U. S. Fish Commission an important report on the "Salmon and Salmon Rivers of Alaska, with Notes on the Conditions, Methods and Needs of the Salmon Fisheries," by Tarleton H. Bean, Ichthyologist of the U. S. Fish Commission. This is a very important work, and sets forth in considerable detail some features of the wealth of Alaska, which have hitherto been known of only in a very general way.

The index of this report has the peculiarity of being a complete table of contents, and the reader can readily find the facts relating to each species discussed by reference to this index. The investigation here reported on was made by authority of Congress, and Col. McDonald placed the matter in Dr. Bean's charge because of his acquaintance with the region and its fishes. In the topographic work and the reconnaissance of the surface geology the expedition had the assistance of Mr. Franklin Booth, of the University of California, and by reference to the charts accompanying the report it will be seen that his time was very fully occupied. He was able to correct the maps of Kodiak in many important particulars. The report is profusely illustrated and twenty-nine of the plates are reproductions of Dr. Bean's photographs. They show the methods of seining, the vessels engaged in the fishery, the canneries, harbors, spawning lakes and other features intimately related to the salmon industry. Many of the photographs were made in parts of the island never before reached by a photographer.

The object of the investigation is concisely stated on the title page. The maintenance of the salmon fisheries under permanent conditions of productiveness involves (1) regulation of the methods of fishing so as to permit the ascent of salmon to their spawning grounds in sufficient numbers, and (2) the introduction of a system of artificial fertilization and hatching of eggs and the extensive fishing out of young salmon to their natural feeding grounds in fresh water. The report describes briefly the physical characteristics of the environment of the salmon, including the size, rate of descent, nature of bottom, etc., of the salmon rivers; the daily variation of the temperature of air and water, the condition of the water during the winter and its changes of level through the influence of rains, the vegetation of the river valleys, the variations of the tides, the nature of obstructions, if such exist, and such other matters as relate to the life of the fish.

The chapter on the natural history of the salmon opens with a brief sketch of the species included in the salmon family, and then takes up the salmon and trout which are commercially important. Concerning these species are given the various common names, size, edible qualities, movements, spawning season and habits, changes incident to the spawning process, methods of cap-

ture, parasites and other enemies, and the present condition of abundance.

Another chapter is devoted to the methods, conditions and other statistics of the salmon fishery. This records a total of 66 vessels in the salmon fleet, of which 13 were steamers. Thirty-six canneries were in operation in 1889. The capital invested was estimated at about \$4,000,000 and the products valued at \$3,000,000. The methods of seining are described and it is related that as many as 17,000 salmon have been taken at a single haul. The processes of salting and canning fish are briefly referred to. The report closes with a brief chapter on the desirability of the artificial propagation of the salmon in Alaskan rivers.

We believe this is the first report of its kind and it is to be hoped that Congress will see the necessity of continuing the inquiry into this matter and will take steps to maintain the existing fisheries, rather than be at the expense of attempting to restore them a few years later and, at the same time, appropriate large sums of money to feed the natives, whose main food resource is being rapidly absorbed by excessive and injurious fishing.

Fishculture.

MORE ABOUT CONNECTICUT SHAD.

IN the Hartford Post Game Warden A. C. Collins writes supplementing his article in FOREST AND STREAM as follows:

I submit a few figures touching the catch of shad in Connecticut for the past twelve years. The following figures for the Hudson, Delaware and Potomac rivers were kindly furnished me by Col. Marshall McDonald and Capt. J. W. Collins, of the United States Fish Commission. The figures for Connecticut were taken from the Fish Commissioners' report.

Catch of shad in the Delaware, Hudson and Potomac rivers and State of Connecticut from 1885 to 1890 inclusive:

Years.	Hudson River.	Delaware River.	Potomac River.	Connecticut River.
1885.....	1,174,835	1,148,496	157,696	190,300
1886.....	1,300,949	874,017	275,422	117,650
1887.....	1,568,634	800,265	327,240	80,850
1888.....	1,563,548	856,662	367,105	68,450
1889.....	1,073,118	934,941	523,617	42,325
1890.....	*	*	456,931	34,318

*No reports. It is known, however, that the catch of shad for the Delaware River was exceedingly large for 1890.

The following table shows the catch of shad and how caught from 1879 to 1890 inclusive as collated from the Connecticut Fish Commissioner's reports:

Years.	Shad Caught by Pounds.	Shad Caught by Nets.	Total Catch.
1879.....	250,026	180,955	436,981
1880.....	175,784	94,134	269,918
1881.....	291,638	70,040	361,678
1882.....	213,730	59,183	272,903
1883.....	114,570	62,738	177,308
1884.....	95,300	51,745	150,045
1885.....	133,000	57,300	190,300
1886.....	75,000	42,950	117,950
1887.....	63,750	16,600	80,350
1888.....	27,425	14,900	68,650
1889.....	16,991	17,327	34,318
1890.....	1,493,154	690,372	2,192,526

Total number of shad caught in Connecticut by pounds, nets and seines from 1879 to 1890 inclusive, 2,192,526.

Total number of shad caught in Connecticut by pounds from 1879 to 1890 inclusive, 1,493,154.

Total number of shad caught in Connecticut by seines and nets from 1879 to 1890 inclusive, 699,372.

This shows that 68 per cent. of the total catch (2,192,526) of shad from 1879 to 1890 inclusive was taken by the pounds on the Connecticut shore of Long Island Sound. And 32 per cent. of the total catch (2,192,526) of shad from 1879 to 1890 inclusive was taken by seines and nets in the Connecticut River; nearly seven-tenths of the shad being caught by pounds and only three-tenths by seines and nets.

Below you will find some statistics that speak loudly:

Number of shad caught by one pound at Westbrook, Conn.: 1879, 19,175; 1880, 13,575; 1881, 10,500; 1882, 9,637; 1883, 6,200; 1884, 7,200; 1885, 7,858; 1886, 4,100; 1887, 7,200; 1888, 2,200; 1889, 1,800; total, 89,145.

Number of shad caught from Connecticut line to Holyoke dam, Mass., on the Connecticut River: 1879, 13,409; 1880, 7,727; 1881, 38,392; 1882, 6,990; 1883, 3,591; 1884, 1,563; 1885, 1,718; 1886, 577; 1887, 850; 1888, 824; 1889, 796; total, 76,457.

The above shows that only one pound caught 12,688 more shad in eleven years than was caught in Massachusetts on the Connecticut River from 1879 to 1889 inclusive.

Let us compare the money value (retail price) of the 1879 and 1890 catch of shad—436,981 shad at 50 cents each, \$218,490.50. The 1890 catch: 34,318 shad at 50 cents each, \$17,159—an actual loss of over \$200,000. Something should be done to recover our almost exhausted fisheries. A. C. COLLINS.

MINNESOTA FISHCULTURE.

WILLOWBROOK, as the State hatchery is named, is situated within the boundary of the city, and lies due east of the capitol, as the bird flies, within two miles and a half.

The well chosen site is upon a terrace secure above high water mark of the Mississippi and safe from danger of washout from any stream. The many large and copious springs upon the grounds are utilized in the processes of fishculture. The abundant and pure sparkling water which gushes from a hundred fountains, cold and clear, is led by conduits to the various hatcheries and ponds, to the troughs and tanks, receptacles, jars and aquaria, in short, wherever needed, and is so controlled and managed by gates and shut-offs that superfluous streams are run down spawning races, forming little cascades and rivulets, which lead sparklingly over pebbly beds and gravelly reaches into ponds fashioned to simulate the natural trout pools of the country. The ponds, though all communicating, are screened with wooden gratings, so as to separate the different kinds of fish, while permitting the free flow and continuous current of water to move everywhere throughout their length. The ponds are divided and subdivided into compartments, and in each may be seen fishes of different species, differing in size and age, from the newly hatched embryo to the patriarchal progenitor of many generations.

In the different pools may be seen fish of the following varieties: Native brook trout, California or rainbow trout, Loch Leven trout, Lake Superior trout, hybrid salmon-brook trout, landlocked salmon, California salmon, wall-eyed pike, yellow perch, black bass, king lake trout, "German" scale, mirror and leather carp, blue carp, tench, golden ide, gold carp, saibling and European brown trout, and some fine large specimens of the lake and river sturgeon. Besides these there is a museum of mounted fishes, which attracted deserved commendation at the New Orleans Exposition, also a number of specimens in alcohol. There are three hatching houses, fitted up with troughs, where the pearl-like eggs lie nestled upon a gravelly bottom, over which the sparkling water gently ripples, but whose limpid transparency permits the secrets of embryonic development to be seen and studied as no other vertebrate can be.

Besides these three hatcheries is another house for white-fish and wall-eyed "pike," whose eggs must be manipulated differently from those of the trout. The basement of this "glass hatchery" is fitted up with a battery of "Chase's self-picking hatching jars," twelve jars in a rack and four racks in a battery, each jar capable of containing 250,000 whitefish or "pike" eggs. The current of water flowing into the

mparts a gentle and continuous rotary motion to the eggs, which is necessary to their vitality. The same current carries away the bad eggs, which, being of less gravity, rise to the surface and are floated away.

The fishes as hatched are also moved forward by the current into suitable troughs and tanks, where they are held until such time as is proper for their distribution.

There is also on the grounds a tenement for the assistant's residence, with a room and office for the superintendent's use. Over the "glass hatchery" is a work shop, while over the second trout hatchery is a warming room for visitors and the museum of mounted fishes. There is also a small structure apart, for preparing the fish food. Also a small stable and shed for the cow and for visitors' teams. The whole is most interesting, and well worth the inspection of visitors, who are always welcome and courteously treated by the superintendent and his assistants.

The following is the distribution of fishes and eggs since last report, viz., from Aug. 1, 1888, to Aug. 1, 1890, inclusive:

Distributed.	1888.	1889.	1890.	Totals.
German carp.....	175	1,385	150	1,710
Rainbow trout.....		12,000		12,000
Black bass and perch.....		2,000		2,000
Landlocked salmon.....		25,000	51,000	76,000
Loch Leven trout.....		15,000	147,000	162,000
Lake Superior trout.....	55,000	100,000	192,000	347,000
Lake Superior trout, 2yrs. old.....				65
Native brook trout.....	80,000	359,000	891,000	860,000
Wall-eyed pike.....		2,100,000	1,700,000	3,800,000

Wall-eyed pike eggs..... 5,260,775

In addition to this, the United States Fish Commission has planted in Lake Superior waters within this State as follows:

Loch Leven, Von Behr and native brook trout.....	50,000
Wall-eyed pike.....	500,000
Lake Superior trout.....	1,380,000
Whitefish.....	35,000,000—36,910,000

Making a grand total of.....67,170,775

Every indication at the present time leads us to believe that the output of the coming season will largely exceed, if not double, that of the last.

ROBERT ORMSBY SWEENEY, SR.

FOREIGN FISHCULTURISTS.—We are informed by the editor of *Sporten*, Mr. Alex. Hintze, of Helsingfors, Finland, that Professor Doctor Malmgren, formerly Inspector of Fisheries of Finland, is now Governor of one of the northern provinces of Finland, and not of the entire country, as we said upon information in our issue of Jan. 1, 1891. Dr. Malmgren, he states further, is not a fish culturist, and upon this we congratulate the Doctor, for he need not waste words in apologizing for successful trout culture nor care a rap whether the salibling is a polymorphous species or a mysterious double.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.
March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Duffenderfer, Secretary.
March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Secretary.
March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.
March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.
April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.
April 16 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.
April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. R. P. Rennie, Sec'y.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

THE SOUTHERN FIELD TRIALS.

THESE trials commenced under very favorable auspices on Monday, Feb. 2, at New Albany, Miss. There was quite a large attendance of Southern sportsmen, among whom I noticed Col. Gordon, J. O'H. Denny, T. M. Brumby, J. W. Renfro, J. Shelley Hudson, Whyte Bedford, J. M. Avent, Patrick Henry, P. H. Bryson, Major Strickland, B. P. Holliday, and F. I. Stone. Among the handlers were such well known men as Messrs. Rose, Tucker, Short, Titus, McCargo, McCartney, Hyde, Bevan and Poindexter. The grounds were well adapted, but birds were not very plentiful. There was considerable grumbling over the hotel accommodations, which were poor. At a meeting of the club a committee was appointed to revise the running rules, and the spotting system will in future be adopted in a modified form. The club was reported as in good financial standing. The losses of the past year have all been paid, and there is a snug balance in the treasury.

The running commenced on Monday with the

DERBY STAKE.

The judges were Messrs. F. I. Stone, Chattanooga, Tenn.; B. P. Holliday, Prairie Station, Miss., and Dr. Rogers, of New Albany, Miss., who acted in place of W. Venable, who had not put in an appearance. The morning opened bright and frosty, toward noon becoming somewhat warmer. The first brace in the

First Series.

BESSIE M. AND FANCHIONETTE.

were put down at 8:24 a mile from town. Bessie M. is an English setter, owned by Mr. E. M. Myers, and is by Bryson out of Grace Bryson and was handled by H. M. Short. Fanchionette is by Dan Gladstone out of Bon-Silene, and owned by Mr. H. A. Renfro and handled by D. E. Rose. Both started fast and Van soon pointing was backed by Bessie, but nothing came of it. After going some distance Bessie pointed and birds were put up: steady to wing. After the scattered birds Fanchionette did the best work, securing three points and a single, as well as a flush, Bessie honoring in good style. Far owing to her better style and hunting sense just secured the award when the dogs were called up at 9:49.

ANDROMEDA AND ATALANTA.

Andromeda, an English setter, owned by H. S. Bevan, by Count Noble out of Moonstone, was handled by her owner, and L. W. Smith's English setter bitch Atalanta, by Jean Val Jean out of Sheena-Van, was handled by N. B. Nesbitt. Put down at 9:52 Andromeda soon showed herself the better in speed and range, her work being especially stylish. Running some distance Andromeda was found pointing a bevy down wind, having been set some time. Atalanta called back also pointed, birds being raised, both were steady to shot. Sent on Andromeda was lost again; when

found she had another point, which was shared by Atalanta, who had followed her. The former was certainly entitled to the point, both dogs steady to flush. Then roading on both dogs pointed and were steady to flush. On the scattered birds each made a point. Then Atalanta secured a bevy, making another point on a single. Dogs were then called up after running one hour and twenty-three minutes. Andromeda had clearly shown herself the best, both in point work and style and the decision was clearly wrong which gave the heat to Atalanta.

VANITY FAIR AND KATE WARD.

Vanity Fair, an English setter, owned by W. Willson, is by Roderigo—Pet Gladstone, and was handled by Hyde. F. S. Ward's English setter Kate Ward, by Bucklelaw—Vic, was in charge of H. M. Short. They were cast off at 11:26. Kate showed better style; but neither had much speed or range. After running some time both dogs seemed tired, when they were held up for a quarter of an hour and then put down on the other side of a wooded bottom. Vanity soon got into trouble, getting right in among the birds, though the wind was well in her favor. Kate Ward then made a point on a single, and as Vanity made another flush and was unsteady, the heat was given to Kate.

DOLLY HILL AND RUPERT.

Dolly Hill, handled by H. M. Short and owned by J. Shelley Hudson, is by Ben Hill—Dolly S. Rupert, owned by J. M. Avent, is by Roderigo—Bo Peep, and was handled by his owner. Cast off at 1:03, they started at a great pace, and were soon up with the birds. Dolly after winding birds and while trying to locate them had the credit taken from her by Rupert, who coming up from a wide cast quickly secured the point. Dolly backed and both were steady to flush. Then several singles were scored by each. This was quick and stylish work with few mistakes, making it one of the most sensational and inspiring heats I ever remember. Both had great speed. Rupert being a trifle the better in range, and won the heat, though Dolly ran him close.

FOLLY AND BLADE.

The English setter Folly, by Roderigo—Countess House, is owned by J. M. Avent, and he handled her; Charles Tucker's English setter Blade, by Toledo Blade—Lola C., was also in charge of his owner. They were put down at 1:35. These two were also good fielders and quick work was again the order of the heat. Folly scored first on a single, then Blade did the same. After running some time Blade found a bevy, Folly backed, and both were steady to shot and wing. Then Blade repeated on a single and pointed again, Avent marking the bird, put Folly on to it nicely. After running 45 min. the dogs were ordered up and heat given to Blade. He was the speedier.

LEMOINES AND DAVE B.

The English setter Lemoines, owned by J. E. Dager, Toledo Blade—Lady S., was handled by D. E. Rose, and J. A. McCargo's English setter Dave B., by Startle, Jr.—Clio, was handled by R. P. McCargo, and were cast off at 2:23. A few birds were flushed by horsemen after dogs had been running some time, then Lemoines pointed one of the singles. Dave B. coming around backed only fairly and was a trifle unsteady to shot. Afterward Lemoines flushed a single bird. Dave B. made a wide cast near a hedgerow, and coming down refused to back Lemoines who was pointing a bevy, but went in, taking the point. Both were steady to wing. After following without finding, the heat ended and was given to Lemoines. Dave B. was the Louisiana Derby winner. Dogs ran 51 min.

SAM R. AND MARGUERITE.

Sam R., owned by Geo. P. Jones, by Dash Bryson—Daisy Hope, was handled by W. W. Titus, and Marguerite, owned by D. E. Rose, by Gath's Hope—Sue S., was in charge of her owner. Cast off at 3:33; they both started well, going fast throughout the heat. Marguerite pointed first but bevy scattered, having run on, but two birds were flushed. Then Sam R. secured a point on another, this Titus flushed when the rest got up. Then a single ensued for each. Then Sam R. pointed and secured three singles to Marguerite's one on the other birds. Sam R. outpaced, ranged and pointed his opponent and won easily.

ANDY AND GRADY.

Andy, English setter owned by J. M. Avent, is by Jean Val Jean, and was handled by owner, Dr. B. M. Smith's English setter dog Grady is by Zagos—Dimple, R. P. McCargo handled him. Cast off at 4:03, when they ran till the close of the day. Shortly after starting Andy nailed a small bevy, backed by Grady. Nothing more being found, after a long run, in which Andy showed his superiority, they were ordered up to run again the next morning.

Tuesday.

The morning opened gloomy, rain falling heavily during the night followed by a drizzle, though afterward the day turned out well. The start was late and

ANDY AND GRADY.

were called to finish the previous heat. After 30 minutes' work Andy won easily, he has good range, style and pace.

DAVE W. AND LADY GAY SPANKER.

Dave W. is by Gath's Mark—Daisy F., owned by Geo. Hodgson and was handled by W. W. Titus. Lady is owned by the Graphic Kennels, by Rumor—Lady Norwich. She was handled by H. M. Short. Put down at 9:35, when Lady very soon made a stylish point on a bevy, birds flushed, when she was steady to shot and wing. Following them up she pointed a single and Dave W. backing, Short flushed and killed. Lady failed to find. Moving on, Dave pointed a bevy, Lady backing promptly. After the scattered birds, Lady flushed a single, Dave then pointed and bird was afterward put up by horsemen. Then he pointed fur. Lady Gay pointed false. Dave then pointed a bevy. Both staunch in their work and equal in speed and range. Heat awarded to Dave W. after forty-five minutes' run.

WHITE B. AND FLORA GLADSTONE.

Whyte B. is by Roderigo—Florence Gladstone, is owned by P. H. Bryson and in charge of Chas. Tucker. E. M. Myers' Flora Gladstone is by Dan Bryson—Grace Bryson, and was handled by H. M. Short. Cast off at 10:27. At the start a bird, flushed quite near, when Whyte B. started in and then stopped. Sent on, the balance of birds flushed. Then he pointed again, doing good work on footscut, he stopped, made a wide cast and came up the wind, when he quickly nailed the birds. Whyte then made two points on singles, while Flora backed, then she secured a point afterward. Whyte pointed footscut, and afterward each made a good point. Dogs up at 10:57. Whyte B. declared the winner.

NOBLE GLADSTONE AND ZULU M.

English setter dog Noble Gladstone, by Count Noble—Florence G., owned by P. H. Bryson, was handled by Chas. Tucker, and Poindexter's English setter bitch Zulu M., by Toledo Blade. Owing to Mr. Poindexter's illness the heat was postponed till after lunch, when Mr. Short handled her, though a stranger to Zulu. Both dogs started well, the bitch showing herself very fast, and she kept it up throughout the heat. Noble had not so much speed but is a wider ranger. After a run in open, dogs were sent into woods. Zulu winding birds, went up, crossed the fence, and coming down the other side, a bevy flushed wild. In the meantime Noble had flushed a bevy some distance away to the right. The first bevy was followed, when Noble pointed, Zulu went on in front, refusing to back, if she saw him, and not recognizing any scent. Noble then made two

points, Zulu making three or four and backed Noble. Zulu was given the heat.

PAUL BO AND FOX.

T. M. Brumby's English setter dog Paul Bo, by Gladstone—Bohemia Girl, was handled by W. W. Titus, and John H. Young's English setter dog Fox, by Jack—Fannie, was in charge of Capt. McCargo. They were cast off at 11:11. After a short run Fox pointed. Paul coming fast down wind only just saw him in time and dropped to back. Nothing could be found, but afterward, just near in woods, Fox flushed a small bevy. Then he pointed a single in grass. Paul roaded but failed to locate birds. Sent on, Paul dropped to a false point in woods. Then he found two bevs, both doing fair work on them. Paul Bo was rightly awarded the heat.

RAYON AND PINK B.

The English setter dog Rayon (sired by Jean Val Jean), owned and handled by J. M. Avent, and J. A. McCargo's English setter dog Pink B. (Startle, Sr.—Clio), were the next brace called. As Rayon was suffering from a recent injury, Avent asked to withdraw, and his request was acceded to. This ended the first series.

Second Series.

FANCHIONETTE AND ATALANTA.

This brace were cast off at 2:57 and ran for 30 minutes. Atalanta flushed soon after starting, a bevy down wind. Following up, she made three points and one flush, and then pointed a bevy, the birds being flushed before she was discovered on point. She was steady at all times to wing and shot. Fan had little to do but back. Atalanta won easily.

RUPERT AND KATE WARD.

Short and Kate Ward were absent when this brace was called. Being notified, Short came a minute or two late, but was allowed to start Kate. Rupert easily disposed of her. Rupert looks as if he would get in the money. Dogs were ordered up at 4:20.

BLADE AND LEMOINES.

Lemoines pointed twice on fur. After running one hour were ordered up, and go down to-morrow to finish the heat.

Wednesday.

A cool and bright day, frosty, but not uncomfortable. The judging was not so satisfactory as hitherto, some of the heats being too long and others the reverse. Little progress was made owing to the scarcity of birds. Only six heats were decided out of the eleven to decide the winner.

BLADE AND LEMOINES.

Put down some five miles from town to decide the unfinished heat. After an hour's run Blade pointed in good style and this settled the heat in his favor at last.

ANDY AND SAM R.

Cast off at 10:40 near where last bevy was flushed. Sam R. pointed a single bird, after a little ranging the bevy was followed, Andy securing a single, Sam R. doing the same soon after. Further on both roaded and pointed the same bird. Each had had an independent point. After a short run they were ordered up. There was not enough difference in point work and speed to decide between them. Sam R. only having a little the best in range and speed. Each had pointed at all chances. The heat was awarded to Sam R.

DAVE W. AND WHYTE B.

They were sent away at 11:27. Dave going at a sharper pace than Whyte; he kept out at work better. Dave located a bevy which he pointed in good style, then some good point work was done by Dave W. in the grass. Whyte B. then pointed and was steady to wing. Dan then pointed, but Whyte passed on, did not back, but flushed the bird. Sent on Dave made a flush down wind. After the thirty minutes limit they were sent on for fifteen minutes more. No work was done and dogs kept on. Whyte then added a false point. Soon after, the heat was given to Dave, which every one fully expected.

After lunch

PAUL BO AND ZULU M.

were started at 1:34, both going very fast. Zulu was first to get wind, and after some good work she located, but was a little unsteady to wing. Paul Bo backed well. On scattered birds near by, Zulu M. going fast up wind, put up a bevy. The dogs were held up at 1:55 to cross a wooded bottom. At 2:17 they were cast off again. Then Zulu M. made a false point, some distance further on the horsemen flushed three birds. Paul Bo then pointed to the left, a single was flushed by him and the balance of the bevy got up quite near. Zulu then pointed and moving on, bird flushed. She then scored another false point. Paul backed. In woods further on, Short flushed a bevy and Zulu M. a single bird, then pointed one. Short putting up the bird, when balance rose. Afterwards Paul Bo pointed on foot scent and soon came up with the bevy. During this, Zulu pointed a single bird, and when the bevy and her bird was flushed she chased. Each dog then made a point on singles; Zulu a little unsteady to shot. The heat was soon decided and Paul Bo won. Zulu was handicapped in being run by a strange handler, though Mr. Short handled her well. This ended the second series.

Third Series.

ATALANTA AND PINK B.

At 3:35 the brace was cast off, but little work was done. Pink B. had run his first heat here, owing to Rayon's withdrawal and a bye in the second series. Under the spotting system he would have been spotted out. No bevy was found. The score was, Atalanta an excusable flush down wind in heavy grass, Pink B. three false points, two flushes and a start to chase when the only bird pointed got up. How he could win on such a record is one of the things no fellow can understand. Atalanta in the previous heat had done good work, but this could not be counted under these rules, worse luck, and the heat should have been prolonged. The heat was finished at 4:43.

RUPERT AND SAM R.

This brace was made of different stuff. Not long after starting, in the open at the edge of woods, Rupert pointed a bevy. Sam R. was called up to back, but though in full view for some distance failed to back, and when close enough up to scent birds he turned in and pointed. Birds were flushed and both were steady to wing. On into woods, Rupert soon pointed a second bevy, Avent flushed them and on scattered birds Sam R. pointed one, Rupert coming up, backed splendidly. Then Sam R. flushed a single. A circle around and Sam made a false point. In the end the work in woods Rupert was stanch and stylish. At the end of thirty minutes the heat should have been given to Rupert, but it was continued. Sam R. made a point in sedge grass but moved on, after running fifteen minutes more Sam R. was missing. Titus, after a search on horseback, gave him up and thought his dog had gone to town. He was found later on a point. Rupert had been ordered up, and the heat will be continued to-morrow.

Thursday.

A heavy frost during the night was not favorable for early work, so the dogs were taken several miles south of the town before a start was made. The day did not seem favorable for good work, but several heats were decided and the decisions, with one exception, were right. Rupert was given the heat against Sam R. without running again, which was right, as he had fairly won it.

BLADE AND DAVE W.

At 9:35 this brace was cast off. Blade through the heat

fairly maintained his former record. He was better in speed and range. Dave W. did a good deal of pottering at times, with some running after Blade, and his pace did not favorably compare with that shown yesterday. Blade should have won the heat. He ran at a disadvantage, for Mr. Tucker, his owner and handler, was called home by the death of his father, leaving Mr. Rose to handle his string of dogs. Mr. Rose did well, of course, but it is unfair to both dog and handler. Blade's point work was equal to that of Dan and, as mentioned, his superiority at other points should have won him the race. Near the end of the heat, both dogs drawing to a point, a single bird was flushed, appearing to be crippled it flew very low and slow, both dogs chased. Blade going the farthest and this may have lost him the heat. Dave afterward made a false point, which ended the heat. Dave won.

Fourth Series.

PAUL BO AND PINK B.

Started at 10:53. After a short run a bevy was flushed. Following the bevy to heavy grass, Pink B. pointed on scent; no bird raised as they had run through to the other side. Paul Bo then quickly made two points. Pink to the right, at the edge of cotton, flushed several birds and dropped to wing. Capt. McCargo claimed a point, which was not allowed. Near a hedge row Paul got another point on a single. Across a branch and on the hill Pink made a good point on a bevy. Paul in meantime was over the hill, and when found seemed to have had some work but it could not be decided what it was. Recrossing branch, Paul pointed a lark and then a single bird. Then he pointed again and Titus urged him on, and while roading the bird flushed. The heat ended at 11:20. Paul Bo won.

RUPERT AND DAVE W.

Dave pointed a bevy in a small plum thicket. The birds were flushed, dogs steady. Another run and Rupert by good work located a bevy. Both dogs winded along a path. Rupert passed on, circled to the right to locate, and then crossed to the left, and coming back up wind, nalled them. On the singles Rupert did the best work and, properly, won. Lunch over, and returning to field at 1:20 Mr. Aven asked the judges for time to rest his dog for the final heat, but after consulting the judges decided to go on with the heat instead of running one in the All-Aged Stake as might have been done.

PAUL BO AND RUPERT.

Both started well to decide first money, Paul the faster, and he soon made a good point on a bevy. Paul steady to flush. Rupert soon after made what was supposed to be a false point, but as two rabbits were started it was possibly the cause of the point. Paul Bo followed with two false points. After a short run, Paul Bo making a cast to the left dropped to a point. He proved to be just above them. Moving on he made a short cast to left. He turned to come back when Rupert, close by, down wind, flushed the bevy. Following the birds he made a point on a single. They were then ordered up after running 30 minutes, and Paul was declared the winner of the Derby and first money.

Mr. Brumby, the secretary of the club and owner of Paul Bo, received many congratulations. The dog is by Paul Gladstone—Bohemian Girl, he is very like his sire, having his action and pace. After this four heats in the All-Age stake were run.

Saturday.

Rain fell all day Friday and no work was done, but to-day was bright and quite warm, though cloudy. A start was made at 8:37 about a mile from town and Rupert and Zula M. were put down to run for second, in the Derby, she being selected as the best dog beaten by Paul Bo, the winner. The heat was void of interest, neither showing the work of their former heats. Zula made the first point and to the right two or three birds flushed. After these each pointed, Rupert backed Zula but Zula refused to return the compliment. After a while Rupert pointed in some grass near woods, moving on he in casting to the left down wind, made an excusable flush. Then Zula pointed false, Rupert backed.

Running a short distance Zula pointed, then moved on and to the left pointed a bird about 50 yds. off. During this Rupert had secured a single, both dogs steady to flush. Then Zula pointed false in woods. Then while Rupert was pointing in a ravine Zula came in and flushed the bird. In heavy grass Rupert secured a single, when Zula indulged in a single flush. Aven soon claimed a point in some briars; several birds got up, but it was impossible to say whether it was a point or a flush. Then Zula made a point across a ravine. Short should have shot as directed.

The heat was then awarded to Zula. This was not very satisfactory, as she potted a good deal and had not the style of Rupert, nor did she back well unless cautioned. Rupert won third money. Thus under the heat system a good young dog was frozen out.

[Owing to the late arrival of the report of the four heats in the All-Aged Stake, and lack of space, it must lay over till next week. The result of the stake will be found in the telegram.]

Latest.—NEW ALBANY, Miss., Feb. 9.—Trials closed to-day on account of continuous rain, handlers requesting judges to decide on work done in the All-Aged Stakes. It was decided as follows: Antonio first, Dad Wilson, Jr., second, Noble C., Satan and Sam R. divide third.

MEMBERS' SHOW AT HAMILTON, ONTARIO.

Editor Forest and Stream:

A few details of the Hamilton Kennel Club members' show may be of interest. The terriers all through were of a very ordinary quality with the exception of these three fox-terriers: First, Mr. D. Rickett's Fan; she had a long, punishing head, with a good vermin expression, trifle large in ears, rather soft in coat, light in bone and only fair feet. Second, C. W. Rickett's Tutiles, short in head and weak in muzzle, nice formation of ear, light in bone and good texture of coat. Third, Mr. D. Rickett's Tom, good head, nice small dark eye, well carried ears, fair coat; the dog was very sick and would have been better at home.

Two bull-terriers were shown; they were of very bad type and were ordered out of the ring.

J. Anderson's black and tan terrier received hc.; he was void of all thumb markings and pencilings, and was very heavily breched.

In toy terriers first went to a small silver, Thos. Church's Beauty, nice formation, with a good terrier head. Second a good dark Yorkshire terrier pup, Frank Close's Tribble.

A very fair type of Airedale terrier was shown belonging to Mr. E. R. Rickett, a little advanced in ears, which made him look a little coarse and heavy all through.

There was a large attendance of members. Great interest seems to be taken in these meetings by the members. G. B.

NATIONAL GREYHOUND CLUB SHOW.—Editor Forest and Stream: You have omitted the number of entries from your report of the N. G. C. show. There were 61 exhibits, which is, I believe, the largest show of these breeds—greyhounds, deerhounds and wolfhounds—ever held in America. The quality, especially in deerhounds, was A1. Last year New York had 59, including of course the three wolfhounds entered in the miscellaneous class. In 1889 there were 45, in 1888 just 44 and in 1887 only 28. Mr. Huntington informs me that a number of entries were returned "too late," and that the Western exhibitors could not show without having their dogs put back in condition for New York. Had the show been held a month sooner, I suppose there would have been about one hundred dogs.—CHAS. H. MASON.

NOTES AND NOTIONS.

I CAN hardly follow "Busy Bee," in your Philadelphia contemporary, when he alludes to my note about collies, Hugh Dalziel's opinion of the tapir collie and Mr. Thompson's expressed admiration for Marcus. "Busy Bee" says, "As to the first named gentleman doubtless he [Onlooker] is correct, for he has but recently expressed his opinion very plainly, but as to Mr. Thompson, who is one of the foremost collie judges of the present day, it is rather far-fetched to quote his opinion of old Marcus. * * * I am quite sure Mr. Thompson does not share the opinion that collies of the Marcus type are to be compared with the Metchley Wonder type, etc." It would seem impossible that Mr. W. W. Thompson should refer to Marcus as the best dog he ever owned and yet hold that the dog was a bad one. The variance in the heads of Marcus and, say, any crack of the day is so marked that if the dog of to-day is good, Marcus must have been bad; therefore Mr. Thompson was either not a believer in the extreme long and very narrow head of the modern collie—thereby concurring with Mr. Dalziel, Mr. Rawdon B. Lee, Mr. Wm. B. Arkwright, etc.—or he took some pains to make it known that his best dog was a bad one. Of course, I do not vouch for Mr. Thompson's statement as to Marcus, but I remember having seen it stated in print that *The Scottish Fancier* made this statement as to Mr. Thompson, and on being challenged repeated it in most positive terms. I took it for granted that it would not be denied that within the last five or eight years fancy had gone crazed on very long and exceedingly narrow heads and profuse coats, and that within a very short time—perhaps since Mr. Arkwright published his memorable "The Fancier vs. The Collie"—there had been a check in this mad race, and I think that if "Busy Bee" will impartially look up the facts he will find it as I state. He must excuse me from specifying dogs with the deformed modern head, that should never be done except over the writer's name.

The hope of the editor that the late (?) discussion on "The Cockers of 1890" may be led into a discussion of what constitutes a cocker and what a small field spaniel, is admirable, but I fear it will result in little. That point has been one to be discussed ever since I knew aught of dogs, nor has it advanced an inch toward settlement. One thing is noticeable—the real authorities, those who thoroughly know the breeds, the Boultons, Lowes and others, all discard modern type as untypical. Mr. Lowe saving himself with the frank declaration that although he has known and used the breeds for years, he supposes he does not know anything of them.

The great difficulty in changing an exaggerated type lies in the extent of the investment in the extravagance of the type; i. e., the dogs possessing and transmitting a deformed excess of a valuable property are expensive, have cost their owners much money, or could be sold for a large amount if this exaggeration remains as the one and only correct type, and the revolution involved in a reversion to exact regard of what the property—now exaggerated—should be, is terrifying. This is not specially applicable to spaniels, as it holds with all breeds more or less. Where there are extensive and powerful interests not guided by considerations of type, as in the cases of foxhounds and greyhounds, these pranks of the fancier are innocuous, as the power, outside the fancier's scope, is too great to be battled with. The mischief is done where show type is the only—or main—consideration.

A distinct gain to kennel interests everywhere is the return of Mr. Vero Shaw to kennel matters in his papers contributed to the London *Stock-Keeper*. We are too apt to rush ahead on our own abstract notions, relying on our intuition (if on anything) for the safety and wisdom of our courses, and that there is such a thing as experience, or that it can guide us, is almost lost and forgotten, and the recital of the experiences of as old a hand in "fancy" as Mr. Shaw, should open our eyes to a good many things. The last suggestion of his that has impressed itself upon me as of importance is that of the great value of the professional dog breeder to dogs at large. This is worth taking home and thinking over. It is all very well to prate about "gentlemen" and gentlemanly dealings, and abstractly there is something in it, but in practical application, the man who breeds and sells dogs as a business, is apt to breed better ones than the gentleman who does it as a diversion, and not uncommonly the gentleman who goes into breeding as an amusement, finally gets to be as commercial as anybody. I am not aspersing the character of our gentleman breeders, their personal characters need no defense, but certainly they cannot, and will not breed with the practical skill of the professional, and it should not be lost sight of, that many of the revivers—almost creators of breeds, bred professionally, for the money to be made out of it. The Yorkshire terrier owes his development and his wonderful variation from his original stock almost wholly to English workingmen whose wives and daughters expended the time on their coats that has made them such marvels. The whippet is as well defined a breed, and as far as my observation goes, breeds as true as any breed, and they owe their existence to the same class of English workingmen. In fact, but a few years since, whippet racing was looked upon as a shady diversion, both here and in England, and entirely on account of the men fostering it.

The world moves nowadays and men who are fond of excitement have begun to interest themselves in this little racer, and surely we have a precedent for the better class of sportsmen to take this sport up, when we remember that fox-terrier coursing, which has been aptly named a "bastard" sport, finds its most strenuous supporters on the other side among the same class of men who foster whippet racing. Fox-terrier coursing on Long Island has received the stamp of fashion, then why should not the harmless amusement of whippet racing afford the same excitement to our leisure class that horse racing does? with this advantage, that the most squeamish person can find nothing in it to oppose on the score of cruelty.

The most brilliant accession to kennel ranks for a long time is Dr. J. A. Tatham's, of the *Canine World*, coming into the field. I cannot remember when so many new and very valuable suggestions, reforms and improvements have been made. He actually seems to have made an impression on the Chinese wall behind which the English Kennel Club has been entrenched, and is battering a hole in these ancient ramparts, he has a splinter new gate, with a broad road, all ready to put in the breach he has made. He now promises a startling departure, and from his so-far success I am disposed to think he will make it work somehow. He proposes to unite demonstrations of the usefulness of dogs side by side with their show qualities. At present the plan is not outlined, and to me the task seems an impossible one, but I cannot help having a faith in "Peto," that he will either accomplish what he starts out to do, or make a most wonderful rattling of the dry bones in doing it. I suppose from his name, that Mr. Tatham is to the manor born in all matters of sportsmanship.

FOREST AND STREAM has done a service to all readers in putting a brake on personal discussions. I fully agree with the disputants that they have a right to their defense, but the public have some rights also, and one of these is that it shall not be tired out with personalities long after they have lost all interest in them. I think that journals will have to come to some fixed, definite rule as to this matter, perhaps;

something like the rule of parliamentarians, that a speaker can speak but twice on one question, allowing the attack, the reply, the rebuttal and the sur rebuttal. Surely this would meet the needs of all such cases, and it would educate disputants in being terse and vigorous, to make the most of the opportunities afforded them and give a much needed relief to the reading public.

A Western paper repeats an old piece of rank humbug that I thought was buried long since. "A show held outside American Kennel Club rules would not attract a corporal's guard." If this is meant to apply to attendance, its stupid folly and falsity is manifest. If meant as applying to entries, it is the most open of questions and one about which nothing whatever can be presented. Experience has settled this beyond dispute. The American Kennel Club is a most excellent institution, and its rules inure to the benefit of all, but no greater harm can be done it than the stupidly false claims set forth for it. "Deliver me from my friends" is a maxim few do not have a chance to learn some time in their experience. THE ONLOOKER.

THE PACIFIC COAST FIELD TRIALS.

THE eighth annual meeting of the Pacific Coast Field Trials Club commenced on Jan. 10, at Bakersfield, Cal. The headquarters for the sportsmen was The Southern, which is a large and elegantly equipped hotel kept by that genial and obliging host, Col. John C. Morrison. It was virtually turned over to the members of the club and visitors participating in the trials. Every attention was freely and even lavishly bestowed and all were made to feel at home. Ladies' day, says *Breeder and Sportsman*, was the great social event of the meeting, and was a pronounced success in every respect, a large number of the fair sex being present, enlivening the proceedings and adding immeasurably to the interest and pleasure of the day.

The grounds are located about four miles south of Bakersfield, and are large and commodious. Under ordinary conditions, such as have obtained generally during the previous events of the club, they are all that could be desired, presenting just enough of timber, undergrowth and open space, with a large number of points and knolls skirted with long bunch grass in which every sportsman knows the quail are wont to hide, to afford ample opportunity for testing the dogs in every part of field work. The weather during the trials was all that could be desired, save for the heat during the central hours of Tuesday and Wednesday, which was much against the working of the dogs when the conditions of the grounds are taken into consideration. They are comparatively level, being broken by winding little depressions and gullies which for the most part are studded with large cottonwood trees and clusters of underbush which in some places cover many acres; the open ground for the greater portion is clothed with bunch grass, which affords excellent cover for the birds. A third, and, as it proved this year, the most trying portion of the grounds is covered with a species of very short grass presented in small tufts with the intervening spaces of bare ground whitened with alkali which covered it completely, in appearance resembling a light fall of snow. This detestable substance covering the ground, clung to every bush and coated every blade of grass, and when moving across the field, filled the nostrils of the dogs, horses and people in a way that was decidedly irritating, evidenced by the animals sneezing and coughing, in which exercise almost every individual on the field joined, adding various terms, *sub rosa*, more noted for strength of expression than for elegance and refinement. This condition arose from the fact that there had been but little or no rain in that section for several days, we may say weeks, prior to the trials, a condition which seldom obtains at this season of the year, and never before noted on these grounds, which have been used for number of years by the club with the best and most satisfactory results. We have not the space to give full details of the running and must confine ourselves to a summary. The judges were Messrs. N. C. Nelson, R. F. Vandevort and H. T. Payne.

SUMMARY.—THE DERBY.—JAN. 20.

First Series.

F. B. Dexter's lemon and white setter dog El Rey (Lode-stone—Enid)

against

N. Rideout's black and white dog Lord Chumley (Lode-stone—Janet).

against

M. D. Walter's white, black and tan setter dog Lee R. (Rodney—Phyllis II.)

against

James E. Watson's Old Black Joe II., black pointer, imp. Pape's Kennel, England.

The California Kennels' orange and white setter bitch Petronella (Harold—Sunlit)

against

J. M. Bassford's lemon and white pointer bitch Queen's Last (Mountain Boy—Beautiful Queen).

Second Series.

Petronella against El Rey.

Black Joe II. against Lee R.

Third Series.

Petronella against Old Black Joe II.

First—Lee R. Second—Old Black Joe II. Third—Petronella.

ALL-AGED STAKE.

This stake was concluded by Friday morning and resulted as follows.

SUMMARY.

First Series.

J. M. Bassford's lemon and white pointer dog Sankey B. (Point—Blossom)

against

T. J. Knowles' Irish setter dog Dan II. (Elcho Jr.—Brownie).

A. B. Truman's white and liver pointer bitch Patti Croxeth T. (Croxeth—Patti M.)

against

The California Kennel's blue belton English setter bitch Janet (Count Noble—Dashing Novice).

James E. Watson's Old Black Joe II., black pointer dog, imp., Pape's English Kennels,

against

J. M. Bassford's white and lemon pointer Rose (Point—Blossom).

W. W. Foote's black, white and tan English setter dog Dick Foote (Royal Duke II.—Nelly)

against

A. B. Truman's white and liver pointer bitch Queen Croxeth (Rush T.—cham. Patti Croxeth).

Second Series.

Sankey B. against Patti Croxeth T.

Old Black Joe II. against Queen Croxeth.

Third Series.

Old Black Joe II. against Patti Croxeth T.

Fourth Series.

Old Black Joe II. against Sankey B.

First—Patti Croxeth T. Second—Old Black Joe II. Third—Sankey B. Queen Croxeth and Rose, divided.

DOG CHAT.

THE Duquesne Kennel Club of Pittsburgh has arranged a premium list for their inaugural show that will compare favorably with any to be held this season. In most of the principal breeds the list of prizes is on a par with our leading shows, in fact, the premiums offered throughout are very good. Mastiffs, St. Bernards, setters and pointers have \$20 for each sex in the challenge, and \$20, \$10 and \$5 in the open classes. Collies have also \$20 in each challenge class. Other breeds have the usual \$10 and \$5. Basset hounds, Scotch, Dandie Dinmont and Bedlington terriers, the toy spaniels and Russian wolfhounds are the only breeds that have the sexes together. It is rather surprising that the Russians are not better treated, when this town may, in a sense, be called a principal center for these wolfhounds at present. Besides the regular prizes there is a great collection of specials, both money and merchandise, and the following, in addition to those already printed in the premium list, will show that every breed has been well taken care of, and additional donations are still coming in: Chas. C. Montooth offers \$5 for the best St. Bernard owned in Allegheny county. John C. Shoemaker offers \$5 for the best dog or bitch owned in Allegheny county. Ludwig & Richter offer a basket of flowers for the best dog owned between Allegheny City and New Brighton. Chas. L. Powers offers \$5 for the best pointer, three years old, owned in Allegheny county. The Monongahela House offers \$5 for the best English setter dog by Gladstone out of Lady N. Jas. Brown & Son offer a corduroy shooting coat for the best English setter in the open classes, also a fine Smith & Wesson revolver for the best bitch in the open classes. Mrs. J. M. Guskoff offers a fine hunting suit for the best brace in the open classes. Chas. C. Montooth offers \$5 for the best cocker spaniel in the show. Elmer E. Shaner offers \$10 for the best beagle that has started in any field trial. Webster Gray offers \$5 for the best bull-dog in the open class. J. J. Gillespie offers a fine picture of dogs for the best bitch in the open class. G. A. Stucky offers a fine gold-headed cane, value \$18.50, for the best St. Bernard in the show bred by the Keystone kennel. E. M. Byers offers \$5 for the best Blenheim bitch. Geo. W. Backofen offers a fine gold penholder and pen for the best Prince Charles and Ruby spaniel in the show. J. E. Hornecutt & Co. offer a fine silk umbrella for the best kennel of four poodles. J. H. Lytle offers \$5 for the best deerhound. H. S. A. Stewart offers \$5 for the best Chesapeake Bay dog. Wm. J. Patton offers \$5 for the best Dandie Dinmont. Geo. W. Schmidt offers a box of fine cigars for the best Scotch terrier dog, also a box of fine cigars for the best bitch. J. H. Lytle offers \$5 for the best Basset hound. Champion Paul Gladstone will be at the show for exhibition only. The judges have already been announced. Mr. W. Tallman will superintend the show. This is a good selection, as the genial "Billy" is popular, and what is better still, thoroughly efficient as a manager. Entries will close Feb. 24, and the fee is \$3.

At a meeting of the executive committee of the English Setter Club, held at the office of the treasurer, 7 P. M., Feb. 3, there were present Messrs. Wilson Risk, J. Treadwell Richards, J. E. Long, H. C. Glover and Percy C. Ohi. Mr. Richards presided. Owing to the unavoidable absence of members of the committee it has not been possible to get an earlier meeting, and in consequence it is now too late to have the medals to be awarded by the club finished in time for the earlier shows. An obligation of the club, however, will in each case be given to the winner. The medal will be unique in design, a silver over 2 1/2 in. in diameter, and will contain about 40% of silver. The committee on medals also reported having selected a design for the American Field \$100 silver cup. It was decided that these medals should be only awarded at shows judged by one of the official judges recommended by this club. Dr. Henry C. Glover was added to the list of judges. A special meeting of the club will be held at New York, Friday, Feb. 27, at 4 P. M., which is the last day of the New York dog show, for the purpose of selecting additional judges and other business. The meeting adjourned to Feb. 18, to meet at the office of Percy C. Ohi, 50 Broadway, at 2 o'clock. An opportunity is here offered to those wishing to join before next club meeting.

A new kennel of St. Bernards has just been started out in Indiana under the name of the South Bend Kennel Club. That they are starting on the right line is evidenced by the fact that they have a dog by Sir Bedivere out of Princess, and the bitch Nymph by champion Victor Joseph out of Sybil, winner of second in puppy class at Chicago last year.

We understand that Mr. C. L. Wilton, of this city, has sold that good American-bred fox-terrier Suffolk Risk, winner in the dog puppy and novice classes and Grand Produce Stakes of 1890, at New York last year, to Mr. John E. Thayer, at a good figure. Mr. Thayer has also imported Russley Joker.

The noted bulldog, Portwood Tiger, is dead. The poison fiend has been at work again, and one of the best bulldogs we had in this country pays the penalty. This dog was imported by Mr. W. T. Tebbitt in 1888, and by him sold to Mr. Sawyer, of Birmingham, Conn., who in turn sold him, with the rest of his kennel, to Mr. John H. Matthews, who owned him at the time of his death. Though a little faulty in muzzle, his skull and front were extremely good. He was by Paul Clifford out of Hussey, and was whelped October, 1885. He had several firsts to his credit both in England and in this country. The loss is, therefore, a severe one to Mr. Matthews, but we trust that he has left something good behind, that will in a measure take his place.

We have seen several allusions lately in one of the Buffalo dailies to the defunct Buffalo Kennel Club and suggestions as to the formation of another one and the holding of a show this spring. We thought it best under the circumstances to inquire at headquarters whether such reports contained any truth. President Bush and Secretary Smith both wrote us that though, owing to the lack of a suitable building they would not hold a show this spring, they intended holding one at the fair this fall, that the Buffalo Kennel Club was not defunct by any means, their dues had been paid to the A. K. C. and as Mr. Bush remarked, they would continue to be as long as he was interested in dogs. Buffalo is evidently afflicted with a class of fellows who like to talk, but when it comes to shouldering the responsibility of a loss they find a vacation very convenient, and as in the case of the last show left five members to make good the \$700 loss on the show. This same paper alleges that the Niagara Falls and Tonawanda fanciers, whoever they are, are anxious to have a show in Buffalo this spring and are in favor of calling a meeting to reorganize the B. K. C. to this end. Mr. Smith writes us that there is no public building to be had for the purpose, and a show held in the old building is certain to result in loss; so these eager fanciers had better "hide a wee."

There is a greyhound in Toronto, Canada, noted for its speed. Langtry is its name. Continual puffing of this dog's merits as a flyer has raised the ire of a Detroit sportsman and he is anxious to match one of Campbell & Blake's whippets, which ran at London last fall, against this wonder, for three races at 100, 150 and 200 yds. respectively, for \$100 a race. A greyhound will need to be phenomenally fast to get ahead of those Detroit dogs at the distances named.

The Canadians have a good English setter sire in Mingo, sire of Mingo II., that won second in the Derby at Chatham last fall. He is also responsible for the noted Jean Val Jean,

who in turn is sire of Tory Lieutenant, winner of the Eastern Derby. Canadians have, therefore, a fine opportunity to improve their field stock.

We hear that the National Beagle Club will have a meet shortly, when twenty-five or thirty dogs will take part. It looks very much as if there will be a conference at the New York show between the officers of the N. B. C. and those of the A. B. C. for the purpose of amalgamation, as we understand President Schellhass, of the latter club, has written to the other club suggesting that committees be formed to confer with a view to that end. Much as such an amalgamation would tend to strengthen the good feeling which ought to exist between men who are anxious to improve any breed of dogs, the time is past and the N. B. C. occupies too firm a position in the minds of the active beagle men, to accept peace with anything but full honor. They are in a position to dictate terms now, not receive them. Their success has been earned by hard work and through generous means, and nothing of this honor should be lost. Still, if amalgamation is in sight, let it be welcomed.

The splendid show of poultry held in this city during the past week was marked by a revolution in judging that has met with the greatest success. This is the first time that the score card has been put in the background. Judging by comparison, as at dog shows, has opened the eyes of these chicken fanciers, and they are now pretty well convinced that the score card must go. Instead of the judging dragging on till the last day, as was the case last year, judging was nearly all completed the first day, prize ribbons tacked up and everything ready for the big crowd, which was a natural consequence. By the way, the first and second prize rosettes were very pretty indeed, and well worth imitating at our W. K. C. dog show. A large handsome blue or red rosette was surmounted by the club's monogram in nickel silver, making it at once a trophy well worth preserving. We noticed that Mr. Tom Terry has a penchant for Langshans as well as collie and judging by the big price he gave for a pen.

Mr. Frank Pilling, of Boston, owns a white bull-terrier, of good form and type, weighing only four pounds. His sire is Jack, imported by Pierre Lorillard, who presented him to Estelle Mortimer, the actress. The signs of the times point to quite a craze in certain quarters for these small bull-terriers, judging from the numerous inquiries we have had about them lately. Provided they are not of the apple-headed kind, they make very handsome and extremely smart house dogs.

The following wail comes from Canada, the hotbed of spanieldom: "Quite a number of spaniel men have expressed the opinion to the *Globe* that the Westminster Kennel Club ought to have done better. 'If it wasn't that I want to get a win at New York,' said one of them. 'I wouldn't make an entry at all. Look at the Gordon setters that come just before the cockers in the premium list. They have four \$20 prizes and we haven't one. They have two classes for puppies and one for novices, but I'll wager that the cocker entry will beat them in numbers in spite of the more attractive list offered for the Gordons. There is only one variety of the black and tan setter, but they have \$315 offered, while for the cockers the prizes amount to only \$117, including the W. K. C. kennel prize in each case. There ought to be two novice classes by sex added for cockers, for not only do I think our entry will outnumber that of the Gordons, but I am sure the interest in our class will far exceed the mild interest in the Gordon section of the show.' *Vous avez raison, monsieur.*

One of the most noted greyhounds in England, Jim o' the Hill, has finished his running career owing to having broken down in a trial a fortnight since. He is a Waterloo plate winner. He will now be used in the stud.

There was some little hitch in the choice of a spaniel judge at Baltimore, but it has been settled satisfactorily by Mr. Mortimer consenting to take them.

The Northfield Yorkshire Kennels seem anxious to take the terrier classes by storm, judging from the number of important importations they have made lately. We unfortunately received a letter from Mr. Symonds, a few hours too late to publish the information it contained about the black and tan terrier Beaconsfield last week, though we were first to see him when the S.S. Lake Huron came to her dock on Sunday last. It would be unfair to criticize him till we see him on the bench, but with the shortest of bodies he combines a splendid head and capital front. He has won over 50 firsts and specials, and was considered the best in England both on the bench and as a sire. Meersbrook Empress, the dam of Meersbrook Maiden, was also a passenger. These two, with Prince Regent and Matchless, will constitute the Northfield Kennels' black and tan team. Mr. Purbeck's greyhound Gem of the Season was also on board, but as our greyhound men will see him in a fortnight we shall say nothing about him now, unless to warn them that they must put their best dogs up if they want to win. Mr. Symonds also had a new purchase in the fox-terrier Endcliffe Spice, well fronted and a terrier all over; he has, we understand, won several prizes under another name. He is by Rustic Result out of Ambrose Diamond. These dogs have all been purchased by Mr. R. Toon, of Sheffield, Eng., under the guidance of old George Helliwell, and were brought over by Chris Thomas, a brother of George. Like his brother he is up to all the moves in the Yorkshire terrier game. We had almost forgotten a Scotch terrier that came along too, Kilston by name and owner of a capital head. He won at Derby, a few weeks since, beating Merland II. and Dudley Geyser. This dog will do the circuit and if there is any call for his services he will stay over here, otherwise he will return to England and be shown at the summer shows, as he is too good to hide his light under a bushel.

Speaking of Yorkshire terriers we are glad that the coming season promises a lively show of these dogs. Mr. Symonds has still Toyns Royal George and Minnie York up his sleeve, never having shown them yet. As Royal George, the former ran second to champion Ted at Darlington last summer. This kennel will have some competition in Mr. Smith's team. This gentleman is superintendent of the Buffalo Driving Park, and it will be remembered we commented very favorably on some of his dogs at London last fall, especially Dolly. Mr. Smith returned from England a short time ago, bringing with him the Yorkshires Merry Prince, Jr., by Merry Prince out of Tiny, and Mona, by champion Ted out of Gypsy. Minnie by Tindale's Marwood out of Longstaff's Floss. Space forbids us giving further particulars, but it will be seen the comb and brush brigade will be pretty strong this spring.

In writing us a chatty letter about cockers, Mr. P. J. Keyes, of Ottawa, says: "Before closing I must congratulate you on the increasing value of the kennel department of the *FOREST AND STREAM*. A few months ago I gave up that paper, as it seemed cynologically dead, but last Saturday I again forwarded my subscription."

Mr. R. H. Burr writes us that he has just purchased the red Irish setter dog Red River Glencho from Mr. Geo. H. Covert. This dog is by Glencho out of Lyda Belle, and has won three firsts at different shows. He is also spoken of as

a good field dog. As will be seen in our advertisement, this dog has now been placed in the stud.

A Virginia correspondent asks: "Can any of your readers give me any information as to Bridget Plunkett? She must have been of some note fifteen or eighteen years ago."

A correspondent writes us: "Will you ask some of your readers to give some of their experience and what they know about watchdogs?" This is a pretty large contract, for there are several watchdogs in this country, and we never yet met a man who had not the very best watchdog, or who had a friend who owned one. Still we think that this would open up a wide field for discussion, and if we can by a vote of the majority determine which breed of dog makes the best watchdog and that constitutes a true guardian, some valuable information can be obtained and a knotty question be in a fair way of settlement. In this connection perhaps the following would not be out of place: "Come here, McKinley bill," called a K street woman to a huge mastiff which came bounding through the hall. "McKinley Bill!" queried her visitor, "what do you call him that for?" "Because he's such a protection."—*Washington Star*.

We shall soon have quite a display of cockers in our sanctuary. Mr. Douglas, of the Woodland Kennels, sends us a nice picture of their dog Black Duke, a cocker well known to all spaniel men. The dog has just returned from a successful tour round the Southern shows. When we have collected a goodly number of these pictures we are seriously thinking of calling a meeting of spaniel men in our office, range the pictures before them, close the door, and let them have a "typical fight" and settle the question forever.

The noted bull-terrier Chessett's Flyer, winner of many prizes on both sides of the water, was choked to death on Jan. 26. Mr. Hayes has also lost Razzle Plazze, the bulldog. This young fancier has the sympathies of his fellow breeders.

Additional specials for the W. K. C. show are \$10 for the best Irish setter that ran in field trials 1890-91; \$10 for the best Irish setter in the open, novice and puppy classes. These are offered by friends of the breed. Mr. W. L. Germaine offers \$10 for the best kennel of four or more Irish water. Clumber, Sussex and field spaniels in the show. A friend of the breed offers \$5 for the best American bred rough-coated St. Bernard dog bred by exhibitor. Also \$5 for the best rough-coated American bred bitch, same condition. \$10 for the best pair of American bred rough-coated St. Bernards bred by exhibitor, and \$5 for the best rough or smooth St. Bernard dog in the show. Mr. James Stroud offers a silver coffee urn, value \$20, for the best Gordon setter owned by a member of the Gordon Setter Club. Mr. E. Wadsworth offers \$25 for the best Gordon setter with a public field trial record. Mr. K. C. Gibson offers \$20 for the best Gordon.

At the last moment, just before going to press, we were enabled through the kindness of Mr. Mortimer to ascertain the number of entries in the principal classes: Mastiffs 56, St. Bernards 195, bloodhounds 3, great Danes 80, Newfoundland 10, wolfhounds 7, deerhounds 20, greyhounds 39, English foxhounds 6, American 4, fox-terriers 130, Irish terriers 25, Welsh terriers 6, Dandie Dinmonts 7, Bedingtons 6, Skyes 5, Scotch 2, Clydesdales 2, black and tans 20, white English 1, Yorkshires 35, toys 7, pugs 25, toy spaniels 55, Italian greyhounds 7, miscellaneous 5, pointers 79, English setters 70, Irish setters 90, Gordon 40, Chesapeakes 5, spaniels 88, collies 97, poodles 23, bulldogs 51, bull-terriers 44, basets 3, dachshunds 18, beagles 20; total 1,336. As there are the long-distance entries still to come in and about 100 entries not classified up to the time of our going to press, the total is expected to reach 1,450, so the additional entry fee has not done any harm after all.

For "Cocker Spaniels of 1890" see next issue.

MEETING OF THE ADVISORY COMMITTEE.

THIS meeting was called to order at 8:15 P. M., at Clark's restaurant, 23 West Twenty-third street, on Wednesday, Jan. 28, President Belmont in the chair.

Present—August Belmont, Thos. H. Terry, J. L. Anthony, John S. Wise.

The following matters were submitted to this committee by the secretary and acted upon, as hereinafter set forth:

Wm. Samuel Johnson, Attorney for M. Jacobs, vs. E. M. Oldham, re unsatisfied claim for purchase of dogs.—In this matter, counsel for Jacobs having expressed a willingness to abide by the decision of this committee, and Mr. Oldham appearing personally before this committee and expressing a willingness to pay said claim, as heretofore agreed upon between the parties, further action seems unnecessary.

Mrs. J. Grant vs. Frederic Emken re loss of bitch while in possession of the defendant.—We find that in this case there was no fraud; the question of negligence is one of law. Mrs. Grant brought a suit, but dismissed it voluntarily. By pressing that she might have tested the question of negligence, which, in our judgment, it is not our province to decide. Matter dismissed.

Edwin H. Morris vs. Dr. John H. Meyer, re unfilled contract.—This case was dismissed upon the original written agreement between Morris and Meyer, being produced by Morris.

Dr. S. H. Blodgett vs. R. B. Sawyer, re recovery of stud fee and expenses.—Ordered, That Sawyer be given thirty days in which to pay back to Blodgett the stud fee of twenty-five dollars and expenses fifteen dollars, in default of which said Sawyer shall stand suspended until said amount shall have been paid.

Mascoutah Kennel Club vs. F. W. Sheldon, re protested draft.—Ordered, That Sheldon be given thirty days within which to pay to the Mascoutah Kennel Club the amount of draft, adding thereto one dollar, the amount of protest fee, in default of which said Sheldon shall stand suspended until said claim shall have been paid.

Mrs. F. Smyth vs. Cincinnati Kennel Club, re violation of additional Rules I, IX, X.—Ordered, That unless the Cincinnati Kennel Club shows, on or before Feb. 24, 1891, that the complaint of Mrs. Smyth is not well founded, in that said club violated its own rules by reopening awards, and admitting dogs to competition which had arrived after the time specified for arrival at its show, that this committee will recommend the suspension of the said Cincinnati Kennel Club.

W. E. Sanders, Tamworth, Eng., vs. William A. Bruette, re recovery of purchase money for a brace of Welsh terriers.—Ordered, That Bruette be given thirty days within which to pay said Sanders the price agreed upon (\$10) for the purchase of the dogs, in default of which said Bruette shall stand suspended until said amount shall have been paid.

Dr. M. H. Cryer, W. L. Washington, German Hopkiss vs. Michigan Kennel Club, re payment of specials.—Ordered, That the Michigan Kennel Club be given thirty days within which to pay to all the exhibitors winning specials at its late show in September last, either in cash or plate, at its own option, in default of which this committee will recommend the suspension of said Michigan Kennel Club.

Stud Book Committee vs. J. G. Burns, F. Stettenberg, re fraudulent pedigrees.—The stud book committee having investigated an attempt to register five St. Bernard puppies, having fraudulent pedigrees; the same, it is believed, known to be fraudulent by the parties in this complaint, and said committee having recommended the suspension of the parties named, it is, therefore, ordered that the recommendation of the stud book committee is hereby granted, and said J.

G. Burns and F. Stettenbenz, both of Buffalo, N. Y., shall stand suspended until one or both can prove to the satisfaction of the committee their innocence in the attempted fraud.

R. H. Derby, Sec'y American Mastiff Club, re request to be furnished with stud books.—Ordered, That upon application, any specialty club that has a committee appointed for the verification of pedigrees of dogs received for registration, may have a copy of the stud book, without cost, from the time of such club's admission to membership, and to continue to receive one copy each year, so long as it remains a member in good standing.

American Kennel Club vs. National Greyhound Club, re specialty stud book.—Resolved, That it is the sense of this committee, that any attempt by a member of the American Kennel Club to establish, or publish a stud book for any special breed or breeds of dogs, is in direct violation of its obligation as a member of the American Kennel Club, and that such publication cannot be permitted, and the secretary is hereby directed to so notify the National Greyhound Club. Adjourned. A. P. VREDENBURGH, Sec'y.

UP A TREE.

Editor Forest and Stream:

Before you close the gates on the cocker controversy, please let me get inside and I will tell you a short story. It will be, "The Cocker—How to Make—How to Break."

George was a barber's apprentice. Not one of those typical gossipers, but a first-class listener. Among the patrons of the barber shop was a physician who was known far and wide as a famous hunter; his gig was usually followed by a half-dozen canines, consisting of hounds, spaniels and terriers, and the doctor was an authority on dogs. Being a most interesting conversationalist, he one day was relating the contents of a letter from an English friend about a wonderful cocker spaniel that the friend owned that was marvelous at treeing partridges. One of his auditors asked what a cocker was, and the doctor's reply was that it was simply a spaniel with his tail docked. The information was greedily absorbed by George. He knew where there was a litter of brown curly puppies, of a breed that has abounded in this vicinity for years and characterized under the various names of water dogs, spaniels and hunters. It would be a hard matter to find a family in this ancient burg that has not at some period or other owned a "Rover," "Curly," "Jack" or "Jessie" of this particular breed.

Being the possessor of a hand sled, George was enabled to make a dicker, whereby he became the owner of the choice of the aforesaid litter. Then was sought the aid of a friendly butcher boy and his big cleaver. Not long after a puppy with a decapitated tail was seen around the barber shop, which George, with a very important air, said was a cocker, and he added that he wished Thanksgiving Day would soon come, as he intended to break him in to tree partridges that day, and he would show the old hunters "a dog as is a dog."

By skilful diplomacy he obtained the information from the doctor that in breaking puppies a chicken could be made to answer quite well to attract their attention and develop their instincts. Thanksgiving Day came. It found George headed up the banks of the sparkling Oswegatchie, followed by a seven months old puppy with a banded tail, that frisked along the frozen ground at a gait that kept his master rather warm, encumbered as he was with a gun, while under the left arm was a bag containing a rather aged hen that had been surreptitiously borrowed from a neighbor the previous night.

Arriving in the wood which fringes this pretty stream, George opened the bag and set the old hen down on the ground, which, being rather cold, caused her to draw up one foot, ruffle her feathers and relax into a state of apparent coma. The pup paid no heed to "biddy" whatever, so George determined on a novel scheme. After quite an effort he climbed a tree with her henship under his arm and proceeded to tie her to an overhanging branch while the puppy lay underneath rather weary from his tramp, when crack, the branch snapped and down came George and the hen in a heap on top of the cocker (?), which, with a ki-yi, disappeared into the woods and has never since been seen by George. He limped home rather sore but satisfied to let any one who wished to start a new breed have a monopoly in that line.

That puppy, I ween, kept in a southerly direction until he reached Hornellsville, and helped originate the Fellows type of cocker, or else (being a "water dog") swam the St. Lawrence and eventually reached Ottawa, where, under the tutelage of "Gothamite," he became a working cocker.

OSWEGATCHIE.

"FANCIERS' GAZETTE" APOLOGIZES.

WE have received the following letter from the *Fanciers' Gazette*, England:

Editor Forest and Stream:

Kindly insert the inclosed apology to Mr. G. R. Krehl in your next issue. As you will see, it is for the accidental insertion of a letter attacking him by Mr. R. L. Mayhew, and as we inserted it inadvertently, we have taken the earliest opportunities of making amends to Mr. Krehl. Part of our arrangement with him is that it shall be inserted in your columns, and we trust that you will find a place for it in your next issue:

"AN APOLOGY TO MR. G. R. KREHL.

"The apology offered by us in our issue of the 15th inst. being deemed to be insufficient, we gladly take this opportunity of repeating the sincerity of our desire to offer Mr. Krehl the very fullest atonement that lies in our power for the pain and annoyance caused him by the insertion of Mr. Mayhew's letter in the *Fanciers' Gazette* of Jan. 8.

"We again repeat that the statements of the writer are in no way whatever adopted or agreed in by us, and beyond this we believe they are without foundation. Some of the directors of this journal have had the pleasure of knowing Mr. Krehl for many years, and all are unanimous in believing the attacks and charges made to be entirely false and undoubtedly damaging to Mr. Krehl, and cannot be substantiated in any way. We deeply regret that by a blunder on the part of one of our staff, the *Fanciers' Gazette* has been made the medium for an unfounded attack on a gentleman so well known as Mr. Krehl in the kennel world, both as an ardent and enthusiastic breeder and exhibitor, and also as kennel editor of the *Stock-Keeper*. We assert that we have every faith and confidence in Mr. Krehl's integrity, and that we deeply deplore the pain caused him by the publication of Mr. Mayhew's letter, for which we are heartily sorry.

"FANCIERS' GAZETTE.

"LONDON, Jan. 30."

ANOTHER MASTIFF FOR HELEN KELLER.—Danville, Quebec, Canada.—Editor Forest and Stream: After reading the justly indignant remarks of Mr. W. Wade on the brutal murder of the noble dog belonging to the little blind mute, Helen Keller, I felt sure there were other hearts besides mine that were touched by the forgiving spirit she shows toward the murderers of her faithful guardian and pet. With a view that this feeling may take some practical form of expression, I will be very glad to subscribe \$5 toward another dog (as near like the last one as possible) or some other testimonial, if it is thought to be better than another dog, the same to be given to our gentle, forgiving Christian. If you will take the matter up you are at liberty to use this letter as may seem best to forward this object and also to call on me at once for my subscription.—GEO. O. GOODRUE.

GREENVILLE (S. C.) DOG SHOW.

THIS show opened Jan. 27 and continued till the 30th. For an initial show it was a very successful one, though the weather interfered with the attendance somewhat. Mr. John Davidson judged all classes and gave general satisfaction. The competition was principally noteworthy from the fact that Kildare, the Irish setter, was beaten by a new dog, Pickens. The boys are loud in praise of the treatment they received from the secretary and other officials and the prompt manner in which the prizes were paid. The list of awards is as follows:

MASTIFFS.—Dogs: 1st and 2d, Sans Souci Kennels' Ben Perry and Mrs. Rautine's Pet. Bitches: 1st, San Souci Kennels' Ethel. Puppies: 1st, S. Lee Beasley's Nero.

ST. BERNARDS.—ROUGH-COATED.—Dogs: 1st, J. W. Kemble's Warwick, Jr. Mr. Diffenderfer's entries were all absent. Bitches: 1st, J. W. Kemble's May Queen.—SMOOTH.—Dogs: 1st, C. T. Barney's Nevis; 2d, W. S. Diffenderfer's Lord Hector.—PUPPIES.—Dogs: 1st, C. T. Barney's Douglass.

GREAT DANES.—1st, E. P. Hammett's Duke.

DEERHOUNDS.—Bitches: 1st, B. S. Dering's Nora; 2d, Sans Souci Kennels' Thora.

GREYHOUNDS.—CHALLENGE.—Bitches: 1st, Fountain City Kennels' Purity.—OPEN.—Dogs: 1st, Sunset Kennels' Monarch. Bitches: 1st, L. C. Whittom's Spinaway.

POINTERS.—CHALLENGE.—Bitches: 1st, Fountain City Kennels' Rosa.—OPEN.—55LBS. AND OVER.—Dogs: 1st, H. C. Britton's Alto; 2d, Jas. Birnie's Phil. Very high com. A. A. Howlett's Sport.—50LBS. AND OVER.—Bitches: 1st, J. W. Kemble's Jess.—CHALLENGE.—UNDER 55LBS.—Dogs: 1st, W. H. Hyland's Pommeroy Sec.—UNDER 50LBS.—Bitches: 1st, Fountain City Kennels' Rosa May.—OPEN.—UNDER 55LBS.—Dogs: 1st, withheld; 2d, Fountain City Kennels' Button H.—UNDER 50LBS.—Bitches: 1st, W. H. Hyland's Lady Graphic.—PUPPIES.—Dogs: 1st, Fountain City Kennels' King Beaufort. Bitches: 1st, Fountain City Kennels' Miss Maud Fritz.

ENGLISH SETTERS.—CHALLENGE.—Dogs: 1st, Fountain City Kennels' Prince Gladstone.—OPEN.—Dogs: 1st and 2d, J. W. Kemble's Darling Kent and Carlton Fox. Very high com. G. L. Connor's Jack Sd High com. C. S. Nettie's Crown. Bitches: 1st, H. A. Bridge's Tick; 2d, G. L. Connor's J. A. C.—PUPPIES.—Bitches: 1st, H. A. Bridge's Tick.

IRISH SETTERS.—CHALLENGE.—Dogs: 1st, Geo. H. Covert's Dick Swiveller. Bitches: 1st, N. L. Washington's Ruby Glenmore. Molly Bawn not for competition.—OPEN.—Dogs: 1st, N. S. Lea's Pickens; 2d, N. L. Washington's Kildare. Very high com. G. H. Covert's Red River Glencho. High com. Seminole Kennels' Elso. Bitches: 1st, N. L. Washington's Winnie II.; 2d, Oriole Kennels' Jeannette. Very high com. G. H. Covert's Little Nell. High com. G. H. Covert's Glidella and Tillie Borsinamy.—PUPPIES.—Bitches: 1st, J. O. Lea's Winnie Davis.

GORDON SETTERS.—CHALLENGE.—Dogs: 1st, Dr. S. G. Dixon's Ivanhoe. Bitches: 1st, H. F. Smith's Roxie.—OPEN.—Dogs: 1st, withheld; 2d, J. S. Gaus's Duke of Kent. Bitches: 1st, Dr. S. G. Dixon's Blossom; 2d, Henry May's Julia More. Very high com. J. S. Gaus's Viola. High com. Dr. S. T. Lea's May.

FIELD SPANIELS.—Dogs: 1st, B. F. Lewis's Black Diamond.—COCKERS.—CHALLENGE.—Dogs: 1st, John Douglas's Black Duke. Bitches: 1st, Geo. H. Brush's Novia.—OPEN.—Dogs: 1st and 2d, W. Barnes's Red Dog and Banjo. Bitches: 1st and 2d, Geo. H. Brush's Bessie W. and Idea.

COLLIES.—CHALLENGE.—Bitches: 1st, W. D. Hayes's Bonnie Brae.—OPEN.—Dogs: 1st, Seminole Kennels' Roslyn Dandy; 2d, and high com., Sans Souci Kennels' Little Ben and Sans Souci Bushey Head. Bitches: 1st and 2d, Seminole Kennels' Mischief and S. S. Lady Rutland.—PUPPIES.—Dogs: 1st, A. H. Halm's Ben Tillman. Bitches: 1st, A. H. Halm's Bessie Cleveland.

POODLES.—1st, Dr. S. G. Dixon's Paris.

BULLDOGS.—Prizes withheld.

BULL-TERRIERS.—Dogs: 1st withheld; 2d, W. P. Sloan's Grip. Bitches: 1st, Woodhaven Kennels' Meg Merrilies; 2d, John H. Naylor's Dinah.

FOX-TERRIERS.—CHALLENGE.—Dogs: 1st, Oriole Kennels' Blemton Volunteer. Bitches: 1st, Oriole Kennels' Blemton Brilliant.—OPEN.—Dogs: 1st, Timeaw Kennels' Brockeburst Quick; 2d, C. D. Purroy's Suffolk Risk. Very high com. Oriole Kennels' Blemton Raucack. Bitches: 1st, Oriole Kennels' Verdict and Blemton Ethel. Reserve, Oriole Kennels' Beverwyck Ecate. Very high com. Oriole Kennels' Blemton Vice. High com., Oriole Kennels' Marjoram.—PUPPIES.—Dogs: 1st, withheld; 2d, E. W. Kirk's Shot. Bitches: 1st, Oriole Kennels' Rage.

BLACK AND TAN TERRIERS.—Dogs: 1st, Dr. H. T. Foote's The Senator. Bitches: 1st, Dr. H. T. Foote's English Lady.

SCOTCH TERRIERS.—CHALLENGE.—John H. Naylor's Rosie.—OPEN.—1st, Sunset Kennels' Browdie.

IRISH TERRIERS.—1st, Lewis and Jarrett's Burnsides.

YORKSHIRE TERRIERS.—1st, John Cumming's Dandy.

TOY TERRIERS.—1st, Woodbury Kennels' Tiny.

SKYE TERRIERS.—CHALLENGE.—1st, C. A. Shinn's Sir Stafford.—OPEN.—1st, M. H. Yard's Lady Countess.

PUGS.—CHALLENGE.—Dogs: 1st, Dr. M. H. Cryer's Bob Ivy. Bitches: 1st, Dr. M. H. Cryer's Vesta.—OPEN.—Dogs: 1st, Jacob Broombank's Bradford Rowdy; 2d, Seminole Kennels' Kash, Jr. Bitches: 1st, Sans Souci Kennels' Mab. Puppies: 1st, Seminole Kennels' Kash, Jr.

DACHSHUNDE.—1st, B. F. Lewis's Gili.

BEAGLES.—CHALLENGE.—Dogs: 1st, H. Bennett's Little Duke.—OPEN.—Dogs: 1st, Sunset Kennels' Count. Bitches: 1st, Sunset Kennels' Flossy; 2d, Associate Kennels' Countess Fay. Very high com., Sans Souci Kennels' Miss Fellows. Puppies: 1st, Sunset Kennels' Baby.

BASSETS.—1st, Associate Fanciers' Mauprat.

NATIVE S. CAROLINA BRED POINTERS.—1st, James Birnie's Phil.

MISCELLANEOUS.—1st and 2d, San Souci Kennels' Judi and Agricole.

SIZE WITHOUT CHANGE OF FOOD.

Editor Forest and Stream:

Your letter of inquiry regarding my dog Presto and my methods of training and feeding him, has lain unanswered through no fault of mine. I had arrangements made for taking a photo of the dog to send you as soon as I received your letter. With regard to breeding, I still maintain that I have pursued a method entirely different from that of any other dog breeder, in order to produce the largest mastiff, as acknowledged by such authorities as your publication and others of a similar character.

In the first place, Presto has never had a piece of raw meat. Secondly, he has had but one kind of food. Thirdly, he has been fed since he was three months old, but once a day. Fourthly, in winter between four and six, and in summer at exactly six o'clock. Fifthly, I never allow him to eat too much; he had always a small appetite left.

These are the principal features of the method which I have held to with such good results in mastiff breeding.

You can judge from the photo which I send you whether the dog appears to be in a healthy condition or not. I am somewhat eccentric in the treatment of my dogs, nevertheless they have never suffered from worms, mange or any of the canine ills. I do not even speak to my mastiff, but by a snap of the finger and a gesture he understands me perfectly. Perhaps you have heard of his exhibitions of intelligence during his visit with me to "the Hub." I hope that you will pardon my long delay and that this may be of interest to the many readers of your valuable paper. WICKEDNEED.

WILL NOT BE RESPONSIBLE.—Baltimore.—Editor Forest and Stream: We, the undersigned, hereby give notice, to all whom it may concern, that we will not be responsible, in any manner, for any obligations that may be incurred by those who propose holding the bench show under the name of the Maryland Kennel Club.—R. B. GLANVILLE, W. T. LEVERING, J. D. MALLORY, H. CASSARD, L. M. LEVERING, ORCHTON MALCOLM, H. MALCOLM, H. R. VON DER HORST.

THE BALTIMORE DOG SHOW.—Editor Forest and Stream: The announcement of the bench show to be held in March, the week following the New York show, has created quite a ripple of excitement in Baltimore. Unquestionably the interest in well-bred canines is growing in this city, and the spirit aroused by last year's show is certain to be increased and augmented by the coming exhibition, planned upon a much larger scale. The local entries are coming in handsomely, and unless all signs fail home talent will have a worthier representation than ever before, and some of the good prizes are liable to remain within the borders of the State. Applications for entry blanks from abroad have been numerous, and already some of the finest dogs in the country have been promised for our show. The arrival of Sir Bedivere was a matter of much interest to Baltimoreans, as Mr. Sears has many warm friends here who were anxious to hear that the monarch of the St. Bernards was safe on terra firma. By the way, the Kennel Club has received a letter from Mr. Sears stating that he will surely exhibit Sir Bedivere at the coming show. The bench show committee has decided to divide the class for black and tan terriers according to sex, providing they receive eight entries, and give \$10 for first and \$5 for second in each class. The club was certainly fortunate in securing the Fifth Regiment armory for its show, for it is by far the most desirable building in the city, and could not well be surpassed anywhere. With an abundance of floor room it has splendid light and ventilation, and is in every way admirably fitted for the comfort and health of the dogs.—W. STEWART DIFFENDERFER, Secretary.

WHAT IS A RUSSIAN WOLFHOUND?—Editor Forest and Stream: The above question is one often asked and, so far, not answered. Considerable Russian light has been shed on it, with the result of considerably darkening the gloom. Now when I heard Mr. C. H. Mason was to judge at the greyhound show, I thought we were in the way of really getting something to go on, but I regret to hear that it is not probable that we will have a circumstantial report from him. Here is a breed, promising to be popular, about which no well defined knowledge exists; there certainly must be great variance in their type, as witness the pictures in *Fanciers' Gazette* and *Canning World*. We certainly do not want any more such "authority" as we have been getting, and as the breed starts practically new, here is an opportunity for starting right, without any rubbish as to the "real thing," "old true type" and similar nonsense. What we want is an exposition why certain properties are most valued, and based, not on "authority," but on solid, sound "dog" reasons, in fact, a sort of synthesis on the qualities of such dogs. No man, either in England or here, is as qualified to give us this as Mr. Mason, and I hope we will see such an article from him, as it will serve as a guide for breeders to go by.—W. WADE.

THE BULLDOG CLUB.—Editor Forest and Stream: The following letter has been sent to all members of the Bulldog Club of America: DEAR SIR—You are requested to support all bench shows to the extent of making as many entries as possible, but you are especially requested to make entries and show as many bulldogs as possible at the following shows, for they are the ones at which Bulldog Club prizes will be offered and competed for: Maryland Kennel Club, Baltimore, Md., March 3 to 6; entries close Feb. 18 with W. Stewart Diffenderfer, Sec'y, 220 N. Charles street, Baltimore, Md.; Mr. Chas. D. Cugle judge. Massachusetts Kennel Club, Lynn, Mass., March 24 to 27; entries close March 12 with D. A. Williams, Sec'y; Mr. Jas. Mortimer judge. Mascoutah Kennel Club, Chicago, Ill., April 8 to 11; entries close March 23, with G. H. Goodrich, manager; Mr. Jas. Mortimer judge. Kindly do your utmost to insure the above shows all the entries in your power.—CHAS. D. CUGLE, Sec'y Bulldog Club of America. [This also included the W. K. C. show, for which entries have closed.]

MEETING OF THE COLLIE CLUB.—Orange, N. J.—Editor Forest and Stream: The annual meeting of the Collie Club will be held at Madison Square Garden on Wednesday, Feb. 25, 1891, at 4 P. M. Members are earnestly requested to attend, as matters of importance will come before the meeting for action. By order of the executive committee, J. D. SHOTWELL, Secretary.

TEXAS FIELD TRIALS CLUB.—Marshall, Tenn.—Editor Forest and Stream: Our club will hold a meeting near this place, beginning Feb. 24. It will be a very modest affair; the prizes will be collars, whips, etc. Any visiting sportsmen will be welcome and we will endeavor to make them have a good time.—JACOBSTAFF.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Spinner and Spinster. By C. B. Hubbard, Broken Bow, Neb., for white, liver and ticked pointer dog and liver, white and ticked bitch, whelped Nov. 13, 1890, by Luck of Limestone (Planet—Lilly Band out of Spinaway 21, (Bang—champion Spinaway).

Lady. The Clumber Kennels, Ottawa, Can., claim the prefix Lady for all Clumber spaniel bitches owned or bred by the kennels, and change the names of the following Clumber bitches owned by them, as follows: Bromine (champion Tower—Leda) to Lady Bromine, Snow (champion John o' Gaunt—Foxley Beauty) to Lady Snow, Belle (champion Ottawa (champion Boss II.) to Lady Belle, Maude M. (champion Johnny—Bess) to Lady Maude, Judy II. (champion Johnny—Jill) to Lady Judy, Bess (champion Rover II.—Nell II.) to Lady Lancaster, Jess (champion Rover II.—Nell II.) to Lady Holmes, Lily (Smash II.—Romp II.) to Lady Lily, Dulcie (Fop—Maggie) to Lady Dulcie.

BRED.

Prepared Blanks sent free on application.

Cassandra.—Balkis. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch champion Cassandra (Debut—Dead Secret) to his champion Balkis (Clyto—Primrose), Jan. 7.

Tuffy.—Duke of Vernon. L. Gardner's (Mount Vernon, N. Y.) pointer bitch Tuffy (Pilate—Fairly II.) to his Duke of Vernon (Glendale—Spotless), Dec. 27.

Lilly.—Douglas II. Phil Weis's (Lancaster, O.) pug bitch Lilly to Douglas II. Douglas II. Douglas II. (Douglas—June), Feb. 5.

Bess.—Eberhart's Cashier. C. H. Deck's (Cincinnati, O.) pug bitch Bess (Joe, Jr.—Pudge) to Eberhart Pug Kennels' Eberhart Cashier (champion Kash—Lady Thora), Jan. 16.

Maggie.—Toledo Blade. F. W. Eddy's (Detroit, Mich.) English setter bitch Maggie Bess to J. E. Dager's Toledo Blade, Jan. 26.

Fairy Gladstone.—Roger. Jas. H. Young's (Tuckahoe, N. Y.) English setter bitch Fairy Gladstone (Gladstone's Mark—Chataqua Belle) to L. Gardner's Roger (Count Noble—Queen Meg), Jan. 18.

Cleo.—Bob Obo. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Cleo (Hector—Black Meg) to Rideau Kennels' Bob Obo (Obo—Nellie), Dec. 30.

Tough.—Bob Obo. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Tough (Wildair—Belle) to Rideau Kennels' Bob Obo (Obo—Nellie), Jan. 24.

Rideau Flossie.—Obo, Jr. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Flossie (champion Obo—Gipping Floss) to their Obo, Jr. (Obo—Nellie), Dec. 13.

Tiney Obo.—Bob Obo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Tiney Obo (Obo, Jr.—Princess Tiney) to their Bob Obo (champion Obo—Nellie), Jan. 4.

Topsy.—Bob Obo. C. Sear's (Hamilton, Ont.) cocker spaniel bitch Topsy (Black Graf—Chain) to Rideau Kennels' Bob Obo (champion Obo—Nellie), Jan. 5.

GERMAN TRAP SHOTS.—"Erste Deutsche Jagd Gesellschaft" was strongly represented at the occasion of the annual meeting at their headquarters, 354 Pearl street, Feb. 5. This old organization, which dates into existence 24 years ago, has always maintained its position as representative club of German trap shooters, and they intend to stay in the field for another year. Four regular club shoots will be held this spring and summer, besides two or three extra shoots. The club badge is of novel design, consisting of a shield, with the name of the club and the year engraved on it, suspended from which is a \$20 gold piece by means of two crossed guns. The first shoot will be held in March at Dexter Park, and Littlefield has received instructions to give a special bird for the first shoots of the club. The association has 20 names on its roll of membership, and the following officers were elected for the ensuing year: H. Zahn, president; C. Pfaff, vice-president; J. Schwack, shooting master; A. Goetz, treasurer, and F. Schell, secretary.

HARTFORD TOURNAMENT.—The first shooting tournament given by the Hartford Gun Club will be held on the grounds at Union Grove, Feb. 19. A good programme of 10 events will be shot, one of which will be 25 single keystone targets, entrance \$2.50 per man, for a fine 12-gauge hammerless gun, donated by the Parker Brothers, of Meriden.—CHAS. H. BURBIDGE, Sec'y.

HACKENSACK, N. J., Feb. 2.—O. Terwilliger, H. Harrison, and W. Disbrow defeated T. F. Timmons, J. Glasser, and J. Ryan in a live pigeon shooting match here to-day for \$160 dollars a side, on the grounds of the Hackensack Gun Club. Score 80 to 28.

CLINTON, Iowa, Feb. 8.—The shooting match here for 100 live birds, \$100 a side, between J. A. R. Elliott, of Kansas City, champion of America, and C. F. Budd, of Des Moines, ex-champion of the country and present holder of Iowa's championship, was won by Elliott. The men stood thirty yards from the trap. Elliott scored 95 and Budd 65.

WAUREGANS, Feb. 5.—The Wauregan Gun Club changed its address from Claremont to Dexter Park, Long Island, and had its initial shoot there. There was a poor attendance, but six members shooting for the two club medals at club handicap distance, ten birds each. Bornhardt won first prize in the club shoot with a clean score, and in a subsequent sweepstake at five birds beat M. Ray, with whom he had tied.

LONG ISLAND, Feb. 6.—Shooters were out in force at Dexter Park, L. I., to see two matches decided. The first was between John Blake, of the Parkway Gun Club, and James Bennett, of the Glenmore Rod and Gun Club, 25 birds each, 27½ ds. rise, Hurlingham rules, for \$50. The latter won by a score of 20, Blake killing 15. A double-handed match, under Hurlingham rules, 50 birds a man, 25½ ds. rise, for \$100, was a close race throughout. J. Schleman and A. Eppig scored 74 to 73 by F. Lanzer and P. Liebigler.

WELLINGTON, Mass., Feb. 7.—Perry won the silver cup match again to-day, at the grounds of the Wellington Gun Club, by breaking 22 out of 25 birds, 15 singles and 5 pairs. The other scores for this match were: Leslie 21, Purdy and Stone 20, Dill and Melcher 19, Snow, Stanton and Sanborn 17. In the contests for silver match boxes to-day, under the classification system, at 25 birds, Leslie won in class A, with 23; Melcher won in class B with 19; and now in class C, with 20. The other scores were: Purdy 18, Stanton 17, Gore 16.

LONG BRANCH, N. J., Feb. 7.—The Central Gun Club held their second monthly shoot at Pleasure Bay to-day. Thirteen members took part and their scores were remarkably good, considering the unfavorable weather. The event was a sweep at 10 live birds per man and the Douglas Slocum, who made a clean score. Edward W. Reid was second, with 9 killed. The Centrals will take part in a shoot with the Parkway Rod and Gun Club, at Dexter Park, L. I., on Thursday, Feb. 26. The prize will be a silver cup. Each club will be represented by a team of 10 men, each man to shoot at 10 live birds, at 25½ ds. rise, 80 yds. boundary, the use of both barrels allowed. The Long Branch Club will be composed of Wm. D. Campbell, George Cuddey, A. P. Cuddey, Edward W. Reid, Elsiea Phil, Phil Daly, Jr., Douglas Slocum, William C. Price, Japhia Van Dyke and Charles Woolver.

The tie for the hog was not shot off. Reinhardt bought Collins's interest and decided to have another shoot at 2 o'clock next Saturday. Second money was divided by Class and Erb, third money by Hedden and Castle. The final shoot of the day was at 8 birds each, \$5 entry, with three monies: Hedden and Castle first, Class and Collins second, Reinhardt and Erb third.

TORONTO, Feb. 7.—The long-talked-of match between C. Charles and J. Humphreys came off this afternoon at Stark's Athletic Grounds. Conditions, \$100 a side, 50 live pigeons each, use of one barrel only, Owl Gun Club rules to govern. Charles 42, Humphreys 27.

NEW ORLEANS, La., Feb. 8.—[Special to Forest and Stream.] The Northern team, consisting of Harvey McMurchy, Quimby, Cranmer, Lindsey and Willard, shot against a team of the Louisiana Gun Club, including Reinecke, White, Febiger, Mayronne and Chaudet. The match was at live birds, five men to a team, 25 birds to a man, and the Northerners won by a score of 106 to 89. There was a shoot at inanimate targets, 15 men to a side, 10 shots each, which the Northern team also won by a score of 118 to 115. The conditions of the weather were not favorable to good shooting. There will be sweepstakes shooting to-morrow and on Wednesday the Northerners will leave for Mobile.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 41 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gaudin, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.	NORTHERN DIVISION.
OFFICERS:	OFFICERS:
VIC-ADM: C. V. Winn, Albany, N. Y.	VIC-ADM: W. H. Cotton, Kingston.
REAR-COM: T. P. Gaddis, Albany, N. Y.	REAR-COM: J. C. Edwards, Lindsay.
PURSER: Howard Brown, Albany, N. Y.	PURSER: J. C. Edwards, Lindsay.
EX-COM: J. K. Bakewell and H. M. Stewart.	EX-COM: Colla Francis and F. H. Osborne.
EASTERN DIVISION.	ATLANTIC DIVISION.
OFFICERS:	OFFICERS:
VIC-ADM: J. W. Cartwright, Jr.	VIC-ADM: I. V. Dorland, Arlington.
REAR-COM: G. L. Parmele, Hartford.	REAR-COM: E. D. Anderson, Trenton.
PURSER: B. Appiano, Winchester.	PURSER: Richard Aldrich, Newark, N. J.
EX-COM: Paul Butler, E. S. Towne and Sidney Bishop.	EX-COM: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

COMMODORE—D. H. Crane, Chicago, Ill.
VICE-COMMODORE—O. B. Cline, Chicago, Ill.
REAR-COMMODORE—O. A. Woodruff, Dayton, O.
SECRETARY-TREASURER—J. H. Ware, 130 Rialto Building, Chicago, Ill.
Applications for membership should be made to the Sec'y-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

FEBRUARY.
6. Canoe Reunion, Harvard Rooms, New York.
MAY.
30. Bayonne, Annual, Bayonne.
JUNE.
6. Hoisting Sail Competition, New York, Sandy Hook Race Brooklyn.
27. Brooklyn, Ann., Bay Ridge.
13. New York, Annual, S. I.
JULY.
11-26. W.C.A. Meet, Ballast Island.
AUGUST.
6-27. A. C. A. Meet, Lake Clear, N. Y.
SEPTEMBER.
7. Ianthe, Ann., Passaic River.

WHITE SQUALL'S '88 CRUISE.

SOON after the close of the '87 cruise, I left New Brunswick and took up my abode for a time in the domain of King Herlock. Here I should have got enough of camps and out-of-life to satisfy any reasonable person; but I was often attached to parties about the composition whereof I had no vote. While the boys composing them were, in the main, what the world calls "good fellows," many of them had a weakness for firewater—were blatant, loud-mouthed and masters of three languages, English, good, objectionable and profane. Very little wonder is it, then, that I fastidiously many comparisons which were overwhelmingly in favor of the quiet camp-fires and the gentlemanly companionship of Horace.

At last I concluded that I needed another cruise with him as a part of corrective to the treatment I was then undergoing; and one fine evening in September I sent a letter asking him to plan another cruise for the next summer in any direction he chose, and I would be with him. He chose the upper St. John, and said we would start on Saturday, July 30, and the date was to be made at my home on June 30, but the steamer on which he was to make the trip left three hours before her regular time, and he was obliged to stay over till July 3.

That afternoon a younger scion of our family had sailed the canoe about two miles down the lake. Soon after the steamer hove in sight I saw a white felt hat swung violently by some one from the front of the house, and the salute was being returned from the Squall, which was lying close to the western shore, side to the wind, with sheets away off. Then I knew the cruise was a certainty. The young fellow says he is sure that the old canoe recognized Horace, for as soon as he filled her away "she just laid back her ears and traveled." The canoe shot under the lee of the scow that transported passengers the hundred yards from the shore before we had covered half the distance, and was immediately offered us, which tender we accepted. We jumped on board, shook out the reef from the mainsail, and were soon flying over the half mile between the boat landing and our own shore.

Instead of landing we stood across the lake, about three-quarters of a mile wide, and made several stretches down past our starting point, and the boat sailing breeze I never saw; in fact, I never saw so heavy a wind so steady. With both of us out to windward, the lee gunwale was just level with the water, and the spray washed our decks fore and aft; but there were no unsteady puffs, and we never had to luff. I never expect to enjoy a sail any more than I did that one.

It took us all day Wednesday to get ready, and our outfit was enormous. We had the best sailing breeches I ever saw; in fact, I know of no other like them, and we took along a pair of corduroy breeches and two pairs of socks in case of accident, and a rubber coat or two, and a cardigan jacket, as handy things to have around. Our cooking utensils were a shallow boiler, which at times we made do duty as a frying-pan, and a billy for making tea. The grub-sack was cylindrical, and made of unbroken leather.

The A-shaped tent, of oiled cotton, was of our own manufacture and design. The rear poles were jointed something like a pair of compasses, but the joint was 2 in. from the end, leaving a "saw-buck" projecting when the poles were extended and set up. A pair of these were fastened securely in place in front of the tent and another in the rear, and when the tent was struck it was wrapped around these and took up little more room than an umbrella.

In setting up the tent we drove a stake in the ground a few feet back from the site, fastened a small rope to it and passed the free end through a grommet in the rear of the tent. We had a light spruce ridge pole, one end of which terminated in jaws like a gaff, and in the other a hole 4 in. deep was bored after an iron ring had been driven on to prevent splitting. We set up rear poles, put bare jaws of ridge pole to the tent, and gave the tent two turns of the rope around sawbuck and two half hitches on ridge pole, and then set up front poles, inserting end of projecting joint, bolt into hole in the end of ridge pole, securing as before by two turns and two half hitches; passed free end of rope through short gable in front of tent, and tied down to stake driven in front of tent and considerably to one side. The sides of tent were further secured by wooden poles, and the eastern shore was secured by ropes attached to davas. The strong point of the structure is its stability. As a test, we set it up with its open door toward a gale of wind, and it never jarred.

On Thursday we were away about a half hour after sunrise. The wind being southerly and our course for the first 7 miles to the mouth of the lake southwesterly, we put the mainsail on and stood overboard, and the boat sailed very fast. The wind was blowing down to Shannon's bluff. Our course from here being nearly due west, we put on the sail and became aware of two unpleasant facts; first, that our freeboard was very small, and second, that the canoe was trimmed too much by the head and the seas washed the decks from stem to stern. We soon romped across the first cove, and under the lee of Gerow's Point we trimmed ship.

Just here I saw a large porpoise, and the character of my companion. In my previous intercourse with him his apparent blindness to the attractions of the gentler sex had been a source of some solicitude on my part. He always made a favorable impression, and would have been a great favorite had he not been so supremely indifferent. But on the morning in question we ran close to a light doubleender, in which was seated a young lady handling the sculls far more gracefully than many a champion oarsman. Chancing to glance at Horace just as he exchanged greetings with her, I saw his face was lighted up with what I took for genuine admiration of the beauty and skill of the brown-eyed Undine. There is hope for him yet.

The Washademoak discharges its waters into the St. John by two deep and narrow creeks, which involve little Musquash and the Eriyavik. The mouth of the St. John is divided by Big Musquash; the eastern channel being known as the Lawson River, and the western as the Frazer River. The latter is the one most used in navigation. We reached the outlet of the lake about 9 o'clock, and turned up Colwell's Creek, the northern channel around Little Musquash. About this time there came on a slight shower—one of the unaccountables of an otherwise fine day. The wind increased to a gale, and under all this we made our way up the Lawson River, taking care to keep quite close to the island shore for smoother water; and then it would be so convenient in case of accident.

Near this place have occurred about all the fatal canoeing accidents that have ever been connected with the history of the lower St. John; and while that superstition of from which very few are free, and which they find ridiculous as it is, do, would it not help an uneasy feeling that if the Squall had any intention of turning turtle, she would probably choose this place as the scene of the exploit. As an account of the two accidents that have taken place during my memory would probably be more interesting to the average sportsman reader than the bulk of this narrative, I will tell the story of the "Hoodoo Gun," with the history of which they are inseparable.

In August 1871 there was a boat race on the Kennebecasis, N. B., between the four-oared Tyne crew, of Newcastle-on-Tyne, Eng., and the old Paris crew, of St. John, N. B., in which the latter were victorious. James Renforth, the stroke of the former, having dropped dead in his boat before the race was half finished. A heavy rain came down on the race by Charles McAlpine, a Cambridge, an ardent sportsman, and he invested the whole of it in a fine muzzleloading shotgun. The old "croaker" in relating this would call particular attention to the fact that the gun was bought with money won through a boating accident, or, at least, through the death of a man in connection with boating, for which, in the light of what followed, I can hardly blame him. The crew came up and the canoe, broaching to, was filled. Foster and Cunningham both drowned and all the guns lost. The superstitions shook their heads—Mac's gun was unlucky. The guns were at the bottom of the lake about a year. Then David Nevers raised all three and McAlpine's and Leonard's were restored to their owners.

In April 1878 McAlpine and W. H. Chase were paddling a light lapwing canoe near the scene of the accident; they had been shooting muskrats in the flooded woods below the Dugway—both were heavy men and sat well in the stern of the canoe, as is mostly the custom here in tandem paddling. Suddenly a huge comber filled the canoe from the stern, both guns went to the bottom, and Chase was drowned and McAlpine had an almost miraculous escape. He was thrown head first into the water, and swam the way was "hoodoo," and it is even said that McAlpine threatened to make trouble for any man who would raise her a second time. A few years later David Nevers was drowned two miles up the river and his body was found only a short distance from where those of the victims of the former accidents were recovered. Taking it all together this story presents a unique chain of circumstances.

The crossing of the Lawson Channel to the mainland opposite the head of Big Musquash was anything but a pleasant experience, as the canoe lay poised on the top of a wave, the crest of which seemed higher than the sides of the canoe, and the water swashed along the deck and against the combing, occasionally taking a slap at that part of my trousers within most easy reach. At a point near the head of the creek where the neck is about 100 yds. wide, the canoe had been out for some time, the vessel of light draft to avoid the bend in the St. John, called "No Man's Friend."

We made the crossing over quartering seas much easier and drier than we did before with the wind dead aft. Once in the creek we fairly flew under all sail by the small village of Gagetown, turning out of our course once to speak some men who were building a water fence, for as I had only been through the "raging canal" once, and then in a steamer, I did not feel quite sure of my way. As it was, we came very near grief on a submerged stone row that had been built out at low water a short distance from the southern bank of the canal, or rather, "cut off." We were only saved by a quick luff and a kindly set off by the tide, which runs through here like a mill race.

In the river the ebb tide was running in full force dead against the wind, and if the seas were hills below, here were mountains. We ran under the lee of the bank and tied a reef snugly into the mainsail, preparatory to a game of pitch and toss. While Horace was extended full length on the forward deck tying in the forward reef point, a boat propelled by two sprillings, rigged out in baseball caps and belts, with a third similarly attired acting as coxswain, steered straight for us amidships. Finding that we did not scare worth a cent they veered sharply and passed between us and the shore, starting superciliously at the outfit the while. Whether they were some of the natives who had become imbued with pseudo-English ideas, or some of the St. John boys out on a vacation, trying to do the correct thing, we had no means of knowing. We felt slightly nettled at first, but a little later we heard such hearty, free, soulful laughter from the direction of their boat that the feeling quite passed away, for whoever knew a bad man to laugh at himself?

We reached Upper Gagetown about 12 o'clock. Here we moored our canoe beside a convenient scow, and took what is known as a "cold bite" ashore, under the shade of some willows. While this substitute for dinner was in progress two Indians in canoes came along, stopped, looked the canoe over, and gesticulated and jabbered for four or five minutes before moving on. What they said was a blank to us, but no doubt it was the Melicete equivalent for, "To what base uses, etc."

Just as we got under way a wood boat passed with the foresail sheet trimmed dead aft, so as to bring the sail well in lee of the mainsail, the latter doing most of the work—a sure sign that the vessel has a little more than she has any use for. The wood boat, a craft as I know peculiar to the river St. John, is a large keel schooner, with a square topped mast and a single set of ordinary rowboat. Their capacity is anything from 20 to 150 M. of lumber. The foremast is stepped in the eyes of the boat, and the sails are the ordinary schooner mainsail and foresail, with the latter considerably enlarged. This craft is also known by the name "jake," and a wood boat hull with a schooner rig is commonly called a "jakenet."

On our last cruise I did all the steering, an arrangement that grew out of my greater experience with boats in general and canoes in particular, but it struck me that a continuation of this practice would be an injustice to my companion, and before starting on this one I notified H. that I would sit in the stern of the canoe exactly half of the time. It was now Horace's trick at the tiller, and the wind was so very heavy that he concluded to take off the mizen till he "caught the knack" of the work. A green hand who thinks it requires no skill to steer a canoe like ours with a crowd of sail broad off the wind in a gale, should try it once (in shoal water). It is far more difficult to keep her from rolling than from yawing or broaching.

The Squall sailing off wind with a helmsman who could not steady the vessel, commenced to rock gently, gradually increasing the motion, and the top of the mast describing a larger and larger circle, till the sail struck the water. We have to fight continually against this motion, and at the end of the forenoon of which I write my wrist was strained from the work. Horace was a little nervous at first, but he did his work as well as I could have done it. The wind was hauling westerly, and our course was trending more and more in that direction, bringing us by the wind, so we put on the mizen.

Opposite a little sawmill, near Upper Gagetown, a fearful gust that knocked her down to the coaming struck, and the millmen shouted derisively for us to "take in our rags;" but we treated that as we do the rest of the advice we get. We were beginning to look out for Ox Island, which we knew was not far ahead, when we were overtaken by a large schooner, which was coming from the river bank, and feeding as they swam on aquatic plants. Says Horace: "That's Ox Island ahead all right, but the labels have washed off." Now about as mean an entry as I could imagine in our log would be, "Canoe collided with a cow, listed to starboard and filled." To avoid the necessity of any such record we gave that beef blockade plenty of room. The wind continued to shift to the west, and the time was passing. We reached the upper end of Gilbert's Island we were sailing close hauled.

Just below Burton Wharf we sighted the General Wolfe, Commodore Weldon, lying at anchor, and we ran in and hooked on for a talk. The commodore is what is generally known as a character, having built with his own single hand more vessels than any man in the Province. By the number of Britain's heroes whose names have adorned his vessels, I would have judged him to be British in his sympathies. He has sailed the Duke of Wellington, Lord Nelson, King William and two General Wolfes since I can remember. Germany also comes in for some of his admiration, as witness the names Crown Prince and Prussian "General," two more of his vessels that I recollect. The King William was built to shift to the breeze, and proportioned lines—any vessel I ever heard of, except the Boston cat Em-El-Eye, viz., 28 ft. keel and 14 ft. beam.

In all of the vessels he drove every spike, placed every plank, besides doing the rigging and making the sails. He sailed them all single handed, and even more so, for I have often seen him sailing two of them tandem—a touch story, I know, but true as the aphorisms of Josh Billings. In the summer of '78 he sailed the Crown Prince and the first General Wolfe in this way, and would beat them to windward, too. "How did he do it?" Now you are asking me something I can't answer; I only know he did it; and you can now understand how his skill in handling a fleet won him the title of commodore. He has a son who is one of the smartest captains that ever sailed a square-rigger out of St. John Harbor.

As the Commodore had carried ashes for me, and also for Horace's father, we were on quite familiar terms with him, and in answer to our hail of "hello, grandpa" (he is over 80 years old), he greeted us with, "Well, now, how did you boys get away up here in that? Come from Washademoak to-day?" "Yes," "Good enough!" he told us that the wind had been westerly up there all day, and that when it headed him he had cast anchor and till it "was ready to go his way." He gave us a good deal of information, and wound up with the assertion that "the load of ashes was for Mr. Randolph, of Fredericton, the best man in the province."

Wishing the old man a prosperous voyage, we stowed sail and bent to our paddles. At Burton Wharf we landed and hunted up a spring. (Water tastes good when you have had none for twelve hours.) A schooner came along just as we re-embarked and we, sometimes paddling and sometimes sailing, hung in her wake the rest of the day, and camped at night a short distance from where the ebb headed her. We pitched our tent just above the head in the river below Oromocto Village, and less than a hundred yards from a house.

Before we started we had been severely cautioned to be careful where we camped, for the reason that many of the people would be liable to order us off. The warning was well meant and came from a man who had some acquaintance with that part of the river, whereas we had none. So before unloading we headed straight for the house to ask permission. We found a young man in the garden who told us that when we liked we could camp there, that gave us all the milk we wanted. Later he piloted us to a spring of good water, talked politics with us without disclosing his political complexion (perhaps because we wouldn't show our hand), and when a thunder shower was imminent came down to the tent and insisted that we should go to the house with him. We could scarcely make him comprehend that we would rather enjoy a good thunder storm than camp in a house, and he would immortalize the name of so good-hearted a man by putting it right here, but I do not know it.

So much hath been said and sung of the festive mosquito by the tourist, the would-be humorist and the blamed fool, that any reference to him smacks of that delightful chestnutty flavor so sought after by the writers for the popular press, but which would not go down very well with the readers of the journal for which this is intended. Yet, as we never had been troubled with them in any of our previous camps, I feel bound to record that we were well roasted here. Horace said that; had there been fewer "pieces" in the band, he thought possibly he might have enjoyed the serenade. The next morning he observed that blood enough had been shed, and a life had been sacrificed, the night to form the essential part of one of Rider Haggard's novels, but a year later he acknowledged that this was gross hyperbole.

THE A. C. A. AND W. C. A.

THE following correspondence, to some extent official, but chiefly interesting and valuable because it shows the pleasantness and intimacy existing between the American Canoe Association and its younger sister, the Western Canoe Association, is caught at this point and forwarded to *FOREST AND STREAM*. Mr. Ware, secretary of the W. C. A., having kindly permitted the use of a copy of his reply to Mr. Lawson, commodore of the A. C. A. The letters explain themselves. It would seem that the prospect is not good for a union of the two associations, except in the bonds of courtesy and good fellowship. This may perhaps be best.

CHICAGO, Feb. 4. E. H.

J. H. Ware, Esq., Sec.-Treas. W. C. A.:
MY DEAR SIR—I was deeply chagrined to find last evening in my post box a returned letter which was sent to you in response to the invitation for the W. C. A. dinner on Jan. 10, and sincerely trust that none of the members of the Association felt that my failure to respond was in any way discourteous to them. If so, and you think it worth while perhaps it would be well to publish the letter in the *FOREST AND STREAM*. The neglect of the hotel people to deliver the letter seems to me inexcusable, as it was delivered to them on Jan. 9, and marked for delivery to you on the 10th at Hotel Richelieu. With fraternal regards believe me very cordially yours, WALTER U. LAWSON, Com. A. C. A. BOSTON, Jan. 27.

The following is Mr. Lawson's letter above referred to:
To all the Good Fellows of the W. C. A.:
Some of you have doubtless heard the story of the two young chaps, Harry and Jack, who went into the jungles of India on a hunting trip. The story is told with many embellishments, but the pith lies in the following cablegrams:
From Harry to the father at home: "Jack dead."
From father to Harry: "Box and ship."
Reply to father: "Shipped P. and O."
Many weeks later—From the father: "Mistake; tiger in box."
Reply from Harry: "O. K.—Jack in tiger."
Now, do not for an instant think that A. C. A. wishes to play "Tiger" and have W. C. A. for "Jack," or vice versa; but, seriously, the best thought in each association is that some equitable basis of union can and should be arranged.
We have the same aims, the same interests, and should unite in one organization, that our influence and fraternity may increase in proportion to our numerical strength united; cementing into one fraternal union the canoeists of all America.
Regretting deeply the distance which prevents my personal presence with you, believe me most cordially yours,
(Signed) WALTER U. LAWSON, Commodore A. C. A. BOSTON, Jan. 6.

Mr. Ware replied as follows:
Walter U. Lawson, Esq., Commodore A. C. A.:
DEAR SIR—Your cordial letter of the 27th ult. duly received and it has been only an excess of business that prevented an instant response.
I deeply regret the stupidity of the hotel people in not delivering your fraternal epistle, for I know all present would have greatly enjoyed it. At such a time of merriment it is pleasant to know we have the whole brotherhood with us in thought, even though many miles away.
However, do not for an instant think we attributed the absence of any response from you to discourtesy. A number of us had you in mind, and that we agreed that a temporary absence from the city, or other sufficient cause, must have interfered with your response being sent in time.
I thank you for your permission to publish the letter in *FOREST AND STREAM* and will gladly forward it, for I am sure the "boys" will appreciate the fraternal feeling and sentiment expressed therein.
In conclusion the W. C. A. salutes its older brother, the A. C. A., with three cheers and a "tiger," but I regret to add, our taste for interior decoration is rather uncultivated at present. Very cordially yours,
J. H. WARE, Sec'y-Treas. W. C. A. CHICAGO, Feb. 4.

THE CANOE RECEPTION.

THE reunion of canoeists on Friday last was by far the most successful attempt of the kind that has been made, and is likely to lead to a permanent meeting each winter. The large Harvard Rooms, used by the Columbia Institute, and very kindly loaned by Prof. Fowler of the Knickerbocker C. C., were decorated with club flags and totems, and by a large display of canoe photos. The chief feature of the evening was the presence of the "Coon and the Jessup's Neck minstrels, who discoursed sweet music, vocal and instrumental, but there was in addition a varied programme of music, readings, fencing, etc., followed by dancing which lasted until 3 A. M. About 200 canoeists, including many ladies, were present. Com. Lawson came from Boston and Vice-Com. Winné from Albany. While many lent their aid, the chief credit must be given to Com. Seavey, Knickerbocker C. C., who was, as usual, the leader and manager.

DATES FOR CANOE RACES.

THE desirable dates in June are now rapidly filling up as the various clubs announce their regattas, but as each acts entirely on its own responsibility, there is a probability of the usual clashing. We would suggest that the representatives of the various clubs from New York, Yonkers and the Passaic River should meet and arrange a circuit of races, beginning with one end, Newark or Yonkers, and ending at the other, thus: Ianthe, Bayonne, New York, Marine and Field, Brooklyn, Knickerbocker, Yonkers. If this is done it will enable men to go in order from point to point, making it practicable for many more to enter the races.

CANOEING IN ENGLAND.

Editor *Forest and Stream*:
Excellent little letter, that of Mr. Wilmer's in the *FOREST AND STREAM* as to the British Canoe Association, but it's rather odd that the Association should hold their regatta on the 1st of June, a canoeist but a "yawner," none the less a clever man with the pen, for he steers carefully clear of the turning marks I laid down. May I once more and finally say that the "hostile attitude" I am said to have assumed toward the British Canoe Association is not a hostility toward a particular club, but is and shall be in defence of true canoeing against the usurpation of the title "canoe association" by a mixed boating club, and repeat, and I am borne out therein by Mr. Bigelow, an expert American canoeist now over here, and who attended the B. C. A. camp, that canoeing was a very small part of the last British Canoe Association meet. I repeat that the large majority of the craft present at that meet were sailing boats and canoe yawls.

In regard to the canoeists who attended that meet, or even are connected with the Association, the only one I know of is the indefatigable secretary. As to the Commodore, set forth as John MacGregor (Rob Roy) I can only say that I hold two letters written by him, just previous to his sad illness, in which he advises me to have nothing to do with the B. C. A.
I am not going to attempt to inflict upon American and Canadian canoeists a pen controversy on details of this nature. I only desire to point out that the B. C. A. is not the same footing on lines here in England as is the A. C. A. in America. I can only see one use here for the B. C. A. as it is at present constituted, i. e., that of an asylum for those whom the canoe of modern times refuses to carry.

As to Mr. Wilmer's criticism of my experiences in racing and cruising, I am much obliged for his kind words, but I think he might admit—if he knows—that all my efforts in canoeing during a period of eighteen years past have been directed to conserve cruising and general purpose qualities in canoes, and to anticipate and curb racing machine dodges. I do not consider the deck position bad or a racing dodge; I think it has given a fresh charm and a long lease of life to canoe sailing, and is undoubtedly of the greatest advantage in cruising.
At the same time, I quite admit that the deck position finds out the weak spot in a man, and has in many cases driven from canoe sailing to boating men who previously had passed muster as real canoeists. Is that bad? Not much!
Then further, as to a man being entitled to be recognized as a "cruising authority," I suppose Mr. Wilmer would have it depend upon how many columns of print a man could publish of every little canoe trip he takes; and when such a man has succeeded in navigating a canoe down a well known river in a heavily populated and cultivated country, camping some half dozen nights in close vicinity of hotels and stores and has published a full, true and not over exaggerated account of such daring voyage, such a man ought to be acknowledged as a "cruiser;" and of course he would say far and away above the man who keeps his cruising to himself and loves it for its own sake, but comes into the critical light of canoeing as a "racer."

In my opinion, and were I choosing companions for a long and difficult cruise, I should pick out as the most likely and best-fitted cruisers men who, from constant practice nearly all the year round in and about the fitting, handling and sailing of racing canoes, have got a name as "racers," and I would do this in preference to the "good-old cruiser" who dodders along on the floor of an ill-shaped, badly-kept and worse-rigged old box; laden down to deck awash with jam pots and cooking gear enough to start a second-class restaurant. Of course there are some first-rate cruising men who never race, and many racers who never cruise, but these are simply examples of misdirected genius.
It should be within the bounds of possibility to put this subject to actual test—especially in America or Canada; though difficult in England for want of waters. A cruising race extending over six days, one man one canoe throughout, no extraneous help allowed, no progress on the course to be made between 6 P. M. and 8 next morning (thus giving ample time for camping and stowing), the course, if possible, to include river and lake work, reasonable facilities for camping on shore. Such a race would probably bring out the best general-purpose canoe and canoeist, and should bring so-called "racing" and "cruising" men together striving for fame with possibly "equal advantages."

W. BADEN-POWELL, "Nautilus" R. C. C.

BUFFALO C. C.—On Jan. 10 the Buffalo C. C. held its annual dinner at the residence of Mr. Forbush, who is also vice-com. of the Buffalo C. C. On Jan. 23 the annual meeting was held, the following officers being elected: Capt. H. L. Campbell, Mate, Geo. L. Kelly; Purser, F. D. Wood. A scheme is under way to purchase a site for a club house at Point Albino, Canada.

SPRINGFIELD C. C.—Officers: Capt. Emil C. Knappe; Lieut. Dr. H. E. Rice; Sec.-Treas., William C. Marsh; Executive Committee, Joseph G. Read; Regatta Committee, Emil C. Knappe, Dr. H. E. Rice and E. H. Barney.

IANTHE C. C.—On June 20 the Ianthe C. C. will hold its spring regatta on the Passaic River. The annual regatta will take place on the afternoon of Labor Day.

ORANGE C. C.—The Orange C. C. proposes soon to own the first war canoe on the Passaic.

Yachting.

Yachtmen who do not see what they want under this heading will please look under the hatches of the *Canoe*, peep into the *Kemmel*, squint down the barrel of the *Rifle*, open the *Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

THE 46FT. CLASS.

THE half-dozen 46-footers which Lawley is to build are all started and in various stages of construction. The Turner boat was the last one to come, but her lines have arrived at Lawley's yard and she will be laid down at once.

Lawley has signed a contract to build the Paine 46, and her lines are partly laid down in the mould-loft. The mould has been made for the lead keel of the Fife boat Barbara, and her stem and stern post are being worked out. The Thayer, Vanderbilt and Belmont boats are set up, and the wooden frames are in position. Lawley has part of the machinery of the frames for the Fife steam yacht. The steel frames for the 46-footers will be bent this week, and then work will be pushed on them rapidly.

All the wooden frames in the center of the Belmont 46 are strengthened with iron floor timbers, and when the steel frames are bent in there will be splendid support for the lead keel. As set up the three Burgess boats are a smooth-looking craft, the Thayer boat showing the cleanest lines, due to her narrow beam and easy midship section.

The Thayer boat is building in the northeast corner of the shed, and the Barbara will be set up just ahead of her. Beside the Thayer boat is the Vanderbilt outfit, with Belmont's Mineola between the Vanderbilt 46 and C. A. Welch's 40-footer. In this shed Lawley is to build a small 25-foot centerboard sloop for the lakes, which will come pretty near filling this shed.

John B. Paine has been at Lawley's during the week superintending the laying down of the lines of his craft. As previously stated, this boat will be the widest of the lot, and will be able to carry a big sail plan.

The keel mould and the Barbara is finished, and its curve coincides exactly with the plan published in *The Globe*. The exact dimensions of the Barbara's lead keel will be as follows: Extreme length of keel 25ft., extreme height of keel 3ft. 10in., thickness of keel on top at after end 8in., at widest part 20in., at forward end 14in., thickness of keel on bottom at after end 8in., at widest part 15in., at forward end 12 1/2in. The height of lead keel is the greatest just ahead of the mast.

The Barbara's lead keel is much thinner than those of the Burgess boats, so it is probable that the center of gravity of the Turner boat's lead will be even lower than that of the Fife boat, in spite of the latter's greater draught of water.

Fife's 46-footer flares a great deal on her topsides. Her extreme beam is 12ft. 10in., but her beam at the load water line is only 11ft. 6in.

C. S. Eaton's graceful 65-foot steam yacht is nearly ready for the water. Her mahogany pilot house is a handsome piece of work and is large enough for a dining-room and stateroom combined. Except the panel decorations the after cabin and stateroom are finished. Workmen are putting in the propeller shaft and adjusting the keel condenser. C. F. Lyman's 30-footer will be built where the Eaton steamer now lies.

Ahead of the Eaton boat, the 51-foot steamer for a Lowell gentleman is planned. She is practically a mate to the two steam launches which Lawley built last fall in design, though a few feet longer.

The weight of the lead keel of the Barbara will not be far from 24 tons, and she will carry probably more than any of the Burgess boats. In this connection, it is interesting to note that the cost of construction of a yacht in this country is just about the same as the cost of the same yacht built across the water, with the cost of bringing her over to this side added. Mr. Foster asked Fife for an estimate, and he figured that it would cost £1,800 to build the Barbara and deliver her in this country, which is just about Lawley's price. It has been stated that Fife's charges for a design are very high, but this is not so, as he charged but \$75 for the complete set of the Barbara's plans. —*Boston Globe*.

NEW YORK YACHT RACING ASSOCIATION.

ON Wednesday evening, Feb. 4, the annual meeting of the New York Y. R. A. was held at O'Neill's, Sixth avenue and Twenty-second street, New York.

Delegates were present from the Columbia, Hudson River, Jersey City, Newark, Newark Bay, New Jersey, Pavonia, Staten Island Athletic (yachting department), Yonkers Corinthian, Bayswater, Tappan Zee, Oceanic, Sing Sing and Williamsburg Yacht clubs—14 in all. After the minutes of the previous meeting had been read and approved, the secretary read his report for the past year, and was followed by the report of the treasurer, which showed nearly \$800 in the treasury with \$170 owing from members.

The regatta committee then submitted their report, in which they set out that the profit of the last regatta of the association was \$163, and they regretted that it was not more, as the contractor for the programmes had absconded, owing the association about \$150. They also reported that they had awarded the race and prize in class 3 to Just Woke Up, of the Newark Y. C.

The committee on the dinner submitted their report, setting forth that the dinner had been held at O'Neill's on Jan. 23, and was a success in every respect.

Notice was given by a delegate from the Newark Bay Y. C. of a proposed amendment to Rule I. of the Sailing Rules regarding classification as follows:

Class VI., open cat rig, over 28 to 32ft. instead of over 27 to 32ft.
Class VII., open cat rig, over 24 to 28ft. instead of over 23ft. and under 27ft.
Class VIII., open cat rig, over 20 to 24ft. instead of 20ft. and under 23ft.

The date for the third annual regatta of the association was fixed for Monday, Sept. 7, Labor Day, to be held over the regular courses in New York Bay. The secretary was instructed to charter a steamer for that day.

After some other miscellaneous business was transacted the following officers were elected: Pres., Arthur J. Prime, Yonkers Corinthian Y. C.; Vice-Pres., Geo. E. Garland, New Jersey Y. C.; Sec'y, Geo. Parkhill, Columbia Y. C.; Treas., Robert K. McMurray, Staten Island A. C.; Executive Committee: Dr. E. B. Sherwood, Sing Sing Y. C.; Chas. E. Cameron, Newark Y. C.; Wm. A. Smith, Pavonia Y. C.; Chas. E. Simms, Jr., Columbia Y. C., and Harry L. Beach, New York Y. C.

With the election of officers the association now enters upon the third year of its existence with 17 clubs, representing the States of New York, New Jersey and Connecticut, and is on a more solid basis than ever. When we compare it with other associations that have been in existence for several years, and who have not much more than half the clubs that compose this association, it can easily be seen how well it has been managed and how much of its success is due to its able president, although, we understand, he is very averse to loading himself with the work that another term requires. In an association of this kind, where there are so many interests and where at times they are bound to clash, it requires a steady hand at the helm to smooth the ruffled seas.

The association, singular to say, has met with much success with its mean measurement, but it is certain that in the near future some different plan will have to be adopted for the larger yachts, in order to encourage the more modern boats. For the open boats mean measurement will do very well, but a different system should at once be adopted for the cabin classes. There is no question that in an organization composed of over 3,000 members (through its clubs) there are many individuals who are scientific enough to measure the boats under the more modern system. In an informal discussion among some of the delegates, before the meeting the other evening, many plans were suggested, but those meeting with the most favor were to take the wetted surface of the boat only, or to cut off the overhang altogether and not limit or tax the sails. The placing of no tax on the overhang would, at least, be a wise beginning and lead to better results.

PHILADELPHIA Y. C.

THE annual meeting of the old Quaker City Y. C. was held at the club rooms, 911 Walnut street, on Feb. 4, Vice-Com. Brereton Pratt presiding.

Mr. J. H. Sloan, chairman of the board of trustees, read the annual report of the board. In it he stated that the name had been legally changed, and henceforth the organization will be known as the Philadelphia Yacht Club, and also congratulated the members upon the increased prosperity of the club, the attention it has attained and the prospects of a bright future, and that the improvements to the buildings, building of basin, etc., on the river property, would be commenced shortly. Mr. C. D. Middleton, the retiring commodore, was not present, and his report was read by the secretary. It reviewed the work of the club for the year. On motion the commodore was elected, and a vote of thanks for his zeal and labors in behalf of the club.

Secretary A. F. Bancroft read his annual report, giving a resumé of the business of the club for the year. In it he stated that 77 members had been elected, 9 dropped for non-payment of dues and 10 resigned, and that the total membership was 159. During the year 48 yachts had been added to the fleet, which now numbered 77—3 cutters, 9 cutters, 18 sloops, 3 yawls, 7 open yachts, 6 steam yachts and 7 launches.

Treasurer C. W. Lyons's report showed a great improvement in the finances of the club, the total receipts were \$3,556.63, disbursements \$3,738.91.

The regatta committee's report reviewed in detail the races given during the year, and stated that on the opening of the river club house the opportunity of having more open courses and starting and finishing of races off the club house would be of great benefit to the club, and called attention to the revised racing rules, which would be proposed for adoption before the opening of the season, particularly to the classification by corrected length instead of waterline length.

The second item on the election of five new members, Wharton Sinkler, M.D., Alexander Hazard, M.D., Ephraim Brice, Chas. C. Knight and Harry C. Ford, and to honorary membership Wm. H. Kern, Esq.

The following resignations were read and accepted: V. A. Bertram, L. H. Clark, John J. Dull, Wm. G. Roberts, S. Fred Hall, S. H. Haines and Wm. S. Hoffman.

There were four vacancies on the committee as follows: Iowa, sloop, Edward Samuel, 36ft. 6in. w.l.; Monarch, sloop, H. W. Kelsey, 46ft. 6in. w.l.; Rosalind, cutter, H. F. Smith, 29ft. 7in. w.l.

Important amendments to the constitution and by-laws were adopted, among them were: Instead of monthly meetings, having six general meetings in each year, on the first Wednesdays of January, February, April, June, October and December. Making a quorum at all meetings fifteen, eight of whom must be representatives of yachts. Limiting the membership to 300, exclusive of yacht owners and honorary members. Making the entrance fee \$15 until Aug. 1, thereafter \$25. Abolishing non-resident membership and increasing the annual dues to \$25.

The following officers were elected: Com., E. R. Coleman; Vice-Com., Brereton Pratt; Rear Com., R. K. Neff, Jr.; Sec'y, Addison F. R. Brown; Fleet Surgeon, Wm. A. Mearns; Hon. Sec'y, Wm. A. Mearns; Fleet Surgeon, Samuel B. Howell, M.D.; Trustees—J. H. Sloan, Arthur Colburn, R. K. Neff, Jr., H. F. Smith. Regatta Committee—A. F. Bancroft, Francis Green, J. A. Lehman, House Committee—W. B. Henry, O. D. Wilkinson, Brereton Pratt, S. B. S. Barth, C. W. Lyon, J. H. Gibson, J. L. McDaniel. Committee on Lectures, etc.—J. R. Appleby, Jr., C. L. Wilson, E. Lee Young. Committee on Lines, Models, etc.—T. D. Whitaker, C. H. Brook, C. E. Ellis. Library Committee—G. M. Freeman, H. P. Lloyd, T. S. Manning. Law Committee—W. B. Mann, J. H. Sloan, W. W. Carr. The annual regatta will be sailed on June 15.

CORINTHIAN NAVY.—Secretary Stryker, of the Board of Education, is now engaged upon the examination papers of that board for seamen; the chairman, Commodore Carter, will announce at an early day the date of the first examination. The Delaware River Squadron is now formed, Mr. Geo. D. Gideon, of Philadelphia, having notified the Admiral that they would proceed shortly with the election of officers. Commodore Day has appointed a delegate to the Eastern Squadron and is under instructions to proceed to Boston and attend to the details of organization of that squadron. Applicants for membership will hereafter send their applications and dues (\$5) to the Chief Purser, Mr. F. B. Jones, 40 Wall street.

CATARINA.—Mr. Morgan having turned over the wrecked Catarina to the underwriters, she has been sold by them to J. W. Sullivan, the engine builder, of New York, who has hauled her out on the floating dock at Gouverneur street for thorough repairs. A part of her plating has been stripped off and taken to City Island, where Piepprass, who has charge of the repairs to the hull, has straightened the sheathing. New angle iron trusses have been put in alongside of all that were at all injured. The keel of the vessel was originally made 50 per cent. heavier than required by Lloyd's, and has sustained no injury, and by good luck the damage to the bottom was just under the bunkers, so that the engines were not disturbed. A large force of joiners is at work below, and the interior has already been completely restored, all traces of water being removed.

CRUISE MONAITIPEE — ON — LONG-ISLAND SOUND.

THE little yacht Monaitipee is known to the readers of the *FOREST AND STREAM* through her cruises published on March 14, 1889, and Jan. 30, 1890, the latter to Wading River, being made by myself and three companions in August, 1889. Two weeks prior to our starting on this venture the Monaitipee had returned from a cruise to Greenport, L. I., but as I did not participate in it the Wading River trip was written and published instead, although occurring later in the season. Since then, however, my brother has written me the particulars of the Greenport cruise, which I will undertake to put before the readers of the *FOREST AND STREAM* with the perhaps conceived idea that some fellow Cornellians may find interest enough in the account to read it through.

To my mind there is too little told of this delightful recreation, and any addition to the small amount should be welcomed, even from the pen of one who owns his inability to place it before the reader in other than a homely and crude shape.

The cruise began with a weekfishing trip to Staten Island; we started on Saturday, July 5, having on board my brother (who is captain), Tom, the crew and myself. We left Sheephead Bay, our headquarters, about 7 A. M. with S.W. breeze. About noon we anchored near the Hospital Islands and caught a few fluke. A little wind came along from the southward and we continued to Huguenot, where we arrived about 5 o'clock.

We landed, refreshed ourselves, and then proceeded to the fishing grounds about a half mile off shore and anchored. Before starting to fish we prepared and ate our evening meal, by which time the sun had set beautifully and darkness was creeping over the surroundings. Lights began to peep forth from the shore and reflect their radiance in the placid waters of the bay, while round about us glared numerous jacklights, ostensibly to attract the wary weakfish. We had no jack light, but possessed two lanterns of the ordinary type, one of which we hung on each quarter to serve both as a lure for the fish and illumination for ourselves in our maneuvers in fixing bait, etc.

We got our lines out and for nearly an hour we waited without any gratifying result. Suddenly Tom got a vigorous yank at his line and began reeling in. Almost at the same instant I hooked something too. Both turned out to be weakfish and weighed about 2 lbs. each. The captain followed with a three-pounder, and for over an hour we batted them in at short intervals. None weighed over 3 lbs., but they were gamy fellows, and quite a number escaped from us while we were endeavoring to land them.

About ten o'clock Tom quietly laid down his pole, leaving his line hanging overboard, and crawled into his bunk. Not many minutes after the captain followed suit, leaving me alone to mind the three poles. The night breeze was cool and I buttoned by coat up and crouched down behind the cabin where the wind would not reach me, determined to stick it out all night. A half hour passed and not a sign of a bite, the poles lay with the butts on the floor just as they had been left. In spite of my resolution I fell asleep.

I was aroused by a great racket, and discovered the poles dancing a sort of hornpipe around the cockpit. I ducked my head into the cabin and gave a warwhoop that awoke the captain so suddenly that in jumping up he nearly drove his head through the roof of the cabin. Seizing one of the rods I found I had hooked a good one and soon landed a three-pounder. In the meantime my brother had taken charge of the other poles, and in a tussle with them both lost one fish but secured the other. This luck was continued for about half an hour, and again they disappeared.

THE FLEET OVERHAULED US ABOUT TWO O'CLOCK.

All the noise we had made did not awaken Tom and he continued peacefully to snore, and was shortly joined by the captain again. I heroically stuck to my purpose until 4 A. M., but only got one more stray weakfish. After daylight, when we counted them, we found we had 43 weakfish, averaging 2 lbs. each.

We had weakfish for breakfast, and about 8 o'clock, after having visited the institution on shore presided over by Mr. Bensly, we set sail for Harlem, with the wind dead ahead. We hooked along shore to Gifford's at Great Kills, and after a turn in among the fishing boats, finding they were not doing as well as we had done, we stood across toward Sandy Hook on the port tack for about five miles. Then going about we were enabled to head up for the Narrows. The sailing was very tedious on account of a light breeze and an ebb tide, but at 11:30 we passed up through the Narrows with an increasing southerly wind and the flood tide, and were whirled along through the East River under the Bridge, and on to Hell Gate, where we turned into the Harlem River and anchored in front of one of the boat houses thereon located. Here I left the boys and returned home to Brooklyn with my weakfish, lamenting over my hard luck in not being able to accompany them on the trip.

The rest of this cruise was told me by the captain, and I think it is worth recording, being a rather venturesome trip for a 19ft. waterline boat drawing 24 in., commanded by amateurs who had never been over the ground before and unsupplied with either chart or reliable compass; the only guide which they had to go by being a railroad map with an outline of the ground on it—having only the principal ports marked. I will tell it in his words:

July 7, Monday morning, we spent a couple of hours taking in provisions. We had not, up to this time, decided on just where we would fetch up. There was a large sloop laying alongside, getting ready for a cruise to Greenport, L. I., and after a short consultation we concluded we would make that our objective point also. The sloop got under way, having eight young fellows on board, a cockpit piled up with boxes of provisions and a large cooking stove. They went out through Hell Gate. We waited until nearly high water, and, with a young man who knew the locality, went through Little Hell Gate and with an extremely light wind reached Whitestone about 8 P. M. Here our pilot left us and returned to Harlem in a steam launch.

We did not see the other yacht, and were unable to tell whether she was ahead of us or behind. After landing our friend we stood away for the Sound, passed Throggs Neck, and the breeze dying out completely we drifted along under a burning sun by Stepping Stones Light and City Island. Occasionally a gentle puff would waft us along for a few minutes, only to die away and leave us in the lurch again. Tom took the tender and towed for a while, but

soon gave it up as darkness came on, and finding it a net very entertaining pastime.

Shortly before 8 o'clock we sighted an opening in the shore which apparently led into a basin of some sort, and we agreed to go in, and if we found it a good anchorage to lay there for the night. We accordingly towed the Monaitipee inside and found it a very good harbor. We learned from a native that it was called Chimney Corner. A schooner lay alongside a rude wharf and was loading a cargo of stone which had been quarried from the cliff

FOR AN HOUR WE WAITED WITHOUT ANY GRATIFYING RESULTS.

which inclosed the basin on all sides except where the inlet was. We put in a comfortable night in this snug little retreat.

July 8.—We turned out early and at 4 o'clock A. M. were underway. As daylight came on we discovered that there was another outlet a little further to the eastward, a small island filling the space between the two. We went out through the east one and once more were on the Sound. It was still very calm, but after a short sail we came abreast of Greenwich, Conn., and turned in, anchored and went on shore. We decided to stop here until some wind arose. After a good deal of nosing around and a few inquiries we discovered the post office at the top of a long road about a mile from the harbor. We sent a short note to the boys, having promised to keep them posted as to our progress.

As the majority of the yachts were larger than the Monaitipee they soon left us astern. We watched them as they receded, unable to take our attention from so beautiful a sight of white sails shadowed here and there, and at other parts brilliant and sparkling in the sun, while their glossy sides sent forth flashes of light as Old Sol cast his rays upon the glossy paint. A long line of foam marked their course and we followed on this milky highway. We sighted what we concluded must be Penfield Reef Lighthouse about 5 o'clock, and shortly after passed it, and soon had Black Rock Beacon abeam. Bounding this we headed up the harbor close hauled, making directly for the Bridgeport Lighthouse.

While on this course we observed a large sloop coming along to windward with a party on board. She was flying the Yale College flag. The party was eating a lunch, which was set out on a large tray on top of the cabin. Evidently they were enjoying themselves immensely, as the shouts of laughter frequently resounded over the water to our ears. She tacked a short distance ahead of us while we were watching her. Suddenly before she had gathered headway a vicious gust of wind laid her almost on her beam ends. We luffed just in time and stuck her nose square at it; and how those two pieces of cotton did slap and bang! The sound of china and glassware tumbling together told us that a lunch had gone to feed the fishes. When we looked at them again there seemed to be considerable confusion on board. In the midst of the party I saw a fellow holding up a large tray, while another was tossing pieces of broken dishes overboard.

We followed the sloop into the harbor, and seeing an unoccupied space alongside a stone abutment between the boat houses we dropped anchor. The steamer Rosedale was lying in a berth near the drawbridge, while I prepared supper Tom went ashore to purchase a few articles we were in need of. He was back in a half hour and reported favorably of the appearance of the city, as much as he had seen of it. Neither of us had ever been here before, and we intended to have a look around before we left. Supper was ready and we both pitched in and ate as only two tired,

hungry cruisers can. After about an hour passed in this pleasant occupation we retired to the cockpit for a smoke and to talk over our future movements.

After making all snug we went ashore and took a look at the city as well as was possible in the evening. We were somewhat astonished at the size and number of the business houses and factories. The part of the city through which we walked was almost entirely made up of these large buildings. That which hit us the hardest was the scarcity of grocery stores, and we searched for a long time before we found a place to buy a fresh supply of provisions. Having procured these, we returned to where we had left the tender, which was at a float under the bow of the Rosedale. We climbed down into her very carefully as it was intensely dark, and paddled out to the Monaitipee. It was 10 o'clock when we stepped on board, and we lost no time in getting into our bunks.

It seemed as though I had not been asleep five minutes (but in reality it was two hours) when I awoke and found myself on the cabin floor. I had been lying with my head toward the bow of the boat, and when I attempted to get up I had great difficulty in doing so, as I discovered that my feet were elevated almost as high as my head, though resting on the floor. At the least movement of my body the yacht would careen from one side to the other, and her stern appeared to be elevated high in the air. With a queer feeling of wonder and alarm I managed to reach the companionway and crawl out into the cockpit. The noise I made in doing so awoke Tom, and after a brief struggle and some confused exclamations of astonishment and terror, his head appeared with hair on end and bulging eyes. "What's the matter? What's the matter?" he cried twenty times in succession before I could answer or discover the cause of our strange position.

I told him to be quiet and keep his balance, and help me to keep the boat steady and I would endeavor to ascertain the reason of the queer antics of our craft. The night was as clear and calm as when we had retired. The water was smooth, and there was nothing visible that would account for the attitude of the yacht. I looked over the counter and was dumbfounded at the distance the water was below. Seizing an oar which lay on deck I thrust it down alongside of the overhang. It brought up with a thud which sent cold chills up and down my spinal column, and visions of jagged rocks crunching through the planking arose before me. I continued to prod about with the oar and it suddenly sank several feet deeper and apparently into soft mud.

It suddenly struck me that the safest way in which to find out what we were aground on would be to let myself down on to it and make a closer inspection of the obstruction, and this I accordingly proceeded to do, taking a lantern with me. I immediately perceived that the yacht was resting on a sunken log. It was a very large one, too, and the heel of the boat had brought up on it at the sternpost. Her bow was deep down in the mud and I thought that I might be able to pry her off with the oar, but this I soon found to be impossible. Tom expressed a fear that she might roll over, for she was lying almost on her beam ends, but an examination forward showed that his fears were unnecessary, she was sunk in the soft mud to the planksheer, and the end of the bowsprit was out of sight.

THERE WAS NOTHING VISIBLE THAT WOULD ACCOUNT FOR OUR POSITION.

On account of the position the boat was now in we were forced to make our beds crosswise of the cabin. We placed two mattresses on the floor and lay down with our heads to the side which was elevated, and our feet in the lower bunk. In this way we passed a part of the night.

At two o'clock I went on deck and found the tide had turned and the water was now over the lower rail forward of the shrouds. There were no signs of her floating yet, although there appeared to be plenty of water. I waited anxiously while the water crept up over the deck to the cabin. I knew that the suction was holding her down, and feared the water would reach the hole in the deck through which the cable passed below, and I began shaking her by jumping from one side to the other. It had the desired effect, for she suddenly lifted, and so quickly that I was nearly thrown down. At the same time she slid gently off the log and was once more afloat. As the tide was rising we felt no fear of getting on any more logs during the remainder of the night and returned to our cabin, readjusted our bunks and fell asleep.

July 9.—Turned out at 6 o'clock. Had breakfast, got some meat from the store, and at 9:30 weighed anchor and stood out for the Sound. A strong easterly wind was blowing, accompanied by an ugly chop sea. Our intention was to make New Haven our next harbor, and with this object in view we flattened down sheets and began our course along shore to the eastward. We hammered along for two hours or more, then the tide turned and the sea got so high that we were dropped at once and plunged the yacht against the waves coming over the deck forward and rolled aft, flooding the deck to the rail, and sometimes coming into the cockpit. We always catch it this way in a short, heavy head sea, being so lean forward she dives through the seas instead of lifting over them.

Our progress became slow, not to say disagreeable, and New Haven was a long way to windward. It soon seemed as though we should have to turn back, two reefs had not saved the vessel to any extent, while our headway was lessened. Finally Tom dove into the cabin and brought forth our map, in the hope that a harbor might be found nearer than New Haven. Our knowledge of the Connecticut coast is limited, and as there was nothing marked on our map between Bridgeport and New Haven, we concluded that our only hope of getting into a harbor before night fall was to return to Bridgeport.

Tom was about to put the map away when I noticed that directly opposite Bridgeport on the Long Island side, Port Jefferson was marked plainly in black letters. An idea occurred to me. We did not want to return to Bridgeport. Why not cross the Sound and visit Port Jefferson? The change it would be necessary to make in our course would bring the wind abeam, and with it thus our boat was sure to ride easy and go fast. Tom was delighted with the proposition, and we immediately changed our course. In an instant the Monitipee sprang away as though just released from some despised bondage.

The Long Island hills could just be discerned some fifteen miles away across the Sound. About an hour after altering our course we passed a few miles to the eastward of a lighthouse which is situated in the middle of the Sound. We had heard of the Middle Ground or Stratford Shoal Light and concluded this must be it. Shortly after passing the lighthouse the wind began to abate, and we shook out the reefs. We were over three hours crossing the Sound. When we had come within two miles of the Long Island shore we could see no signs of an opening as far as the eye could reach. A line of bluffs stretched east and west until lost in the distance. And now we knew not whether we were east of Port Jefferson or west of it. After a short consultation we decided to keep on toward the eastward. If we were past Port Jefferson all right. We would be so much further toward our destination, Greenport. And we had little doubts but that we could find a harbor somewhere along shore where we could put in for the night if necessary.

We went about and stood on the starboard tack for an hour, then tack'd inshore again. This brought us six or seven miles further east, and we now discovered a schooner lying close in shore at anchor, and headed for her in quest of information. The wind was slackening up and we crawled along very slowly. Soon it died out altogether, the sun sank in the west and the Sound became as smooth as glass. We got out a sweep and started to tow the yacht toward the schooner, but it was slow work. Tiring of this I took the tender and rowed into the vessel, leaving Tom to bring the Monitipee along with what air he could find. There was only one man visible on board the schooner, which was lying peacefully at anchor about 300 yds. from the beach. I inquired of him regarding our position, and asked if we were near Port Jefferson.

"Port Jefferson?" he cried, "Why, the port is nearly fifteen miles westward of here," said he, pointing with his finger in the direction from which we had come. "Wading River lies right in here back of us. Looking for a harbor?"

"Yes, we might as well get in somewhere until morning," I said. "Well, you can't go in yet, as the tide is down to low, you had better drop anchor and wait until high water. Might just as well lay here though it's going to be a good night."

After answering his inquiries as to where we were from and where bound I paddled back to the Monitipee, which was slowly nearing the shore. During my conversation with the man on the schooner I learned that he was engaged in carrying cord wood from this place to New York, and that he was waiting for his cargo. As the water was low and the beach was high, I only required one tide to load and he would float off at the next high water.

We dropped anchor near the schooner and found about five fathoms of water. After eating supper we had a smoke and then lay down for the night. I was awakened about 12 o'clock by the pitching of the boat and found a stiff northeast wind blowing, and we were getting the full benefit of the sea, being on the lee shore. It did not look dangerous, however, so I turned in again.

A. M. LOCKHART.

[TO BE CONTINUED.]

YACHTING AT HAMILTON.

THE 40-footer Doerboard, now of the H. Y. C., the property of Mr. Harry Lowry, designed by A. Cary Smith, of New York, is being rebuilt. Nearly all her frames will be new, and she will be planked with 1½ in. pine in place of the 1½ in. white oak used formerly. It is expected that the pine planking will improve her speed.

In the shipyard of Mr. Thos. Jutten there is a centerboard sloop nearly completed for Mr. Jutten. She will sail in the 30-ft. corrected class, her dimensions being: L.w.l., 27ft.; beam, 10ft.; draft, 2ft. 6in. Mr. Jutten has also a contract for a small cutter designed by her owner, Mr. B. Pinch, for the 20ft. corrected class. Her dimensions are as follows: Length over all, 25ft.; l.w.l., 18ft. 6in.; beam, 6ft. 6in.; draft, 4ft. 6in. Her ballast will be an iron keel, no inside ballast.

In the yard of Mr. Jas. Weil there is a centerboard sloop under construction for a gentleman in Montreal. Her dimensions are as follows: Overall 30ft., l.w.l. 24ft., beam 9ft., draft 2ft. He has also an order for a centerboard sloop 30ft. corrected length for the H. Y. C. fleet.

Mr. F. S. Malloch, the owner of the Nancy, champion 30-footer of last season, is having a 35-footer built by Robertson Bros., from a design by Mr. Thos. Walton, the designer and builder of the Nancy. Mr. Walton is superintending the building of the new yacht. She is a fine-looking craft. Her dimensions are as follows: Length over all 42ft., l.w.l. 33ft., beam 10ft., draft 7ft. Ballast all outside in an iron keel about 7½ tons. Sails will be supplied by Ratsey & Lapthorne, of Cowes, L. of W., England. The wire rigging will be supplied by a Scotch firm. She is in frame and being rapidly pushed forward.

For the 20ft. corrected length class, there are likely to be built two more small cutters. Wm. T. Stephens has the model and plans of his own sloop, and a still greater one, which is being ordered by her being a small Yama. She is certainly a likely-looking little boat. Her dimensions are: Overall 25ft., l.w.l. 18ft. 6in., beam 5ft. 2in., draught 4ft. 6in.

The other is for Mr. Draeske, of Dundas, owner of the yacht Spray, from a design by himself. She will be a cruiser, but her owner has hopes of her showing a good turn of speed, in which case she will probably be raced in the 20ft. class. Her dimensions are: Overall 24ft., l.w.l. 18ft., beam 6ft., draft 5ft. Her ballast is in the shape of an iron keel, about 2½ tons.

Ice boating is now in full swing on Burlington Bay, Ont. We have a fleet of about 20 boats here. We have been unable to have any organized races as yet, the ice being hardly fit. The boats, however, have some friendly brushes among themselves.

CLOSE HAUL.

MARINE AND FIELD CLUB.—On Feb. 6 the Marine and Field Club, of Bath Beach, elected the following officers: Com. W. B. Dick, sloop Mad Cap; Vice-Com. F. B. Fluke, sloop Fanny; Rear-Com. Geo. E. Brightson, sloop Penguin; Sec'y, Jas. F. Mallet; Treas. Chas. A. Deshon. Arrangements are being made for regattas similar to those of last year.

YACHTING IN HOLLAND.—To the yachtsman with the right kind of a boat and plenty of leisure, the waterways of the Netherlands offer a most novel and attractive field for cruising, as what is missing in the way of excitement and stirring adventure is more than made up by the close and intimate intercourse with the curious and its interesting people. We have lately received from the publishers, Messrs. Sampson, Low, Marston, Searle and Rivington, a volume of cruising in Holland, under the title of "Friesland Meres, and Through the Netherlands, the Voyage of a Family in a Norfolk Wherry." The author, Mr. Henry Montagu Doughty, is a resident of the east coast of England, and his cruise was made in one of the local craft, a "Norfolk Wherry," which was set up and dismantled at the end of each day's sail, and was not fitted with centerboards, the Gipsy, Mr. Doughty's yacht, being 53ft. long and 13ft. 6in. beam, with but 3ft. draft. By means of a large cabin trunk she afforded room for the owner, his son and four daughters, while forward she carried one seaman, a steward and a native pilot. The single mast, on which one lifebuoy was set, was pivoted at the deck with a heavy leaden heel, so that it could be raised or lowered quickly, having a forestay but no shrouds. Being capable of fair progress under sail, and at the same time able to run under low bridges, it was admirably fitted for Dutch waters, in fact the yacht was so closely allied to the great family of Dutch watercraft that it and its owners became, for the time, a part of the river and canal life of Holland, and the crew and passengers were all old dikes. Two summers were spent in visiting all parts of the Netherlands, many places being reached which are entirely beyond the run of ordinary travel; while the boat herself proved a passport, and placed her crew on a very different footing from the ordinary tourist. The book, which is illustrated by a number of sketches and two good maps, will be found interesting even by those unfamiliar with yachting.

NEW YORK Y. C.—On Feb. 5 the annual meeting of the New York Y. C. was held at the club house, with Com. Gerry in the chair. The following officers were elected: Com. Elbridge T. Gerry; Vice-Com. Edwin D. Morgan; Rear-Com. W. Butler Duncan, Jr.; Sec'y, J. V. S. Oddie; Treas., F. W. J. Hurst; Meas., John Hyslop; Fleet Surgeon, Morris J. Asch, M.D.; Regatta Committee, S. Nicholson Kane, Chester Griswold and Irvin Grinnell; Committee on Admissions, Edward M. Brown, Alexander Taylor, Jr., Frank T. Robinson, William L. Brooks and August Beaudet; Course Committee, R. P. Lounsbury, John M. Wilson, E. S. Byrne and J. Waldemar Hayward. Messrs. J. D. Smith, J. Pierpont Morgan, J. S. Dickinson, J. R. Busk and F. T. Robinson were appointed a committee to consider the proposed Frye bill excluding foreign-built yachts. Com. Gerry moved that a sum of money be appropriated for the procuring of an oil painting of the late Geo. L. Schuyler, which motion was carried. The regatta committee presented a verbal report. The following members were elected: James C. Ayer, Charles G. Emery, Nelson Robinson, James R. Roosevelt, J. L. Kernochan, William Cutting, Jr., E. Fish, William H. T. Hughes, J. Borden Harrison, Oliver Harrison, Jr., Harold A. Sanderson, Heber R. Bishop, Alfred V. Van Santvoord, Alexander Matland, David S. Hammond, Fred A. Hammond, J. Beavor Veth, Charles Clark, Lewis A. Vanhousen, W. D. Sloane, Vernon H. Brown, John Sloane, H. Tucker, Frank Sherman Benson, John B. Van Schaick, John H. Starin, Columbus O'D. Iselin and William J. Weldon. The annual regatta will be sailed on June 18.

CORINTHIAN Y. C. OF SAN FRANCISCO.—Yachting on the Pacific coast has experienced the same ups and downs as in other localities, but from local conditions it has suffered even more severely from the decline of large tonnage. From 1880 to '84 San Francisco boasted quite a fleet of yachts from 45 to 90ft., Casco, Lurline, Halcyon, Aggie, Con O'Connor, Annie, Emerald, and others; but this fleet was dispersed, and racing is dead as far as the few surviving yachts are concerned. Under these circumstances the old clubs have lost much of their life and vigor, and are doing little or nothing for the revival of yachting. What life there now is in yachting is mainly concentrated in the Corinthian Y. C. of San Francisco, whose station is at Tiburon, a successful young club which is rapidly building up its membership and improving its fleet of yachts. The roll now shows 135 members, 100 yachts, 30 yachts besides 40 new building, and a fleet of boats and canoes. A new club house is proposed as soon as a suitable site can be found. On Jan. 28 the annual meeting was held, the following officers being elected: Com. Jas. H. Johnson; Vice-Com., H. L. Jones; Sec'y, F. F. Tracy; Treas., F. D. Spaulding; Port Capt., Chas. E. Miller; Meas., C. R. Wilson; Directors, H. E. Hurlbut, C. O'Keefe and S. Regan; Regatta Committee, A. D. Cross, K. H. Catton, and H. J. Kelly. An urgent invitation has been sent out for the second annual dinner. On April 25 the season will be opened by a reception at the club house, followed by a cruise next day. The annual regatta will be sailed on May 30.

ROCHESTER Y. C.—At the regular monthly meeting of the Rochester Y. C., on Feb. 2, E. B. Leary was elected corresponding secretary, a selection which is certain to please every one, and it is believed that Mr. Leary will prove to be the right man in the right place. There is a rumor current that a new steam yacht is to be added to the fleet of the club, also, and the owner wishes to be admitted to the club. The club has never possessed a proper anchorage, those who have not enjoyed dock privileges lying at anchor entirely unprotected. This subject has been called up by the possibility that these dock privileges will be withdrawn the coming season, and it is to be hoped that this important question will be attended to at once.—OSCEOLA.

RIVERSIDE Y. C.—At the annual meeting of the Riverside Y. C. on Feb. 5 the following officers were elected: Com., Geo. T. Tyson; Vice-Com., F. Beltz; Rear-Com., John Moller; Treas., Jos. E. Peek; Sec'y, John G. Porter; Meas., E. F. Lockwood; Regatta Committee, F. A. Hurlbut; Regatta Committee, H. Gielow; A. Gange and H. B. Howell; Treas., H. C. Winttingham; Recording and Corresponding Secretary, Geo. H. Church; Trustees, J. P. Howell, J. Roger Maxwell, Thos. P. Fluke, Thos. L. Arnold, Ed. N. Norton and W. W. Kenyon; Committee on Membership, H. A. Gouge, H. W. Banks, Jr. and J. C. Seely.

ATLANTIC Y. C.—The annual meeting of the Atlantic Y. C. was held on Feb. 9, the following officers being elected: Com., N. D. Lawson; Vice-Com., David Banks; Rear-Com., Jas. Weil, Jr.; Sec'y, J. A. Hurlbut; Regatta Committee, H. Gielow; A. Gange and H. B. Howell; Treas., H. C. Winttingham; Recording and Corresponding Secretary, Geo. H. Church; Trustees, J. P. Howell, J. Roger Maxwell, Thos. P. Fluke, Thos. L. Arnold, Ed. N. Norton and W. W. Kenyon; Committee on Membership, H. A. Gouge, H. W. Banks, Jr. and J. C. Seely.

EXCELSIOR Y. C.—The Excelsior Y. C. reorganized and elected officers for 1891: Com., Michael E. Toepel; Vice-Com., Jos. Kraus, Sec'y, Jos. Zwack; Treas., Matthew Fauth. They will hold their first regatta on April 5 over the club course from Riker's Island to Sands Point and return, 20 miles.

A SPEEDY CRUISER.—A sound and comfortably appointed all-round cabin sloop, 30ft. over all, is offered for sale in our advertising columns by ex-Com. Day. She is hauled out just south of Ludlow station, Yonkers, where intending purchasers can inspect her.

NEWARK BAY Y. C.—The Newark Bay Y. C., of Bayonne, N. J., has elected the following officers: Com., Thos. Winters; Vice-Com., E. Van Buskirk; Sec'y, J. J. Vreeland; Treas., E. A. Scott; Meas., C. S. Braisted.

MASSACHUSETTS Y. C.—A complimentary dinner was lately tendered by the Massachusetts Y. C. to Com. Soley, who has done so much to advance the club. The compliment was, however, declined in a graceful letter.

PORTLAND Y. C.—Yachting is quiet, but the club will have to wait three or four years before it can start. Dyer, of this city, has contracted to build one of 55ft. for a Portland merchant.

GITANA, "sohr, W. F. Wold, will fit out early in the season, though her owner, who is going abroad for his health, will not use her until his return in June.

BOSTON YACHT AGENCY.—The new catalogue of the Boston Yacht Agency, Messrs. Clark & Borden, will be ready by Nov. 1.

BOUNCER.—Mr. Clapham is now busy with five racing sloops of the Bouncer type, two of 28ft., two of 25ft., and one of 20ft., all drawing inside of 12in.

MOCCASIN.—Mr. Morgan has sold his 40-footer Moccasin to Mr. J. P. Cruger, of the Newburgh B. & C. A.

ALVA, steam yacht, W. K. Vanderbilt, has left Wilmington, Del., for the South.

SHAMROCK, sloop, J. R. Maxwell, will have her lead keel lowered about a foot, at Winttingham's yard.

THETIS, sloop, P. V. Stevenson, will have a new sail plan, with repairs to hull.

HILDEGARDE, sloop, J. E. Bergen, will have a lead keel added this spring.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. J. M., Philadelphia.—Will you kindly inform me where there is gunning and fishing within fifty miles of Philadelphia and oblige? Ans. At Barnegat in season.

C. E. B., The Jamestown Club.—The prohibition against taking the fish out of season is absolute. You cannot legally do what you suggest. See *Book of the Game Laws*.

C. A. H.—The proposed law in New York applies only to Lake George, where the close season runs from Feb. 15 to July 1. We should think that the pneumatic barrel might help, but we have not seen it.

D. B. M., Rochester.—Will some of your readers through the paper inform me as to the partridge shooting found in Canada in the vicinity of the Thousand Islands and the eastern part of the lake in general.

P. N. H., St. Louis, Mo.—Can you let me know through the columns of your paper or otherwise the pedigree of the pointer bitch Della S., 1141? Ans. By Busch's Koro out of Schnitz's Diana out of imported Juno.

ASTORIA, Oregon.—Please give address of persons who can furnish wild rice and celery. Ans. Wild rice from Chas. Gilchrist, Port Hope, Ont., or R. M. Valentine, Janesville, Wis. We do not know where you can get the celery.

J. K. K., Watkins, N. Y.—Brunswick, Ga., has within the past few years become a fashionable place, and it is doubtful if you can get good shooting there, but by going a short distance inland you can probably find good quail and turkey shooting.

H. V. M.—We do not know the address of the company nor how they load their shells. The gun you mention is excellent, but we cannot pronounce it the most perfect made in the world, for such a verdict on any gun is more a matter of opinion than of fact.

I. F. O., Windsor, N. S.—Which is the proper way to carry a hammerless gun while on shooting grounds, with the safety catch on or off? A friend of mine claims that it should be kept on until the gun is sighted, but I differ with him; which is right? Ans. Your friend is right.

K. D. B., Holyoke, Mass.—Will you please publish the pedigree of Buff and Lena, sire and dam of Dash II., he was the sire of Guy II., A. K. R. 6759? Ans. Neither of them are registered. You had better ask the breeder of Guy II., H. N. Sears, Holyoke, Mass.

B. C. E., Marshall, Minn.—How can I dig out a pond and stock it with pickerel and black bass? Ans. For complete details respecting pond culture write to Hon. Marshall McDonald, U. S. Commissioner Fish and Fisheries, Washington, D. C., for a pamphlet on pond culture by Carl Nicklas. We would not advise rearing black bass and pickerel together.

J. K. Y., Hamilton, Canada.—Is the demand for decoy ducks as great or greater than it was six years ago? Can you tell me about how many factories there are in the United States that make a specialty of making decoy ducks? Ans. The demand is about the same, and prices for hand-made decoys hold their own. The factory-made decoys are turned out by a machine; a block of wood goes in at one end and the turned decoy comes out from the other. The market is pretty well stocked with decoys.

J. M., Quincy, N. D.—Own English mastiff dog Jumbo, A. K. R. 261. Can you tell me anything about Jumbo, sire of McCormick, A. K. R. 6540? I feel confident that he is not the Jumbo that I own. Ans. Nothing further than that the owner of McCormick is or was Mr. Paulson, Mayville, Dak., and the breeder the McCormick Harvesting Machine Co., Chicago, Ill. We have no record of any Jumbo except the one you own, Jumbo (A. K. R. 261).

F. E. A., Waterbury, Vt.—I. Is enclosed pedigree fair, good or first class, and are winnings correct? 2. Having a good pointer puppy of suitable age to train next season, and wishing to train him on grouse for my own use, would you advise me to try and train him myself by "Hammond's method"? Ans. No. 1. Yes, 2. Yes, but do not attempt to train a dog unless you have the time and patience necessary to carry it through properly.

J. B. B., Hartford, Conn.—I have a raw deer hide from which I wish to make a pair of leggings. Can you tell me how to make the leather waterproof, by oil tanning or any other means? Also, in case the operation should prove too difficult, the address of some one who could tan the skin for me. Ans. We know of no way by which a dressed deer skin can be made waterproof. We presume that it might be glazed or enamelled, but in this case it would lose its character and be no better than calf skin. You do not say for what purpose you wish to use the leggings.

W. D. A., Sundridge, Ont.—Could any of your army of correspondents on Florida tell me: 1. By camping out can one combine comfort and cheapness at this time of year? 2. Can you get snort land and water within easy distance of each other in a healthy climate? 3. Is the general price of living higher than it is in northern cities? 4. Is a .44 Winchester rifle heavy enough for alligators, if not, what is the right caliber? 5. What is the best general district for sport and health? Ans. 1. Yes, but camp on high ground. 2. Yes, there are many such localities on the Gulf coast. 3. No. 4. Yes.

J. S. S., Jr., New York.—Could you kindly answer through your next issue the following question: The estimated (or known) rate per hour at which our swiftest wild duck travels and also its name? Ans. We definitely know nothing on this subject, though many estimates have been made. These are to the effect that the swiftest ducks fly from 90 to 100 miles an hour and the canvas-back is said to be about the fastest of the ducks. As we say, however, nothing is definitely known about it. See last paragraph "Chicago and West" in our Game Bag columns, this issue.

L. M. C., Bristol, Pa.—Can you kindly inform me open season for quail, snipe, duck, in North and South Carolina, Georgia and Florida? I believe the game laws have changed there of late. I am contemplating a trip South shortly, and would like latest information on these points. Ans. Open season for quail in North Carolina, Nov. 1 to April 1. Georgia, special laws for the different counties. Florida, no law on quail. For details see *Book of the Game Laws*, which gives the statutes in full.

C. S., New York City.—I am about to purchase a liver-colored pointer dog and ask you to kindly advise me as to what price I ought to pay for him, as I never had occasion to buy a dog before. The dog to which I refer is about 1½ mos. old, has never been trained and his owner cannot furnish me with a pedigree of him. Ans. Pointers of unknown pedigree and untrained are of little value; you had better consult our advertising columns, pay a little more and get a pointer with an authentic pedigree and of good field stock. Without seeing the dog you mention we can form no idea as to its value.

READER OF FOREST AND STREAM.—What is the proper way to clean a shotgun after using it; also what should be put on it to keep it from rusting when not in use? Ans. "Huts and Points" says: "Never let a gun remain dirty over night, no matter how much exertion it may involve. Swab it out first with warm soap suds, after which it should be wiped dry. Then it should be thoroughly rubbed with camellia skin or cotton flannel soaked in gasoline, turpentine, benzine or kerosene, which will remove any particles of dirt which may resist the water and soap. In addition to this, the penetrating qualities of these volatile oils are such that they sink into the pores of the metal and act as a rust preventive. The last operation is a good rubbing with dry camellia skin. If a gun is a comparatively new one, it should be kept in a dry room, and occasionally looked at and rubbed out with dry camellia skin. If it has been in use some time and is pretty well permeal with oil, one rubbing out two or three days after cleaning will be sufficient. On the locks never use anything but the best sperm oil, and that sparingly."

The FOREST AND STREAM, honored, staunch and dear to sportsmen's hearts, continues its visits, with old time promptness and regularity, losing nothing by that constant familiarity, which in this case engenders increased respect. Here are found the best stories, anecdotes of the chase, and practical hints for a life in the woods.—Holyoke Transcript.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 300 pages, price \$2.50. For sale by FOREST AND STREAM.

THE season is rapidly approaching when **Anglers** will need to replenish their stock of **Fishing Tackle**.

Before doing so, we would advise them to **call on us and examine the largest assortment** to be found in the **World**, or send us 10 cents to pay postage, and we will mail you our 136 folio page illustrated catalogue and price-list.

STEVENS SPECIAL FIRE ARMS.

Wherever shooting is done, in all parts of the world, the **Stevens Rifles and Pistols** are being introduced, and on account of their superior accuracy are preferred.

STEVENS PISTOLS have made more brilliant records and have done finer work than any other pistol ever made.

STEVENS RIFLES have made records which were considered impossible.

STEVENS POCKET RIFLES are carried by ladies, anglers, tourists and hunters. They are marvels of accuracy, compactness and beauty.

STEVENS LADIES' RIFLE is the proper rifle for ladies. It is wonderfully accurate and has no recoil.

The .22 long rifle and the .25 rim-fire cartridges, the most accurate small-bore cartridges made, were originated by this company. These celebrated rifles and pistols are manufactured by

LYMAN ACCELERATING SHOTGUN CARTRIDGE

The "EXPERT" is charged with a perforated cake of especially prepared powder, which burns progressively—the only correct method of availing of the power of powder in guns. Shot started easily, with rapidly increasing velocity and least recoil, and without stringing. Perfect combustion, little smoke, harmless dry ash residue. Cake burns in shell; no flying, heated grains to cut barrel of gun. Cakes made by machinery; greatest uniformity of pattern and penetration. No nitrates, decomposing, or changeable chemicals! Detonating impossible! Shotted cartridges, or Blanks containing powder cake only, for sale by

LYMAN CARTRIDGE CO., 9 Chambers Street, N. Y.
J. P. DANNEFELSER, Selling Agent.

GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 shot gives you 120 rounds with your own gun. Practice limited only by shooters enthusiasm. Our pneumatic auxiliary gun barrels can be inserted in any ordinary breechloading shotgun in a moment, converting your gun into an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet of No. 1 shot is discharged that will break any clay pigeon or kill small game at short range. No fire, smoke or noise, and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.

P. O. Box 1127. **VAUGHAN & CO.,** Philadelphia, Pa.

ANSWERS TO CORRESPONDENTS.

sioners should continue to increase by the proposed establishment of new hatcheries by the Legislature (although the Commissioners themselves do not approve of the establishment of any additional stations), it would become necessary for the appointment of a general superintendent, who should be a practical fishculturist and a man of good executive ability, to take general charge of the work of the Commission. Indeed, it is well understood by those who are conversant with the scope of the Commission's labors that each one of the members of the board has as much as he can reasonably be asked to do as a gratuitous public service; and unless there are substantial reasons, which have not been divulged, for believing that the proposed change would increase the efficiency of the board, the organization should be left as it is.

The codification Committee also recommend that but one commissioner shall be appointed from any judicial department. In this they have manifestly paid heed to certain expressions of distrust on the part of recent critics of the Commissioners, lest the eastern portion of the State should be unduly favored at the expense of the rest. In a matter of such importance as this, foolish sectional jealousy should be given no weight. The proposed restriction is unreasonable. The Governor may safely be trusted to appoint to the Commission men whose public spirit, ability and experience commend them, without regard to the locality of their residence.

Equally uncalled for and mistaken is the proposal to make Albany the headquarters of the Commission. At least two of the members of the codification committee must have known that one of the most important branches of the Commission's work has to do with the oyster fisheries. More time must be given to this division than to all others combined; the commercial importance transcends those of others. To do this oyster work with any degree of satisfaction, the office of the Commission must be readily accessible to the oystermen; in New York it is convenient; in Albany it would be out of reach. To transfer the maps and charts of the oyster surveys to Albany would not alone seriously hamper the business of the office, but it would subject the oysterman to unjust because unnecessary expense of time and money.

SNAP SHOTS.

THE Fly-fishers' Club, of London, is a social institution, the purposes of which are to bring together gentlemen interested in angling, to afford a means of communication between them, and to provide a reading room stocked with angling literature. The club was established in 1884 and has steadily grown in membership, until its roll now shows a list of 310. Once a year the club assembles for its banquet, at which gather members from town and country, and these occasions are always most happy reunions. It has often been suggested that New York might follow the example of London and establish such an institution here, but no one has yet been found to take the initiative. The nearest approach to the Fly-fishers' Club in this country is the Massachusetts Association, with headquarters at Boston, and a membership rapidly extending throughout the State.

At the last meeting of the Fly-fishers' Club Mr. R. B. Marston, editor of the *Fishing Gazette*, referring to the copyright bill now under consideration at Washington, related an interesting little story about Mr. F. M. Halford's work on "Floating Flies." It appears that when the book came out an American paper took it bodily and reprinted the whole thing without ever saying by your leave or thank you. Mr. Marston thereupon wrote to the editor, who responded that the proceeding should be taken by Mr. Halford as a compliment. This was perhaps the same paper that appropriated Vero Shaw's "Book of the Dog," and when taken to task for it related that the author should feel highly delighted that the editor had considered his work good enough to reprint.

The Massachusetts law, authorizing towns and cities to appoint special officers to destroy the English sparrow, has resulted in nothing, since no town has done anything in the matter. The Commissioners now recommend that cities and towns be empowered to pay bounties on eggs and dead sparrows.

Is pigeon-shooting cruel or legitimate sport? That is a question now under discussion in two States, and imminent in others. In Maine the practice is forbidden, but

an effort is making to repeal the law. A petition sent to the Legislature recites that an investigation of belfries and other pigeon roosts in Lewiston and Auburn has disclosed the fact that numbers of pigeons have died from cold and neglect; it would have been more humane, says the petition, to have given these birds speedy death at the trap. Moreover, it is urged, if the ubiquitous Yankee boy were encouraged by the reward of the few nickels for which he might sell the pigeons to the trap-shooters, he would be encouraged to feed and shelter the birds. Arrayed against the trap-shooters are numerous school teachers and even the Sabbath schools of some of the cities; and they are sending in counter petitions praying that the anti-pigeon law may be retained, on the ground that the practice is cruel and degrading. It is thought that the repeal will be effected.

A serious defect in the proposed New York law is its failure to protect rapacious birds. The Commission seem to share the popular prejudice against hawks and owls, and, in sections 78 and 80, encourage their destruction. It is sufficiently well known to all who have given the subject even slight attention that the work performed by rapacious birds is beneficial rather than injurious, and in another column a correspondent gives citations on the point taken from an exhaustive inquiry carried on by the Bureau of Economic Ornithology at Washington. It is difficult to combat prejudice, yet if the codification of the New York game laws is to mean anything, and the changes made are to endure, these changes should represent the best knowledge that we now have on all points which the statute touches on. To fail to protect these rapacious birds will be seriously to injure the farming interests of this State, and the bill should be altered so as to avoid this injury.

Whatever may be the merits of the libel suit which has just been brought by an Albany gentleman against individual members of the American Kennel Club, the case will excite lively interest among all who are connected with that institution. The complaint, we understand, is based upon the repeated publication in the *Kennel Gazette*, the club's official organ, of the name of the plaintiff in the list of the disqualified. Whether or not the damages asked for will be awarded, it is quite clear that members of the A. K. C. will not relish being made defendants in libel suits. The simplest way to guard against such unpleasant consequences is manifestly to discontinue the obnoxious posting of names of disqualified members. It should be quite practical to conduct the affairs of a kennel club without taxing the already overburdened calendars of the courts. We hear that several other suits are to follow.

The rabbit war in New Zealand goes steadily on. Our consul at Auckland reports that although there is scarcely any perceptible diminution in the number of vermin, yet the returns show the progress made in this respect, as seen by the export of skins. During the past ten years the total number of skins exported amounted to, in round numbers, nearly 100,000,000, increasing from about 7,000,000 in 1880 to 11,342,778 in 1889. The value of last year's sale of rabbit skins outside the colony amounted to \$480,195.

At the meeting of the New York Fish Commissioners held Feb. 12, there were 366 applications for trout fry, which called in the aggregate for 22,165,075 fish, and there were voted to the applicants throughout the State 2,100,000 brook trout, 2,500,000 brown trout and 3,310,000 lake trout. There were reported as on hand 22,000,000 fry, all trout of different species except 7,000,000 frost fish. The distribution of nearly 8,000,000 fry in the waters of this State cannot but have an important effect on the fishing.

On first thought it might appear that the man who wrote in our rifle columns the other day and signed himself as the "champion deaf-mute trick, snap-rifle and wing-shot challenger of the world" was laying claim to an empty honor. Mr. O'Connell assures us, however, that among the 90,000 deaf mutes of the world are many shooting experts, and he has repeatedly been called on to defend his claims. But what an odd "championship" it is.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

THE NEW YORK COMMISSION.

AMONG the changes proposed by the codification committee in the New York game law is one which reduces the Fish Commission from a membership of five to three, provides that the offices shall be in Albany and calls for meetings on the first Fridays of alternate months. We have already expressed the opinion that such changes would not be for the good of the service.

As now conducted, the work of the Commission is divided in a way which experience has shown to secure the best results. Individual members are intrusted with special divisions of the work. There are five hatcheries. The Caledonia hatchery is under the charge of William H. Bowman, of Rochester; Sacandaga hatchery, on Mill Creek, Adirondacks, under the charge of Mr. Henry Burden, Jr., of Troy; the Cold Spring Harbor, Long Island, under the charge of Mr. L. D. Huntington, of New Rochelle. The hatchery at Old Forge, on the Fulton Chain Lakes, and the Adirondack hatchery near Bloomingdale, in Essex county, are under the charge of the president, Mr. E. G. Blackford. The New York office with the office work is under the general supervision of Mr. A. Sylvester Joline, of Tottenville. The president of the Commission is designated by law as the Shellfish Commissioner, and is charged with all of the work of designating the natural growth oyster beds in the waters of this State, and with the work of surveying and the granting of franchises for the purpose of cultivating oysters. The office work is under the direction and in charge of secretary E. P. Doyle, who gives to it his entire time.

The supervision of the hatcheries by the different Commissioners is an actual work performed by the present Commissioners, as each hatchery requires the inspection of the Commissioner in charge at least two or three times each year, and in some instances the Commissioner in charge has to visit the hatchery at least once a month. It has been suggested that if the work of the Commis-

The Sportsman Tourist.

IN THE REGION ROUND NICATOWIS.

XI.—TO SHAW'S ON DOBSY.

It isn't pleasant to give up what one has started to do; but in the present case discretion was better than courage. We backed out gracefully.

We came up the same shore which we had followed in going down, and picked a few cranberries that, oddly enough, were growing among the rocks on the beach; but most of them were still in bloom or just withered. As we approached the inlet we saw a canoe there, and going up found two young Indians fishing for pickerel. At first they were reticent, but they soon told us that they had come from Grand Lake by way of Wabash into the eastern arm of Third Lake. The gun which we heard the night before was theirs.

Just below the quick water on the inlet Jot saw the head of a fine buck which was standing in the bushes; but we made no effort to kill him. True, it was not a very good chance, but even if he had been standing broadside to us in the open meadows it might have been just the same, much as we wanted meat; for Father has been so much with the Indians that he is learned in their philosophy and never lugs an extra pound on a carry. Had he met a nine-prong buck on the Machias end of the Gassobeis Carry, it would have been quite characteristic for him to request the buck to step across to the Gassobeis end, because he always preferred to shoot his deer at Gassobeis and save lugging them across the carry.

We thought it easier to carry past the little fall just above, many hands making light work, than to make Jot pole the load up over; for it is a "smart little pitch" and there was much more water on than when we came down. At the gravel above we also walked by, and on the carry to Fourth Lake Dam we walked while Jot poled the canoe up. Third Lake rose fully twelve inches between Tuesday night and Friday morning, and Fourth Lake had risen even more, though the gates were up at both dams. While we were at Fourth Lake the water rose fully two feet.

Such a beautiful, clear, hot day, such fresh air, such delight in seeing the sun after so many days of gloom. Even Fourth Lake looked almost pretty.

We left our canoe at the end of the carry to Lower Dobsy and went across to Shaw's to dinner, but more especially to get some flour, salt, sugar, potatoes, butter, condensed milk and matches, of all which we stood in some need, though we had plenty spoiling at Gassobeis. The carry is a wide sled road, along the top of the horse-back, a mile and a quarter from lake to lake. Shaw's house lies about half a mile further up the lake on the end of Norway Point. Here the family receive summer visitors and care for them at the house or on camping excursions to the different lakes about the region. The house itself is a commodious, two-story building, remarkably well located in every respect. It is in a grove of sapling red pine (which we call Norway pines), close to the lake, a perfectly healthful spot, free from mosquitoes, and though both cool and shady neither damp nor exposed to cold winds. Mrs. Shaw is a lady of refinement and tact, with the art of making temporary visitors like ourselves feel at home. The board is excellent, for any one who could cook as good a dinner as we obtained there could not cook a poor one. I have never seen a place in Maine to which it would be so easy and so pleasant to transport a whole family, old and young, and yet have all contented. Here old people could sit in quiet on the piazza, or children be left to play among the pines or to bathe at the beach in front of the house, while a part of the family could go off with guides and tents to hunt and fish. Twice a week the steamer comes up from Princeton, so that mails are regular and the place is easy of access.

We wanted to get some butter but Mrs. Shaw had none. Now butter is a luxury and according to our *credo* should be dispensed with. But as we made no pretensions to strict consistency in leading our life of poverty and self-denial we have butter when we can get it. It was proposed that we should cross the lake to Ball's and get some. We borrowed a canoe and, forgetting that the absence of any baggage should make a difference in the way we loaded, got in after our usual order, Jot in the stern, Father bowman, myself in the second band. This brought her down by the head. The affair was managed with a real "Kennebec swing," as Penobscot people say of anything that is particularly awkward. Then the canoe herself was small, narrow and cranky, with a twisted nose, which, combined with the wrong adjustment of the weight, made her work directly up into the wind. There was no butter to be had at Ball's so that we had four miles of paddling for nothing. However, we saw the steamboat locks and ran across the narrow neck of land which separates Dobsy from Pocumpeus for a view of the latter lake.

Dobsy is not the proper name for this lake, but Sissladobsis. I have used the common form of "Lower Dobsy" that I might distinguish it from "Upper Dobsy," of whose Indian name I am not sure. There seems to be an uncertainty about these names which is hard for a stranger to untangle. I have heard Sissladobsis, Sississladobsis, Sississladobsis, and Sissississladobsis given as an example of the perfection to which the Indians reduced their use of diminutives, each added *sis* being one more diminutive. But this looks to me more like an example of Yankee ingenuity than anything else. There seems to be something theoretical about it. In actual practice when anything is so much belittled as that last name, it would become a mathematical point and cease to have any visible existence; and so I have thought of some of these lakes. But I do not claim to know anything about the matter, for these are St. Croix waters.

Lower Dobsy is a beautiful lake. When we returned to Fourth Lake we could not help contrasting it very unfavorably with the clean shores, the pellucid water, the high hills and heavy growth about Dobsy. But we would not have exchanged our canoe for theirs. Indeed they make a much poorer canoe there than we do on the Penobscot. We had with us our old favorite Lady Emma—named for the mother—built for us by Gerrish, of Bangor, after a model specially shaped to meet Father's approval. She is a canvas canoe 19ft. long, made to carry three of us and all our load, yet light enough for one man to lug on a carry, high and full at the bows so as to

mount a heavy sea, and yet narrow enough to be an easy canoe to pole up rapids. She has been used for three years now, all over the northern part of the State in the roughest water that we have. No one has ever criticised the model, some have copied it; but we who have been with her through hard places and heavy seas best know her virtues. She is as staunch as on the day she was built, and will see more service yet. We paddled up the lake in the path of the setting sun and that night camped again on our island.

XII.—SATURDAY AND PICKEREL.

Friday night was as clear as a bell, stars out and northern lights flashing, in the morning a bright sunrise, then mist, fog, rain. Surely all signs fail!

We were back again on our old camp ground and at our old work of eating pickerel. Jot repeated his remark about being ashamed to look a pickerel in the face, and forthwith caught enough to last over Sunday.

Fourth Lake is full of pickerel. How many might be caught there in a day we do not know, for we never caught more than enough to meet our actual needs. In the present state of the game laws, when each one must be a law unto himself, we make our limit, not one of times and seasons, but of the amount of game which we take, which never is more than enough to satisfy our appetite. Of course this is killing to eat, and according to sporting papers, not sportsmanlike; it lays us open to the reproaches of the elect and classes us among those who have no appreciation of the proper methods for satisfying their thirst for blood. None the less we never kill when there is no reason for it; and like many other Maine people who have lost all respect for our game laws, we kill whenever we need meat. There is a volume yet to be written about Maine game matters, but it will be very different reading from what has been written up to this date, and it will explain things about which previously we have held our peace.

The Fourth Lake pickerel were darker than our pickerel usually are, some of the smallest being very dusky on the belly and almost black above. Their average length was not less than 15in.; and some of the largest measured 22 and 23in. I was always called a "biological fiend" and am still given to arcupus, so the pickerel had to furnish material for the note book. One female which we caught had a well developed roe, although I had always supposed they did not spawn before February; and her head after it was cut off and thrown into the water continued to breathe with regularity and several times turned itself from one side to the other. Many undoubtedly have noticed the little sacs which cling to the gills of pickerel and also the great size and leaden blue color of the gall-bladder, as also how the long leaves of hard white fat cling to their intestines as to an animal's. I know no other fish in which the fat takes this form and looks so much like lard; a very good oil can be expressed from it.

It seems to be the fashion to slur the pickerel. But do not some throw more than their quota of stones? That he is an interloper in trout waters is true, but he is not morally responsible for his present surroundings. The same well meaning unwisdom which supplied us the English sparrow and the black bass gave us the altogether more welcome pickerel. He is well liked in this State. There is no other fish or game which the law allows us to take any time of the year, and the back settlers and farmers count on him as a staple article of diet, while to many who live in cities winter fishing for pickerel affords more sport—if sport is the criterion by which everything must be judged—than all the other fishing they get throughout the year. He swarms when once introduced, he does not sulk like the trout, he can be taken at any time, and, practically, in any manner. Then, too, the pickerel is no mean food fish when properly cooked; but he will not bear being soaked in fat and taken out half raw, nor is he at his best in a chowder. Split the fish down his back, cut out the backbone, salt well or corn over night, then broil before an open fire and butter heavily. So cooked they are the rival of the trout. For a single meal the trout, but for a steady diet broiled pickerel.

It has been a matter of ceremony to praise and flatter the trout; there are those who cannot speak of them without dragging in the well worn adulation of "speckled beauties." Indeed, they are a glorious fish; but the pickerel has merits too, like Dr. Johnson, despite his looks. The trout is more fickle and dainty, the pickerel never lacks an appetite; the trout is shy, the pickerel bold to the point of rashness; the trout is playful, the pickerel is an old war dog. He is full of energy, dash, decision. When the buel is rippling quietly through the water as if it were the only living thing astir, the ferocity with which some large pickerel charges after it and leaps upon it with a great whirl and a flash of black and yellow, never fails to startle. Then how he cuts and shears and hangs back, making the reel ring as he rushes for the nearest stick or lily pads, where he hopes to tear out the hook. A trout does not know half as well what to do at first, but the pickerel never loses his head. A bold freebooter, a good fighter, a "leglar ole pilate" as Sebattis used to call him, he has qualities which we Maine folk understand better than the trout's coyness. He commands our respect for his hardihood, independence, and unconquerable temper. There is a shark in him—see the teeth; and a leopard in him—see the spots; and a lion for courage, and a unicorn for strength. One has but to look into the eye of the pickerel—what an eye! what colors! what craft, what resolve, hate, rebellion, tenacity of purpose gleam from the jeweled orb as he is drawn up, captured but not conquered! Nothing but the toad has such an eye. And for intelligence—he has an unfortunate countenance, to be sure, which does not give him an intellectual appearance, but his cranium lacks none of the necessary bones, and he knows just as well as any other fish what he wants.

XIII.—SUNDAY AND SPIDERS.

Of course Sunday was fair, and for that we were glad, since our Sundays in camp are occupied with the great enjoyment of whatever is nearest us. This day the sky was beautifully blue, and the lake, scarcely rippled by the light north wind, was blue also. I took my shawl and my Emerson out upon the knoll back of the tent and lay down there in the hot afternoon sun among the brakes, not to read, but to listen to the hum which underlies all silence and to enjoy to the full the sense of well-being which such a day imparts. One might fall asleep on that hillock on such a day; perhaps one did. At first there

was a procession of ants across one corner of the shawl, all stepping with sober haste, but unloaded and apparently going nowhere at all, unless to see the sluggard who had been directed to go to them. Then a dragon fly with a red body lighted on a brake near by and solemnly rubbed his nose with his paw. I never yet saw a dragon fly do anything worth mentioning, except to whizz about like a portable windmill or to sit on a stick and duck his head and rub it just like a fat bald-headed man. Then there were strange voices on the beach—somebody must have been asleep to let Father and Jot pass so near unchallenged—and the visitors had to be reconnoitred through the pine-brush.

The tent was hot that afternoon, although I went there and turned the leaves of the Emerson, trying to read. It has been done so many times before that sunshiny Sunday afternoons in the woods are always associated with Emerson. I do not care for him on a rainy day, when looking up to see if Nature herself does not smile approvingly on his optimism, there is nothing to be seen but a Scotch mist that dampened all one's ardor. "Heroism" and "self-reliance" need a back ground of blue sky in order to be perfectly picturesque, and the "compensations" of such weather as we had been enjoying for a fortnight are apt to look more like the retributions for folly than the rewards of wisdom. Not that Emerson is a mere fair-weather prophet; but, like all true poets, he has more of June in him than of November.

The tent was hot, as I have said, and full of flies; and a myriad of spiders, infinitesimally small, dangled from fine threads all over the roof. Big dragon flies three inches long, yellow or green, and black, bumped against the tent with a crackle of stiff wings and sat there as shadows. A red-bellied nuthatch lighted on the tent pole and looked in, then flew away. Emerson ceased to entertain. Then like Abraham of old we sat in the tent door in the heat of the day and looked abroad. The big dragon flies and their smaller cousins in red and brown were darting through and about the branches of a dead pine which stood in the door yard about five rods off. We were watching their quick, whizzing, undeviating flight, in zigzag lines turned with sharp angles as they spun back and forth—they are not the pickerel of the air, motionless when they are still, swift as light when they move, arrow-like in the straightness of their flight, keen-sighted, voracious?—when we saw a spider come sailing over the treetops. It was about 3 in the afternoon and the sun was at our left shoulder as we sat in the doorway; the spider came with the light breeze, which must have been drawing across the lake from the north, with a whole reef of web above her, which shone in the sun like a silver mainsail. As she came near a green pine tree she drew in her sail, clambering about on the rope ladders like any sailor, and descended to the pine of which she laid hold. When, after some hard work, everything had been made taut and belayed, she cast off again, this time sailing to the dead pine which stood in the clearing, a few rods from the green tree. The web did not catch; but she gathered it in and held it in her arms until she settled where she wished to be. She made her way from branch to branch apparently carrying the collapsed web with her, very busy and agile, until she was on the side of the tree furthest from the wind, when once more she made ready her airy craft, spread her sails again and launched forth, sailing toward the sun beyond the reach of my vision and as far as Jot, who is an old bee hunter, could follow her course. What conscious pride such a creature, even though small, must feel in its ability to make, man and navigate its own craft on these long voyages across unknown seas.

I thought I had seen something when I saw this. I thought possibly it was something new and worth telling. But it was as much a pleasure as a surprise to learn by chance that the same had been observed and written down nearly two hundred years before by a lad of eleven. In the *Andover Review* for January, 1890, you will find an article on the "Flying Spider," written by Jonathan Edwards, the great metaphysician and divine, when he was not more than twelve years old. If he stole my observations by being born a hundred or two years before I was, I will retaliate by quoting some of his. He has seen ten times as much as I and has told it a great deal better; but he cannot capitalize and I will expose him:

"I know I have several times seen a very Calm and serene Day at that time of year, standing behind some Opake body that shall Just hide the Disk of the sun and keep of his Dazling rays from my eye and looking close by the side of it, multitudes of little shining webbs and Glistening Strings of a Great Length and at such a height as that one would think they were tack'd to the Sky by one end were it not that they were moving and floating, and there Very Often appears at the end of these Webs a Spider floating and sailing in the air with them, which I have Plainly Discerned in those webs that were nearer to my eye and Once saw a very large spider to my surprise swimming in the air in this manner"—This is only the beginning of young Jonathan's sentence; it is less than a quarter by actual measure. I pause to remark that ours was a very large spider, too. "They when they would Go from tree to tree or would sail in the air let themselves hang Down a little way by their webb and then put out a web at their tails which being so exceeding rare when it first comes from the spider as to be lighter than the air so as of itself it will ascend into it (which I know by experience) the moving air takes it by the end and by the spiders Permission Pulls it out of its tail to any length * * * but if nothing is in the way of these webs to hinder their flying out at a sufficient Distance and they Dont catch by anything, there will be so much of it Drawn out into the air as by its ascending force there will be enough to Carry the spider with it," and so on for nearly a page more, telling us the philosophy of what he calls the "Greater Levity" of the web and the "Greater Gravity" of the spider.

"there remains only two Difficulties," he goes on, "the One is how they first begin to spin out this so fine and even a thread of their bodies"—which he shows by experiments and drawings. "The Other Difficulty is how when they Are Once Carried Up into the air how they Get Down again or whether they are necessitated to Continue till they are beat Down by some shower of Rain without any sustenance which is not probable nor Agreeable to Natural Providence. I answer there is a way Whereby they May Come Down again when they Please by only Gathering in their Webs into them again by Which way they may Come down Gradually and Gently, but whether that be their Way or no: I Can't say but without scruple

that or a better for we Alwaies find things Done by nature as well or better than we can imagine beforehand."

And so he goes on discoursing on optics, astronomy and natural history, aged eleven they say, but the best mind in America even at that age. And he has this corallary which has in it all the charm and restfulness of that lovely Sunday afternoon on Fourth Lake: "We hence see the exuberant Goodness of the Creator Who hath not only Provided for all the Necessities but also for the Pleasure and Recreation of all sorts of Creatures And even the insects and those that are most Despicable."

FANNIE PEARSON HARDY.

WINTER IN THE NATIONAL PARK.

YELLOWSTONE NATIONAL PARK, Jan. 9.—*Editor Forest and Stream:* This is the most remarkable winter that has ever been experienced here within the memory either of white men or Indians. There was not enough snow in the middle of January to impede wagon traffic over the roads throughout the Park. Even the trails were not blocked, except on a few very high, exposed ridges, where what little snow has fallen has been drifted by westerly winds. These drifts can be broken down and one can ride over any section of the Reserve. I have traveled over most of the northern part of the Park, and am within the limit when I say there is not an average of six inches of snow. The light snow-fall, the bright sunny days, often quite warm enough to keep the southern exposures entirely free from snow, the dry winds evaporating the moisture as fast as the snow melts, leave the ground very dry, often quite dusty. I have seen quite a cloud of dust made by bands of elk and antelope when running. Then, too, they mix the dry snow and soil where the sun has not reached the snow in sheltered places, showing the ground to be unusually dry even under snow. This dry condition of the mountains and absence of snow would indicate a very low stage of water next summer, a very much diminished supply in all the streams draining the Park and used in the valleys below for irrigation. The streams now are unusually low. The next two months, we hope, will see a change, and sufficient snow piled up to fill all the great reservoirs, streams and springs. Otherwise there is danger that the forest (what little there is left) will be destroyed by the fires sure to come with a dry season. We don't even have any severe cold weather; up to the 8th of January 10° below zero is the coldest reported in the Park.

Withal, every one enjoys the delightful weather, the game remains on their summer range since there is nothing in the way of snow to drive them to a lower country. None of the animals have moved to any extent, except the blacktail deer, which have left the Park in great numbers. Scarcely any game has shown itself on Mt. Evarts, where usually it became very numerous before Jan. 1, driven there by deep snow at higher altitudes.

Recently I saw over three hundred antelope on Specimen Ridge at an altitude of 8,000ft. Several large bands of these beautiful animals can be seen in the Blacktail country. So many antelope when seen by hunters remind them, they say, of old times, the good old times when game was abundant everywhere. It is useless to attempt to convey to the Eastern mind any idea of the number of elk in the Park. One can simply say there are thousands of them. The country at times looks like an over-stocked cattle range during a round-up. Elk everywhere in large and small bands. I recently had the pleasure of watching a band of over 400 for an hour. They were in an open park on Specimen Ridge, and I was about 300yds. distant from the center of the band. Myself, horse and dog were in plain sight on a ridge. Other elk were scattered about on ridges and in the edge of timber. It is possible they mistook us for elk, for they paid no attention to me whatever. I saw fights between bulls, one which lasted as long as I remained in sight was between two of about equal size, but one had only one horn, the other beam seemed to have been broken off close to his head. I could hear their clashing horns as they made a dive at each other, and could see with my glasses that my one-horned friend was holding his own very well, sometimes pushing the other bull back bodily, when again it would be his turn to get the worst of it. He would be braced but would be moved back, all four feet sliding on the ground. It was a very interesting sight, but I could not stay to see the end. Mr. Onehorn was standing off the other bull when I left. I heard several whistle, but not so clear as early in the season. I was surprised to hear them at all so late, Nov. 20.

There is a very perceptible increase in the number of black-tail deer, but I cannot say the same for the mountain sheep, this may be accounted for by the fact that the latter have not left their summer range in any number, only a few have appeared on Mt. Evarts. Since the outbreak of the Sioux Indians in the Dakotas, Captain Bouteille, with most of his command ("Troop "K," 1st Cavalry), has left the Park for Ft. Keogh and the field. Lieut. Frank A. Edwards is in command at Camp Sheridan with only ten men. The Park is left without a superintendent or acting civil officer, unless Lieut. Edwards is or some other commissioned officer has been so appointed when this reaches you.

The past season was an active one, by the Fish Commissioner stocking the barren waters in the Park. About 100,000 fingerling trout were brought from Michigan in cars to Cinnabar, from there hauled over 60 miles on wagon roads, then packed 20 miles on horses to Shoshone Lake and Lewis River. There is not the least doubt about the stocking of the Park waters with trout being a success. The trout planted the year before have grown and are doing very well. Some of the brook trout planted in Glen Creek were six inches long last spring when first seen. They had grown from fingerlings or two-inch fish to that size in less than a year. Professors Jordan, Gilbert, Forbes and Linton found abundance of the best kinds of fish food in all the streams and lakes they examined while investigating the waters of the Park for the U. S. Fish Commission. If the good work is continued for two years more this reservation will be one of the greatest resorts for fly-fishing in the world. There will be more kinds of trout and similar game fish here and a greater extent of country over which one can find them in the streams and lakes than the area of many of the smaller States of the Union.

Very few violations of the Park rules were committed last year. Late in the fall one camp was found very near the northern boundary line on the Gallatin. The parties were brought into Camp Sheridan, but were soon

released and their property turned over to them, as there was a doubt about their being much within the reservation boundary. Were the lines surveyed and properly marked by stakes and monuments at frequent intervals there would be no question about the line. People would at once know when they crossed the line, and would know, too, what to expect if they broke the Rules and Regulations.

The Yellowstone Park Association has a large hotel at the Fountain Geyser well along toward completion. It will be ready for guests by the first of June. This is the third large hotel that has been built during the past two years, and is a great improvement over the rough affair at the Lower Basin, which was almost three miles from the objects of interest.

No buffalo have been seen on Specimen Ridge so far this winter. A small band is in Hayden Valley and can be seen at any time by parties passing through. The reported band of 70 in the Red Desert, Wyoming, which were said to have left the Park, is all a mistake. So many parties were along the line south of the Park over which these buffalo would pass that they would have been seen by some one or their tracks noticed. The buffalo in the Red Desert are probably a band that have been there for years. They have been seen before, but only by parties who did not care to "give it away" to any and every one who came along, for had it become generally known they would soon have been killed by specimen and trophy hunters, or the Indians would soon have finished the band, for they enjoy the privilege of killing game at any and all times, no game law affecting them. There is little danger of the buffalo in the Park straying out, except on the west into Idaho, where, if molested, they would soon return to the reservation.

In October Captain Bouteille had five small log cabins built at different points for the use of snowshoe scouting parties. They are so situated that the scouts can make their trip over a very extensive range with the certainty of shelter every night. The cabins are well built, provided with a door, window, good fire place, a bunk and locked strong box, to contain a supply of provisions and blankets. These cabins are not in sight of the roads or trails, but are cached as they are for the benefit of no one but the scouts. H.

ANTOINE BISSETTE'S LETTERS.—VI.

M'sieu Fore's Strim:

Wal, seh, dat hol' fashin Janawary t'aw was come sem lak we ant mos' spec he will, in de mont' he b'long for. He'll was mek me some troubl' an' he'll mek mesome funs an' Ah 'll tol' you bose of it, haow he was.

Ah 'll was be chaup bah de cord for Joel Bahlett hees son-ny-law. Ev'ry since de wintry beginn he was beegin for hearnes an' ev'ry tam dar was come snow 'nough, dar was come some more, an' bombe he was be very high, an' Ah 'll gat for pile mah hwood taup of it.

Ah 'll pile it kan' o' hopin cause it was season better so, an' it ant meashy any wus for me, probly.

Wal, seh, w'en de snow was gat four probly t'ree foot high an' Ah was pile mah las' cord, de sous' wind beginn for blow kan' o' genkly, den more harder an' harder an' more warmer an' de suow flea beginn haup all over de snow till he 'll mek it gray lak it was been pepper.

Den de snow beegin settlin', settlin' more under one side of mah hwood pile as t'odder, till mos' all my cord was tomble an' seratter togedder, an' spile all mah nice pilin'.

Den it beegin for rain lak hol' t'under an' Joel Bahlett sonny-law git scare for afraid de sleddin' all be gone off an' so he 'll hoorah for draw off hees hwood home.

An' he 'll antook mah meashy but meashy it w'en he 'll gat it draw an' he 'll ant pile it so caifly Ah was did, so you see he 'll cheat me for mos' four cord, Ah do' know but t'ree, probly. Dat was pooty discourage for poor, hones' hard-workin' mans, Ah tol' you.

But he 'll mek mistake of ten cent he 'll pay me too much as he mean to, an' dat mek me feel leetly better. Dat was de way, de t'aw bus' me, some.

Naow Ah tol' you haow it was do me some fun. Ah 'll was mek grea' deal of cackelate on hunt some coon w'en he come aout for sociable wid hees folkses, he 'll ant see for more as mos' two mont' w'en de t'aw was be t'aw-in', some bees'ness pree-vent me to go.

Ah 'll had to keel bif critter for Tom Hamlin' an' 'fore Ah 'll gat it hang, de win' come on de north' side an' froze some crus' on de snow.

But Ah 'll took mah haxe an' go hairly of de mornin'.

Fust Ah 'll fin' track of four coon goin' togedder, den t'ree in one road, den bombe five jus' de sem, an' all pahnt toward one way.

Ah 'll hope very hard it ant be hole in de rock where he all goin' an' Ah 'll foller, foller long way till Ah was be tire. Den Ah 'll stop for have it some smoke, an' w'en Ah 'll was got lit of mah pipe Ah 'll kan' o' stan' leetly while for look what Ah 'll see.

It was clear mornin' an' so steel you can hear squirly run on de crus' more as forty rod.

Off piece Ah 'll took noticed of big hol' holler tree wid de limb all broke off, an' Ah 'll see what Ah 'll think fus' was smoke comin' aout de taup of it. It ant come steady, honly poof! poof! lak stin voggin on rail-roll, baout once so often as you breeze you bref.

Ah 'll was very astonishin', but Ah 'll ant fraid, cause Ah 'll ant never do dat, an' Ah 'll go close of it an' den Ah 'll see all de coon track come raght dar. Bah gosh! Ah 'll said, all de coon in Danvit was be in dis tree if he ant gone off on de crus', an' Ah 'll guess he ant, for dat stin was hees bref. It clamb de sky all de tam, poof! poof! Wal seh! Ah 'll throw mah coat, Ah 'll spit on mah han' of it an' Ah beginn for chaup.

Mah haxe go pluck! pluck! an' ev'ry tam Ah 'll stroke Ah 'll said hah! an' de cheep flew so you tink it was rain hwood. Dat hol' tree can' stood it great while an' bombe go c-r-r-r-ack! c-r-r-r-whoosh! on de crus' an' split wide all hopen, an' dar was a squirm of hair an' claw more as ten foot long.

Feefty coon! Ah 'll said, an' Ah 'll jump on it an' knock it raght 'tween de head wid mah haxe, all but one dat run way an' Ah can' see hees track on de crus'. W'en Ah 'll get it all keel Ah 'll count it, an' bah gosh! Ah 'll was dis'pant. Ah 'll spec dar was feefty, but he ant honly t'irty-seven, cep' de one run way.

Wal, Ah 'll got for mek de bes' of it, an' Ah 'll ant cry 'f Ah 'll ant gat great many coon dis tam.

Fust Ah 'll tie it all in row an' haul it head fust, till Ah 'll gat fraid it wear off all de hair. Den Ah 'll go home an' got sled an' load mah coon on it an' draw it so. W'en Ah 'll comin' where de folkses see me, fust dey

tink Ah 'll gat beeg sled load of hay for mah hoss. Den w'en Ah 'll gat more close of it dey tink Ah 'll was peddle fur overcoat, an' den w'en dey see what Ah 'll gat, dey ant tink what for tink.

W'en Ah 'll skin it an' nail de skin on mah barn for dry, stranger folkses say w'en dey drove on dat road, "Dat mans was pooty good off for be able of board hees barn of coon skin!"

De meats mek it long row w'en it was hang up for froze, an' it mek you stommack be hurry for have it cook w'en you look of it.

What you tink Ah 'll was pooty good feller for hunt coon, hein?

Ah b'lieve de reason Ah 'll get so few of it was cause dey mos' all gone off on de crus' fore Ah 'll found dat tree.

ANTOINE BISSETTE.

Scrippos.—M'sieu Mumsin said he 'll b'lieve Ah 'll ought for mek it game supper of dat coons an' invite all de huntin' feller in Danvit an' have it hol' big tam.

Ah 'll goin' speak of Ursule baout dat, an' if he say he ant care, Ah guess we goin' have it.

Ah guess yass, if he ant willin' probly.—A. B.

Natural History.

NOTES ON THE BEAR.

Editor Forest and Stream:

I notice in your issue of Feb. 5 a letter from "M. D." in regard to the breeding of bears. Your answer is not altogether correct as regards our country. Here bears mate during the month of August. During running season the female will go to a tree and stand with her back to it, reach above her head with her paws and bite the tree. A male will come along and will go through the same performance. About the first of February the females go up to have their young and do not come out again until their young are large enough to follow them, which is about May 15. The cubs follow the mother until the next running season, which is the next following August, one year later; they only have young every two years. The females that have mated in August are very fat in the fall and are what we hunters call "barren shes." I have had pet bears for years, and have seen those owned by others, but have never known them to breed. I think as a general thing they have two cubs. During my hunting experience I have never seen more than two following a female. It is my opinion that the male will kill the cubs. This has always been the opinion of all old bear hunters.

I have caught cubs in September that were not larger than a house cat, and have killed them as late as December, weighing only about 50 or 60lbs. In all my hunting I have never killed what we call a "barren she" during the month of February. I think when they go up to have their young they never come out until the cubs are large enough to follow. It is an old tale with bear hunters that during running season, when a little bear comes along first after a female he will roll a chunk up to the tree and get up on it, so that he can bite high up. The next one that comes along if he cannot reach the bite he will turn back, as he thinks the bear in front is the biggest and won't do to monkey with. I have seen them biting the tree and every fellow certainly tries to reach his best.

HUNTER.

POINT PLEASANT, La.

Editor Forest and Stream:

I note the question and remarks on the "Breeding of Bears," in the edition of Feb. 5, and contribute my mite, gained by study of the species during an experience as a trapper of more than forty years in New England and Canada. It is my opinion that bears mate mostly between June 1 and 15 and have their young the fore part of February, a period of eight months in gestation. The number at a birth rarely exceeds two, but I once found four in a den and but one old one. This was in March, when it was good tracking, and as no tracks led away from the den it is certain that the cubs were one litter. I was very thorough in my search for another old one, as I had doubted bears having more than three at a birth. No doubt the male will kill the cubs. Many of the carnivora have this propensity, hence the females hide away by themselves to have their young. Bears are the worst cannibals I know of. I have had bears killed in traps by others several times, and forthwith they tear out and devour the entrails as they do with a sheep. Some months ago I noted the inquiry of a correspondent for best bait for bears. When I commence the season I endeavor to procure the entrails of sheep or swine, as the best for a starter; then when I have taken a bear (and now I am giving away my very choicest secret) I cut off what I need for bait and burn the rest of the carcass. Bears will be lured by this when nothing else will bring them and it never fails. I got on to this as follows: I observed that the carcasses I skinned out were carried off. Following up I found it the work of bears and that all but large bones were eaten before quitting; this, together with their killing and devouring in a trap, was a pointer I did not fail to profit by. According to my observation bears breed only in alternate years, but as your correspondent's bear did not raise her young she may be in season the ensuing summer.

MAINE, Feb. 8.

A DEATH FROM SNAKE BITE.—St. Augustine, Fla., Feb. 7.—*Editor Forest and Stream:* A deep gloom has fallen on this gay throng through the death of a popular young Englishman, from the fatal poison of the rattlesnake, the bane of all sportsmen. The gentleman, Mr. Bosanquet, went out with his friend into one of the hammocks after birds, and came upon the reptile, received its fatal bite in the calf of the leg; and knowing the desperate nature of the injury, proceeded at once to save himself by cutting out the part. The noble man and friend who accompanied him sucked the wound—a heroic thing to do, for a simple abrasion or crack in the lip might have been fatal. It is a sad fact that no antidote has yet been discovered for this fatal poison, for which the Indians of the West care nothing. Several of these have told me "Indian no mind snake bite, medicine man cure it." If this is so, why cannot the secret be secured from them?—H. CRUTHERS, M.D. [The jaborandi remedy, so successfully employed by Dr. Yarrow in his experiments with this poison carried on some years ago in Washington, ought to have been tried in this case.]

THE OPOSSUM.

SO far this winter the pages of our most valuable paper, the FOREST AND STREAM, have been crowded with many interesting accounts of coon, fox and other hunts, while but little has been said about our old friend the possum. Is it that the sport of possum hunting has ceased to be popular? Is it that the game is scarce? Or is it that our writers, in giving their brilliant accounts of other grand hunts, have forgotten the possum entirely? True, Northern hunters know little or nothing about the habits of this animal; but to those who hunt in the South, and especially to coon hunters and raisers of poultry, it is not only common, but also often proves itself quite a nuisance.

Many a night have I trudged along after the hounds or sat upon a fallen tree trunk, listening to the glorious music of the pack; when suddenly they would tree. Jumping to my feet I would be off as fast as the underbrush and darkness would permit. Pressing on in the direction from which the voices of the hounds came, I would picture to myself a coon of the largest size perched in the fork of a huge black oak. On coming up, however, no such sight met my gaze; in fact, one quite different. There was the well-matched pack of hounds circling round a sapling not bigger than my arm and making the whole timber reëcho with that deep melodious music which can be produced only by a pack of foxhounds.

Why! what is the cause of all this commotion? O! now I see. Wound around the topmost branch of the tree is what looks like a ball of dirty cotton about the size of a man's head. Throwing down my axe and hanging my lantern on a broken limb, I proceed to climb the tree, which sways under my weight as though it would break. The ball of cotton does not move, neither does it offer any resistance when I put my hand on it. At length I find what is called the handle, a long, snake-like tail about as large as one's finger and perhaps eight or twelve inches long. This I pull and with difficulty I unwind and detach from the limb a possum. It dangles by its tail for a moment and shows its teeth. This tells me that it is not

YOUNG OF THE OPOSSUM ABOUT ONE WEEK OLD (LIFE SIZE).

an old one and I proceed to make it "sull" (play possum), by tapping it on the nose with a stick. At the second or third blow, all signs of life disappear and as far as looks are concerned it is dead and is easily carried to the ground. Never, my fellow hunters, allow yourself to be deceived by this little ruse, and put your hand too close to the jaws which contain such sharp teeth. For if you do I think without a doubt you will be forcibly reminded that your game is not half so dead as it looks. The ruse of playing possum, however, is so adroitly feigned that after a shake or two, such as a terrier gives a rat, your hounds will leave the possum for dead.

An old and experienced possum will "sull" almost as soon as it is touched, while a young one sometimes has to be subjected to a little rough treatment. I remember one possum that I could make it "sull" only by dashing him in a dog's face and jerking him back by the tail.

I never knew of more than one case where a possum would show fight to a dog. This was in the spring of '90. I had started out in quest of young squirrels, followed as usual by my favorite hound, Old Ben, whose ragged ears told of more than one encounter. I was making through "Wolf Holler" (this was in Missouri) gazing up in the treetops, when my attention was attracted to Old Ben, who was digging like fury under an old rotten log. I ran to the spot just in time to see Old Ben jerk his head out of the hole, while holding to his lip was a possum of extraordinary size. The hound made a grab at her and I could hear the bones crack. The possum thinking, no doubt, "discretion the better part of valor," dropped as though dead, and Old Ben after administering a shake or two left her.

I dispatched her, and on examination found her to be a female of extreme age. The pouch contained thirteen little pink creatures not much larger than an ordinary bean, with not a vestige of hair on their bodies. It would have been hard to find the place where the eyes should be, for not a sign of these organs could be seen. Each little creature was holding by its mouth to a teat, and they held so firmly that it was with quite an effort that I detached them. When this was done they squirmed about with a great deal of animation. It is said that the young of the opossum at one week old do not exceed four or five grains in weight. Although I had no opportunity of weighing these I am sure they could have weighed little more than five grains.

When I related the killing of the possum with thirteen young, I was blessed by the farmers and poultry raisers of that section and it was put in a local paper on account of the large number of the young, but the old saying, "The first man to tell a story stands no chance," proved itself true, for in the very next issue of this paper another nimrod stated that he had killed an opossum with fourteen young. I never heard of a litter of more than nine before this, and I am led to think that that number is seldom exceeded.

It is needless to remark on the tenacity of life of the opossum, but I think that no animal of its size is harder to kill, not excepting the turtle or the cat. LOTOR.

[As the opossum has only thirteen teats and as the young are born in an extremely helpless condition and are at once transferred to the pouch by the mother and attached to the teat to which they remain fixed for a considerable period, it is difficult to see how fourteen young could be raised. Can "Lotor" give us the etymology of the word "sull"? It is new to us. Has it any relation to the word sulk or sullen? Light is needed.]

WHITE DEER.—Appleton, Wis., Feb. 9.—*Editor Forest and Stream:* In a recent issue Mr. E. Hough, your Chicago correspondent, inquires as to any one's personal

knowledge of the killing of a white deer. In early November, 1888, while the writer and two friends from here were hunting in the vicinity of Iron River, Mich., on the Upper Peninsula, one of the party shot and secured a white deer and wounded a doe, which was in company of the white one, but failed to secure it, as it was then so dark as to make following the track on bare ground impossible. During the night it snowed, so the wounded one was lost. The white one was a delicate creamy white with pink eyes and the hair seemed to the touch finer than ordinary deer hair. It was in rather poor flesh and would weigh about 65lbs. (estimated), it was killed with a .44-405 grain lead bullet—no silver in the transaction at all—and the killer is still on earth and fairly active for an oldish man with the usual ups and downs of the average man in business. The white deer attracted a great deal of notice all along the Menominee Range, and was seen by hundreds of people at railroad stations, as it was brought down here. It was handed to a butcher to skin with the intention of having it mounted, but owing to warm, muggy weather and neglect in attending to it in time was spoiled, the hair all falling out around the head. The writer saw a fine specimen in Buffalo, N. Y., said to have been killed in Pike county, Pa.; that one was a large buck; the one killed in Michigan was a doe.—C. V. Y. [The white deer mentioned was evidently an albino.]

WINTER ROBINS IN NEW ENGLAND.—Bath, Me., Feb. 5.—*Editor Forest and Stream:* A few years ago it was stated in your columns by a noted naturalist that robins often passed the winter in the deep forests of New England. I was much astonished by the statement, and resolved to observe closely, hoping to verify the statement. This winter my efforts have met with success. On three different occasions I have seen robins in the same vicinity, once in December and twice in January. They were on the east side of the Kennebec River, about six miles from the ocean. When first seen there were about twenty in the flock, the second time eight, and the last time but one was seen. The single bird flew on the marsh near me and was feeding on something it picked from the ground. This seems to account for their frequenting that locality. As this has been a severe winter in Maine I am now convinced that the statement made by the naturalist is correct. Arctic or white owls have been unusually abundant on the coast of Maine this winter. Several have been seen near Bath, one within the city limits. A number have been taken at the mouth of the Kennebec and on the Seguin. A number of fine specimens have been secured about Boothbay.—C. H. G.

LINNÆAN SOCIETY OF NEW YORK.—A regular meeting of the Society will be held at the rooms of the American Geographical Society, No. 11 West Twenty-ninth street, Friday evening, Feb. 20, at 8 o'clock. The following papers will be presented: "Remarks on the Song Seasons of some South Carolina Birds," by Leverett M. Loomis; "The Labrador Duck," a revised list of the extant specimens in North America, with some historical notes, by William Dutcher.—JONATHAN DWIGHT, JR., Sec'y.

THAT WINTER RAIL.—Binghamton, N. Y., Feb. 11.—*Editor Forest and Stream:* The "king rail" that I mentioned was the *Rallus elegans*. I saw it in the hands of a taxidermist of this city, where it was left to be mounted. It was shot near the village of Greene, Chenango county, N. Y.—W. A. H.

Camp-Fire Gleanings.

"That reminds me."

IT was a sober farmer man who, one fine morning, went to roam the fields and forests on hunting deeds intent. No special kind of bird or beast had he designs to slay; but wandered on intending, in an impartial way, to sow destruction broadcast and harvest all it yields. Nor was he posted on the laws, though posted were the fields!

What time—according to the bard—"The lowing herd" should "wind,"

His hopes had run down in his breast and eke his shoes behind. He'd torn his coat and bruised his knee; he was inclined to curse in a manner quite too rugged for my smoothly-flowing verse. Upon the scene that follows I fain would draw the veil; For, nestling in the hedges, he spies a splendid bunch of quail.

"Abad!" says he, "now I'll shoot high and catch 'em through the head,

And then advance the outposts and gather up the dead." Soon said, soon done. Loud roars the gun. But when with ghoulish glee

He rushes forward for the flock, he finds a scanty three; And scarce are these poor victims within his pocket stowed When another farmer, irate, comes running down the road.

"Hey! What you doin' here, I say? You ain't no right at all To be a-shootin' of them quail till way 'long in the fall."

"Me? Shootin' quail? I hain't shot none." Thus spoke our farmer man;

Or rather, to be accurate, 'twas thus that he began To speak; when, lo! A wondrous sign! An omen! As of old They came to check the tongues of men when they had grown too bold.

There came a flutter at his side and from his bulging coat A quail flew off and left the lie still fluttering in his throat.

"See now, you have. It's 'gainst the law. You'll pay well for that game."

Again denial; and again, as formerly, there came A flutter—from the other side—and toward the setting sun Quail number two went speeding to catch quail number one! Dumb with amaze our farmer men watch the receding bird; When, from another pocket, whirr! whirr-r-r! off went the third!

Now whether they were only stunned and so soon flew away; Or, "entered into" by the lies so glibly told by A., Went whizzing down the western slope into the sunset sea. Are things too metaphysical and mystical for me.

I simply tell the tale as I was told it long ago By a man who was "reminded," and hence it must be so!

KORAX.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Ado.*

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE NEW YORK GAME LAW.

CANTON, N. Y., Feb. 13.—*Editor Forest and Stream:* In your issue of Feb. 5 you publish the proposed game laws. Section 20 gives the appointment of game protectors to the Commissioners of Fisheries. Is this wise? Is it recommended by the Commissioners themselves? Should not each locality have something to say in the matter? How does Mr. Blackford know who would make the best protector for St. Lawrence county?

Section 40 says "no one shall kill more than two deer in one season." Make it three. There will be no more deer killing and hunters will have less excuse for breaking the law.

Section 44 allows hounding forty days. Are Sept. 1 and Oct. 11 in the open or close season? This should not be left doubtful.

Section 42 says no deer without horns shall be killed. Who will educate the dogs to run only male deer, and will the club hunter who has been watching beside the pond for hours spare the doe when it is so easy to destroy the proof that it is a doe?

Hounding is prohibited in St. Lawrence and Delaware. Floating is prohibited everywhere. Will some one tell us how we of St. Lawrence are to get any venison? There is but one way—still-hunt. Still-hunting in August and September is uphill business. Must we of St. Lawrence be but the breeding ground for game for the rest of the State? Must we stand off and kill by still-hunting or not at all (and it means to the average outer not at all), while all the rest of the State may drive deer into ponds with a pack of dogs and kill them with a club? That isn't fair. The men of St. Lawrence have worked long and earnestly for protection. They do not want hounding because they know how very destructive it is. But if, after all their work, the deer are to be turned over to the dogs from everywhere except St. Lawrence, I protest. In place of hounding give St. Lawrence floating—or, what would be better still (for the deer at least), prohibit killing or shooting at a deer from a boat.

Enforce the law against all killing prior to Aug. 1, and you have reduced the "floaters'" chances to many less than you give the hounder.

Treat all alike, and to do it you must give St. Lawrence more or the rest of the State less than there is in the proposed bill. J. H. R.

[Our correspondent's question with regard to Section 44 is answered in paragraph 7 of Section 271 of the proposed bill.]

Editor Forest and Stream:

I read with great interest Mr. F. M. Chapman's short plea for hawks and owls in the last number of your valuable paper.

This subject is one which every sportsman should be interested in, as well as the agriculturist, though these seem to think that the greatest enemies they have are the hawks and owls.

As Mr. Chapman says, "it has been proved" that these birds are beneficial rather than harmful. In the Report of the Ornithologist of the U. S. Department of Agriculture for the year 1887, Dr. A. K. Fisher says: "Out of 1,072 stomachs examined, 89 were empty. Of 983 containing food, 57 contained poultry, 20 game birds, 177 other birds, 523 mice, 137 other mammals, 51 reptiles and batrachians, and 225 insects. On looking at the following tables it will be seen that certain species feed principally on mice and insects, while others feed principally on poultry and small birds. In the latter category, fortunately, there are but 5 species in the Eastern States, namely, the sharp-shinned (a small hawk, locally known as blue, chicken and bullet hawk) Cooper's, duck, and pigeon hawk, and the great horned owl (called hoot, cat and skunk owl). Taking out 126 stomachs of these 5 species, there remains 857 stomachs of 23 species, of these 31 contained poultry, 11 game birds, 109 other birds, 518 mice, 125 other mammals, 49 reptiles and batrachians, and 241 insects. In other words, poultry was found in but 3.6 per cent. of the 857 stomachs, while mice were found in 64.4 per cent."

Where have the Commissioners who framed the new law lived? It is very evident that they are not ornithologists, or the law for the protection of hawks and owls would not have been repealed. In this section of New York State the red-tailed hawk (*Buteo borealis*) is the most common. On looking at the table referred to, it will be found that "of 311 stomachs examined, 29 contained poultry or game birds, 35 other birds, 203 mice, 55 other mammals, 9 batrachians or reptiles, 24 insects, 3 crawfish, 4 o'fall, and 29 were empty. Two hundred and ten examined by the Division contained mice."

It is a well-known fact that during the months when grasshoppers can be obtained, these insects constitute a large part of this bird's food, and the small number of crops containing insects (24) is due to the fact that they were taken when grasshoppers could not be obtained. Yet in the face of this poor *Buteo*'s nest is robbed, his young killed, and himself and his wife murdered whenever an opportunity offers.

Suppose the 210 hawks mentioned above each chose a mate and reared a brood of three young. At the rate of one mouse a day for each bird, the 210 families or 1,050 birds would in one year rid this earth of 333,250 mice. Out of the 29 stomachs containing poultry or game birds, 4 contained game birds, those being quail. Of the 55 containing "other mammals," 7 were rabbits and 10 gray squirrels. When it is seen that out of the 311 crops examined, only 21 contained game birds and animals, and those of species which are prolific breeders, the damage is not so great as is supposed.

But it seems hopeless to argue with the sportsman or farmer on this subject. They have seen hawks catch chickens, and the sportsman shot one that had driven a partridge into an ice-cold stream. The grouse was then taken from the water and its "neck wrung." It would have been more sportsmanlike if the water had been wrung from the neck and the grouse given its liberty. One thing they didn't see, however; that is the 333,250 mice that were killed.

With the red-shouldered hawk (*Buteo lineatus*) the

slaughter is even greater, owing to the comparative tameness and noisy ways of the species. Looking at the summary of this species in the tables it will be found that of 102 stomachs examined, 1 contained poultry, 5, other birds; 61, mice; 20, other mammals; 15, reptiles and batrachians; 40, insects; 7, spiders; 3, crawfish; 1, earthworm; 1, offal; 1, catfish; and 3 were empty. This hawk shows the best record of any, there being only two game animals (rabbits) and no game birds.

A few summaries of other hawks and owls are as follows:

Marsh hawk (*Circus hudsonius*).—"Of 46 stomachs examined 5 contained poultry or game birds (1 duck, 2 fowls, 1 woodcock and 1 quail), 5, other birds; 24, mice; 9 other mammals (no game animals); 3, reptiles; 8, insects; and 1 was empty. Twenty-two stomachs examined by the Division contained 21 mice."

Sharp-shinned hawk (*Accipiter velox*).—"Of 48 stomachs examined 2 contained poultry and game birds (1 fowl and 1 quail); 35, other birds; 4, mice; 2, insects; and 10 were empty. Total number of small birds 41."

Cooper's hawk (*Accipiter cooperi*).—"Of 46 stomachs examined 15 contained poultry or game birds (6, chickens; 4, pigeons; 3, quail; 2 poultry); 17, other birds; 1, mice; 1, frog; 1, lizard; 2, insects; and 11 were empty."

Broad-winged hawk (*Buteo latissimus*).—"Of twenty-two stomachs examined 2 contained small birds, 3 mice, 5 other mammals, 8 reptiles or batrachians, 10 insects and 1 earth worm."

Rough-legged hawk (*Archibuteo lagopus sancti-johannis*).—"Of 28 stomachs examined 23 contained mice, 4 other mammals, 1 lizard, 1 insect, 1 was empty; seventeen stomachs examined by the Division contained 52 mice."

Sparrow hawk (*Falco sparverius*).—"Of 133 stomachs examined 1 contained game bird (quail), 28 other birds, 55 mice, 6 other mammals, 5 reptiles or batrachians, 83 insects, 12 spiders and 5 were empty."

Long-eared owl (*Asio wisconsinianus*).—"Of 47 stomachs examined 1 contained a game bird (quail), 5 other birds, 40 mice, 2 other mammals (1 rabbit), 1 insects and 5 were empty."

Barred owl (*Syrnium nebulosum*).—"Of 37 stomachs examined 1 contained poultry, 4 other birds, 16 mice, 8 other mammals, 2 frogs, 4 insects, 1 spider, 2 crawfish, 1 fish and 6 were empty."

Saw-whet owl (*Nyctala acadica*).—"Of 6 stomachs examined all contained mice."

Screech owl (*Megascops asio*).—"Of 94 stomachs examined 1 contained poultry, 20 other birds, 41 mice, 1 other mammal, 1 frog, 35 insects, 3 crawfish, 1 spider, 1 indeterminate matter and 7 were empty."

Great horned owl (*Bubo virginianus*).—"Of 30 stomachs examined 16 contained poultry or game birds (3 ruffed grouse, 1 quail, 2 guinea fowl, 4 fowl, 4 poultry and 1 pigeon), 2 other birds, 1 mice, 12 other mammals (5 rabbits, 1 fox squirrel, 1 gray squirrel), 2 insects and 1 was empty."

Of the 28 species of hawks and owls mentioned in this report 23 are beneficial, yet these 23 have to answer for the sins of the other 5. Why the Commissioners have seen fit to repeal the law for the protection of these birds is something I can't see. Why were not these 23 species exempt when that law was framed? J. ALDEN LORING.

OWEGO, N. Y.

Editor Forest and Stream:

One of the worst features of the present and the proposed law is the one that allows men to go into the woods after woodcock and hares in September. It is impossible to follow people about and watch what they shoot, and it is a well-known fact that by Nov. 1 quail in many sections are about shot off. Hares are often with young even up to October, and should not be shot a day before that month. H.

NEW YORK, Feb. 16.

Editor Forest and Stream:

I was present last Thursday at meeting of committee on game laws and was given to understand that shooting from boats will be allowed on the Hudson. Several prominent sportsmen along the Hudson had written the committee expressing a desire for such amendment. Three or four persons were present from Long Island and strongly expressed a desire to have more favor for Queens and Suffolk by allowing wildfowl shooting as now, until May; also to allow game to be sent out of the county to market by carrier, which is prohibited in the bill, stating that their local shooters killed a great many ducks for market, two last fall having killed over 900 ducks in one day. (More than killed on the Hudson in a season.)

Forest Commissioner Townsend Cox opposed spring shooting on Long Island and advocated making penalty for killing a deer in the Catskill Mountain region from Heidelberg to the Pennsylvania line within five years, "one year's imprisonment and \$100 fine." Mr. J. D. Collins, of Utica, presented amendments to the proposed law to such extent as to be almost a substitute bill, and in the end complimented the Board of Commissioners by stating that he did not regard the proposed bill as being as good a bill as the present State game and fish law. Mr. Collins advocated jack-hunting for deer after Aug. 15, as I understood him, for reason that they did not come much to water to feed and to get rid of insects, flies, after that time. If so, there would be few to jack-hunt. The proposed bill prohibits jack-hunting of deer. The present law, giving by lease or hire, exclusive rights to shoot and fish, excepts leasing any lands or water belonging to the State. Such prohibition is not in proposed law. Asking E. G. Whitaker, of Attorney General's office, about this point I was informed that the State could not and would not lease thus any of its lands. Mr. Whitaker did appear to be very desirous to get the game bill passed without any amending, stating to me that if I would wait until the bill was passed and signed, he would then get such amendments introduced and passed as I desired. This letter is not intended for publication, but you can make any extracts.

Mr. Henry A. Reeves, of Suffolk, opposed the provisions of the bill forbidding the use of steamboats in dredging for oysters in Long Island waters, and the use of dredges heavier than thirty pounds. This would virtually put an end to oyster dredging there. Prof. Lintner asks for the protection of certain birds that were insectivorous, and therefore beneficial to the agriculturists. He wanted it made a misdemeanor to feed English sparrows, Hawks, shrikes and owls should be protected, as they were insectivorous, and the shrikes killed many of those little

pests, the English sparrows. He also asked for protection for robins, blackbirds and meadow-larks, giving no open season for these birds. Assemblyman Bradford asked for a brief open season for web-footed birds in the spring on the St. Lawrence River. The Canadian hunters were given an open season in the spring, and they did not confine their hunting to Canadian waters. He also pleaded for an amendment allowing jack-hunting for deer. A further hearing will be given next Thursday at three o'clock.

CORRESPONDENT.

ALBANY, Feb. 14.

NOTES AND NOTIONS.—II.

Editor Forest and Stream:

Not very long ago I happened to find myself in company with half a dozen men, who make it a practice to spend their vacations in the West. They were all good fellows, keen sportsmen and well bred men—all men to whom could fairly be applied that much-abused word, which in common talk has now almost ceased to have a meaning and which yet means so much—gentleman. The game killed by the party comprised bears of two species, deer, antelope, elk, white goats, moose, sheep and mountain lion. As we were all familiar with one another's tastes, it may be imagined that there were plenty of hunting stories told, and that we had a pleasant session.

I sat still and smoked and listened most of the time, and as I listened I was struck by one thing. This was that these men hunted not for blood alone but really for the clean manly sport of the thing. They did not want to wallow in gore, they wished simply to live the free outdoor life of the mountains and to provide themselves with meat in a fair honest way, by matching their hunters' craft against the keen trained senses of the wild creatures which they pursued. All of them seemed to appreciate that the game is rapidly decreasing, and that it is the part of all hunters to do what killing he does with judgment and discretion.

Thus one gentleman explained that he never killed a cow elk nor a calf. One party desiring to bait for bears did not depend on game for their baits, but purchased for a small sum a lot of crippled, worn out horses, which they drove along with their pack train and killed as they needed bear baits.

One of the party told a most interesting story of a fight which he witnessed between a bear and two dogs that he had with him. One of the dogs was a greyhound pup of nine months and the other an older greyhound, which is supposed to have a dash of bull-terrier blood in him. The older dog is a veteran and has for years been used in bear hunting. It is generally supposed that the greyhound follows game only by sight, but this is known by most men who are familiar with this breed to be an entirely erroneous belief. At all events these two dogs hunted by scent. The old dog when he struck a bear's trail, would follow it, feathering like a foxhound; at first, when the trail was cold, going slowly and stopping every now and then, but as the scent got warmer, advancing more rapidly. When it was seen that the dog was on a trail a rope was put on him, and the men would follow on foot. When he got near the game he would stop and point for fifteen or twenty seconds, and then, if not restrained, would make a dash for the bear. The first time the young dog was taken out they came upon a bear trail, and this performance was gone through with. The young dog seemed at once to catch the idea and thereafter followed a trail very satisfactorily.

These dogs were astonishingly quick, and would hold a bear absolutely in one place. They would feint at him and he would strike, as it seemed, within a few inches of their heads, but he could never hit them, and if he turned to run they pinned him by the hams in half a second, and he was obliged to sit up again and assume the defensive. In the particular battle above referred to, dogs and bear fought until both were almost exhausted, but neither dog had a scratch on him. Then when the animals were quiet for a little while the hunter killed the bear.

Of the six bears accounted for last season by this party of diners only one displayed any great ferocity. This was a grizzly brought to bag by a well known gentleman. Briefly the story of the capture is this: The hunter was alone and was just passing out of a piece of bull, or lodge-pole pines, when he saw the bear in the open park which he was about to enter. The animal was standing broad-side on, and the first shot struck it behind the shoulder and passed through the lungs; it at once turned and ran up hill into a small thicket of laurels which stood about shoulder high. The hunter followed, saw by the blood where the bear had entered the thick brush, and heard it whine. He walked along the edge of the thicket trying to look over and catch a glimpse of the beast, but without success. Suddenly it came into view at the point of the brush some 60 yds. distant and stood for a moment. In an instant the hunter fired again, and this ball entering just behind the fore leg, and low down, split the point of the bear's heart. It whirled about, and without an instant's hesitation charged down the hill toward the man, who again fired, this time striking it in the chest. Still the bear came on, running like a race horse, and, when he was only about eight feet distant, a fourth shot was fired and the hunter sprang to one side, up the hill and reloaded. As the bear passed him it made an ugly stroke at him with its paw, and—by that time being pretty weak—fell forward so that its nose hit the ground, leaving quite a pool of frothy red blood on it. It made three or four jumps and then rolled over and over, head over heels and was dead. The last shot, aimed for his nose, but while he was running, had entered his mouth and broken the lower jaw far back on one side. The whole affair was soon over, but while it lasted was, I fancy, about as exciting an episode as one is likely to meet with.

THE SILENT MAN.

TO ENCOURAGE GAME WARDENS.—The Maine Game and Fish Commissioners have published the following notice: "Reward! Office of Commissioners of Game and the Fisheries.—Bangor, Me., Jan. 26, 1891. To any Fish or Game Warden, or any other person who shall cause the final conviction of any person found guilty of violation of any of the game laws (Chap. 30, R. S.) the undersigned will, until further notice, allow a sum equal to one-half of the fine imposed in each case; certificate of the justice imposing the final sentence to be the evidence of who is entitled thereto. E. M. STILLWELL, HENRY O. STANLEY, Commissioners of Game and the Fisheries."

A COONLESS HUNT.

"EVERYTHING comes to him who waits," and the writer waited until old Time had changed many of his raven locks to silvery hue ere an invitation came to spend a night with a jovial party on historic Mount Wachusett, in pursuit of the cunning thief of the cornfields. The invitation came from an old timer from whose belt dangled many a noble pelt, and who, though called upon to fill the seat of chairman of the Board of Selectmen, could not forego the pleasures of a night in the old haunts.

Reaching the house of our host, we were ushered into a cheery dining-room and were soon discussing the tempting spread. The conversation naturally drifted to the sport before us and the prospect of success.

"Will you have some more of the roast?"

"Thank you, I will. The drive has sharpened my appetite, and the lamb is very tender and nice."

"Well, if we have the good fortune to get a nice, fat coon, you must take it home and dine on roast coon."

"Hardly, Atwood, hardly. I am rather inclined to think I will have to draw the line at coon."

A roar of laughter burst forth, and came the inquiry:

"And what are you now eating?"

"Why, lamb, of course."

"Yes, lamb taken from the quarters of a fat coon!"

Passing Ransom Rock of colonial fame, where the whites ransomed their captives from the Indians, we were soon on the mountain side and Tige and Pomp were cast off. We had not been long seated before they gave tongue some distance away. A coon they had, dead sure, and away go the party in pursuit. The baying of the dogs echoes from the mountain side and makes weird music in the stillness of the night. The lantern man heads the procession and the rest follow as best they can. Now down goes one and then another until nearly all have paid tribute to the uneven footing and the darkness, rendered visible by the feeble rays of the lantern. We overtake the dogs only to find that the quarry has taken up secure quarters in a fissure of the ledge.

The dogs are pulled off and led some distance away and again they are off. The party gather under a spreading pine and spin reminiscence and story until called to the work in hand by the music of the dogs. Again the procession moves, quartering up the hillside, a long and fatiguing jaunt—trying to the mind and muscle of the best. Coming up to them we find the dogs tearing around through dense spoonwood, through which runs quite a large brook—but coon saw we none! The knowing ones claimed that Mr. Coon being hot pressed took to the water for some distance to throw the dogs off the scent, and that he emerged into such dense thicket that the dogs could not follow. It was decided to cast off the dogs and start a new trail. The wind meanwhile had veered again into the west and the full moon rolled out from a bank of cloud and lent an added charm to the night. Again the group formed under the sheltering boughs, and quickly sped the time with brilliant sallies and skillful repartee.

The faint note of the distant town clock, as it tolled out the hour of one, had hardly died away ere all were summoned to their feet by the hardly audible barking of the dogs. We had not proceeded more than a hundred yards before a ruffed grouse, disturbed in his slumber, made the hills thunder with his pinions.

One of the party in line with the moon saw him alight near a form in a small maple, and summoning the writer, who carried the gun, he confesses to doing the deed of death in an unsportsmanlike manner at an unseemly hour in the morning. Gathering up the spoils we hurry on and soon strike into an old wood road which materially assists our passage. Soon after the writer stepped on an old sled stake that was lying athwart the pathway concealed by a pile of dead leaves, and down he went as if struck by a political cyclone. Gathering himself up with the assistance of friendly hands he proceeds to retrieve his hammerless breechloader, which he found broken completely in two at the wrist. No misadventures must stand in the way and we are soon with the dogs at the foot of two white birch trees of considerable size—one standing erect and the other bending in graceful ellipse toward the earth. Here the dogs waxed eager and soon the coon was discovered near the top of the upright tree. Getting in line of the moon he was clearly discernible to all, and he of the dilapidated gun was summoned to "bring the critter down." Placing the broken ends in opposition and grasping the fracture firmly with one hand he cut loose, but his coonship was not seemingly disturbed.

"You hit him for certain! I saw the fur fly!" said one. "What size shot have you in?" said another. "Try him again!" chimed in a third. And thinking I must have flinched through fear of my gun I wrapped a handkerchief around the fracture and again took deliberate aim and fired. "Hit him sure!" said several, but he did not "coom down." Handing the weapon over to the Nimrod of the party, he sends up his compliments with like results.

Climbing irons are strapped on, a Colt's navy revolver stuck in the belt, and now down will come his coonship. The party forms a ring around the trees, the dogs tearing like mad; the climber has reached the treetop, which he proceeds to shake as if it had been struck by a hurricane, but the coon is not unhorsed. "Put a bullet into him," said some one growing impatient at the delay. Aim is taken and the navy belches flame and thunder, but no coon moves. "What in thunder does it mean?" Is it a plantation coon? "I've seen fur fly every time he was shot at," were some of the many sayings of those on terra firma, while he in the treetop had "put up again his sword into its scabbard" and proceeded to reconnoiter more closely. Carefully making his way up the small stem of the tree near its top, he sings out: "Well, boys, I think we had better go home. A big wasp's nest is all the coon there's up here!"

Thoughts were not revealed until we reached the team in the early dawn some miles away, when the chairman of the board of selectmen with becoming gravity said: "Wan't he cunning, though! to run up the bent tree and jump off to break the scent and fool the dogs!"

GEO. M. McALEER.

WORCESTER, Mass.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanik," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

LARAMIE GUN CLUB.

LARAMIE, Wyo.—*Editor Forest and Stream:* The Laramie Gun Club held its annual meeting on the evening of Feb. 3, which was fully attended. The officers elected for the ensuing year were as follows: For Pres., C. S. Greenbaum; Vice-Pres., C. Settele; Sec. and Treas., Ed Greenbaum; Captain, Gus Sigwart; Trustees—L. C. Hanks, John Davis, Wm. Breitenstein.

From a report made by the secretary I extract the following remarks showing what we are doing:

"The members of the club have manifested great interest in the immediate affairs of our organization as well as other matters pertaining to field sports in general, and it gives me pleasure to say that the Laramie Gun Club is using in every direction toward the proper protection of game and fish, and is meeting with encouragement and success. The club has, during the past year, grown rapidly in membership, and with the increased influence that follows, we confidently hope for still greater activity against the unlawful slaughter of our game and fish, and I would respectfully urge upon each individual member the importance of promptly reporting any and every infraction of the game laws that may come to his notice. Your secretary is at all times in communication with the Rocky Mountain Sportsman's Association, and any matter of this kind beyond our immediate jurisdiction could be placed in the hands of said Association, when it will meet with proper investigation and action.

"The natural conditions that obtain in the immediate vicinity of this city have long been well adapted to the propagation of quail and, while the matter has been discussed from time to time for several years by sportsmen and others, it has remained for this club to take definite steps in the matter. The amount that this club will appropriate for this purpose will rest with your incoming board of trustees, and I would suggest that the sum be as large as the state of the treasury will admit. This, however, is not a question that concerns only the members of our club but must be of interest to all sportsmen in this vicinity, and every lover of gun and dog is cordially invited to co-operate with us in the effort to permanently stock our valleys and fields with that gamiest of all game birds, the American Bob White. Many of the ranchmen along the Big and Little Laramie rivers, and in the Centennial valley, take great interest in this matter and have pledged us their hearty support, both in introducing and protecting the birds.

"Many of our streams, lakes and ponds are now favorite feeding and resting places for duck, geese and other aquatic game birds, and it has been suggested that these feeding grounds might be greatly improved by planting in favorable places wild rice. This matter has been discussed by many of our members and has met with such liberal responses and so much encouragement that I would heartily recommend its early and favorable consideration by your incoming board of trustees." S.

MAINE GAME LAW.

PORTLAND, Me., Feb. 7.—*Editor Forest and Stream:* The following dispatch appeared in a Portland paper of to-day:

CALAIS, Feb. 6.—Close upon the outbreak of the Sioux in the West there follows an outbreak of the Passamaquoddy Indians in the East, and Washington county is the scene of the conflict. Indians at war in both cases but with weapons altogether different. In the West the sturdy braves have donned the war paint and feathers, have "loaded up" on fire water, have taken the trail and demand gore. There is a savage, bloody war. The Passamaquoddy Indians have adopted a different tactic. They have declared war, grim-visaged war, but it is a legal war. They have climbed up the ladder of civilization several steps higher than their brethren in the West and propose to marshal their forces in battle array in the arena of the courts of the law. Hostilities have actually begun. The cause of this outbreak is the attempted enforcement of the fish and game law on the Indians at Peter Dana's Point, 30 miles from this city. Game Warden French, of Calais, has arrested two Indians, Peter Newell and Joseph Gabriel for "the unlawful killing of deer." They were brought before Justice David Dresser, at Princeton, Feb. 2, found guilty and bound over to the Supreme Judicial Court to be held in this city in April next. Their defense is truly an ingenious one and they base it on very solid foundations. They claim that they have the right to fish and hunt whenever and wherever they please, the fish and game law to the contrary notwithstanding.

An interesting question thus arises. Are the Indians amenable to our game laws? The Indian confidently asserts that he is not, and it cannot be denied that he presents cogent reasons for his claim. It is none other than a right derived from treaties. In 1725, again in 1787 and finally in 1794 the Commonwealth of Massachusetts granted to this same tribe of Passamaquoddy Indians by bounden and solemn treaty the right to hunt and fish forever. These treaties, the Indians say, neither the Legislature nor the courts have a right to vary, treaties which were made with them by Commissioners of Massachusetts before Maine became a State were not only ratified by the new State, but it was a part of the agreement in the act of separation that "the rights of the Indians by treaty and otherwise should be protected." This treaty, the Indians claim, is to be considered like any other treaty, the supreme law of the State, and any act of the Legislature that conflicts with it is null and void.

At any rate they propose to test it and confidently appeal to the courts for redress of what they consider wrongs done them by the game laws. They have appealed to the Legislature again and again, but to no purpose. They now seek the domain of the law for vindication and propose to fight it out on that line.

This much is sure, the Passamaquoddy tribe is stirred up to its very foundations.

This question has excited a lively interest in this city. Many of our prominent citizens have volunteered their aid and counsel to the Indians, and the case will be presented at the next session of the Supreme Judicial Court in April.

This shows one of the devices which our Commissioners have put up against them. When the Legislature is in session it requires all the care of those interested in the game to prevent tinkering with the present code. I have no doubt the present stir is at the instigation of savages who are not Indians. Last year the governor of these Indians and some sixteen of his tribe with a lot of dogs were scared away from Clifford Lake by wardens French and Pennell, but they left only because they believed these two were supported by a large force. It has been a favorite excuse of the Darling crowd at Nictowis when accused of dogging to accuse the Indians, and the Indians in turn have learned to lay the blame over on their white neighbors.

The plan proposed by the Commissioners to open September or a part of it on deer is doubtless a concession in hopes of avoiding other trouble, but if this is done the deer will be slaughtered under jacks worse than now, for the line between the middle of August and the middle of September won't be drawn very fine. One day last August I stayed over night in a camp on the Megalloway not far from Lincoln Lake. During the night one of the guides came in with some meat. Knowing him well, I inquired if that animal was killed in Maine or New Hampshire, and his characteristic reply was, "I ain't

studied geography sence I was big enough to lug a gun." Very few of them remember how to count, either.

As a great class, the guides in Maine observe the close season, having learned it to be for their interest.

It is a fact that the killing of deer this year has been, even in the open season, remarkable. To my certain knowledge, a taxidermist of this city has received 80 heads to mount since November. A mounted buck's head is now in this city one of the most common office or library ornaments, and a good many of them have come from Nictowis. Six were brought here in one lot, but strange to say only two of those heads were mounted here, and all but one of the carcasses were bought by a prominent beef dealer who has close connection with the Boston market, none of the meat was offered for sale here.

There has been a shrewd guess that the meat was brought down to accommodate Brother Darling. It was averred that these deer were all shot by one party within a week, but some of the meat was fly-blown, and that isn't usual in November or late October in Maine.

I should not have troubled you with so long and rambling a letter were I not in such hearty sympathy with your efforts to create healthy public sentiment with reference to the game laws. We haven't any too much protection now, and with what we have the deer will be driven out, sooner or later, at the present rate. D.

CHICAGO AND THE WEST.

CHICAGO, Ill., Feb. 13.—The Illinois State Sportsmen's Association in pow-wow assembled met at the Sherman House yesterday at 3 P. M. About a dozen, or a dozen and a half, or two dozen members were present. Dr. N. Rowe, president of the Association, was in the chair. General discussion of the present game law and its weak and strong points took place, in which Dr. Bartlett, of the State Fish Commission, and Col. E. S. Bond, representative of the South Water street game dealers, took part. Mr. Donald, ex-president of the Association, did not like the law, which his own experience had taught him to be hard to enforce. Mr. Low complimented Mr. Donald on being so earnest and personally unselfish in his efforts to have the law enforced. Mr. Organ pointed out certain flaws in the bill. The general drift of opinion was that the law was not such a very bad one, except in its executive features. The suggestion came up that the Fish Commissioners could attend also to the enforcement of the game laws, using their deputies for that work. Dr. Bartlett pledged himself to assume this labor if necessary. We may hazard a guess that this was a most unpleasant pledge to Dr. Bartlett, who knows very well that the Fish Commission has more work now than it can attend to properly, and that to add to such labor would be to half do two things, one of which may in time be very well done as it is. In this matter, if one didn't in the least care what he said, the Illinois State Sportsmen's Association may be said to have acted with the greatest delicacy and tact. It by its officer says to Dr. Bartlett, "We want you to show your hand. You are either wily, or again us; see? Now we want to join you—join with you; see? We want to join the State Association to the Fish Commission, and have the Fish Commission do all the work, which we can't do and never have done, and never will do; see? And if you don't do this, and don't come out and show your hand, we will go and do something awful! We will take our infloence away, and go off by ourselves and protect things; see?"

Dr. Bartlett saw the terribleness of all this. He pledged himself all right, and pledged himself to a mistaken measure. It is time to talk of such a union as the above when appropriations are large enough for a single work, let alone a double and different work. However, it is probable that nothing will come of it, and meantime it ill becomes the writer to be too critical beyond the extent of a personal belief, lest a too off-repeated fling might lend ground to the accusation that he was casting doubt upon the wisdom, energy and executive ability of the Illinois State Sportsmen's Association as practical game protectors; which may heaven forbid!

There are said to be between forty and fifty measures pending in the present session of the Legislature bearing on changes of the game law, but the meeting thought a few more wouldn't hurt, provided they were not violent. These changes will be discussed at the meeting of the legislative committee next Tuesday. The prairie chicken law will doubtless be changed back to Sept. 1, but the selling season will be left as it is, opening Oct. 1. Amendments will also be proposed to secure police powers for game wardens, and perhaps to levy a gun tax, fifty cents per gun, to raise a fund to enforce the game laws. Perhaps the latter will be made a law in Illinois, and then again perhaps it may not.

The old legislative committee consisted of Mr. Wolfred N. Low, Chairman; Messrs. R. B. Organ, H. D. Nicholls, F. C. Donald, W. L. Pierce, Chas. Kern, C. E. Felton and Dr. Rowe, ex-officio. To these names were added those of Dr. S. P. Bartlett, of the Fish Commission, Messrs. M. R. Bortree and F. S. Baird, of the Fox River Association, and Col. E. S. Bond and G. W. Barnett, of South Water street. There are good men on that committee, representing different interests which have some strength each of its own, and they ought to be able to do better work than was ever done before by the State Association. That the association shows itself disposed to treat with the South Water street dealers, and that the latter are willing to come half way, is a matter of congratulation. If we may mix our metaphor a little, we may say that viewed in the light of the hard brass tacks of practical results, the State Sportsmen's Association hasn't much to show by way of laws improved or laws enforced, while the game dealers have always got their measures through just about the way they wanted them. It is always very well to be friendly with the people who show themselves possessed of the highly desirable ability to get there. This alliance may last, as the game dealers say they don't care to have the law changed much now.

It was over the South Water street matters that some of the spiciest of the talk at this meeting happened. Old Col. Bond is as well posted a man on game law matters as anybody and he is wise in his day and generation; Mr. Wolfred N. Low is also level-headed some. These two had a little tilt. Col. Bond said the game laws of Illinois had not been violated. He had received no illegal game from Illinois. Mr. Low asked how he could tell the difference between illegal Illinois birds and birds legally shipped from other States. Mr. Organ said he couldn't see how the Colonel could do this unless they

were all tagged when shipped. This brought up the fundamental weakness of all our game laws, viz., their non-uniformity. Col. Bond, however, insisted that the laws had been respected in Illinois, Nebraska and other States. (It may be that the era of protection is at hand, for that the practical extermination of our game birds is setting the reckless shooters to thinking, so that the necessity of protection is becoming better known and acknowledged.) Col. Bond also thought the selling season was about right, he wouldn't want it shortened. He would not care to see spring shooting abolished. More ducks were killed in the fall by far. His books showed the ratio to be 6 to 8 ducks shipped in the fall to 1 in the spring. Ducks in the spring might be in very good condition. The best ducks of the year he usually got in January. Better prohibit fall shooting. Mr. Low said he would like to see the law have a clause allowing only 10 days lapse after the close of the season, after that 10 days no game whatever, Illinois or foreign, to be sold in Illinois. Would Col. Bond agree to that? Col. Bond would not. The markets of Boston, New York and all around us would be selling game and we might as well also, he thought. "Then you admit that our law as it stands is only an incentive and stimulus for the selling and shipping of illegal game, which cannot be detected?" The Colonel took a chew of tobacco.

"I would like to ask you another question, Col. Bond," said Mr. Low, "How many of the quails received by you are trapped quails and not shot?"

Col. Bond—"I should think about one-third of the quails we handle have no shot marks on them."

Mr. Organ—"I believe it is nearer two-thirds. I buy a good many quails for family use, and a quail with shot marks on it is the very rare exception if you get it on South Water street. It is easier to trap them."

Mr. Low said he wanted the game laws to reach the game dealers on South Water street, who did the worst of the work and held out the temptations for illegal shooting. He would rather catch them than the poor devil on the marsh, perhaps with a sick wife on his hands and anxious to make a few dollars. He had heard Col. Bond had sent out a circular inviting shipments of game at any and all seasons, legal or otherwise. Mr. Organ also had understood that the circular wanted all the game at all seasons. Col. Bond replied that this was not true, that he invited shipments only for the legal season. Later on he furnished to this paper one of these circulars, which reads as follows:

Dear Sir:—As the game season will soon open we inclose our annual circular letter to let you know that we are yet in business and will be ready to handle your game as usual, and will give your shipments prompt and personal attention. The late decision of the Supreme Court of the United States in the Iowa whisky case has practically wiped out that section of the game laws of the following States, viz., Nebraska, Dakota, Minnesota, Iowa, Wisconsin, Michigan and Arkansas prohibiting shipments of game outside the State. The Court holds that States have no right to pass laws interfering with commerce between States, and that this power rests entirely with Congress. We think you will have no trouble in shipping game this season, as express companies and railroads fully understand the effect of this decision. Our game season opens on duck, Sept. 1, on venison and wild turkeys, Sept. 1, and grouse, partridges and quail, Oct. 1. Write if you want tags. Yours truly, BOND & WHITCOMB.

Mr. Low said he had been informed that Col. Bond and his fellow dealers probably knew something about the disappearance of a witness against Fred Smith, accused of selling illegal game, and he heard that Col. Bond headed a fund to aid Smith in defending that case. Col. Bond denied both charges promptly, and said he would head a fund for just the opposite purpose, and would pledge the game dealers to give \$5 toward the protection of game where the Illinois Sportsmen's Association gave \$1. In regard to an alleged alliance of the dealers with the Humane Society, Mr. Low said he supposed that was because both the dealers and the society were anxious to preserve the game as food for the dear people. Col. Bond grimly acquiesced. In other words, the game dealers are better wire-workers. They can claim at least one element as an ally, if necessary, when they come before the Legislature, and unite with the humanitarians who are pushing the anti-pigeon shooting law. In this is an additional cause for respect for the South Water street men in game law matters, and additional cause for congratulation if an actual friendship, and not a formal one, has been arranged between the State Sportsmen's Association and the game dealers. Both sides protested that the former was the case, and white-winged peace brooded with one wing on the Sherman House and one on South Water street by the river.

Contrary to expectation, very little was said or done relative to the anti-pigeon shooting law, but that will come up in committee work later on.

This meeting showed an earnestness which is commendable. The State Association has men in it, Fred Donald and Wolfred Low, for instance, who have given their own time and money pretty freely to a work which is thankless enough, and whose deficiencies it is far easier to laugh at than to correct. The fact remains, however, that the State Association as a body is not really interested in this work. As a body it will not raise a dollar for the work. All its energy lies in a few individuals. As a body, therefore, let it not vaunt itself overmuch in game protection. It will be wisest to admit a weakness that really exists, to smile good humoredly at its own faults, and to seek first to better its condition by diplomacy and compromise rather than by bluff and swagger. If it can really unite with South Water street, on a basis which will not leave the dealers snubbed and slighted, and if it can keep up this alliance and not let it go to pieces as the earlier one did, the matter of game protection may yet gain weight in actual results. The time will soon be ripe for that. The game must nearly disappear before the people realize it needs protection. Just at present both sides of the "alliance" agree that no new law is needed, and that only the enforcing features of the present one need improvement. Mr. S. F. Baird indited chiefly the present law. It is a good law. It is a very good law. It is an almighty good law. It is, so to speak, a corker, a screamer, likewise a daisy and a dandy. It is just as good as a gun without a firing-pin. And not one iota better.

By the way, the folks were talking so hard they overlooked one thing they might have done and should have done, as being one thing they actually could do to better game protection in Chicago. That complacent individual Brusewitz, by the grace of Fifer game warden to the county of Cook, was called a real naughty man, but no one knows anything definite about a petition for his removal. Let us abide in hope that when the legislative committee go to Springfield they will humbly request

Gov. Fifer to give us a warden here who will contend that he knows a grouse from a duck, and who will work for the State and not for the game dealers. We perhaps ought not to suggest such little details as this. Perhaps Brusewitz ought to stay here three or four years longer. But the State Association is in earnest; it is really, and it means business, it does indeed.

Feb. 14.—I saw Col. Bond since the meeting of the State Sportsmen's Association, and had a little talk with him. "We dealers are perfectly satisfied with the present law," said he, "or at least consider it a practical working law. I would rather see the season on quail open Nov. 1 than Oct. 1, because then we would not get so many little half-grown birds that we don't care to handle. These are the second brood birds. We would not like to shorten our game selling season very much when the other big markets East are open all the time, but I don't want to sell game more than four months in the year. We are all willing to support the present law heartily, and I for one have not and will not encourage illegal shipments. The game dealers will support this law with respect, and with money, you may say."

"I noticed the article about ice-fishing around Antioch in the Fox Lake system," continued Col. Bond later, "and you have got the thing just exactly right. I have been getting shipments from just the parties you name in that article, but we pay them more than 4 cents a pound for black bass. The shipments are not large, not very large. I don't think those fellows ought to fish through the ice. I don't care to mention any names specifically."

E. HOUGH.

WISE AND FOOLISH CANVASBACKS.

ON looking over old numbers of FOREST AND STREAM, I came across an article on canvasback shooting, that brought to mind a hunt I had a few years since with a partner, in quest of this, the most peculiar, fickle and uncertain member of the duck family. I do not know if the same can be said of the canvasback in the East as here, or if the different latitudes cause them to act differently. Never having hunted on the Eastern waters, I shall write from knowledge I have gained in the West.

Here they are a combination of foolishness and shrewdness that is hard to understand; and unless you do understand them it is useless to undertake to hunt them, but as I said, they are a combination. To-day they come to the decoys with a rush and impudence that surprise you, regardless of how the blind is constructed or the decoys placed; while to-morrow the same blind and decoys only serve to scare them away, although the two days are seemingly alike.

To show how indifferent they are to surroundings at times, and how effectual Kleinman's motto "keep still" is, I will relate an incident. My "pardner" Jim and I had been in camp a week or two before the canvasbacks put in an appearance. This was in the spring, and we were shooting such ducks as we could, principally sprigs. We had built a blind at a certain spot where we could command a view of the entire lake, in order to be able to locate the grounds that the canvasbacks used upon or crossed over in the greatest numbers when they did come. About this blind we had placed all our decoys—about 150 of all kinds, for a sprig will decoy about as well to one kind as another. Jim shot principally along the edge of the timber, while I kept a lookout at the blind. Well, one day, late in the afternoon, I saw them coming flock after flock seemingly from one direction and to one point. I watched them until sunset, then went to camp and reported the result; also that I had selected two places where I thought blinds could be built, about half a mile apart, so that each of us could have good shooting; one being a bunch of brush and small willow, the other a large forked willow that stood in about 4ft. of water, with no brush near.

Early next morning we started out with two boats. Mine being the larger, had in it probably a dozen canvasback decoys. I was for leaving them in camp, also my gun, but Jim advised taking one gun, as we might get a shot at a goose, and the few decoys would not be in the way. Jim was armed with the axe, being an expert chopper. We started on our journey to the main lake. Arriving there we discovered a large body of canvasbacks busily engaged in feeding, and found that the locations for the two blinds had been well chosen. We decided to build a blind at the forked willow first, Jim's boat being entirely too small to chop from, it was taken to a distant bush and made fast. Then we came in the larger one to the tree and here found that the decoys were in the way. These we threw out in front of the tree, helter skelter, and proceeded to fell the tree in the best manner to make the blind. This done we found that our blind was entirely too open and must be thickened by the addition of other brush. I proposed to Jim that I would stand in the fork of the tree, while he went after brush so that he could bring a larger load. Taking my gun, more to get it out of the way than anything else, I perched up in the fork, my whole body being in view, while Jim was standing up in the boat pushing it along with a pole toward the brush 200yds. distant. When he was about 100yds. from the blind, and was in open water, I discovered four canvasbacks coming for that misshapen bunch of decoys, with the peculiar sweep that a shooter likes so well to see. A signal to Jim caused him to stop instantly, standing erect in the boat, not even turning his head to see what the signal was for. On came the ducks and lit fairly among the decoys, not over 20yds. distant. As they bunching up, a shot fired at their heads knocked over three, while the fourth was killed with the second barrel as it rose. A move on the part of either of us would have caused them to sheer off while they were coming, as we were both in plain open sight.

Nor were these the last ones killed during the time we were building the blind. After my partner returned with a load of brush, I assisted in placing it about, then got in the fork again while he brought another load; and during the day succeeded in killing nine from this exposed position.

This shows how important it is to "keep still" and also shows how foolish canvasbacks are at certain times.

KIZER.

JERSEYVILLE, Ill., Jan. 24.

THE MAINE WINTER.—The district referred to in the letter from which we quote below is on Wood Stream, which feeds Moose River on the north and west of Jackman, Maine. One of the townships lies adjacent to the Megantic Club's preserves. The letter was written by

the superintendent of a logging crew to a gentleman resident in Connecticut, and has been sent us for perusal. Under date of Jan. 24 the writer says: "This has been the hardest winter I have ever experienced in the woods. I have been in them thirty-one years and I never saw the beat of it. Since the first snow came last fall it has snowed every day more or less. There is about 4ft. in this locality. Caribou and moose were quite plenty from the middle to the last of September, and then they seemed to leave the ponds. Deer are plenty. I never saw them so thick as they are this winter. They are right around where the men are at work. I don't allow the men to kill them. I was in the woods last fall with a Mr. P. It was about the 27th of October and he got a buck caribou with as nice a set of antlers as I ever saw. It was in on Luther Bay. He was a beauty and no mistake.—E. G."

THE PASSION PLAY.—The interesting and novel illustrated lecture delivered by Mr. Marion Kerner at the Academy of Music last Sunday, descriptive of the Passion Play enacted at Ober-Ammergau during '91, will be repeated at that playhouse every Sunday hereafter at three o'clock, until further notice. The lecture is profusely illustrated with handsomely colored reproductions of all the scenes and characters of the vivid presentation, secured by Mr. Kerner during a three months' stay in the little Bavarian hamlet during the progress of the sacred drama. Mr. Kerner betrays a delightful familiarity with his subject, his lectures being brimful of interesting data of the lives, customs and characteristics of the quaint European community of crucifix carvers, whose sworn duty it is to enact the sacred passion periodically until the extinction of their sect.

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds, which they may kill. Cloth, 230 pages, price \$2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A TRIP TO COLD RIVER.

FOR a week we had had a wet spell of weather that widened the usual circle of prophets around the stove at Crawford's by night, and decreased in the same ratio the fishing by day. And so the old yarns went round for the hundredth time, told in a constant haze of smoke from that famous brand "Blue Ruin," until gradually the twilight crept through the small windows of the old store and silence fell upon the circle, and no sound broke the stillness save the crackling of burning logs in the stove. The prophet had fallen asleep, even the old hound at my feet sighed in his dreams. It was late, and so I left the now diminished circle and went over to Jock's and turned in. The morning dawned clear and bright. The river, swollen with continuous rains, flashed in the warm sunlight, running at the speed of a sluiceway. As I leaned over the mill bridge a kingfisher screamed past, as much as to say, "Poor fishin', ain't it?" Just then my good friend Frank the Forester emerged from a tangle of alders on the opposite side of the stream.

"What's up?" I asked as he drew near. "Water's about the only thing I know of," said he. "I thought I'd come over and see you about a little scheme I had cooked up for you." He was to start in the morning on one of his periodical trips through the woods, reporting on the condition of the timber, about a three weeks' trip. Would I accompany him? Yes, and gladly.

And so we proceeded to Jock's to talk it over. That night the fly-book was looked into and the usual assortment of old standbys from grave to gay rearranged, and what duffle we needed got together. We contented ourselves with a rod apiece—one a rather heavy lancewood, a "rough diamond," that had seen hard service both with bait and fly, the other a bamboo of 5oz., a lovely little rod and every inch a thoroughbred. We were to find our provisions and blankets en route.

Our route lay by trail from Keene Valley, Essex county, N. Y., through to Van Houverberg's, thence to the "Deserted Village" via the Indian Pass, and so on to Preston Ponds and down Cold River, returning by way of Lake Colden, Mt. Marcy and the Ausable region. In all a circuit of some 150 miles by trail.

The next day we took a late start, and the trail being in fairly good condition, struck the Great South Meadow in the cool of the evening and reached Van Houverberg's at dusk, feeling comfortably tired and hungry after our twelve miles' jog through the notch. That night after a poor but welcome supper we stretched ourselves before the big blaze in front of the lodge and talked over our pipes until one by one the stars flickered and went out and the moon just cresting the edge of the black spruces told us it was past time to turn in. Another twelve miles of rougher going the next day brought us through the Indian Pass and out to the "Deserted Village." It is a strange contrast to suddenly break from the heavy timber in that wild country and come upon this isolated relic of what in days long ago was once a thriving settlement. There it lies to-day, its single thoroughfare half obliterated in a tangle of rank weeds and blackberry bushes, its row of shanties covered with the moss of years, abandoned and fast crumbling to decay. We enter a dilapidated structure on our right. Half sunken in the moss-covered floor lies an iron-bound chest of ancient pattern, its lid bulging with a tumbled contents of old ledgers and papers, all that remains of the old bank.

Half way down the street the Adirondack Club have their headquarters. Under their hospitable roof we spent one of the pleasantest of weeks, and having gained a clear idea of the lumbering and condition of the timber land, lakes and streams of that region, we packed our duffle one bright morning and were off for Preston and Cold River.

Starting at the upper end of Lake Henderson, a trail of four miles through a more or less lumbered country brings you to the Upper Preston Pond. And what a beauty it is! Nearly circular, its placid surface reflects the primeval loveliness of the unbroken forest that surrounds it. Through the courtesy of the club we occupied a model log camp—the like of which would bring contentment to the heart of any hunter or true angler, as it lies nestled among the big spruces in a cove of this ideal pond. We were soon in our snug quarters, and after a bite and a nip stretched ourselves under the shade of an old hemlock down by the little brook that chattered so merrily past our shanty, and tried as patiently as circum-

stances would admit to kill that longest part of the day—the time between the end of the morning fishing and the time to fish again. Who—if he be a true angler—has not felt that indescribable feeling of impatience for the hour to come when the sun dies pale in the west and a dozen concentric rings breaking the quiet surface of the pond tell him it is time to put his rod together and glide gently out upon the still water now swimming in the yellow evening light. Whirr! whirr! goes the reel as you pay out enough line to get your cast under way. As you drift silently along the clear, plaintive note of the hermit thrush from some distant swamp comes softly over the water to you. As you near a tangle of floodwood that hangs as if in midair, so accurately is it mirrored in the black water, suddenly your eye catches sight of a swirl ahead and instantly you are on the alert. Go slow, my boy! These wary old fellows are sparing with their favors.

A deep, quiet stroke with the paddle and you glide within casting distance. Now steady! Softly your flies fall upon the black water just this side of his majesty. There he lies in the shadow of that big white snag to your left. Again the line straightens and this time your cast dapples the still surface above him. Like a flash, with a swirl of his mighty tail, he has your dropper fairly in his jaw and has started for deeper water. Steady! Be careful of that flood wood, he will play havoc with you if he reaches it! Inch by inch you recover your line. You feel the butt is beginning to tell on him and instinctively you reach for the landing net. A quick pass as he rolls to the surface and the next instant he lies struggling in the meshes at your feet. Ah! what a beauty he is. Two and one quarter pounds if an ounce! There he lies, game to the last, the big hook of his under jaw working convulsively, his bright spots gleaming like so many turquoise and rubies.

Handle him tenderly—treat him with respect, he is no reptile of a dogfish, this fellow who has sent the blood coursing through your veins for the past fifteen minutes—he is a prince among fishes.

As I look across in the direction of the camp a thin column of smoke rising straight against the dark timber warns me it is late and that Frank is getting supper. The sun has set an hour ago and the chill night mist is beginning to settle over the water. I manage to pick up half a dozen little fellows for the pan and then put for camp.

As the canoe grates against the beach I hear Frank's cheery voice calling to me from the shanty, "Hello, Doctor, I didn't know but what you had about concluded to make a night of it. Any luck?" And then, as I emerge into the shanty, his eyes fall upon the sagging contents of the net, and the big fellow with the aristocratic hook is duly lifted out and weighed.

"Just two pounds, old man, and a beauty he is! Took the gnat, eh? Curious how these big fellows' tastes differ. I've got some biscuits in the oven, and I guess these little fellows won't go bad along with the bacon. Tea or coffee?" "Suit your taste," said I, and taking the candle I followed the trail down to the brook to dress the fish.

"Frank," said I, as we rolled on a log and filled our pipes after a hearty supper, "what has become of Old Sam Dewey? Still living in 'New Rushy' I suppose?"

"Yes, and still is one of the most accomplished old liars in these woods. I can see him now. He was always to me a typical old trapper, his hair grew over his ears and reached an inch or so below the collar of his coat, under his mink-skin cap his keen gray eyes seemed to light up his thin old countenance with an attractiveness that one sees in the cunning face of a fox. He was a man of spare build but with an unusual amount of endurance, and I am inclined to think even now in his old age would lead the best of the boys a hard race in an all-day hunt.

"That reminds me by the way," continued Frank, "of a yarn I once heard the old fellow tell when we were over in Newcomb county on a big hunt a year ago last fall. One night a lot of the boys went up to Caleb's, where there was to be a dance and a general good time. We were all in good spirits for we had had a good hunt, and intended to stay another week. 'Hite' Partridge was there, and Pete Dunning and 'Old Sam.' A lot of us were around the stove in the kitchen, and naturally the talk ran to hunting adventure. Caleb told how in the early days he had once tracked a panther for two days in the light drift with the thermometer at zero, and finally killed her over on Moose Ridge, just below where Hiram Chase's sugar works now stand. Every one had a story to tell, all but Old Sam, who seemed to keep out of the game, owing, no doubt, to his being frequently squelched on previous occasions whenever he attempted to spring a new yarn on the boys. Finally the old man grew impatient, and transferring his feet from the second rung of his chair to the floor, he waited for a lull in the conversation and began.

"May be," said he, "yew fellers never heard tell haow I once got forty-tew uv the noicest black-duck ez ever cum tew Little Beaver Pond? Wall—about ten year ago—the time me en Brother Bill wuz trappin' daown Cold Creek—I kin see yew fellers air beginin' tew daoubt what I'm a goin' t' tell ye, en ef I hedn't seen it I dunno but what I should mistrust it m'self. But it's Gospil treuth."

"Here he produced a shrunken package of 'Blue Ruin' from the depths of his jeans and filled his pipe and proceeded:

"'Ducks had been plenty 'baout the pond, en one evenin' ez I cum back home from havin' seen tew m' traps I see an almighty big flock er ducks settin' out on th' pond, jes' this side uv where Brother Bill killed the big doe. They see me an' riz en roosted on the limb er that big birch on t'other side th' pond. It looked ez ef I warn't goin' to git a crack at 'em, en I see I hedn't but one cartridge in m' gun, so I jest set daown on er holler log en begun to ca'late haow tew git enow tew make a mess. Bimeby an idee cum tew me en I crep' up about forty rod from the old birch an' aimed her jest at the crotch uv th' limb above where them ducks wuz settin' en pulled th' trigger. Daown cum th' limb en pinned 'em all daown by th' toes. Wal, I jest clim' up'n' picked off forty-tew uv the noicest black-duck yew fellers ever see. Brother Bill he said he'd gin a dollar tew hev been there en seen th' fun. Talk about rats, ducks en otter! Little Beaver's th' place fer me en daon't yew fergit! And the old man tilted back in his chair and refilled his pipe with the air of a lawyer who had just won his case."

The fire had burned low, and after a look at the moon and a few speculations in regard to the morrow we covered up the ashes and turned in.

F. BERKELEY SMITH.

A DAY WITH THE WALL-EYED PIKE.

THE 25th of September, 1889, was one of those perfect autumnal days that, with its bright sunshine and balmy air, never fail to send a thrill of pleasure through every fiber in the being of the enthusiastic devotee of the "angle" as he hies himself to the spot where so many pleasant hours have been passed.

On the morning of that day I started on my way to, what is to me, a favorite fishing resort, a short distance above Creswell Station, on the Columbia & Port Deposit R. R. The waters at this point mark the terminus of the rapids extending southward from the Columbia Dam, and hence are not so swift here, but form a series of eddies and deep pools (the latter being locally known as "hollows") in which the "lord of the Susquehanna" delights to make his home. Owing to the unevenness of the bottom and the deposits of rocks and snags, it often happens that while fish are plentiful the angler is sometimes put to a disadvantage by getting his hooks fast in the above obstructions.

Having arrived at the desired point, I at once proceeded to fish, which, of course, meant work and no little amount of vexation, owing mainly to the usual difficulty of getting "snagged."

I continued trolling nearly all the forenoon, baiting and casting in the most tempting way I could conceive, but without success. Indeed, it began to look as if the wily inhabitants, yielding to the influence of the unusually fine weather, had, on the impulse of the moment, gone to visit their friends or, possibly, to attend a mass meeting held for the purpose of discussing a question which is to them one of vital importance—the pollution of the waters of the Susquehanna in other parts.

I was much surprised, and not a little discouraged at the ill luck that attended my efforts, so much so that I began to think seriously of giving up and returning home. But wait! what is that? Ah! no inanimate snag this time, but just the very kind of snag I had been longing to get fast to all morning, and now my fine fellow, since you have evidently just returned from one excursion, and have been so kind as to give me the opportunity, I will take you on another free of charge.

I succeeded in landing this fish with little difficulty, though a good-sized "salmon," and making a circle over the same place, took a second, and in a short time I added two more and one bass, making in all four "salmon," or wall-eyed pike, and one bass.

I now concluded to go home, get dinner, and then return and resume the sport in the afternoon. While taking dinner, learning that it would be convenient for my wife to go, I persuaded her to accompany me back to the scene of the morning's failure and success.

We started accordingly, our little daughter also making one of the party. As Mrs. S. had done no fishing up to this time, I decided to devote the afternoon to teaching her how to fish, and that she should go through with the entire programme of handling the fish, from the time it "struck" until safely landed, without any assistance other than verbal directions; for I wanted to make a "fisherman" of her, and determined that if any fish were caught the credit should all be due to her. How well she succeeded we shall see later on.

Arriving at the point where I had taken the fish before noon, and having prevailed upon Mrs. S. to take the rod (which she was quite reluctant to do) while I did the rowing, she began, as I supposed, to try to fish, but ended with genuine fishing.

Considerable annoyance was experienced by getting "snagged," and more so by the apparent absence of fish. It is not surprising that, after rowing about for an hour and a half or more, getting fast numberless times and taking no fish, Mrs. S. was thoroughly disgusted with fishing, refused to hold the rod any longer and insisted upon going home. But I really wanted to see her catch a fish, and I had to use all my powers of persuasion to induce Mrs. S. to consent to hold the rod long enough to encircle a spot where I felt sure some wary "salmon" must be waiting for a tempting bite. She consented to do so, but only on condition that we should leave for home immediately if there were no strikes during this round.

We had gone some distance, when suddenly there was a sharp pull on the line that made the reel whizz. I knew at once, by the irregular nervous jerking of the line that the fish was hooked, and told Mrs. S. that now she had her fish fast. "Oh, yes," said she, "it is very likely one more of the kind I have been hooking ever since we came—" but at this moment the fish, becoming alive to the sense of his condition, began to make such vigorous demonstrations of resistance as to cause an abrupt ending of her speech.

Now you should have seen Mrs. S. reel him in. "Be quick about it, don't give him any slack," said all in one breath. "How, how? which way? where?" said she, getting excited and turning the reel in such a manner as to let out line at an alarming rate. "Turn the reel the other way as quickly as possible and bring your fish up steadily," said I, almost ready to explode with laughter at the events which were occurring. Mrs. S. had by this time, to a certain extent, recovered her composure and began to follow my directions in a very encouraging manner, and in a short time had her first salmon up to the side of the boat; here, after some little excitement, she succeeded in landing the fish.

I now asked her if she still desired to go home and was answered with a big "no." Enthusiasm had now taken the place of disgust and so, after resting for a few moments, we started around the same line we had taken when the fish "struck." When crossing the same spot another tug was felt by Mrs. S., who being an apt pupil and using to advantage the experience she had gotten in playing the first fish, played this second one quite well, indeed, and soon landed it in good style.

Mrs. S. becoming more confident of her abilities as a "fisherman" continued the operation of extracting a "salmon" at each succeeding round until she had seven fine ones. On making the eighth circle she had a "strike" but missed. This discouraged our "fisherman," and as it was late in the afternoon she thought she had enough for one day and began to talk of going home, but from the nature of the strike I knew it was a large fish that had been missed and was anxious to make another trial; we did so and on this round Mrs. S. succeeded in landing her eighth and largest fish. This individual tipped the beam at 4 lbs. We then returned home after what finally proved to be a pleasant and successful excursion, Mrs. S. being much elated over her remarkable good fortune, and well she may be, for landing eight fish out of nine that struck

is a fact that even experienced anglers do not accomplish very often.

I have spent many days (and pleasant ones too more successful in regard to the numbers of fish taken) upon our beautiful Susquehanna, but the day when together with my family I shared the excitements and pleasure that only the true angler can feel I look back upon as the brightest and happiest of all.

G. S.
WASHINGTON BOROUGH, Pa.

CHICAGO AND THE WEST.

CHICAGO, Ill., Feb. 11.—Mr. W. Hoyt, of Aurora, was in town the other day and we fell foul of each other. Mr. Hoyt is a genial angler and much of an enthusiast in fly-fishing for bass, for which he has the best of opportunity in that bassful stream, the Fox River, which flows through Aurora. Mr. Hoyt is, however, I believe, interested in some milling properties situate along the Fox, and that changes the whole color of the world to him. He didn't love the State Fish Commission. He didn't love Dr. Bartlett. He didn't love the idea of putting fishways in dams. He said that to put a practical fishway in a dam would ruin the dam. He admitted that bass fishing was good in the Fox, but denied that it had been in the least benefited by the fishways. He said fish couldn't get up over the fishways, but claimed there wasn't a dam on the river the bass couldn't run over at high water. He had seen suckers run up almost over the dam. I don't know how he reconciles these two ideas, and forgot to ask him. Mr. Hoyt says that the fishway at Dayton Dam, low down on the big river, is absolutely worthless, and that no fish can get over it. Allusion was made to the opposition the dam owners made to the putting in of the fishways, and to the suits instituted by the Commission.

"Yes, and you can't name a single case where they won their suit," said Mr. Hoyt.

"How about Carpenterville?" I asked him.

"Oh, that was a widow they sued there," said Mr. Hoyt.

This is a criss-cross sort of world, anyhow this Illinois end of it is. Here's Mr. Hoyt, or the dam owners. They think the Fish Commission is a vile, wicked and ineffectual affair. The Fox River Fish Association thinks the Fish Commission is a good and worthy body, working in a noble cause, and it therefore lends a hand. The Fish Commission returns thanks, and says the Fox River Association has been its best friend and ally. The Illinois State Sportsmen's Association says to the Fox River Association, Let us unite in this great and glorious work of preserving the game and fish of this great and glorious country. The Fox River Association says it don't mind if it does unite some, but all the same it doesn't want to and doesn't mean to. The Illinois State Sportsmen's Association says to the State Fish Commission, Show your hand. Here, blame you, unite with us, or we will everlastingly knock your political eye out. The State Fish Commission says to the State Sportsmen's Association, Don't say another word, we are going to unite with you, and we meant to all along. Brotherly love. Nice, isn't it? Hands all 'round, and *dos d' dos*. I wish I could draw a picture of it, showing what each fellow has in the hand he keeps behind his back. In the meantime, the little fishes and the birds that fly in this great and glorious land of the free, are getting it extensively in the neck, so to speak.

Mr. Ed. Howard, keeper of the well-known sportsmen's hotel on Fox Lake, was in the city this week and had something to say about the ice fishing that has been going on up in his country, and which was shown up in last week's FOREST AND STREAM. Needless to say, Mr. Howard has always opposed this sort of business, though his house is right on the lake where a great part of it is done.

"It isn't so bad now as it used to be," said Mr. Howard, "but the farmers used to make a regular business of coming to Fox Lake and catching all the fish they could through the ice. They had their shanties all over the lake. Naturally, the more thoughtful of us who lived about the lake, and had some consideration for the people who came to visit us, didn't like to see the lake robbed in this way. One night, in 1885, there was a lot of shanties out on the lake, and I don't know how it happened, but some way 22 of those shanties got piled up in a bunch together and were burned up, slick and clean. After that the ice fishers used to miss the doors of their shanties a good deal, and stoves would disappear from them by night, and spears and lines would turn up missing, so it wasn't all plain sailing for the ice fishers. One old fellow got sharp. He used to bring his fish shanty with him on his bob sled every morning and take it back at night, so no one could get at it. One evening when he went to hitch up his team he found his horses gone and he had to walk home, away over in the country, and left his shanty. Next morning his team was back hitched to the sled out in the woods, but his shanty wasn't in practical working order. He staid away after that.

"It is shameful, the destruction these ice fishers create. I hope you will keep up the work and show them the folly of it all. As to the men living above me on the lake, I think they would listen to reason, and if you and Mr. Cole, the president of the Fox River Association, will go up through there and try to get them to agree to quit their winter fishing, I will go with you and do all I can to help. It certainly is unwise to keep up this ice fishing."

Mr. Howard said that a great many bass were caught by the ice fishers. He had often tried to have men help him in his work, but often they would say they could make more fishing. Willie Dunnell, three weeks ago, caught 33 fish in one day, and of the whole 16 were pickerel and 16 were bass. Percy Hill, son of Capt. Hill, a man who ought to know better, had 5 black bass to bring down to Chicago for sale last week. He thought he "might as well do it as anybody." George Drury was fishing right along, and what could be expected of the Stanleys who more than once had seined up young black bass and sold them for bait?

"A strange thing happened not long ago," resumed Mr. Howard, "which shows the size of some of the fish in the lake. George Drury brought in a pickerel which we weighed and found to weigh just 2 lbs. 11 oz., quite a fish you may see. This pickerel was fairly skinned from the gills clear back to the tail, and George told me how it happened. He found this fish on one of his lines, and was pulling it in when he saw a big fish run at it, and grab it right by the middle. George pulled and the fish let go, but made another run and nearly swallowed the little pickerel. George pulled the big fish on into the hole, and when he let go he had the little pickerel pretty

near scaled. We could see the marks of the teeth of the big fish, both crosswise and lengthwise of the pickerel. The fish may have been a masacallonge.

"You didn't know there were masacallonge in Fox Lake? Well, there are not many, but there are a few. Ten years ago Mr. Bell—you will remember he was drowned, with his warm friend Mr. Wilcox, in that unfortunate trout fishing trip on Lake Superior—was fishing on Fox Lake, and he landed a 42 lbs. masacallonge, right on my beach. In 1868 Monroe Stanley speared a masacallonge which weighed 53 lbs. They had three spears in him before they got him. Only three years ago, Harry Stanley, while fishing with a common bamboo rod and bass outfit, caught a masacallonge 4 ft. 1 in. long, that weighed 37 lbs. His father helped him land it. This is the last one we know certainly to have been caught. I think they must be a slow fish to reproduce or to mature, so they are easily killed out of a water.

"When I was a mere boy, twenty years ago, I caught a masacallonge that weighed 24 lbs., in Fox Lake, and caught it in a very singular style, too. I yanked him alongside and hauled him over the boatsteed, but after I got him into the boat he jumped square out and swam off. I pulled him up and hauled him aboard again, and again he jumped out and swam away. I got pretty anxious, and pulled him in again, and for the third time he jumped out of the boat. When I got him in again I had had enough, and I smashed him till he held still. I don't believe anybody on earth but myself ever caught a masacallonge that jumped out of the boat three times and yet was saved.

"You may think that is a pretty hard masacallonge story, but I can tell you a worse one, and one equally true. A little more than three years ago Chas. Eldridge was fishing on Fox Lake, and struck a masacallonge which was later found to weigh 11 lbs. This fish went square under the boat, and ran clear out to the end of the line, the rod being out on the opposite side of the boat. As he reached the end of the line, which was short and rotten, he sprang clear out of the water, turning back as he felt the line check him, and landed directly in the boat, where Eldridge nailed him. The funniest part is that before the fish struck the boat the line was broken short off, and he lit with a piece of it hanging loose out of his mouth. He evidently broke the line when it snubbed him, and in his crazy jump landed in the boat by mistake. I believe this is the only case of the sort that ever happened."

Ed. Howard is a quiet, straightforward sort of man, and I never knew him to wander from the paths of stern reality, but after these last two stories I looked at him with an increased respect. If he has any more masacallonge stories like this, he can come and sit in my office and talk a week at a time, and his board won't cost him anything.

I notice in a recent daily paper the following, which I think will astonish even the most profound believer in the glorious climate of California: "The San Diego (Cal.) Sun tells of a monster black bass taken with hook and line recently near that port. It weighed 318 lbs., and the catcher was forty-two minutes in getting the fish alongside a steamer." There is something wrong about that story.

But about that ice fishing. The effort must be made to get these people to see the matter in a reasonable light. I hope to be able some day to report these summer-resort men all as much opposed to the practice as they are now in favor of it, and to see every one of them a member of the Fox River Association.

E. HOUGH.

TROUT FISHING PAST AND TO COME.

INQUIRING as I go from town to town regarding authentic records of trout caught reveals the fact that more and larger trout have been caught the past year than in any year within the recollection of the oldest inhabitants.

Waterbury, Conn., tells us of good success, and our genial friend Guernsey, who keeps everything in the fishing tackle line that one may need, says that all the boys had good luck, bringing home a basketful every time they went. As to size, 1 lb. may be the limit reached by the largest.

Naugatuck followed right along and here the dealer is Col. Tolly. A pound to 1½ lbs. was the limit.

Seymour and Birmingham told similar stories.

Torrington and Winsted, noted in former years for their fish lies, gave us a little better report, 1½ lbs., and in one or two instances 1½ lbs. were the big ones here, and at Colebrook River, a point a little way out from Winsted, one was reported weighing 2½ lbs. This one was taken alive and sent to Hartford, where he made the owner thereof happy \$10 worth.

Canaan, where Mr. Camp sells the hooks, says: "We have got a new gag on the trout here; we just get on the train and go over here a little ways and catch all we can lug home. Big ones? Why yes, pound and three-quarters, several of them, but no larger."

At New Milford I got no report except good success, but as to size I inferred that a pound was the big one. Sandy Hook "got there" with several of a pound and three-quarters, and "Pape" and O'Hare are prognosticating for 1891. Well, good luck! Hope they will catch whales next time.

Great Barrington didn't know much about trout fishing; got some, I guess, but Sagey says that one and three-quarters was the largest here. Lee, Lenox and Stockbridge could do no better, but West Stockbridge just managed to pull through with two and three-quarters for trumps.

I got so by this time that I swallowed fish lies without any difficulty, and took in all sorts of stories. But Philmont takes the whole bakery for in this quiet village, where Mr. Lockwood sells the strings, lives a man, if indeed he lives yet, Frank Alberts by name, who caught a trout that weighed three pounds and fifteen ounces, and another fellow got one that weighed two and one-quarter. No jokes, for Lockwood says it's straight.

And so they go, and every one says we will catch larger ones this spring, of which more anon. NOTLIKES.

CLUB ELECTION.—Newport, R. I., Feb. 11.—At the annual meeting of the Newport Fish and Game Association, held Jan. 14, the following officers were elected: President, J. P. Cotton; Vice-President, Robt. Frame; Treasurer, W. A. Armstrong; Secretary, F. H. Wilks. Directors: Messrs. J. P. Cotton, Robt. Frame, W. A. Armstrong, W. H. Hammett and F. H. Wilks.—F. H. WILKS, Sec'y.

CONNECTICUT RIVER PIKE.

Editor Forest and Stream:

You are perfectly right in your statement that there are no mascalonge in the Connecticut River. The fish in question are simply the great northern pike (*Esox lucius*.) I have seen scores of them, caught them, and eaten them, but the largest I ever saw scaled 19lbs. They were not introduced in a pond near Bellows Falls, but were brought from Lake Champlain by the late Governor Paine of Northfield, Vt., and placed in a mill pond in Northfield or Roxbury, at the head of the Black River about the date stated, 1838. At any rate, in a great freshet in 1840, the dam broke, and the fish were swept down into the Connecticut. I left home soon after that, and on one of my vacation visits, a few years later, was told of the strange new pickerel of fabulous size which were being caught.

It might have been about 1847 or '48, that Hon. Wm. Henry, the cashier of the Bellows Falls Bank, caught one weighing 17lbs. in the "big eddy" below the Falls. It may have been two or three years later, but I should say it was as long ago as 1853 at latest.

Mr. Henry was an enthusiastic angler, and when business was dull was reported to be in the habit of locking up the brick bank, and going down the gravel one behind it to the river to fish, and it was said that when the country people around came to the bank in the summer, and found the doors locked, they always made a bee line for the eddy, where they were sure to find the cashier.

The pike have spread up and down the river, and nearly exterminated every thing else. I have heard of them as far north as Haverhill, and eaten them, caught in shad nets, at South Hadley Falls. I once had one brought to me, to decide if it was not a mascalonge. It was almost black on the black, with orange spots, and yellow belly, but had probably got discolored by living in some eddy where an iron spring oozed into the river, and deposited a bog iron bed for him. When I was a boy, I used to supply my father with the black sand, used instead of bloters 50 or 60 years ago, by collecting it with a magnet on the bank of the river at low water in summer.

CHARLESTOWN, N. H.

VON W.

ANGLING NOTES.

UNDER the proposed change of the trout law it will be impossible for the honest angler to send home a few trout. While in some cases this is somewhat harsh, yet as it is for the public good, we will have to submit. Trout do not amount to much after a journey of any length, but generally arrive soft and tasteless and often unfit for the table. After trying many ways, the following has been found the best to keep trout in good condition and flavor: Clean the fish as soon after they are caught as possible; wipe dry and clean, inside and out, and be careful to remove all the blood along the backbone. Sprinkle a little black or white pepper in the inside and lay them in as cool a place as you can. If possible to keep them in an ice house, do so, but lay them on a board, not on the ice. Never use salt to preserve them, as it pickles them and ruins the flavor. When ready to pack, fill an empty tin, such as gingersnaps come in for instance, with pounded ice, and pack the fish around it. This ice will keep them 12 hours. If it can be had, refill the tin with fresh ice during a long trip.

The proposal to change the number of Fish Commissioners meets with universal disfavor, and the codifying commissioners seem to have gone beyond their duties to make the suggestion. The cutting off of the two weeks trout fishing in September is a mistake. There is little or no fishing in the Adirondacks from July 1 to Sept. 1, whereas it is generally good during the first two weeks of September. If this change is made, anglers will simply go to Maine or Canada, and their money will be lost to the guides and hotels of the North Woods, or what is worse, will fish contrary to the law, as they used to do before it was made legal. The best laws always are those that are reasonably easy to enforce. That is the reason that the law regarding the shipping of venison has been of so much benefit.

SCARLET-IBIS.

Fishculture.

MASSACHUSETTS FISHCULTURE.

THE twenty-fifth annual report of the Commissioners of Inland Fisheries and Game of the State of Massachusetts opens with a reference to the fishways built over eight dams on the Monaquot River. Two of these dams are from 18 to 20ft. in height. A record is given of the fish seen in the Lawrence fishway from April 23 to Oct. 9, 1890. Between October and April the only fish seen were suckers. The first alewives made their appearance April 24, and other species arrived on the following dates: Lamprey, May 4; salmon, June 19, three individuals ranging from 13 to 14lbs.; forty-four salmon in all were seen, the last, Oct. 9, weighed 8lbs., the largest salmon of the season weighed 20lbs. Silver eels appeared July 2, and black bass July 30.

The catch of shad in 1890 showed a marked falling off, and the high water and scarcity of spawning fish interfered seriously with the shad hatching operations at North Andover.

A few carp have been raised and sold at from 16 to 17 cents per lb. The catch of trout during the season of 1890 was unusually large, and was evidently due to the distribution of fry. In beginning the work of trout hatching the Commissioners made the experiment of stocking several depleted streams, and also several streams in which trout were not native. Successful results were obtained in all cases. The Commissioners believe that without skillful management trout and salmon cannot be profitably kept in small ponds until they are one or two years old before introducing them into the brooks. When artificially fed in such inclosures they lose their self-reliance and become a prey to enemies soon after liberation. They prefer introducing the young fry into the headwaters as soon as the egg sac is absorbed, and letting them at once begin the struggle for existence. The demand for trout fry has been greatly in excess of the supply. With the \$1,000 granted by the Legislature for establishing a new hatchery, work is expected to begin this spring with increased facilities. The Commissioners expect to distribute about 600,000 young trout in April and May. These are delivered free at the hatching house at Winchester, Mass., and transportation cans furnished, which are to be returned to the hatchery at the expense of the applicant.

The Commissioners refer to the Sunapee trout, and express their belief that it is native to New England waters and existed there many years before the introduction of saibling. They state from their own knowledge that no

saibling were ever planted in Sunapee Lake or in Dan Hole Pond, or in any of the tributaries of these bodies of water.

The welcome announcement is made that salmon are steadily increasing in the Merrimac; sixty were taken during 1890 near the hatchery at Plymouth, N. H., an establishment which is operated by the Massachusetts and New Hampshire Commissioners jointly.

Reference is made to the work of the steamer Ocean Gem, which was purchased by the Commissioners for the purpose of enforcing the laws relating to the shore fisheries of the State. Her especial function was the protection of the lobster fisheries and the enforcement of the laws against menhaden seining in Buzzard's Bay, a duty for which she is

TROUGH FOR YOUNG SALMONIDÆ.

admirably suited by reason of her high rate of speed. This steamer seized the steamer Fearless, of Newport, but was obliged to abandon the prize for want of sufficient coal to get into port. Nineteen arrests were made for violations of the lobster law and three for infringement of the fish laws.

The returns of the lobster fishery show an increase of more than a quarter of a million in the catch of marketable lobsters. The returns from the fisheries show a marked decrease of shad, alewives, sea herring, scup, tautog, flounders and flatfish, eels, and some other edible fish, while there was an increase in the catch of menhaden, striped bass, squeteague, mackerel and bluefish. The increase in menhaden was particularly large, being 2,500,000.

The appendix to the report contains a list of Fish Commissioners, a series of notes by Mr. S. Garman on the carp, brown trout and Sunapee trout, accompanied with figures of the species.

Mr. B. P. Chadwick, who had charge of the shad hatching operations at North Andover, states that the run in the Merrimac in 1890 was small and he attributes the marked decline of the shad fisheries to the destruction of young fish by the use of fine meshed seines at the mouth of the river. "The practice of catching small fish for bait at the mouth of the Merrimac has been pressed to such an extent as to have ruined the shad fishery of this stream, and the alewife fishery is destined to meet the same fate." The shad fishery is no longer profitable and Mr. Chadwick recommends the abolition of all seine fishing for a period of ninety days after June 1. He finds that the sale of undersized lobsters has almost ceased. One violator of the law, George S. Seeley, of Beverly, was fined \$115 and costs.

The Hampshire Trout Breeding Association, through its secretary, Mr. Dana Pearson, has made a report to the Commissioners. Dec. 25, 1889, they received 25,000 brook trout eggs from the U. S. Fish Commission and 35,000 from the Massachusetts Commission. Of these they hatched about 98 per cent. and only 4 per cent. of the embryos were lost. About the middle of April they distributed all the fry in brooks at Hatfield, Hadley, Williamsburg, Northampton, Hadenville and Chesterfield. None of these streams are posted and the association has secured control of the hatchery site until the fall of 1898.

An opinion of the Supreme Court of Massachusetts in the case of the Commonwealth against Arthur Manchester, who was complained of for taking fish by the use of a purse seine in the waters of Buzzard's Bay within the jurisdiction of the State of Massachusetts, is given at length in this appendix. The Chief Justice decides that the statute of the Commonwealth is not repugnant to the constitution and the laws of the United States.

The effect of this decision will be to prevent the use of the purse seine in the menhaden fisheries within Buzzard's Bay. Reference is also made to recent legislation for the protection of the fish and fisheries.

The report closes with detailed returns of the lobster fisheries showing the number of traps used, the number of marketable lobsters taken and the number of egg-bearing lobsters returned to the water alive. Finally complete tables are furnished showing the returns of pounds, weight, gill and sweep nets, with the names of the kinds of fishes taken. One remarkable feature of these tables is the record of 1,341 Spanish mackerel taken in gill and sweep nets at Chatham.

NEW JERSEY FISH COMMISSION.

COMMISSIONERS: Robert D. Foote, Morristown; W. A. Newell, Pennsville; F. M. Ward, Newton, Secretary. Several thousand brook trout and lake trout have been planted in the inland waters of the State during the last year, and there is reason to believe that the stock is in good condition. The success of the efforts in replenishing the streams is acknowledged since the fishing last season was as good as it was twenty years ago. The trout waters are confined chiefly to the northern counties.

The catch of shad in the Delaware River and Bay during the season of 1890 was the best known for many years, and it is conceded that it is due to the large number of fry deposited in the river during the past five years by the United States Fish Commission and the New Jersey Commission. The former liberated 15,000,000 last year and the State Commission about 7,000,000. The sturgeon fisheries of Delaware Bay have recently become very important. Many hundreds of thousands of dollars are invested in the business and hundreds of men are employed during the fishing season. The fish were worth from \$7 to \$15 each, according to size. A much-needed law was passed by the Legislature to protect the young sturgeon from destruction by gill-net fishermen.

The Commission intends to introduce other varieties of game fishes into some of our principal lakes, including Hopatcong, Greenwood, and some of the smaller ones, during the present season.—F. M. W.

TROUGH FOR YOUNG SALMONIDÆ.

THE tendency of young trout or salmon to "bank" or pile up at the head of the trough where the water supply enters is one of the undesirable, and with the ordinary trough unavoidable conditions in holding them. Whether there is a greater possibility of injury to them by reason of their huddling together in such masses or they are more liable to contagion or the effects of diseases, to which other animals are subject under like conditions, can only be a matter of conjecture. We do know, however, that young *Salmonidæ* are particularly susceptible to certain diseases, the causes and nature of which are not understood, and which are, moreover, not easy to determine.

It has occurred to the writer that at all events any arrangement in the trough which would cause the young fish to be dispersed throughout its entire length, while allowing perfect facility in cleansing it and handling the fish, might present to the minds of trout culturists some advantages worthy of practical experiment.

The idea which has suggested itself to the writer as a result of observation, though not of practical experience, is a double trough, or trough inside of a trough, as shown in the accompanying sketch. One bottom answers for both of course. Along the sides of the inside trough are arranged a series of angular chambers, made by placing pieces of wood

or metal of a required size at an angle from the sides, and covering the mouth or base of the angle with wire gauze, letting the wood project some little distance beyond the gauze, as shown in sketch.

Now, entering into each of these angles from the outer trough is a hole with gate, by which the flow of water may be regulated. These angles may be placed opposite one another, or may alternate as is found preferable. The idea is to introduce currents of water at intervals along the entire length of the trough in such a way that the fish will find a number of places with the conditions they prefer instead of the single one at the head of the ordinary trough.

It will be seen by the illustration that with a feather all

the sediment may be swept to the foot of the trough as easily as if the sides were entirely straight and clear.

It will also be noticed that while it is possible that in time the fish may find their way to the head of the trough they may be a considerable time in doing so, and the currents they must encounter on the journey will afford them beneficial exercise.

If, however, they should accumulate at the head of the trough in too great numbers it will only be necessary to sweep them to the bottom with the feather and allow them to work slowly up again. By a proper proportioning of the waste ways of both sections of the trough, and the holes through which the water must pass from the outer to the inner section, the outer one could be kept fullest and the water be caused to flow into the inner one with considerable force.

WM. P. SEAL.

U. S. FISH COMMISSION, Washington, D. C.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Feb. 21 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.
March 3 to 6.—Second Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. Stewart Diffenderfer, Secretary.
March 10 to 13.—First Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Secretary.
March 16 to 19.—Inaugural Dog Show of the Washington City Kennel Club, at Washington, D. C.
March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.
March 31 to April 3.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Secretary.
April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.
April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.
April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. R. P. Rennie, Secy.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

THE GREYHOUND STUD BOOK.

Editor Forest and Stream:

At the last meeting of the advisory committee of the A. K. C. I notice a resolution demanding that the National Greyhound Club give up its private stud book or forfeit membership in the former organization. To the writer this seems a grave mistake, for above all other dogs, the pedigrees of the greyhound should be accurate, entire and pure. To accomplish this requires more care and research than the A. K. C. exhibit in their stud book, which comprises all sorts and conditions of the canine species. Rather than censure a man or club for keeping or publishing reliable information as to the pedigrees and winnings of a special breed of dogs, the A. K. C. should encourage such efforts.

Doubtless the greyhound men have had the same experience as the writer in the more insignificant matter of breed ing pugs. He found the comprehensive A. K. C. stud book not at all adequate to his needs, and so set about getting all the information possible from other quarters. By writing and talking to the pug breeders of both England and America he was quite astonished at the amount of valuable facts to be found outside both English and American stud books. Collecting all this matter together he has compiled a book on pugs which appeared in the *Fanciers' Journal* of last year in serial form, and is now ready for publication. This little book might be termed a stud book, as it is a record of the pedigrees as far back as they could be traced, winnings and winning produce of the pug dog, together with a few facts relative to this breed. Has the National Greyhound Club erred more than the writer? except that their dogs are a more important and grander breed than the pug. Why then should they be criticised or censured for any effort whereby they can keep a pure, disinterested record of the pedigrees of these fine animals?

M. H. CRYER.

PHILADELPHIA, Pa., Feb. 15.

HELEN KELLER'S MASTIFF.—Hulton, Pa.—Editor Forest and Stream: I can best express my appreciation of the letter of Mr. Geo. E. Goodhue in your issue of Feb. 12 by saying that I am almost tempted to regret that Mr. Goodhue's kindly wish has been forestalled. As soon as I heard of the killing of the dog, I wrote to "Uncle Dick" to secure Eriant, an elder sister of the one killed, and succeeded in so doing. That I got the right kind is proved by the prompt manner in which Eriant bounced into a room full of dancers and broke up the fun by seizing the beaux and belles, deeming their semblance of fighting most reprehensible. Mr. Goodhue's allusions to the forgiving spirit of this child seem to make it proper for me to say that this is the most marked feature in her wonderful character. Nothing can make her angry, no offense is sufficient to excite her animosity. Her teacher says she never saw the child so distressed, yet she was ready to forgive and think the best of the one who had brought such distress upon her.—W. WADE.

HORNELLVILLE, N. Y.—Editor Forest and Stream: Mr. Geo. O. Goodhue shows the right spirit in starting a subscription to buy a mastiff for Helen Keller; but it is all fixed now. She is to have my Eriant. As soon as Mr. Wade wrote wanting to buy Eriant to send the little girl, I tried to get her address so that I could make the present myself, but Mr. Wade heard of it and insisted on paying for the bitch, so I had to accept.—J. OTIS FELLOWS.

THE SOUTHERN FIELD TRIALS.

ALL-AGED STAKE.

THERE were twenty entries in this stake, and the first four heats were run at the conclusion of the Paul Bo-Rupert heat, to decide first place in the Derby, on Friday, Feb. 6. The first brace was

DAD WILSON, JR., AND SHOTMASTER.

The English setter Dad Wilson, Jr., by Dad Wilson—Lit, and owned by J. Shelley Hudson, was in charge of H. M. Short, and the Istone Kennels' Shotmaster, by Planet—Lady Croxteth, was handled by D. E. Rose. At the start, at 2:39 P. M., Dad Wilson, Jr., soon showed his superior pace, which he kept up to the end of the heat. On the scattered birds from the previous heat, Dad pointed and Short flushing, killed, and Dad made a difficult retrieve in good style. He followed this up by a good point on a bevy, and was steady to flush. Shotmaster in the meanwhile had shown his running powers off to good advantage on a rabbit. In the woods, Dad Wilson coming at speed from the right, went in ahead of Shotmaster, who had scented game, and wheeled to a fine point. Shot, not to be outdone, passed him in turn and pointed as well. After another short gallop Dad was rightly awarded the heat, being superior to the other all round.

JACQUES AND CORSAIR.

Jacques, by Fred W., —, and owned by Chas. Tucker, was, in the absence of owner, handled by D. E. Rose, and B. M. Stephenson handled his dog Corsair, by Dad Gladstone—Haldee. In the open, some distance from where the last heat was run, these two were cast off. They both soon made points on a bevy and were steady to shot. Soon after, following the birds, they were both found again on a point in a plum thicket, but nothing was found; further on, they each made good points on singles and birds flushed to each, birds were shot at but neither killed, both dogs steady. Jacques then made two points to only one of which a bird was flushed. Coming to a stand a little further away, three birds flushed to his point. Moving on, he stood again, and Rose flushing the bird, shot and killed, Jacques bringing the game up in good style. After a short run both dogs pointed near a ravine in some grass. They had, however, been ordered up but after consultation they were sent on again. Not far away Jacques wheeled to a good point and Corsair coming up at speed, caught the scent while jumping a ditch and landed stiff. Nothing being found, they roamed on and Jacques soon located the birds; they were not followed. Then Jacques flushed one. On the other side of a deep ravine Corsair pointed nicely, and a woodcock was flushed. Jacques got into trouble by flushing a bevy to the right down wind, afterward redeeming himself by a point on a single. Dogs were then ordered up and the judges awarded the heat to Jacques. Down 45m.

CASSIO AND KENO.

The English Cassio, by Count Noble—Lizzie Hopkins, was handled by his owner, J. M. Aven, and the English setter Keno, by Roybil—, owned by Dr. Jones, was also handled by her owner. They were cast off in the open. Cassio showed his superiority by doing most of the pointing and showing better speed all through the heat. Keno made several flushes and pointed only two singles to Cassio's two bevs and several singles. The heat therefore finished in his favor after running 30min.

ANTONIO AND LITTLE GIFT.

The black, white and tan setter dog Antonio, by Roderigo—Bo Peep, was handled by his owner, J. M. Aven, and Little Gift, owned by Bert Crane, was in charge of N. B. Nesbitt. There was no competition in this race, as Antonio did all the work, cutting out the pace and ranging wide and stylishly. There is little need to enumerate points made as the heat was so one sided. This finished the work for the day.

Saturday.

The first heat of the day was the Zula M.—Rupert one, and this has already been given in the Derby report. The fifth brace in the All-Aged Stake was then called up. This was

DAD WILSON'S BOY AND RODER.

The English setter dog Dad Wilson's Boy is by Dad Wilson—Dolly S., and owned by G. O. Smith, and was handled by W. W. Titus. N. B. Nesbitt handled his dog Roder, by Roderigo—Lufra's Cross. They were put down at 10:12, and as the weather was warm the dogs soon felt its effects. They ran for some time and then were taken up twice, and soon after Dad pointed in good style but the bevy could not be found, then just after, Dad flushed a single, and the dogs were taken up to be put down in the afternoon at 3:40, but finding no game after a quarter of an hour's run they were ordered up and the heat given to Dad Wilson's Boy.

FRED GATES AND SAMUEL S.

This brace was put down at 12:06. Fred Gates, owned by Messrs. Hamilton and Jackson, was handled by D. E. Rose and H. S. Bevan's (agt.) Samuel S. was handled by H. S. Bevan. Samuel S. was the first to get to work and secured a good point on a bevy. Then Fred showed his speed in the chase after a rabbit, and then another start was made after the scattered birds, but they failed to avail themselves of the opportunity to do good work. Samuel S. flushed some, when the rest got up. Then ensued a long run and both were found on a point in a hedge row, though it was plain that the credit belonged to Fred. Sent on, the bevy was located by Fred, and when flushed, Rose made a double and Fred retrieved nicely. Samuel S., after a short run, came up to the same bevy and pointed them at the edge of woods. Judge Rogers killed the bird, Sam S., after much urging, retrieved it. Then ensued a consultation, but no decision was arrived at and dogs were put down again at 1:30. Soon after, over the hill, a questionable point was made by Samuel S.: the judges did not see it, though some of the spectators claimed to have done so. Then in the open Sam made matters more secure by nailing another bevy. The judges then decided at last that Samuel S. was the better dog. Though Fred had two singles to his credit he had not the speed or range of the other, but was more stylish. They had been running for two hours and fifteen minutes. Sam at times was unsteady and might have backed better.

SATAN AND NATALIE.

The English setter dog Satan is by Baden—Bessie, is owned by J. W. Renfrore and is handled by D. E. Rose in place of Charles Tucker, who had been called home. Bert Crane's Natalie II., handled by N. B. Nesbitt, is by King Noble—Natalie. They were cast off at 2:40. Satan soon flushed a bevy in the woods; birds were marked down in sedge grass. Then Natalie pointed, Nesbitt flushed and killed, Natalie doing the retrieve well. Satan found some mischief to do in the idle moments and pointed, Natalie coming up soon got to work again with another point which Satan backed nicely. Then Natalie pointed foot scent. Some sharp running was now indulged in by both and Satan dropped to a point on foot scent, but while pottering round Natalie came up and by a cast nailed the birds. Flushed, they were followed without result, the dogs were soon after ordered up and the heat was given, much to the surprise of many, to Satan.

NELL OF IDSTONE AND NOBLE C.

The black and white pointer bitch Nell of Istone is by Planet—Lilly Bang, owned by Istone Kennels and was handled by D. E. Rose. Patrick Henry's English setter Noble C. is by Rapier—Belle of Hatchie, and H. M. Short had him in charge. They were cast off after a short heat between Dad Wilson's Boy and Roder, alluded to above. Noble soon got to work and found birds at the edge of woods

and followed this up, at the other side of some underbrush, by finding another bevy. Nell during this had found a single, but flushed it. Then on scattered birds both secured a point, when time was called and Noble won the heat.

SAM R. AND BLADE.

Owing to Mr. Tucker's absence and Mr. Rose's request to withdraw Blade, the heat was given to Sam R. He is by Dash B. out of Daisy Hope, and is owned by G. P. Jones. Blade is by Toledo Blade out of Lula C. The tenth and last brace of the meeting was

TENNESSEE CHARLEY AND TUBEROSE.

B. M. Stephenson handled his dog Tennessee Charley, by Fred W. out of Ida S., and Tuberoose, by Count Noble out of Lit, was handled by E. H. Hyde. Her owner, Will Wilson, had sold her to J. Shelley Hudson. They were cast off at 4:45. Not much work was done, they only running the allotted 30 minutes; but Charley showed himself the better dog, being a faster and a wider ranger. He was first on game, finding a bevy and some singles. Tuberoose secured one. They were ordered up at 5:15, and Tennessee Charley won. Thus ended the first series.

Monday.

As rain fell in torrents, with no sign of a let up, the handlers, many of whom were sick, decided unanimously that the judge decide the stake on the work done in the first series, and their request was accordingly acceded to with the result as wired last week.

Antonio first prize, Dad Wilson, Jr., second prize, Satan, Sam R. and Noble C. divided third.

This brought a rather unsatisfactory meeting to an abrupt close.

MAX.

COCKER SPANIELS OF 1890.

Editor Forest and Stream:

Mr. F. H. F. Mercer's letter of apology, which appeared in your issue of Feb. 5, is not altogether satisfactory. He admits he made misstatements *intentionally* and apologizes for these, and he asks forgiveness of those whose feelings he *advisedly* hurt. As an introduction to this he says "the end justifies the means," and then drags Mr. Wade into the muddle as his adviser. My friend Mr. Wade knows nothing about cockers, regarding them more as a creation of "fancy." Relying undoubtedly upon Mr. Mercer's statements being correct, Mr. Wade advised him to go ahead.

In his letter which reached me after having sent my letter which appeared in FOREST AND STREAM of Jan. 29, Mr. Mercer advised me that he was "Gothamite" and that he had sent Mr. Wade his original communication with a request to send it to me for my opinion. If Mr. Wade had been in doubt as to the truth of "Gothamite's" assertions he would probably have sent it to me, but he returned it without doing so. Mr. Wade is not the person to countenance *intentional* misstatements, with the purpose of *advisedly* hurting any one's feelings, especially I may say those of personal friends. Mr. Wade's record as an apologist for his few unintentional misstatements is too well known to allow "Gothamite" to adopt any such Adam and Eve argument and drag Mr. Wade into the controversy.

Mr. Mercer tells us that good has come out of these *intentional* statements. Perhaps so, but I think not. All that has come out of it is the apology of Mr. Mercer for masquerading under the name of "Gothamite" for the purpose of making *intentional* misstatements and *advisedly* hurting the feelings of others. All through the piece Mr. Mercer has shown his profound ignorance of cocker spaniels and of their history since the first "long and low" spaniels were imported. He doesn't know that the long and low spaniels were field spaniels and that the longest and lowest cocker yet imported was Miss Obo II. In fact he knows nothing of cockerspaniels, and a bantam weight, he shies his castor into the ring, challenging the heavyweights of the fancy, and with a result that might be expected.

When "Gothamite's" first letter appeared I was astonished to see FOREST AND STREAM publishing such a nonsensical string of misstatements, and I never would have taken the trouble to reply thereto. That "good has been done to the cocker spaniel cause by this turmoil," as Mr. Mercer claims in his apology, is admissible only so far as showing very conclusively what every one the least acquainted with the views of our leading cocker men well knew, that there was unanimity among them as to the proper type. Mr. Mercer claimed in his letter to me that he had gained something by securing public admission of Mr. Mason and myself that we are opposed to long and low cockers. My reply to him was that it was just as much gain as if he had accused us of saying the moon was made of green cheese and we had replied to the contrary.

There is absolutely nothing in the whole business outside of the now admitted fact that Mr. Mercer made *intentional* misstatements for the purpose of *advisedly* hurting the feelings of some gentlemen.

Mr. Laidlaw hits very near the mark when he says "the craze, so called, originated in breeders importing cockers from England, where the long and low notions prevailed, and these importations having more quality as a general rule than the spaniels then in America, were taken as the standard." It was just about the same thing that I wrote to Mr. Mercer. No man with any sense will put a bull-headed fright with a cocker build of body over a dog showing spaniel quality all over, even if he is a bit longer than the judge likes as his ideal. If Mr. Mercer had had much experience in breeding cockers, he would know that a body is easily got but a good head is mighty hard. It must be three years ago since Mr. Willey said to me, "I can get every thing I want without trouble except the right heads." About that time Mr. Mason drew attention to the same thing.

It is much easier for a man outside the ring to sum up merits, especially if writing incognito, than if that same individual changed places with the judge. We had a somewhat prominent case in point when Mr. Fellows judged at Philadelphia a few years ago. "Uncle Dick" is well known through the press as a denouncer of "crocodiles," and we naturally anticipated a grand transformation scene when his list of awards was announced. In place thereof and much to the satisfaction of spaniel men he recognized quality as an essential, and differed in no material degree from judges who had previously passed judgment upon the same dogs. When Mr. Mercer is called upon to occupy the position as judge, he will have the same difficulty to encounter. He will find no dog without faults, and it is in the estimation of the difficulties overcome, as opposed to the failures, that he will experience trouble in order to arrive at a decision satisfactory to himself.

I rather feel that the greatest injustice of all has been done to Mr. Wilmerding in dragging his dog Doc so prominently into the discussion, but I do know this that he deprecated the starting of the correspondence in the way it was done, and only wrote to correct errors unintentionally committed by Mr. Mason, which that gentleman at once retracted. The puffing of Doc I know has been done entirely without his knowledge or consent, and he being now in Florida and not being present or perhaps caring to refute suggestions as to seeking gratuitous advertising, I take the liberty, as an old friend, to say what I do know on this part of the subject.

PHILADELPHIA, Pa.

Editor Forest and Stream:

In addition to the retraction which appeared in your columns two weeks ago, Mr. F. H. F. Mercer has written me a private letter, expressing regret for the course he pur-

sued and the misstatements he made. This letter of apology, which is no half-hearted affair, is accepted as it deserves to be—cheerfully and sincerely.

In regard to the "Cocker Spaniels of 1890" I have shown by a careful comparison of the dogs at New York that there has been no improvement during the past year. My statements have been indorsed by the best judges and we must look elsewhere for a field of discussion.

If a fixed type is to be obtained and maintained it will be done by intelligent selection, careful mating and a judicious distribution of blood. And let me advise no man to be led away by this cry for working cockers. Many men who were unable to breed pointers with square muzzles, and at the same time clean and long necks, insisted that spike-nosed, long-necked, characterless apologies for a pointer were the proper thing. Others that failed to breed dogs with the necessary amount of bone assured us that little bone of good quality was needed. The man with a ring-tailed dog coolly remarked that a bad tail did not prevent a dog from running fast and finding birds. The unlucky possessor of the staring, gooseberry-eyed specimen said that a dog could see just as well with a yellow eye as any other. And so it goes until all defects are wiped out. Look at almost all the breeds and you will find connected with them men who, themselves unable to breed good ones, are ever insisting that their "workmen" are typical. The market for dogs that approach the standard in name only is very limited, and plenty of cheap advertising and "work" are the only means by which such stock can be unloaded.

The standard of the American Spaniel Club is good enough for the present. Unfortunately it is the custom in this country to fit the standards to the dogs when the dogs cannot be bred to fit the standards. This has been tried repeatedly with the setters, but I am glad to see that no genuine dog man has ever had a hand in such work. When you have succeeded in breeding dogs that possess all the points called for by the standard and have satisfied yourselves that these dogs cannot do all that is asked of them in the field and on the bench, then turn your attention to remodeling the standard.

For judges select only those who can properly interpret a standard and estimate the true value of points, positive and negative. Frown down anything and everything that savors of cliquism. Insist that the prize goes to the best dog whether it be owned by prince or pauper, and if the cockers are not a vastly better lot in 1895 sell out and leave the field to those who, while always owning the best, never let anybody see them.

CHAS. H. MASON.

Editor Forest and Stream:

The issue of your paper for Jan. 29 has only just reached me here to-night. In it I notice in the cocker controversy that Mr. Mason states that the remarks made by myself and others calling a halt in personalities, came rather late in the day. Mr. Editor, you will bear me out when I say that you yourself asked me to write a line to this effect, which I did shortly after the request, but which was received too late, therefore having to lie over a week. Owing to the state of the controversy at that time my wishes were anything but to go into it, nor would I have had a word to say had Mr. Mason not fallen into an error in regard to the ownership of Doc, stating that he belonged to Mr. F. H. F. Mercer, which I felt impelled to correct. Regarding Doc being in Mr. Mercer's care at Ottawa: The latter wrote asking me to send the dog to the show in that city, volunteering at the time to personally care for him and take him each night to his own home. This offer I accepted and he remained with Mr. Mercer I should think about two weeks. Mr. Mason suggests that I refresh my memory on this score. No need of that, and no need of Mr. Mason's suggesting it, as I have his letter of two or three weeks ago asking about this, and he no doubt has my very prompt reply, stating the case as above, and further stating (in answer to his question) that I did not know that Mr. Mercer had advertised the dog as at the stud over his own name, as Mr. Mason asserts. In asking me to send the dog to the show Mr. Mercer said in substance that he would notify the papers that the dog would be at the stud in his hands for a short period. Any further "advertisement" of the dog I knew or know nothing about. And as regards the recent so-called "booming" of the dog in the present controversy, the mere mention of his name has been entirely without any understanding or agreement (or consent) on my part with any person, whatsoever. The identity of "Gothamite" until about ten days ago was positively and absolutely unknown to me.

A. CLINTON WILMERDING.

SEMINOLE, S. C., Feb. 4.

Editor Forest and Stream:

In your issue of Jan. 29, Mr. Pancoast, of Auburndale, O., offers a special prize of \$10 for the best cocker spaniel bitch at the coming Cleveland show, provided that Miss Obo II. and Bene Silk are entered, the prize to be awarded by either Mr. James Watson or Mr. J. Obis Fellows.

Mr. Pancoast writes: "I should like to hear from Messrs. Willey, Whitman and others if my offer meet their approval."

I desire to say to Mr. Pancoast that I am not after newspaper notoriety, but if cocker spaniel lovers desire to see such a competition under such well-known breeders and judges of spaniels as Messrs. Watson and Fellows, I shall be pleased to enter champion Bene Silk at the Cleveland show in April, although it is hardly justice to her for me to do so, as Bene has recently whelped a litter of puppies.

L. F. WHITMAN.

CHICAGO, Feb. 5.

Editor Forest and Stream:

As neither of the parties engaged will make the very simple explanation, I feel forced to explain how it was that Mr. Mercer took such violent offense at Mr. Mason, and the more so as it was so amazingly simple. It is this. In an article in *Turf, Field and Farm* Mr. Mason wrote that "the Canada official" had made more untruthful statements than—"etc." Mr. Mercer being an official of the Canadian Government not unreasonably took this to apply to himself, and I must admit that I did the same, and it was not to be wondered at that he was wrathful. But the fact is that Mr. Mason had not the faintest idea of implying aught against Mr. Mercer, and his remark was meant to apply to a totally different quarter, and learning this, I advised Mr. Mercer of his misapprehension with the result, I feel certain, that two of my most honored and trusted friends will yet come together in amity. Further than this I do not feel at liberty to say.

W. WADE.

HULTON, Pa.

BULLDOGS.—Baltimore, Md.—*Editor Forest and Stream*: Bulldogs certainly are booming. Last year there was no club and only nineteen entries at New York. This year there is a club with thirty charter members, and Mr. Mortimer writes me there are fifty-one entries at New York. This positively proves that specialty clubs stimulate interest. Now, it only remains for members to come to the front and increase, in the same proportion over last year, the entries at Baltimore, Lynn and Chicago, and our success is assured.—CHAS. D. CUGLE, Sec'y.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. Kennel Record and Account Book. Price \$3. Training vs. Breaking. By S. T. Hammond. Price \$1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

ST. BERNARD CLUB MEETING.

Editor Forest and Stream:

The monthly meeting of the board of governors was held Feb. 9 at the Hoffman House, New York city. Present: W. H. Joekel, Jr., J. O. Thurston, B. P. Johnson, Jacob Ruppert, Jr. and K. E. Hoff. The following were elected members of the club: W. C. Reick, New York city; J. L. Pierce, Jr., Bennington, N. H.; Haslage, Pittsburgh, Pa., and Wells, Brooklyn. The names of Mr. Sidney W. Smith, of Leeds, England, and of Mr. H. W. Lacy, of New York city, were added to the list of judges recognized by the club.

It was decided to support the Pet Dog Club in their petition to the Mayor of the city of New York, to the effect that licensed dogs under the immediate control of their master, but not held on the leash or muzzled, be exempt from seizure except during the months of June, July and August. As the law now stands any licensed dog, when not held on the leash or muzzled may be seized by the dog catchers.

The annual meeting of the club will be held on Feb. 24 at 7:30 P. M., at Madison Square Garden (opening day of the New York show) for the election of officers and for the transaction of other business. All the members who can possibly do so are requested to attend.

The club has donated the following specials for this season's shows: New York show, 10 club medals and 2 silver cups of \$35 each; Baltimore, 4 medals; Pittsburgh, 4 medals; Chicago, 3 medals, and Boston, 10 medals; total 36 medals and 2 cups, amounting to \$348. The competition for these specials is open to members of the club only, and with the exception of the two cups and four medals the prizes are exclusively for American-bred dogs.

The initiation fee is \$10; it includes the current year's dues, annual dues \$5. Notwithstanding the low dues on the one hand and the liberality of the club on the other, the club is not supported as it deserves to be by St. Bernard men.

K. E. HOFF, President.

A DOG PROTECTIVE UNION.

Editor Forest and Stream:

Replying to your article in FOREST AND STREAM, issue of Feb. 5, regarding a "Protective Union," will say I cannot see how such a union could take the bread out of the mouth of the A. K. C. Certainly this has not been our intention, as we believe the A. K. C. to be a good organization and worthy the support of all dog breeders. Our intention was to call a meeting at Chicago, April 9, 1891. Perhaps we were better acquainted with the objects of the A. K. C. we would not desire such an organization as a Protective Union. While there are so many rascals in the dog business, and they are allowed to go on with their nefarious work and are unpunished, it seems to me that the breeding and selling of dogs must be a contemptible one for any one to engage in. How is the public to know who are reliable dealers? Even the firm I exposed can furnish what appears to be good references. A so-called dog breeder displays a huge "ad." You send to him for a puppy, the money goes with the order. You receive the thoroughbred (?) puppy. It has the distemper, the mange, is full of worms, and dies within a week after its arrival. The purchaser perhaps paid his last dollar of cash for the puppy, and is 1,000 miles from the kennel (?) from which the puppy came. The breeder (?) will not refund or even answer a letter. This poor man, who has been caught, can not go hundreds of miles and prosecute this swindler, but were I a member of it, I should vote to prosecute such swindlers in dogs, even though it took two \$5 bills a year. Do such swindles occur? They occur every day and go unpunished. I say if there is any honor in the business let us convince the public of the fact. I was pleased with your article regarding my exposé of the Associated Fanciers. If these people have any defense to my charges, let them bring forth their proofs. Your blizzard-swept Dakotan,

W. W. BRADLEY.

MILNOR, N. Dak., Feb. 11.

CALIFORNIA NOTES.

A. B. TRUMAN of this city has purchased of the Bullied-Miner Kennels, the noted pointer dog Molton Baron, E. 20,187, winner of first, Warwick; first, Barn Elms; second, Darlington, 1889, and the sire of many good ones.

The Occidental Coursing Club's spring meeting promises to be one of great interest. Sixteen dogs are already entered from San Jose, Santa Clara, Los Gatos and this city. On account of Washington's birthday coming on Sunday, the meeting this year will be held on Feb. 23. The club is strong financially and numerically, and are about to make extensive improvements in their park at Newark. The park measures 677 by 440 yds, and is well arranged. The club propose to build a better, more commodious grand stand, new kennels and add to the escapes.

The California Kennel Club's show promises to be a big success. They have decided to hold the show in the Wigwam Theatre, an excellent place for a show, large enough and light enough. The members at the last meeting placed a guarantee fund of \$320 in the hands of the treasurer. This with the cash on hand amounts to nearly \$500, which sum will be materially increased by contributions from other members at the next meeting. The cash prizes will not be large, but the list of specials will more than make up for the deficiency. The list of officers for the ensuing year are: President, J. B. Lewis; Secretary, H. P. Rennie; Treasurer, John DeVaul; Executive Committee—Dr. Jas. Stanton, J. B. Martin, Thos. Higgs, Felix Deleane, Joseph King, A. B. Truman, J. W. Orndorff. Little, Mooney. Mr. John Davidson will judge all classes.

Mr. P. D. Nolan's greyhound dog Scout, that made the phenomenal run at the last meet of the Occidental, twice leaping the 9 ft. fence that surrounds the escape, has "staked" himself badly, making a wound in his chest 3 in. in depth. He is one of the finest hounds on the coast, and the accident is much to be regretted.

NAMQUOIT.

SAN FRANCISCO, Feb. 12.

MY IRISH SETTER.

Dedicated to the Hon. Geo. W. Moore, of Kentucky, by his friend and fellow sportsman A. E. Laare.

I PURCHASED him one bright sunny morning in October, when all the world seemed in harmony with the sun's glad effulgence and my dog's brilliant future. I immediately sent him to college at Salina, Kansas, where his professor wrote me a year later that I had the finest quail dog west of the Pyramids and to kindly remit \$25.

He arrived a few days later, and I met him at the depot. He was a bright, attractive fellow, with his beautiful eyes, head and form, and his dark red coat of soft silky hair. Indeed he was a pretty dog, and I was very proud of him. I had twenty-three more friends the evening after his arrival than I had had that morning.

The next day we were on the shooting grounds a little after sun up, having driven thirteen miles. The dog would not lie down in the buggy, but insisted upon getting up in our laps and pulling the robe down and making us uncomfortable generally. I did not like this, but knew it could easily be corrected, and I did not want to be severe with him until his affection for me was established. We hitched and blanketed our horse and started for a deep ravine, about a quarter of a mile distant. We were in excellent spirits,

having just received not only the dog, but also a new gun direct from the factory. There was not a particle of wind, and the atmosphere was just crisp enough to make it most enjoyable. I was walking on briskly toward the ravine, when to my surprise a prairie chicken got up right under the dog!!!! My beautiful soft-eyed setter gave one wild impassioned lunge and moved away like a meteor flushed in the dark. And just as my optics were beginning to cast a cool and perceptible shadow, he butted a great large hole in the horizon, and as the hole closed up behind him I could hear far away in the hazy distance that peculiar yelp so dear to the colored rabbit hunter. It came back to me over the hills, gladdening my heart and sweetening my nature, like the welcome tap of a poker player when you're out on a "sandy." I stood gazing at the cruel mantle of space that had enveloped my treasure and deprived me of the joy of his presence. I gazed long and tenderly. I felt sad and depressed, and I presume, not unlike the beautiful Dido the morning she climbed upon a burning brush pile, and with only a few battlements of poor old Carthage as witness furnished the hereafter with what is known to reticent mortality as a self-made corpse. My only salvation from a similar fate was, I think, the mirthful deportment of my companion. Ever since he heard the first faint yelp of my late Irish setter he had been seized with a violent attack of audible smiling. It seemed intermittent and augmentative. It would return without any apparent cause or provocation; sometimes in the midst of a deep forest, sometimes in the midst of a permanent lull in the conversation, but always, it seemed to me, out of place and irrelevant.

In the course of two or three hours the idol of my heart returned. His legs were worn off at the points till they were not over four inches long. There was a halo of steam around his body, and ever and anon he would step on his tongue and stumble. I briefly arranged him so he would resemble as nearly as possible the spangled ruins of a lecture egg and started for Salina.

Dear reader, there are some things too sad for the human pen to utter, and I will tersely say in conclusion that I called upon his trainer, and with tears in my mouth told him of my dog's departure from the path of rectitude. I then bade him farewell, and as we parted I wrung his neck instead of his hand, and all was silent.

THE FAITHFUL DOG OF HELVELLYN.

A MONUMENT has just been erected on Helvellyn to the memory of Charles Goff, who, in the year 1805, was killed by falling from the high crags on the ridge that joins

MONUMENT ON HELVELLYN TO THE MEMORY OF THE FAITHFUL DOG.

Striding Edge to the summit; and of the faithful dog who for three months watched over his master's remains. Sir Walter Scott describes the event in his poem, "I climbed the dark brow of the mighty Helvellyn," and Wordsworth records it in his lines on "Fidelity."

The young man was returning to Wythburn, where he lodged, from a fishing excursion in Patterdale. The accident was probably caused by a false step, during a blinding hail-storm or dense fog that day. It happened on April 18, and on July 20 his bones were found, still watched by the starving dog, a little yellow rough-haired female terrier. She had given birth to puppies, which were found dead by the side of the corpse. It is believed, though unable to secure enough food for milk for her young, she maintained life by bits of carrion sheep which are not unfrequently found on the hills; but she might have had to range far and wide during her three months' watch. The mere fact that the bones were found intact serves to prove the assertion that the dog did not touch the remains of her master, for dogs break the bones to suck the marrow. This animal died a few years afterward at Kendal.

The merit of the suggestion to erect this monument belongs to Miss Frances Power Cobbe, whose design has been carried into execution by the aid of the Rev. H. D. Rawnsley, Vicar of Crosthwaite, both names of some repute in literature.—Illustrated London News.

ANOTHER SPECIALTY CLUB.

Editor Forest and Stream:

I have sent the following circular to those black and tan breeders whose addresses I know, but to give it greater publicity would you kindly publish it as well? "During the past two years the black and tan terrier has made rapid strides in public favor and popularity. Other breeds, less suited to fill the requirements that the black and tan meets, have been greatly aided by cooperation on the part of their breeders and admirers. The time has arrived when much can be done for this smart and handsome terrier by organizing a specialty club under the name of the Black and Tan Terrier Club of America. Will you lend your support and become a charter member provided the initiation fee is not made over \$5 and the annual dues the same? This breed has suffered much through incompetent judges, misrepresentation, and the lack of support such as only a specialty club can afford it. It is proposed to call a meeting of all interested, on the second day of the New York show, which will be Wednesday, Feb. 25, 1891. Can you attend? If not, and yet are willing to join the movement, send me your acknowledgment to that effect and I will present your name as a charter member. I will consider it a personal favor if you decide favorably."

H. T. FOOTE.

120 LEXINGTON AVENUE, New York.

DOG CHAT.

THE action of the N. G. C. does not evidently meet with unqualified approval out West, judging from the extract from *Breeder and Sportsman*: "THE NATIONAL GREYHOUND CLUB.—An anonymous communication in the FOREST AND STREAM under the above caption in the issue of that excellent paper of the 8th inst., presents some features which, to say the least, to California coursing men seems rather high-handed and premature. In the formation of a National Greyhound Club it would seem that California, which possesses more greyhounds two to one than all the country east of the Rockies, ought at least to be formally consulted. Coursing as a sport has been actively carried on in this State for more than twenty years; the sport has become one of the standard events of our sport-loving people; the record here shown exhibits the fact that the largest cash purses ever offered for prizes in coursing events have been contested for in California. With such a record as promoters of legitimate coursing in this country, and now exhibiting more coursing meetings annually than all the balance of the States taken together, our coursing men simply ask in all fairness, should we not be consulted in the formation of a club which assumes to lay down rules for the government of the sport in the United States and Canada? We have the most friendly and cordial feeling for the greyhound interests all over the country. We trust that harmony and good will shall mark every step in this matter. No one will contend that a national organization will serve a good purpose, but let us have it organized with proper respect to all parties in the royal sport of coursing." The communication above referred to says: "At the request of a large number of the members of the Western coursing clubs the National Greyhound Club has prepared a code of rules for use by all the coursing clubs of the United States and Canada. One of these rules reads as follows: 'No greyhound shall be allowed to run at any coursing meeting held after Oct. 1, 1891, unless it shall have been duly registered in the National Greyhound Club Stud Book.'" So far as we have been enabled to hear no club on this coast has ever been consulted. Do not be arbitrary, good friends, but allow at least the coursing men of California to retain the vested rights which for more than a score of years have been peacefully enjoyed by them. Do not force them into an organization, in the formation of which they have had no voice and have never even been consulted. The preparations for coursing events in this State for the coming season fore-shadow the fact that larger cash purses will be offered than ever before. The meetings will be open to the world. We would like to see every greyhound in the United States and Canada entered, the leading ones unquestionably will be. We ask our Eastern friends to do nothing rash lest it be not done well."

The exhibitors are rousing themselves to action in England and intend forming a league which will in every way strive for the protection of dogs from every form of cruelty and hardship, and promote the best interests of owners and exhibitors from the poorest upward. A good deal of the organizing work was done at the late Liverpool show.

Lovers of Irish terriers should read Mr. Krehl's, at least we presume it is, report in the *Stock-Keeper* (Eng.) of the Irish terriers at Liverpool. This was the strongest show of these dare devils ever held. One hundred and seven "Irishmen" is a monster entry. He describes Brickbat as the best of his breed.

Our San Francisco contemporary *Breeder and Sportsman*, says that whoever will set the ball rolling in the direction of any of the breeds of terriers on the Pacific coast, will find a clear field. They own, however, several nice fox-terriers out there.

The auction sale of collies from the Chestnut Hill Kennels promises to be a splendid opportunity for those who would like to secure first-class stock at auction prices. On the list of dogs that will be brought to the hammer we find the names of such noted animals as Maney Trefoil, The Squire, Roslyn Sensation, Colonel Scot, Roslyn Wilkes—by some counted the best in the country, and is sure to be eagerly bid for—Spoiled Miss, Roslyn Parole, and several others, besides the shipperkes Othello and Mieke. Particulars of the sale will be found in our advertisement columns.

Another crack collie, Sefton Hero, has risen on the show bench horizon, and as usual Liverpool is the scene of the coming dog's debut in England. It is said that he comes as near perfection as the nature of things will allow.

The late owner of Sir Bedivere is going out of dogs entirely, even to the disposal of his house and kennels, and his brother will shortly make his home in America.

We were pleased to receive a letter from Mr. Ronald H. Barlow, now of Northwood, Middlesex, England, and to learn that he still has a warm spot in his heart for FOREST AND STREAM. Mr. Barlow, it will be remembered by those familiar with our shows of three or four years ago, was one of our best terrier judges and a thoroughgoing fancier. This gentleman sends us also something that will interest the bull-terrier men. It seems that Mr. C. Albert Stevens, of Castle Point, Hoboken, N. J., through the medium of Mr. Barlow, has effected with difficulty the purchase of Alfred George's latest acquisition in bull-terriers—Dick Whittington, 2½ years old, by Big Ben out of Trentham Venus. No expense has been spared, and Dick is to be shipped per White Star liner Majestic, arriving in time to make his debut on this side, at the W. K. C. show next week. This dog has only been four times before the English public, with the result of two firsts, a second and a reserve in hot company.

We like hits straight from the shoulder (though not when we are the recipients) but at the same time we do not like to see the truth strained to breaking point in order to furnish the wherewithal for the "smack." "Fandango," in a contemporary, in referring to the last Baltimore show puts it in the 200 list, when it is well known that the entry was 511, and this number was much beyond the capacity of the hall. With a large hall and increased prize list, this show ought not to fall far below the 500 mark. We take little stock in the effect that any judge's name may have on the entry list, for shows are so few here at present, that we have hardly arrived at that state where we can pick and choose our judges to show under, as in England, and this proves that the chance to show at all is in most cases the reason for the entry. Of course, as our kennel world grows older this will be altered to some extent and the judge's name will draw or the reverse, as the case may be, but at present it strikes us that the most guaranteed money and the best management will draw the best entry. Speaking of money reminds us that we were somewhat guilty of an injustice to the Maryland Kennel Club in our last issue, in printing the "Malcolm disclaimer" without at the same time assuring exhibitors that the prize money for this show had been guaranteed by wealthy men, and when we remember that Messrs. Dufferin and Farber stood sponsors for their inaugural show last year, there is no ground for any fears in that respect this year.

Just as we go to press the premium list of the New England Kennel Club's seventh annual show, to be held March 31 to April 8, is received. The list of prizes and the large number of valuable specials make the schedule a very at-

tractive one. The challenge prizes for the principal breeds are \$15, with \$15, \$10 and \$5 in the open classes, and in no case do the challenge or open class prizes go below \$10 and \$5. A dog winning a money prize can have a medal instead, at the option of the exhibitor. Sexes will be divided when not less than five of each sex are entered. The judges appointed are: E. H. Moore, Melrose, Mass., mastiffs; H. W. Lacy, New York, St. Bernards, great Danes, greyhounds and deerhounds, all terriers except bull-terriers and fox-terriers, toy spaniels, pugs, poodles; John Davidson, Munroe, Mich., English, Irish and Gordon setters, pointers, foxhounds; Jas. Watson, Philadelphia, Pa., collies, all spaniels except toys; R. F. Mayhew, New York, fox-terriers and bull-terriers; John E. Thayer, Boston, bulldogs; W. Stewart Diffenderfer, Baltimore, Md., beagles; J. Newman, Boston, round-head bull and terrier; Messrs. Watson and Lacy, miscellaneous. Kennel prizes of \$25 are given in the more important breeds. Most of the specials given by the different specialty clubs have already been published. The entries close March 18, with the bench show committee, 6 Hamilton Place, Boston, Mass. Spratts Co. will bench and feed.

The English Setter Club having donated several specials to the Pittsburgh show, desired one of their own judges to officiate, though the judge, Mr. John Davidson, had already been announced. Mr. Tallman was then asked to judge the English setters, but very properly declined.

We regret to hear that the well-known handler, Ben Lewis, has been very ill since his return from the Southern shows. We trust that he will be all right next week, for a dog show without "Ben" would be—like that Shakespearian chestnut.

Mr. S. L. Boggs, president of the Duquesne Kennel Club, writes that they will give a diploma as second prize in the challenge classes already provided for the following breeds: Mastiffs, St. Bernards (both breeds), deerhounds, greyhounds, foxhounds, pointers (both weights), setters, collies, bull-terriers, bulldogs, beagles, foxterriers and pugs. Where practicable the judges will be instructed to give a third prize of a diploma. The English Setter Club offers the silver medal of the club for the best English setter bitch and two of her produce, over 12 months old, regardless of ownership, prize to go to the bitch; also silver medal of the club for the breeder of the three best English setters, dogs and bitches, or three of either sex, over 12 months old, regardless of ownership; also silver medal of the club for the best English setter dog or bitch with a public field trial record.

Our illustration this week is the noted Skye terrier Sir Stafford. Sir Stafford was imported by Mr. C. A. Shinn in August, 1888, and was bred by E. Ewing, of Cambridge, England. He is by Sir Garnet—Floss. This dog's record on the bench in this country is now well known, and before he came over he defeated such crack Skyes as champion Kingston Tory, at Maidstone, and this was his first defeat. At Bristol he vanquished champion Sir Strathairn, also a big winner. He is, as a sire, responsible for some of the best winners on the other side, among them Silver Queen, Sir Joseph, Sir James, Cassie, Baffie Flower, and others. His winnings here include first wherever shown. It is needless to repeat them as the dog is as well known to the show goers as his inimitable handler Ben Lewis, who will again have him in charge at New York and through the balance of the circuit, when he will be retired. He is now about five years old, and is as game as they make them. He has sired some good pups over here, though, of course his sphere in this direction has been but limited, owing to the scarcity of bitches, but one of his get will be shown with him at New York.

It seems funny that the English Kennel Club does not make some rule to correct the bad habit exhibitors are getting into in holding back their entries for shows till after the regular date of closing, so that secretaries are compelled to appeal to the kennel papers for a "whip" and to extend the date. After such a notice to the papers the show's entry is sure to be a good one. Perhaps it is one of the tricks of the trade we are not yet up to in this country. Mr. Cruft, who is getting up his annual terrier show, makes such an appeal and extension, although he has provided a list of about 480 classes.

Show committees in England are making a stand against the specials given by owners of stud dogs for the best progeny by their dogs. Recognizing the bother and annoyances these specials give to the management in hunting up the different competitors at the tail end of a show, the Manchester show people have refused such a special from a man who has been advertising this special as an inducement to get breeders to patronize his stud dog for some time past. Now he cannot keep his engagements. *Stock-Keeper* suggests that he ask some well-known terrier man, who is not an exhibitor, to run his eye over the qualified entries, and then send a postal card, with the number of the chosen dog on the back, to both owners of stud dog and progeny. This saves a lot of bother and might be adopted in this country.

Barzois or Russian wolfhounds are steadily making their way to the front in England. Two well-known exhibitors intend indulging in them, and have ordered several of the best that can be bought in the land of the Czar. That they have a standard of excellence for these dogs in Russia is proved by the fact that at the late Moscow show the Great Gold Medal was withheld, as the exhibits were not considered worthy of it, and only the Great Silver Medal was awarded.

We learn that Mr. Chas. S. Hanks, of Boston, Mass., who, it will be remembered, dispersed his kennel of terriers previous to taking a trip to Siberia, has, while in London, purchased some good fox-terrier stock. From Mr. Redmond he secured Damson, by Dominie—Daphnea, and she is to be served by the crack dog D'Orsay. Then from Mr. Tinne he bought Brockenhurst Queenie, by Rational out of Ytene, and she is to visit Dominie. Besides these, he purchased Grouse II., by Rational out of Olive II., who will, as *Stock-Keeper* puts it, remain there for Venio's pleasure. Mr. Hanks has evidently been under good tutelage, for he has invested his money in some of England's best fox-terrier stock, and bred to these dogs he will have the nucleus of a kennel that should put him well to the front in future shows. He has also, since his arrival in St. Petersburg, been smitten with the Barzoi fever, and feels very much like investing in some of these beautiful hounds.

Mr. J. E. Lloyd-Lloyd, of Totnes, Devonshire, Eng., is disposing of his well-known kennel of show and field trial winning pointers. Among them are champion Ilma, served by champion Naso of Upton; Totnes Parody and Totnes Onyx. They will be disposed of in one lot.

Mr. Green, late owner of Sir Bedivere, has lost his noted smooth St. Bernard Baron Wallasey, by Nero III.—Bena. He was a full brother to the crack, out of a later litter. Inflammation of both lungs took him off despite the best veterinary care. He had won numerous prizes.

A well-known English coursing man, William Wilkinson, has joined the majority. He was the father of the noted slipper Tom Wilkinson.

Mr. Toon, of Sheffield, England, has purchased for Mr.

MR. C. A. SHINN'S SKYE TERRIER "SIR STAFFORD."

Charles Symonds, Salem, Mass., the noted Irish terrier Bellman (E.K.C.S.B. 25,913). He is by an unknown dog out of E. D. Fanning's Glen Quiss, by Gripper out of Brickdust. His weight is 37 lbs. Among his 12 firsts and specials he counts a win at the Aquarium terrier show and Birmingham. He is described as a grand coated dog and just the sort for small, weedy bitches. Bellman hails from J. W. Taylor's kennel, at Oldham, and this is the kennel where the crack Bradenhill holds court. Mr. Symonds writes us he has not yet received his pedigree, so the above is news for him as well as others. He is now on City of Berlin, consigned to Dr. Foote. With Bellman, Breda Bill, Ballymoney and Exile, the Northfield Kennels will have a pretty level team of "Irishmen" at New York.

The premium list of the Massachusetts Kennel Club's show at Lynn, March 24 to 27, lies before us. It is of the usual \$10 and \$5 order. Challenge classes are provided for both sexes in most of the breeds with prizes of \$10 and a diploma. Open classes for all breeds excepting Newfoundland, Irish water spaniels, dachshunde, bassets, bull-terriers, pugs, black and tans, Skyes, Yorkshires, Scotch, Bedlington, Dandie Dinmont and Irish terriers, toy spaniels, poodles and miscellaneous have \$10, \$5 and a dip, those mentioned must be content with \$5, \$3 and a dip. Spaniels have only \$5 and dip, in challenge classes and \$5 and \$4 in open classes. Kennel prizes of \$10 are given to most of the breeds, the one for setters includes all breeds. Merchandise, from trousers to cigars and cash, are given as specials, together with numerous medals donated by the different specialty clubs. The owner of a good kennel of beagles can pretty well clothe himself from the special list and drink the club's health from a silver cup given by Mr. E. B. Sears. We have already given the names of the judges, which are Messrs. Glover, Mortimer and Mayhew. It is not stated who will take the greyhound classes. The usual arrangements with the express companies have been made. The entries close positively March 13, with Mr. D. A. Williams, Box 5, Lynn, Mass. The entry fee is \$3. Sanitas will be the disinfectant used and Spratts Co. will bench and feed.

The premium list of the first annual show at Washington, D. C., is out. The pamphlet is an attractive one with a good picture of the pointer Bracket on the cover. They have taken a departure from the usual amount of prizes, the principal breeds having \$12 and \$8 in challenge, and the same with a third prize of \$4 in the open classes, the others get \$10, \$5 and \$3. We are pleased to see that the terrier breeds, such as Yorkshires, black and tans, etc., are well looked after. Puppies in most of the breeds have prizes of \$5 and \$3. Liberal kennel prizes are given, for instance, mastiffs get \$15 for the best four or more, St. Bernards \$20, pointers and English setters \$10, Irish \$10. Fox-terriers and collies have also \$15. Spratts Co. will bench and feed the show. The list of outside specials is not compiled yet but present prospects denote that they will foot up to nearly \$700. We are sorry to find, however, that this club should see fit to treat the smooth St. Bernards so shabbily, \$10 and \$5, for both sexes together, with no challenge class, is not right, as there are many people going in for smooths now that the roughs are getting beyond their means. Little's Soluble Phenyle will be used as a disinfectant. The entries, which close March 4, must be sent to Mr. Frederick S. Webster, 711 14th street, N. W., Washington, D. C. The judges selected are Miss A. H. Whitney for St. Bernards, Newfoundlands and pugs; J. M. Tracy for pointers and setters; and James Mortimer takes the rest, with the exception of beagles, the judge for which has not been chosen yet. Mr. J. A. Hoffer will superintend the show.

We have just received, since writing the above, a letter from Mr. Webster, in which he states that they have increased the prize list for smooth St. Bernards, and they will now be the same as the roughs, viz.: 11A, challenge class, dogs, \$12 and \$8; 11B, bitches, the same. 11C, open class, dog, \$12, \$8 and \$4; 11D, bitches, the same, and 11E, puppies under 18 months, dogs and bitches, \$5 and \$3. A kennel prize of \$15 for the best kennel of smooths will also be given. The rough-coated puppy class should be for puppies under 18 months, instead of 12 months. They have also given a class to basset hounds, class 80A, open class, \$10, \$5 and \$3. Everything is being done by the committee to attract exhibitors. Many specials have been received and will be announced later. One of the important ones is that of \$25, to be offered for the best kennel of field trial winning pointers, and already two very important kennels have entered for this special and others are expected.

The meetings of different clubs to be held during the W. K. C. show are as follows: Annual meeting of A. K. C., Feb. 26, at 1 P. M. Meeting of Associate Members, Feb. 26, at 8 P. M. Bulldog Club, 24th, at 8 P. M. Collie Club, 25th, at 4 P. M. Pointer Club, 24th, at 4 P. M. Gordon Setter Club, 25th, in P. M. St. Bernard Club, 24th, at 7:30 P. M. Irish Setter Club, 24th. English Setter Club, 24th, at 4 P. M.

The English Setter Club has offered at the Lynn dog show the following specials: Silver medal for the best English setter bitch and two of her produce over 12 months old, regardless of ownership; prize to go to the owner of the bitch. Silver medal to the breeder of the best three English setters, dogs or bitches, or both, over 12 months old. Silver medal for the best English setter dog or bitch with public field trial records.

At the annual meeting of the Cincinnati Kennel Club the following officers were elected for the ensuing year: J. Shelley Hudson, President; J. P. Heister, Vice-President; Geo.

H. Hill, Secretary; Al G. Eberhart, Treasurer; Board of Directors—J. Shelley Hudson, J. P. Heister, Geo. H. Hill, Al G. Eberhart, W. C. McBrain and T. A. Snyder.

It is the practice of the American Kennel Club to publish in the *Kennel Gazette* a list of the names of members who have been disqualified. We believe that the legality of such a proceeding is open to serious question. The claim is made that while the club may have the power to disqualify for cause it has no authority to publish this disqualification in print, particularly as in this case, month after month, thereby holding up the disqualified individual to public contempt. It has been a foregone conclusion that some time some one would bring action against the club for such treatment. Last Tuesday a summons was served on Messrs. August Belmont, Oliver H. P. Belmont, Alfred V. Vredenburg, Thomas H. Terry, W. Stewart Diffenderfer, Samuel B. Duryea, H. B. Duryea, Mitchell Harrison, J. Otto Donner, Frederick E. Lewis, Frederick R. Halsey, John S. Hoey, Pierre Lorillard, Jr., Winthrop Rutherford, Francis R. Hitchcock, Joseph D. Shotwell, A. Clifton Wilmerding, James L. Anthony and William C. Rogers, requiring them to appear in the Supreme Court in answer to a libel suit brought by Mr. G. E. Gallup, a member of the Albany Kennel Club, whose name has been published repeatedly in the *Kennel Gazette* as among those who are disqualified. The answer must be returned in twenty days. The Albany Kennel Club, according to the rules of the A. K. C., has been disciplined for non-payment of prize money. The Albany Club has, we believe, paid all the prize money due from their last show, excepting \$10 which Mr. A. W. Smith, of Buffalo, claims is owing to him. The club claims they have paid all their prizes. It is just as well, all things considered, that some one has brought such a suit, as it will determine, once for all, whether the A. K. C. has the right to disqualify individuals and hold them up as a warning to others by publishing their names in the black list of the A. K. C.'s publication, the *Kennel Gazette*.

Messrs. L. and W. Rutherford will have another of their auction sales of fox-terriers on the last day of the W. K. C. show. Breeders, and those who have a fancy for a smart terrier as a companion, have at such a sale an opportunity to buy high-class animals at reasonable prices. The good breeding of the dogs from these well-known kennels is established, and this is a good opportunity for younger breeders to secure good brood bitches, as there are only 17 dogs out of the 48 fox-terriers in the list. We find the name of Warren Venom, winner in the bitch class at New York in 1889, among other prize winners to be disposed of. The sale will be held at the American Horse Exchange.

We hear that Mr. John A. Logan has purchased from Mr. T. W. Twyford the fox-terrier Pitcher. When we mention the fact that this dog is the sire of the crack dog Dominie, and other high-class dogs, Mr. Logan would seem to have made a wise choice.

Mr. Shields, of Brooklyn, has made a motion in the Assembly, at Albany, to amend Section 655 of the Penal Code so that it reads: "Nor any other provision of law shall be construed to prohibit or interfere with the coursing of hares with greyhounds." If this is passed a great load will be taken off the minds of the greyhound men.

The Westminster Kennel Club have reason to congratulate themselves on the fine entry they have secured this year for their 15th annual show. Last week we gave an approximate idea of the number of entries in the different classes, as far as they had been written up. The list is now considerably larger, amounting in all to 1,526 entries, as follows:

Mastiffs.....	58	Chesapeake.....	7	Bedlington t'rs. 6	
St. Bernards.....	197	Spaniels.....	107	Skye terriers... 6	
Bloodhounds... 3		Collies.....	119	Scotch terriers.. 4	
Great Danes... 36		Poodles.....	27	Clydesdale t'ers 3	
Newfoundlands 10		Bulldogs.....	51	Black and tan t's 14	
Russian wolfh'ds 8		Bull terriers... 37		White Eng. t'rs 2	
Deerhounds.... 20		Basset hounds.. 3		Yorkshire t'ers. 35	
Greyhounds.... 41		Dachshunde.... 30		Toy terriers.... 9	
Foxhounds..... 28		Beagles.....	24	Pugs.....	33
Pointers.....	107	Fox-terriers... 161		Toy spaniels... 55	
English setters. 79		Irish terriers... 31		Italian greyh'ds 8	
Irish setters.... 102		Welsh terriers. 5		Miscellaneous... 5	
Gordon setters.. 42		Dandie Dinmonts 7		Schipperkes.... 6	

Of course many of these are duplicate entries, but the total of 1,370 different dogs will be benched, which makes it the largest show ever held in this country. At the same time the increase of quality is in proportion, and it is safe to say that as a general collection it could hardly be surpassed in England. What we lose in some breeds we make up fully in others, so that the Empire City may well feel proud of its dog show. To-night (Tuesday) all the identification papers, tags, etc., will be mailed off, and any one who knows what work this entails, will appreciate the fact considering it is yet a week to the opening of the show.

The A. K. C. Stud Book for 1890 is expected to be out this week. It will contain over 2,900 registrations, besides which 17 pages of the book are devoted to a full list of the winners of the past year, arranged in alphabetical order. This makes a handy reference, for one can at once find the name of the dog required, and opposite will be found a full list of its winnings for the year.

The A. K. C. has instituted an "official" art gallery of large framed pictures of the presidents and secretaries of the club from the time of its organization in 1884. With the exception of two, those of J. Otto Donner and Elliot Smith,

the list is complete, with presidents Taylor and Belmont, Dr. Perry, president of Associates; and secretaries Porter, Osborn and Vredenburg.

At a business meeting of the Brunswick Fur Club, held last week at the Sunnyside Hotel, East Wakefield, N. H., it was decided to offer special prizes at the bench show of the New England Kennel Club as follows: For the best American foxhound dog, \$10; for the best American foxhound bitch, \$10, and for the best American foxhound pup, under 18 mos., \$5. Hounds, the property of the club to be excluded from competition.

At the Ridgway coursing meeting in England last month Colonel North entered seven puppies in the large stake, winning 23 out of 24 courses, with a result that the whole seven were in last ten and six in the last seven. This is form with a vengeance. His nomination for the Waterloo cup is a steady favorite at 4 to 1, the next being 20 to 1.

The meeting of the Brunswick Fur Club, at East Lakefield, N. H., opened on Feb. 9, but the weather and conditions for sport were anything but propitious. The first night it snowed, rained and froze, which made a crust just strong enough to carry a fox and weak enough to let the hounds through. The hounds selected for the first day's hunt were Dr. Hoffman's Gipsy Blanco, Dennison's Billy, and Fount's Bonny, all light-weights. The meet was at Balch Pond, a mile from the hotel. A fox was soon started, but the dogs could not press him owing to the thin crust, and though they kept at it for several hours finally lost him. The meeting has been continued, but with poor success, owing to the bad weather and the unfavorable condition of the snow.

Although Mr. Mercer purchased the noted Clumber bitch Snow in 1889, he had not seen her till her arrival on Feb. 12. He is delighted with her, and though she is undersized, thinks her better than anything he has yet seen in the Clumber line. As her name implies she has no markings. His experience in attempting to breed her in England has been very disastrous. The first litter by Boaz all died, and her second heat was allowed to run over. She has won over thirty first prizes in England, three of which were at Birmingham and one at Barn Elms. Mr. Mercer is coming down for the W. K. C. show with his team of Clumbers.

As no better date than that claimed for the Boston show is available, the St. Louis people are compelled to forego their intended show, although a guarantee fund had been raised.

The premium list of the Boston show will, it is expected, be issued at the end of the week, and we hope to be able to announce the judges in this issue. We can say, however, that Mr. Moore, now that he is out of mastiffs, is ready to don the ermine and will make his debut as a judge in the mastiff ring at this show. New blood will also be tried for the St. Bernard and several other breeds, so that exhibitors can take on fresh hope. A novelty is under consideration in the way of amusement at the show, but further than this we are not at liberty to speak.

It is not very likely that the St. Bernard Princess Florence will be seen in this country after all. According to a cable from Mr. Chapman her lowest price is \$7,500, a mere trifle of a thousand more than the late importation, Sir Bedivere. Mr. Chapman wrote us some time since that though she was not in good shape she weighed 200 lbs., and expected her to be ready to meet Sir Bedivere at Manchester in March, when he had every expectation of downing the dog now that she was full grown. Of course this little prospect of triumph is knocked on the head, for the present at least.

After a murder case, which is now claiming the attention of Judge Brady in Oyer and Terminer, the famous Peshall trial will be commenced, the District Attorney having set it next on the calendar. It is understood that Mr. Peshall will enter a demurrer and move to quash the indictment.

Mr. Wade writes that he would like to have Mr. Mason's opinion of what a Barzoi should be. Mr. Mason will, among several other breeds, criticize the wolfhounds at the coming W. K. C. show, and at the same time take the opportunity to give Mr. Wade the points he requires.

A meeting for the election of officers in the Eastern Coursing Club, and a meeting of the N. G. C. will be held at the Metropolitan Hotel on Thursday, Feb. 19, at 8 P. M.

Mr. Stewart Diffenderfer has purchased the crack St. Bernard bitch Hespary, at a very long figure. She will be served by Scottish Prince.

The auction sale of the Chestnut Hill colliers will take place at the American Horse Exchange on Wednesday, Feb. 25, instead of Friday.

A SULTAN COMING.—New Rochelle.—*Editor Forest and Stream:* I have purchased from Mr. Ellis, of Manchester, Eng., the best of his superb collection of black and tan terriers, Broomfield Sultan, for the Rochelle Kennels. He is only 16 months old, yet he has made a remarkable record on the bench, his greatest triumph being at the recent Crystal Palace show, where there was the unprecedented entry of 59 black and tans. Sultan, under the judging of Geo. Raper, won first in open dog class, first in junior class, and capped the climax by winning the special for the best of the breed in the show, and defeated the strongest dogs now on the bench in England. His sire was Broomfield Turk, he by Sir Edward, he by Burke; and his dam, Broomfield Belle, was by Whitehead's Prince, he by Sir Edward. It will be noted that Sultan on both sides of his ancestry is rich in the blood of England's most noted show and stud black and tans, hence there is every reason to believe that he will prove an exceptional sire and perpetuate his superior type. He should arrive on the Wyoming on the 18th inst., and I shall send him to the principal shows.—H. T. FOOTE.

TAKES EXCEPTION.—New York.—*Editor Forest and Stream:* I must take exception to your statement in last issue, that Beaconsfield led the black and tan breed in England both on the bench and as a sire. He was certainly one of the best show dogs, but his bench record hardly entitles him to unquestionable superiority. As a sire, his get can probably be figured to a larger number than any dog of this breed in England, but as quality and not numbers make the reputation of a sire, the names of a few of his get that have attained marked distinction on the bench would not be out of the way. As he is in his seventh year they should not be difficult to find.—H. T. FOOTE. (Will Dr. Foote please read the *Canine World* report of the Oldham show, Oct. 10, 1890, and *Fanciers' Gazette* report of Crystal Palace show, Oct. 31, 1890.)

UP A TREE.—Hornellsville, N. Y.—*Editor Forest and Stream:* If "Oswegatchie" or any one else wishes to hear from me on the Fellows type of working cockers, let them sign their names to their twaddle and I'll guarantee that I'll hold up my end of the discussion, but I want no truck with any one that is ashamed of their father's name.—J. OTIS FELLOWS.

NOTES AND NOTIONS.

CUTTING straight through all circumlocutions and euphemisms, I will refer straight out to the matter of Mr. R. F. Mayhew acting as compiler of the entries for the A. K. C. show, at which he is to judge. Most observers will say that his conduct is "bad form," bad taste or bad ethics, but it is nothing more. There is a certain feeling of noblesse oblige among judges of dogs that operates to keep straight those who would, or might, otherwise go crooked. Apart from considerations of honor, many of them attach a certain and definite value to their reputation as judges, reputation as knowing dogs, in other words, and fear damaging it. For instance—although in a contrary direction—many will remember a most capable mastiff judge of a few years since, who has dropped entirely out of sight because there was a feeling that his friends' dogs got undue placings under his judgments. No suspicion of dishonesty was ever entertained, but the feeling that he lacked the backbone to decide against a close friend, weighed him down; while, as an opposite instance, may be cited a certain judge, who in a very close case is apt to decide against his friend.

There is this consideration that should be taken into account in weighing Mr. Mayhew's course. It is an open secret that his material prosperity has not been unchecked, the position as to the W. K. C. catalogue should pay him very much better than judging, and after accepting the position of judge, he is confronted by the necessity of determining whether he shall keep up his "form" at the expense of his pocket? Many will say as to this, that his duty is clear: after knowing every entry to be made, owner, pedigree, breeder, etc., the thing for him to do is to withdraw from judging. Of course an "onlooker" only looks, and should not quote his own opinions as to the course another should pursue.

From Mr. Mayhew to that wonderful apology published in two of our papers is an easy transition. What a wonderful performance that was. And remember it was not a free one, or even an original. It was a second, apparently extorted under fear of depletion of pocket by a libel suit, after a first one had been offered and not deemed sufficiently humble. Really I do not see how the *Fanciers' Gazette* is going to survive this. How will it retain public respect after such dirt eating? One of the highest duties one man can owe another is to make a full and frank apology for a wrong done as soon as the wrong is discovered, but to make one under compulsion, for fear of damages being inflicted, to go down on one's knees and eat the humblest of humble pie is, in the language of Petroleum V. Nasby, "rather ranchin'." I am at a loss to understand why Mr. Krehl required such humility. The course of his own paper would indicate that no amount of prospective penalties would have induced him to make such an apology after a first had been offered, and it is utterly out of imagination that Mr. Tatham would have allowed such a thing to appear in his paper. Evidently (to me, at least) Mr. Krehl must have some ulterior object in his demanding such servility; perhaps he may wish to dispose of "the member of our staff" who inserted Mr. Mayhew's article, which "member" must have been Mr. Millais, a gentleman whose career in journalism has been a very unfortunate one. THE ONLOOKER.

ABLE TO PAY THEIR DEBTS.—Baltimore, Md.—*Editor Forest and Stream:* We see that in the issue of FOREST AND STREAM of Feb. 12 appears the following: "Baltimore, Jan. 28.—We, the undersigned, hereby give notice to all whom it may concern, that we will not be responsible, in any manner, for any obligations that may be incurred by those who propose holding the bench show under the name of the Maryland Kennel Club. (Signed) R. B. Glanville, L. M. Levering, W. T. Levering, Crichton Malcolm, J. D. Mallory, H. Malcolm, H. Cassard, R. R. von der Horst." The bench show committee beg to say that they have a guarantee from responsible parties to pay any and all debts they may contract, and trust above will in no way be misconstrued, as its source must be considered. No signer of said letter is a member of the bench show committee. Mr. W. T. Levering is in Europe, Mr. J. D. Mallory is not a member of the club, Mr. R. B. Glanville is in arrears for dues, and Mr. H. Malcolm is under suspension by the American Kennel Club and also the Maryland Kennel Club.—W. STEWART DIFFENDERFER, Sec'y Bench Show Committee.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.
Frank Gladstone. By F. G. Taylor, Philadelphia, Pa., for English setter dog, whelped Dec. 1, 1890, by Breeze Gladstone out of Rodreka.

BRED.

Prepared Blanks sent free on application.
Golden Rod—Inspiration. J. H. Winslow's (Philadelphia, Pa.) pointer bitch Golden Rod to F. G. Taylor's Inspiration (Bang Bang—Tollie Doe), Dec. 19.
Katie Noble—Breeze Gladstone. F. G. Taylor's (Philadelphia, Pa.) English setter bitch Katie Noble (Count Noble—Queen Meg) to his Breeze Gladstone (Gladstone—Sue), Jan. 9.
List Noble—Breeze Gladstone. F. G. Taylor's (Philadelphia, Pa.) English setter bitch List Noble (Count Noble—Fate Gladstone) to his Breeze Gladstone (Gladstone—Sue), Dec. 12.
Albert's Duchess—Breeze Gladstone. Dr. J. A. Hartman's (Larrobe, Pa.) English setter bitch Albert's Duchess (Warwick Albert—Princess Nelson) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Jan. 20.
Abbott's Joy—Breeze Gladstone. Prof. J. C. Schuyler's (Luray, Va.) English setter bitch Abbott's Joy (Gath's Joy—Rosa) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Jan. 31.
Alberta G.—Breeze Gladstone. L. Shuster, Jr. (Philadelphia, Pa.) English setter bitch Alberta G. (Count Noble—Alphonsine) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Feb. 11.
Countess B.—Breeze Gladstone. F. S. Brown's (Philadelphia, Pa.) English setter bitch Countess C. (Dashing Lion—Victoria) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Nov. 21.
Dauphin—Breeze Gladstone. E. Comfort's (Philadelphia, Pa.) English setter bitch Dauphin (Calkley D.—Cassino G.) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Nov. 23.
Delaware—Breeze Gladstone. J. G. Gray's (Bridgeville, Del.) English setter bitch Delaware (Glen Rock—Lenore) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Dec. 8.
May—Rattler III. W. S. Gates's (Chagrin Falls, O.) beagle bitch May (champion Bannerman—Blossom) to his champion Rattler III (champion Rattler—Music), Jan. 13.
Lady Thelma—Bradford Ruby II. O. P. Kinnie's (Lima, O.) pug bitch Lady Thelma (Spokane—Topsy K.) to Eoerhart Puz Kennel's Bradford Ruby II. (champion Bradford Ruby—Puss B.), Feb. 15.
Lady Lowden—Pouf. Jas. F. Hall's (Philadelphia, Pa.) St. Bernard bitch Lady Lowden (champion Plinlimmon—Lady Linton) to Dr. H. W. Roberts's champion Pouf (Garret—Bo-Peep), Jan. 28.
Sedan—Glen Jarvis. Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Sedan (Chester D. Herald—Nancy) to their Glen Jarvis (Elcho, Jr.—Maid), Feb. 6.
Molly Glendyne—Glen Jarvis. Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Molly Glendyne (Glennmore—Nell) to their Glen Jarvis (Elcho, Jr.—Maid), Feb. 6.
Blossom—Rattler III. W. S. Gates's (Chagrin Falls, O.) beagle bitch Blossom (Blunder—Rue) to his champion Rattler III. (champion Rattler—Music), Jan. 15.
Gladys B.—Blaze. R. H. Burr's (Middletown, Conn.) Irish setter bitch Gladys B. (champion Tim—Lady Edith) to W. G. Gale's Blaze (champion Chief—Bizeena), Feb. 8.
Bess—Waltham Jewel. Geo. H. Moses's (North Gorham, Mass.) foxhound bitch Bess to W. A. Small's Waltham Jewel (Drive—Music), Feb. 5.
Jest—J. Reckon. H. T. Broadbent's (Philadelphia, Pa.) fox-terrier

bitch Jest (Splauger—Jostle), to G. W. Price's I Reckon (Reckoner—Tennis), Jan. 7.

WHELPS.

Prepared Blanks sent free on application.
Mamie. Moorefield Kennels' (Chula, Va.) English setter bitch Mamie (Prince Al—Maiden), Nov. 28, seven (four dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).
Rodreka. B. Maun's (Philadelphia, Pa.) English setter bitch Rodreka (Rodrigero—Gem), Dec. 1, seven (four dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).
Countess B. F. S. Brown's (Philadelphia, Pa.) English setter bitch Countess B. (Dashing Lion—Victoria), Jan. 23, nine (five dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).
Croxteth Rival Queen. Riverside Breeding and Training Kennels' (Riverside, Ind.) pointer bitch Croxteth Rival Queen, Feb. 11, six (three dogs), by Combination.

SALES.

Prepared Blanks sent free on application.
Frank Gladstone. English setter dog, whelped Dec. 1, 1890, by Breeze Gladstone out of Rodreka, by F. G. Taylor, Philadelphia, Pa., to H. Chamblin, Richmond, Va.
May. White, black and tan beagle bitch, whelped August, 1889, by Bannerman out of Blossom, by H. S. Gilbert, Millersburg, Pa., to W. S. Gates, Chagrin Falls, O.
Blossom. Black, white and tan beagle bitch, age not given, by Blunder out of Rue, by H. S. Gilbert, Millersburg, Pa., to W. S. Gates, Chagrin Falls, O.
Red Lion. Red Irish setter dog, whelped Dec. 1, 1890, by champion Glencho out of Lydia Belle, by Geo. H. Covert, Chicago, Ill., to R. H. Burr, Middletown, Conn.
Glen Jarvis. Red Irish setter dog, whelped Feb. 23, 1890, by Elcho, Jr., out of Maid, by John A. Jaun, Jr., Onley, Ill., to Glendyne Kennels, Bristol, R. I.
Emerald Pegg. Red Irish setter bitch, whelped Oct. 10, 1890, by Albert out of Lucille, by Glendyne Kennels, Bristol, R. I., to H. J. G. Hallowell, Conshohocken, Pa.
O'Donovan Rossa. Red Irish setter dog, whelped Jan. 27, 1888, by Starfield out of Nino, by Glendyne Kennels, Bristol, R. I., to —, New Haven, Conn.
Razzle. Red Irish setter dog, whelped Jan. 23, 1890, by Grip out of Sheila, by Glendyne Kennels, Bristol, R. I., to Wm. F. Memo, Vicksburg, Miss.
Zilla. Silver fawn pug bitch, whelped Aug. 5, 1890, by Spokane out of Lady Verne, by Eberhart Pug Kennels, Cincinnati, O., to Eugene Watrous, Lacon, Ill.
Larnock Elsa. Liver and white pointer bitch, whelped May 15, 1884, by champion Bang-Bang out of Rose, by Wm. H. Hyland, North Tarrytown, N. Y., to F. E. Atkins, Waterbury, Vt.
Nellie Hunter. Noting the sale of Nellie Hunter the purchaser's address was misprinted; it is New Canaan, Conn., not New Haven.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

A. C. H., So. Man's'ique, Mich.—1. I have a very valuable St. Bernard dog. 2. Whose manufactured food is the best? Ans. 1. Feed him in the morning such scraps as you may have from the table, making an occasional soup from fresh beef bones. At night you can give him three or four dog biscuits, either soaked or dry, dry is best if you can get him to eat them that way. 2. Spratts or Goodwin's, both are good.

H. T. T., Reading, Pa.—Several weeks ago I received an 8 mos. old Irish setter pup, and a new he has been in my possession I find great trouble to get him to eat. From the time he was 6 weeks old until I received him he was kept at a large hotel, where he received for his meals the refuse from the table, generally chicken etc., and I suppose that because of his being accustomed to this food made him reluctant to eat the raw beef I offered him, but this morning I found one of his eyes closed and the other running. His eyes have been running for some time, but this morning was the first time I noticed any closed. I also observed him shivering on several occasions. I had him out on the field a few days ago, and noticed a coughing such as a dog generally makes when leading by a strap, and exerts himself in order to get loose. These seem to be symptoms of distemper, and about three days ago I gave him a dose of castor oil. Since then his passage has a colored appearance. I have been thinking of giving a 2gr. quinine pill, as per your advice in FOREST AND STREAM of two weeks ago, but before doing so would kindly ask you to inform me whether, from the above symptoms, this is correct, or whether there is any better remedy, and what food is best and how often each day? Ans. The dog has distemper; treat him at once as described in the issue of Jan. 29, in the first part of answer to M. F. S.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MAGAZINE GUN TEST.

OFFICE OF BOARD ON MAGAZINE GUNS, Army Building, New York City, Dec. 17, 1890.—The Board* for the examination of magazine guns prescribe the following rules and tests for the trial of all guns submitted under General Orders No. 136, Nov. 24, 1890, Headquarters of the Army.

Generally these rules will govern in testing all guns submitted to the Board. It may occur that certain of these tests will be modified, or that others may be substituted for them; the object being to find a magazine system which will meet the requirements of the army.

The piece to be first fired ten rounds by the exhibitor, as a test of safety; the same firing to be also a test of rapidity by one familiar with the arm. The time to be noted in the record.

The firing to be then continued, according to the rules annexed, by an employee or person designated by the Board.

The Frankford Arsenal experimenting cartridge to be used in all cases, except when pieces of a different caliber have been submitted in the manner provided by the order.

No persons will be admitted to the firing ground but the agents or exhibitors of the gun immediately under trial, and such other persons as may be specially invited by the Board.

The handling of guns by their representatives at any time after the preliminary test for safety is forbidden.

Any arm which has been submitted to the Board and entered upon the record shall remain in the hands of the Board for such time as may be necessary to make drawings explanatory of its mechanism.

If the magazine system of any gun becomes disabled or unserviceable, all further tests will be discontinued, and the proprietor informed of the fact. If the gun be altered and resubmitted to the Board, it will be treated as a new gun.

Safety test: To be fired ten rounds by the exhibitor, or with a lanyard.

REGULAR TESTS.

1.—RAPIDITY WITH ACCURACY.

Piece to be fired from the shoulder at target 6ft. by 2ft., range 100ft., under following circumstances, cartridges disposed at will or in packets upon a table:

a. Time of firing and number of hits for 20 shots: magazine to be loaded before beginning test and then held in reserve until remainder of cartridge have been fired, using gun as single loader; then firing those in magazine.

b. Number of shots and hits firing for two minutes, using gun as single loader; test begun with chamber empty.

c. Number of shots and hits firing for two minutes, using gun as magazine arm only; test begun with magazine empty.

Any cartridge missing fire in this or other tests to be tried with a prick punch, or opened, to ascertain cause of failure.

II.—RAPIDITY AT WILL.

Same as Test I, except that piece will be fired from the hip without aim, at stop butt at short range; hits not considered, and time of firing from parts "b" and "c" reduced to one minute.

*Brevet Major General August V. Kautz, Colonel 8th Infantry, President; Lieutenant Colonel Robert H. Hall, 6th Infantry; Major George W. Meeker, Ordnance Department; Capt. Henry B. Freeman, 7th Infantry; Capt. Stanhope E. Blunt, Ordnance Department; Recorder; and Capt. George S. Anderson, 8th Cavalry.

govern live bird shooting. Ten entries, purses divided. First
second and third moneys, except at closing event.

STATEN ISLAND Y. C.—A club with this name has been organized on Staten Island, the officers being: Com., Nathan S. Taylor, Vice-Com., William H. Ludlam; Sec'y., Charles E. Hoyer; Treas., E. Simonson; Elect Captain, Harry Van Duzer; Meas., A. Pantle; Trustees, William E. Horn, C. A. Schultz and Frank Lauer.

PART II.

(Continued from Page 78)

WE both crawled out on deck in the morning about 5 o'clock and found a flat calm with indications of rain. Anxious to see what kind of a place Wading River was like, we pulled in and made fast alongside an old schooner which was tied up. We were busily engaged in cooking breakfast when Tom called my attention to an old man who was leisurely paddling a skiff in the inlet. When he arrived alongside we discovered that he had been fishing, judging by the net which he had in the stern of his dilapidated boat. He had the appearance of a typical Long Island farmer and fisherman. His face was bronzed and wrinkled, and he wore the funniest beard I have ever seen. It grew out from his chin to about a foot in length, and while it only covered a small part of the lower jaw, it brushed out at the extremities and assumed the form of a feather duster.

He said "Good morning, boys," with a regular Down East twang. We returned his salute, and inquired how he had succeeded in fishing. "Poor, poor, very poor; there's all I got this mornin'," said he, pointing to a solitary weakfish. "Got a few mossbunkers, but them's no use to me. The sharks play hob with my nets whenever I do get any fish. There's one I ketches last week motioning toward the beach where the carcass of a shark about 12 ft. long lay. Lots of them varmints around these parts. By the way, I see your boat when I came out this mornin' an' wuz wonderin' what you were doin' round here. S'pose you're havin' a cruise, though, like them yachting fellers down at the Port?"

Tom said that we were going to Greenport and had come from New York.

"Val, if the weather keeps good that's nothin' to hinder; but seems t' me that's a small craft to knock about the Sound in. Goin' around to-day?"

We said that we were if we got any wind from the right quarter. The old man seemed to be in no hurry to proceed, he appeared to be quite taken up with our boat and anxious to talk with us, and, like all such characters I have met, good natured and pleasant to give all the information capable of. We invited him on board and conversed with him for a half hour. We asked him about the shore from here on to Plum Gut and his reply ran thus: "Well, the beach runs purty straight from here to the pint, you better keep a mile or two off shore though for a little way, as there are some rocks off that point yonder, that's near the surface at low tide. After you pass them you can keep within forty rods of beach all the way down. But if the wind is from south, an' off the land, I'd advise you t' keep a mile or so off all along down, as the wind 'll be steadier than it would in under the bluff. 'Fraid your chances of getting around are somewhat slim to-day. It'll be flood tide 'fore you get far and no signs of any wind either. 'Fraid it's goin' to be wet too; hello, it's commenin' to sprinkle now, guess I have to be goin' home or I'll get wet, ain't got no skins with me this mornin'. Well, good-bye boys, good-bye." The danger of getting wet hurried the old fellow over the rail into his boat and away he went, poling up the creek.

After he had gone we snuggled up and donning our oilskins proceeded toward the village with a basket, in quest of fresh provisions, deeming it useless to start on this tide without any wind. We walked along inside the sea wall for a half mile or so and discovered a roadway leading inland. Following along this we arrived at the post-office a mile further on. The post-office was also a grocery and hardware store, in fact, we found it was the only store in the place and supplied a general assortment of merchandise. We posted a letter to the boys and after securing some necessities, we traded (traded for her) for her to eat the one she had a cottage up the road, milk and butter, we made our way back to the yacht.

The first thing we did on arriving was to get rid of the oil clothes. We then brought forth the bottle labeled Duffy's Pure Malt. We each secured a glass, which we filled two-thirds full of "Duffy," the other third being milk. Then to convince ourselves it was a milk punch we grates a little nutmeg on top. After that the cold and rain had no show. We made another trip to the village in the afternoon just for exercise and to get some more milk, which was plentiful here, and could be had directly from the cow. We turned in early, determined to be off for Greenport before daylight.

It was still drizzling when we awoke and peered out of the cabin window. It was also quite dark, and a thick mist obscured things a little distance off. While gazing out Tom called my attention to an old woman who was seated on the bank opposite. She had a large bundle beside her and appeared to be holding an earnest conversation with herself, nodding and gesticulating meanwhile. We were astonished and wondered where she could have come from, for there were no houses in that direction for miles; only the long stretch of bluffs which reached all the way to Port Jefferson, some fifteen miles away. Presumably she had brought her bundle over her back and plodded off up the bank of the river, but had not gone far when the mud got so soft and the grass so long that she was compelled to return and resumed her former position, still talking to herself and seeming not to notice our boat, probably thinking there was no one on board, for we had not showed ourselves on deck yet. She was a perfect bundle of rags and appeared to be anywhere from seventy to one hundred years old.

As soon as we got our clothes on we went out into the cockpit and Tom took the skiff and paddled across to where she was, and asked her if she wished to cross the creek. She began to jabber off something which was unintelligible to Tom (he afterward said it was French). He perceived by her motions, however, that she did wish to cross, and he called for her to enter the boat. She then began to wall off something about having "No money, no money."

"I don't want any money," shouted Tom. "Come on, get in here, and I'll put you on the other side in no time, and won't charge you a cent." She laboriously climbed in after sinking in the mud to her ankles, and splashing it all over Tom and the boat. She appeared confused and excited, and I had fears that she would capsize our little rick, skiff, but he landed her safely on the other shore. She was profuse in her motions of thanks, and Tom gathered from her broken English that if he would come to French Charlie's (wherever that might be), he could have all the red wine he could drink. Tom thankfully declined to drink and returned to the yacht, while the old woman disappeared over a knoll and we saw her no more. While we were making ready to start out, our friend with the luxuriant goatee came down stream in his boat, but was probably too intent on his fishing to stop to talk, merely saying good morning, and making a few remarks on the weather.

We made all snug for a long run, and about 6 o'clock hauled out and started on our voyage to Greenport. There was a light S.E. breeze that kept the sheets taut and that was about all. About 8 o'clock the breeze freshened up, but a shower came with it, and we were compelled to incase ourselves in oilskins. We cared little for the rain now that we had a good 5-knot breeze, and were foaming along down shore beautifully. We had made it a practice to take two hours at the tiller alternately when sailing for any length of time. As I had the first trick this morning my time was now up, and feeling a little chilled I peeled off my covers and got below. It was much more comfortable lying on my back in the lee bunk listening to the swishing of the water past the sides of the boat than it was sitting outside. The view of the land had become uninteresting, as it was the one thing all along—sandy bluffs surmounted by bushes and trees.

It did not seem as though I had been lying down a half hour, when I was suddenly aroused from a light doze by the voice of Tom yelling down the companionway: "Watch below! Tumble out here and take your trick!" I looked at the clock, and was

astounded to see that it was 10 o'clock. I began growling about the watching too short, but Tom assured me that they were an hour too long. The oilskins seemed as wet inside as they were outside and felt very uncomfortable after the warm, dry cabin. The wind was piping stiffer than when I had gone below and the rain was still falling heavily. One thing I noted with satisfaction as I puffed away at my pipe, the wind had hauled from S. E. to S., enabling us to start sheets and run with it almost abeam. In about a half hour the rain ceased, but a thick haze continued to hang over the water, and from the distance we were from the beach the bluff appeared like a mountain in height. While gazing absently at this effect of the fog I noticed at the top of the highest bluff a form which looked like the body and head of a giant with an immense straw hat. Presently I imagined I saw it move. Glancing into the cabin I saw that Tom was snoring, so as there was no one to have the laugh on me if my giant should prove to be a stump I took off my hat and waved it above my head. What was my surprise when the figure on the cliff rose

and followed my example with an arm that looked to be 10 ft. long and 3 ft. in diameter—considering our great distance from the beach it was wonderful. I suppose it was some mirage produced by the condition of the atmosphere.

The wind continued to freshen and the Monaitipee increased her speed accordingly. With everything straining and pulling, boom lifted and main sheet like fiddle strings, we tore along, leaving a wake of boiling foam astern through which the skiff tenaciously followed us with nose elevated high in the air. We passed several schooners bound west, and once a large open boat with two reefs in went by within hailing distance, but I did not speak her, as I did not wish to alter my course, which would have been necessary in order to hold any conversation, and thinking it would be a waste of time I kept straight ahead.

It soon became a question as to the advisability of reducing sail, for although we had the wind free, it was blowing so fiercely that the lee deck was constantly under water and every part of the gear was pulling and straining to its utmost, while the stiffened shrouds showed sharp and distinct against the bellying sail which pressed hard against it. Forward the water seethed and gurgled about the stem, and occasionally a vicious little wave rolled on deck and swept aft, where it rejoined the foaming mass under our counter. The jib, with a generous supply of sheet, was curved well forward of the stay; and the club on the foot pointed skyward.

I called Tom on deck when my watch was over, and we consulted together. But as he was disposed to abide by whatever I thought best, and I was loth to lose any time, we decided that so long as it did not get really dangerous we would keep her at it. We congratulated ourselves on having the wind from a favorable quarter. Another source of satisfaction was that in having the wind from off the land, the sea was almost flat, being only disturbed by short, choppy waves which in no way impeded our speed.

In consequence of the exciting turn our voyage was now assuming we both remained on deck ready for action in case of necessity. We had been out six hours from Wading River, and we began to think that we must be getting pretty well along down shore toward Plum Gut, and we watched eagerly as we passed point after point for any signs that would indicate our proximity to it.

Shortly after Tom came on deck a sail appeared from out the fog ahead coming toward us. We soon made her out to be a small sloop yacht, not more than 30 ft. long; she was cutter-rigged and was sailing under full mainsail, forestaysail and jib, and heading so as to pass us a couple of hundred yards to leeward. Only one person could be seen above deck as she approached, but as she neared us he was observed to bend forward toward the companion as though calling to some one below. Immediately after a head popped up and they both stared in our direction. We waved our hats as they got abreast of us and they returned the compliment and one of them shouted something to us which we were unable to hear distinctly against the wind; but supposing that they were asking the name of our boat and where bound I yelled back the information. In the meantime Tom had been spelling out her name as she swiftly drew astern. "Cordette," said he as he lowered the glass. Neither one of us had ever seen her to our knowledge before. I asked Tom if he was positive it was Cordette. I knew a small cutter-rigged boat which sometimes lay at the Atlantic Y. C. basin at Bay Ridge called Coquette and it might possibly be her. But he was positive, and as I was not very familiar with the Coquette's details we let it go at Cordette. She shortly died out in the fog and we ceased to surmise as to her name, destination, etc., and turned our attention toward matters which concerned ourselves.

No signs of Plum Gut yet. Tom said some one must have removed it, or that we had gone clear around Montauk Point, and were going down the south side of the island toward home again. To this expansion of imagination I made no answer, not wishing to encourage him in such flights of fancy.

About 1 o'clock I espied dimly through the mist what at first I took to be a tug boat lying off a point of rocks, but on a nearer approach turned out to be a pile of stones built up about 10 ft. above the level of the water. On top of this stood three poles joined together at the top.

"That must be a beacon of some sort," said Tom. "No doubt it is," I answered, "but what the name of it is we will have to find out later on. Hello!"

"What's the matter?" asked Tom. "Plum Gut, or 'I'm a Dutchman.'" Sure enough, there was the water stretching away to the southward as far as we could see around the point, off which was situated the supposed beacon. As though to favor us still more the

wind suddenly hauled more to the southwest and we were enabled to lay our course through the Gut by hauling close up on the wind.

We were soon made aware that the tide was running like a mill race and was accompanied by an ugly short sea which tossed us about unmercifully, one minute she would leap out of the crest of a wave with her bowsprit elevated at an angle of nearly forty degrees until half her length was out of water, then suddenly dropping she would be just in time to receive the next one, plunging the forward deck under to the cabin. We had heard about the current in Plum Gut, but there is nothing like seeing for yourself. We saw enough of it that day to last us for some time. Tom went below and fastened down the skylight, for frequently the water came on the deck quite plentifully, and once nearly a painful pour through the open skylight into the cabin.

When Tom came out he had a disgusted expression on his face and did not appear to be in the best of spirits. He seemed to lack his accustomed jollity and did not regain it until we reached smoother water. I perceived that the violent motion of the yacht was becoming disagreeable to him, and spoke to him cheerfully. As he made no reply, no my remarks I assumed that he was too much occupied with his own private thoughts to join in conversation, so I ceased to utter words of condolence and turned my attention to the more important business of steering the boat.

She held up well and we fetched well to windward of Plum Island, then going about we stood in toward Orient Point, off which we again tacked. After a long thrash to windward we at last arrived off Greenport at six o'clock. The tide being pretty well up we ran into what appeared to be a basin, but as we passed through the narrowest part of the entrance we found the water shoaling and the current was very swift. As the wind had fallen we were at the mercy of the tide, and to prevent going against a landing stage we let go the anchor.

The counter just cleared the bow of a steam yacht which was lying at the dock, as we swung around. We inquired of some men who were at work on the yacht as to where would be the best place to lay, and they told us we would have to anchor outside, as we were now at a private dock. They asked us where we were from, and expressed surprise when we told them. They said it had been blowing hard all day, and wanted to know whether it was rough in the Gut. Tom said that it was a little sloppy. We poled out into deep water, and getting a little air slowly made our way to where we had been instructed to anchor and let go the mud hook, furled sails and made preparations for supper. We took a short run on shore in the evening, but as we were pretty tired after our long day's sail, we soon returned.

AN OLD MAN WAS LEISURELY PADDLING A SKIFF IN THE INLET.

The evening was perfect. The mist of the day had all cleared away and the stars shone brightly over head as we stretched out in the cockpit to enjoy a clear, some specials we had brought along for these evenings. When is the cruiser we could recollect just such evenings, I with a thrill of pleasure, when after a long day of sailing, pulling and hauling, he throws himself down to enjoy a pipe or cigar in the delightful calm of a cool summer twilight. What a sense of satisfaction comes over him as he rests thus after the worries consequent on navigating in strange waters, and finally finds himself safely at anchor in a snug harbor. These are happy moments, never to be forgotten entirely, and we look back on them as the most charming periods of a cruise.

It was six o'clock when I awoke next morning, and a ray of sunlight was gleaming in through one of the cabin lights directly in

WE FETCHED WELL TO WINDWARD OF PLUM ISLAND.

my face. Tom was loudly snoring in the starboard bunk. I gave him a punch in the ribs and he rolled over and grunted "What's trumps?" I said it would be clubs if he did not turn out very quickly.

"You are not out yourself yet," said he, looking at me as I sat blinking in the sun.

"Well, I'm awake anyhow."

"One wouldn't think so to look at you."

After we had both got outside and had a wash we felt less disposed to growl, and as the novelty of our situation forced itself upon us we woke up to the fact that we were here to enjoy ourselves, not to quarrel.

A. M. LOCKHART.

[TO BE CONCLUDED.]

THE NORTON WATER-BALLAST BOAT.—We copy the following from the *Marine Journal* of Feb. 14, a paper which has indorsed and supported the Norton water ballast system, whose claims we have repeatedly exposed. It is very sad that innocent persons should have been sacrificed, as in all probability they have been, in order to demonstrate the fallacy of the whole system. Should the boat never be heard from, a large part of the blame for this unnecessary loss of life must fall upon those whose duty it is to warn the ignorant against such schemes, but who have proved false pilots: "The steam yacht Francis L. Norton, which left New London for Toulon, France, Nov. 24, has been out 82 days to-day (Saturday). The trip was an experimental one, made in midwinter for the purpose of proving that the 'water-ballast system,' of which Capt. Norton was the inventor, when applied to any craft, insured it against capsizing or sinking. We fear one or the other of the two causes which the inventor claimed were impossible has led to the loss of the F. L. Norton with all on board, as nothing reliable has been heard from them since their departure. The following named persons were on board this craft: Capt. F. L. Norton and wife, Miss Rickaby, Chief Engineer James Menells, Assistant Engineer Arthur McLean, Sailing Master C. F. Carlson, Seamen John Anderson and Oscar Mileyar, Steward Joseph Marcial, Cabin Boy John Roberts."

A BREAKWATER AT POINT JUDITH.—On Feb. 13 the first load of stone was carried from Mason's Point to the site of the new breakwater and harbor of refuge at Point Judith. Owing to many difficulties it will be some years before the work is completed.

HELVETIA.—The new Iselin steamer will be named Helvetia.

THE RILEY & COWLEY ENGINES.

MESSRS. RILEY & COWLEY, of South Brooklyn, the yacht engine builders, have lately taken a contract for a high-speed steam launch for the Yale University Boat Club; the boat, which is now well under way, being designed for special service of a somewhat unusual sort, and which demands a high degree of excellence in hull, boilers and engines.

She is intended for use in coaching the Yale crew, and consequently must be able to start at full speed and quickly pass an eight-oared shell, and then drop back again; and this without blowing off steam or forcing the fires. These requirements call for great power and ease in handling. She is being built under a guarantee that she will cover 90 miles at the rate of 14 miles per hour. The dimensions are, 52ft. over all, 8ft. 6in. beam, 3ft. 10in. depth of hold. The machinery consists of a triple expansion engine 5in., 8in., 13in. X 8in., and a Roberts coil boiler with 165g. ft. grate surface. She is an open launch with car top over boiler and engine, and canvas awnings over forward and aft cockpits. The hull is of cedar, with white oak keel and frames and yellow pine clamps. Independent feed and air pumps of the Worthington type are to be used, and an outboard pipe copper condenser. All pipes and valves are of brass. A steam syphon is to be used for quickly cleaning out any bilge water. The propeller wheel is of composition, four bladed, and a true screw. Stern bearing of composition. The cut represents a three-crank triple expansion engine with cylinders 6in., 10in., 16in. X 10in. stroke. The cranks are placed 120 deg. apart and are arranged in the sequence high, low and intermediate. The cylinders are of cast iron, in one piece, and are carried by a cast-iron frame at back which forms the slide, and by four wrought-iron columns at the front. The combination of cast iron and wrought iron in the framing thus, resists both compression and tension most perfectly. The bed plate is of the wedge-rigid pattern. Piston valves are used throughout, the low-pressure cylinder being provided with two, the high and intermediate with one each. These valves are simple in construction, easily renewed, and perfectly balanced. There are no links, and but one eccentric for each cylinder. The three eccentrics are keyed upon a movable sleeve, at the rear end of the crank shaft, which loose sleeve is capable of being rotated about on shaft by means of spiral in sleeve and straight keyway in shaft, engaged by pin moving in second loose sleeve carried forward and aft on shaft by rack and pinion mechanism. The motions of the eccentrics are communicated to the valves by means of concentric rack shafts. Pumps may be attached. The bearings are extra large, of best composition.

SENATE BILL 4321.

THE New York Y. C. at its last meeting appointed a committee to consider the bill introduced by Senator Frye at the suggestion of the Commissioner of Navigation, W. W. Bates, by which it is proposed to exclude from American waters yachts of foreign build, and at the same time take from small American yachts the privilege of flying the American yacht ensign. The following correspondence has ensued between the committee and Senator Frye. It is unlikely that the bill will become a law:

DEAR SIR—I have been appointed a member of a committee by the New York Y. C. to look into the bill offered in the Senate by your country, challenging, it is claimed, the right of American yachts to fly the American ensign. I am sure that you will be able to report this session, and if so, whether you would not bear us before it? I will make only two suggestions to you. The first, that yachts are built only for pleasure, and cannot under any circumstances receive a dollar for carrying freight or passengers. Yachtmen never receive any revenue. They always pay out money. Second, very few foreign yachts come to America. The notable foreign yacht clubs have heretofore challenged the New York Y. C. to race for the America's Cup, won by the schooner America in 1851 seven times. It has been held by us. Would it be fair to tax them or their yachts for coming to America to make an international race? The expense of any yacht owner in a foreign country, challenging, is enormous in sailing to this country and making the race. They now complain that we do not treat challenges fairly. If this bill should become a law I fear they would think the United States Government was helping the New York Y. C. to hold the America's Cup by making a law that would add largely to their expense in pursuit of pleasure and honor if they won the Cup, and thus really prohibiting a challenge being made by any foreign yacht club. If it is to be offered, the committee under you as chairman, can't we have notice? Yours truly,

JAMES D. SMITH.

MY DEAR SIR—Yours of the 9th received. Being a born sportsman I naturally act very slowly in anything which affects sporting interests. I probably shall not report the bill touching yachts at this session. It is entirely clear to me, however, that something should be done concerning the purchase of foreign-built yachts. I think when they have been brought over duties have been paid, but none where they have sailed across and been purchased here. They, in my opinion, should pay a duty in case of purchase. Where foreign yachts simply come to this country for the purpose of entering in races, and are then returned, I do not believe myself in any limitation. If I conclude to bring the matter before the committee for consideration, I will notify you. I am very truly,

W. P. FRYE.

GEN. PAINE AND THE 46FT. CLASS.

DISCUSSION of the 46ft. question has assumed a new phase during past week. Mr. Foster's Fife boat has been pretty well talked out, and now the position of Gen. Paine is the absorbing topic. Whether he wishes it or not, it is evident that the famous cup defender is considered thoroughly "in the light." A mass of the arguments among yachtmen now reduce to a discussion of "Paine versus Burgess."

For the first time since they began their memorable partnership in 1885, these well known yachtmen will be interested in opposing craft. Gen. Paine and his son John together have produced two very successful craft in the Swoosh and Hornet, and now they have jumped into a class where the behavior of their productions will receive national attention.

At first the general was disinclined to admit any connection with the new 46 and referred to her always as "John's boat." But his friends were unwilling to accept his version of the case, and gradually the general has come to admit that he advised with John all through and that the boat as produced represents his ideas exactly.

Gen. Paine himself stated his position a day or two ago as follows:

"I expect to do my cruising on the new 46-footer, and to let John race her. I have engaged Capt. Huff for the coming season. In fact, he has never been out of my employ for the last four years."

Well informed yachtmen who have talked with the general are not inclined to allow him even this loophole, and predict that he will be seen aboard the Paine craft in the races and that Capt. Huff will steer her. However this may be, it is conceded that the new Paine 46 represents the ideas of Gen. Paine as opposed to those of Mr. Burgess, and the coming season will demonstrate the correctness or fallacy of the ideas upon which the various designers have constructed their craft.

A gentleman who expects to do some sailing in the 46-foot class says:

"I think that Gen. Paine will strike a harder class to beat next year than he has ever been in. He is opposed to Burgess and Fife boats, all handled by the best skippers that are obtainable anywhere. It will be a hot class, and I don't think any one boat will get all the prizes."

It transpires that the Paine boat's dimensions are even more extreme than they have been published. Her beam is just a shade under 4ft. 6in., and her draught is 10ft. 3in. This is much the widest of the new 46-footers, and shows that the Paine craft will have tremendous initial stability. As she has also a very heavy lead keel, it is plain to be seen that her sail carrying powers have not been over-estimated.

The mould of the Paine lead keel has been made, and it lies alongside that of the Fife cutter. The exact dimensions of the latter were printed in the *Globe* last Sunday, and those of the Paine boat's lead keel are as follows: Extreme length, 25ft.; extreme depth, 30in.; width on top, at after end, 5in.; at widest part, 27in.; at forward end, 8 1/2in.; width of bottom, at after end, 2 1/2in.; at widest part, 20in.; at forward end, 8 1/2in.

Unlike the keel of the Barbara, the lead keel of the Paine cutter is straight up and down on the sides. Mr. Fife has put considerable hollow in the sides of his lead. By this means Mr. Paine has less weight of lead very low. The profile of the Paine cutter shows more curvature than any of the other boats.—*Boston Globe*.

BARBARA AND THE BURGESS BOATS.

THE question which now causes the most discussion among yachtmen is: "Will the Barbara in her class make such a showing as the Minerva did in the 46ft. class?"

At the outset it would probably be safe to say no. Instead of being first the new Fife boat should hardly average better than the majority of the other boats in her class. She has a very large sail plan and in its area it is not much different from the Minerva's.

Now one of two things is certain. If Mr. Burgess has correctly calculated Minerva's power then the Barbara will not be able to carry her sail spread, especially at times when she will need it. The Fife boat has not the stability of the Minerva, consequently she cannot exert the same power. There is a wide difference between the midsections of the Minerva and Barbara, the latter carrying her extreme beam to the deck, falling away very fast at the loadline, with a very faint bilge. The Minerva has more initial, natural and artificial stability; consequently, is better able to carry the same sail spread as the Barbara, though she may not be so easily driven.

It has been found on some of the 40-footers, whose midsections resemble the Barbara, that they could not carry sail with a boat like the Gossoon. The Burgess 46-footers, while finer in form than the old forties, are still more powerful and will be better able to carry their large sail spreads than the forties. Pro rata for length, they have less wetted surface and there is more intelligence displayed in their design than in any other class yet built on this side of the water.

From what the writer has been told by first-rate authority, the Barbara promised to be the most tender of the 46-footers, and the same authority says that all the Burgess boats, notwithstanding their lighter draught, will, on account of the better placing of the lead of the keel, have their center of gravity of the lead keel in about the same as on the Barbara; so that in this respect the Fife boat has no advantage, while the boat itself loses on account of having less natural power than the Burgess 46-footers.

Of the four 46-footers now being built at Lawley's, several of our leading yachtmen incline most strongly to the Minerva, though Mr. Burgess inclines to the Turner boat. Against the above the experience of such a crack designer as Fife should have great weight, and it is only fair to him to state that in giving the Barbara her large sail plan he acted intelligently and knew well what he was doing. Fife says she is an improved Dragon, and, knowing as he must almost to a certainty the power of the Dragon, in making the sail plan of the Barbara he had intelligent data to govern him. In any event, if the Barbara is able to carry her present sail plan, more spread can be given the Minerva.

In the matter of handling the boats, the owner of the Barbara says he would rather have her beaten than that any one else should sail her. In certain quarters comments are made that the Barbara will suffer from handling, and that she will not be seen at her best.

Yesterday Gen. Paine wrote Capt. H. O. Huff, and the latter has been engaged for another year, and that means that the Volunteer's skipper will be on the Paine 46-footer racing against his son, who will sail the Minerva. This means that Gen. Paine is going to push matters for all they are worth in the 46ft. class. Will Gen. Paine go into anything he does so with a will, and from this out will figure out for himself how he can improve his boat.

New York yachtmen certainly have shown little local pride in the 46ft. class, though it might be said that two of them are building Burgess 46-footers. Mr. Wm. Gardner, when interviewed a few days ago, said he had no order for a 46-footer nor did he expect one, and Mr. A. Cary Smith has the lines of one made, but thus far no order for the same had been placed with him. From the above it certainly looks as if the New Yorkers had neither interest nor confidence in home talent; in fact, they are buying second-hand Boston boats.—*Boston Globe*.

BOSTON YACHT AGENCY.—A CORRECTION.—Through an error of the types we last week stated that the new catalogue of the Boston Yacht Agency would be ready by Nov. 1; the date, of course, should be March 1.

AN AMERICAN YACHT FOR HOLLAND.—Mr. Burgess has lately completed a design for a 27ft. "Cape cat" to be built in Holland.

BROOKLYN Y. C.—The fixtures of the Brooklyn Y. C. are, May 20 opening sail, June 20 spring regatta, Sept. 7 fall regatta.

EASTERN Y. C.—The annual meeting of the Eastern Y. C. was held on Feb. 10, the following officers being elected: Com., Alanson Tucker; Vice-Com., E. Gordon Dexter; Rear Com., Augustus Hemenway; Sec'y, Edward Burgess; Treas., P. T. Jackson, Jr.; Members of the Council—C. O. Foster, J. Malcolm Forbes; Regatta Committee—William S. Eaton, Jr.; P. T. Jackson, Jr.; Richard Sears, F. E. Peabody, H. H. Buck; Committee on Admissions—J. Malcolm Forbes, E. Gordon Dexter, Percival L. Everett, Augustus Hemenway, R. W. Crowninshield, Amory A. Lawrence, T. Dennis Boardman, Henry D. Burnham, E. V. R. Thayer, George O. Adams; House Committee—F. E. Peabody, Gordon Dexter, Edward B. Haven, Hugh Cotton. Some minor changes in the sailing rules were made, conforming with the rules of the Seawanhaka and New York clubs.

CAPE COD YACHT AGENCY.—We call attention to the advertisement, on another page, of the Cape Cod Yacht Agency, recently established by Mr. V. D. Bacon, of Barnstable, Mass. Mr. Bacon, who is known to our readers through a number of cruises and sketches in the *FOREST AND STREAM*, has had a long experience with the Cape Cod catboats, and is now prepared to furnish designs or to have boats built to order. He also has a very large and complete list of catboats for sale.

CORINTHIAN MOSQUITO FLEET.—At a meeting of the executive committee of the Corinthian Mosquito Fleet, held in New York on Feb. 7, it was decided that the annual regatta be held on May 30, off Larchmont, the next event to be off New Rochelle on June 20. An appropriation for regatta prizes for the season was made, so that the regatta committee will have the prizes on hand on the day of any regatta. The following names were received for membership: Harold Sanderson, John Hyslop, William Gardner.

MASSACHUSETTS Y. C.—The first of the series of lectures for the season of 1891 was given at the winter quarters in Boston, on Feb. 12, the subject being *The Wreck of the Mount Lebanon on the Coast of Borneo*, by Captain Charles H. Nelson.

CATARINA, steam yacht, was launched from the dry dock on Feb. 17. Mr. Piepgras has made an excellent job of the repairs to her bottom, under the supervision of Lloyd's surveyor.

CORINTHIAN NAVY.—Proposals for membership: Albert A. Simpson, John H. Gibson, New York; Wm. Daessler, C. P. Tuttle, Camden, N. J.; H. E. McCormick, C. B. Haag and Winfield Van Deusen, Philadelphia.

MANHATTAN ATHLETIC CLUB.—On Feb. 14 a very interesting lecture on seamanship was delivered by Ex-Com. Center before an audience of yachting members of the Manhattan Athletic Club.

ALVA, steam yacht, Mr. W. K. Vanderbilt, will sail shortly for the Mediterranean, calling at Bermuda and Madeira.

Canoeing.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BEAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION. NORTHERN DIVISION.
Officers: Officers:
VICE-COM: C. V. Wind, Albany, N. Y. VICE-COM: W. H. Cotton, Kingston.
REAR-COM: T. P. Gaddis, Dayton, O. REAR-COM: J. C. Edwards, Lindsay.
PURSER: Howard Brown, Albany, N. Y. PURSER:
EX-COM: J. K. Bakewell and N. Y. Stewart. EX-COM: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION. ATLANTIC DIVISION.
Officers: Officers:
VICE-COM: J. W. Cartwright, Jr. VICE-COM: I. V. Dorland, Arlington.
REAR-COM: G. L. Furness, Hartford. REAR-COM: E. D. Anderson, Trenton.
PURSER: R. Apollonio, Winchester, Mass. PURSER: Richard Hobart, Newark, N. J.
EX-COM: Paul Butler, E. S. Towne. EX-COM: H. L. Quick and H. M. and Sidney Bishop. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. meeting should make such application. Application sent to the Sec'y-Treas. will be forwarded to him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 180 Rialto Building, Chicago, Ill.
Applications for membership should be made to the Commodore, or blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

FEBRUARY.
6. Canoe Reunion, Harvard Rooms, New York.
MAY.
30. Bayonne, Annual, Bayonne.
JUNE.
6. Hoisting Sail Competition, 20. New York, Sandy Hook Race Brooklyn.
13. New York, Annual, S. I. 27. Brooklyn, Ann., Bay Ridge.
JULY.
11-26. W. C. A. Meet, Ballast Island.
AUGUST.
6-27. A. C. A. Meet, Lake Champlain.
SEPTEMBER.
7. Ianthe, Ann., Passaic River.

RACING IN THE NEW YORK CLUBS.

THE February number of the *Sail and Paddle* contains a very good suggestion in regard to the arrangement of races among the clubs about New York, or from Yonkers to the Passaic River. It is proposed that the circuit plan, of a succession of races open to all the clubs, which is now in partial operation, shall be discarded, and that one or two big events, such as that of the Marine and Field Club last year, shall be substituted. This would serve the purpose of bringing all the racing men together in one big race, and at the same time would not kill off the weekly work in each club, as is now the case to an undesirable extent. The plan is perfectly feasible, and we should like to see it carried out. The *Sail and Paddle* says:

"The suggestion was made in this paper last year that the clubs about New York join issues in their regattas and hold them all in one place. The absence from the club houses for six weeks last year of the leading racers was not an element of strength, and no amount of winnings made up for the depressing effect of a dull club house. The outlook this year is still more depressing from the club point of view. There will be more races than ever before, and if a man so chooses, he can leave his club house in May with his racing canoe, go into a race every Saturday during the summer, attend the meets and not return home till autumn."

"Local cruising and short races at home with one's fellow-clubmen are getting to be things of the past. Even the club regattas are not what they were—races for everybody—but are now simply regattas of speed between a few racers. The regatta is too common, and cruising rare. Prizes are cheap, and a fairly good boat and man who makes the rounds can win a number of firsts and seconds, and yet not even secure a place in the trophy race at the meet."

"The suggestion has been made that one or two really test events be held, like the Marine and Field races last June, in which the experts of all the clubs except the New York take part, and in which the prizes won mean something, and that the club regatta, if held at all, be merely a local event in which only the members of the club take part, and to which the friends of the club members can be invited."

"There is another argument in favor of this plan. The men who make the rounds get into their canoes but once a week, and have little or no practice except in the races, and, therefore, are not in the best of form when they go to the meet. Is there not something in these points worth considering?"

MODEL YACHTSMAN AND CANOEIST.—With the current number of the *Model Yachtsman and Canoeist* Mr. T. H. Holding, who has edited the canoeing department for four years, retires from his position. His place will be taken by Mr. George F. Holmes, an amateur sailor and builder, who is known to our readers by his contributions to the *FOREST AND STREAM*. The *Model Yachtsman and Canoeist* is the only British journal which gives special attention to canoeing, and we wish Mr. Holmes a full measure of success in connection with it.

WHITE SQUALL'S '88 CRUISE.

[Continued from Page 75.]

WE arose early next morning but took our time about getting breakfast and making a start. As we headed toward the channel, on the eastern side of Oromocto Island, we noticed a blue streak ruffling the water a mile ahead, in a manner that shattered all hope of fair wind. By the time we had paddled a mile the choppy head sea was very pronounced, and long before we reached the head of the island it was a terror and as rough as the face of a rasp. It very much resembled hard, back-breaking work, the forcing of that long, heavily-laden canoe against the wind and current, yet, as I look back on that forenoon, I somehow carry the impression that it passed pleasantly. If the seas were boisterous our spirits were keyed up to match, and we saw fun in nearly everything. We found a large "pike-hand-spike" and a pike-pole that some of the lumbermen had lost.

Both shores, from the head of Oromocto Island to Fredericton, are lined with booms. This district constitutes the great "round-up" of the lumber on the St. John waters, for there are many points of rendezvous between the pioneer industries of prairie and forest countries, viz., ranching and lumbering. Their effect on the fortunes of their followers, the type of man they develop and their gradual death as the country becomes settled, are almost identical. The rope is to the cowboy what the pike-pole is to the lumberman. Then the latter has his brand and his "cutting out" in the great boom round-up. There are also "rustlers," who change the brands on the lumber, and "women" who, common, every-day citizen laugh himself sick to see how the good old deacons and church elders, along the river, will scramble over one another to possess themselves of a "maverick" log.

Should the professional flash rider, or "bronco buster," think there is no skill in the lumber business analogous to that which enables him to sit out the antics of a bucking cayuse, he might get some of the ideas by watching the lumber "man" and his "water man," "foam walker," "bubble rider" (you can take your choice of terms) at his work. The steed of the latter is the untamed torrent, and his saddle, on which he stands erect, a log, often neither large nor buoyant. Should he get "bucked off" it means death. Yet he will run a seething rapid, studded with rocks, skillfully swinging the log and the current by a series of hops, or springing into the air to avoid being pitched forward as it hits a rock, and will display as little concern as if he were on the deck of a Cunarder.

The booms render it impossible to land between the above points, except at a few places, unless you would call tying up your canoe to the boom and running over a hundred yards or so of loose lumber, a landing place. It will not do to get out of the water and merely caution the inexperienced against undertaking the feat. About 9 o'clock we were allowed to take refuge from a heavy squall behind a wangan (pronounced wong-un), a sort of house built on a scow. Scarcely had we resumed our course, when we saw a black cloud rising in the west, that meant much wind, if not rain. We tied the canoe up in a "dog" in the boom, on the Lincoln side of the river, and making our way over a lot of lumber, took refuge in a large wood scow belonging to the tur Ada G.

The squalls, accompanied by fine rain, followed one another in quick succession for the next three hours, with sufficient force to render headway under paddle an impossibility. As the sides of the scow were high, and the rain was driving very nearly on a plane with the surface of the river, we did not get wet.

After dinner we stood over to the "interior side" of the river, where another squall drove us to shelter in a nook in the rafted logs. We watched the little tug Melbourne snaking the joints of logs together and waited. The next lull enabled us to reach Lincoln. Here we watched three hands with a scow and differential pulley derrick breaking up the burned steam tug Relief and got a good lesson in the way to put in an hour or two minutes' work. The undersized also got all the water he could drink.

From here to Fredericton we only made one stop, and that was to give Horace a chance to look up a spring. I spent the time in watching an expert young boom man drive ratlin wedges. As the day was nearly at a close we used our paddles most vigorously, but though the rain was in the air, we did not get out of the water. We never got there. We landed on a little green below the cathedral and your humble servant was dispatched to the nearest grocery for a supply of canned goods. On my way back I met an equestrian dude dressed in a suit of light check and riding a low-set, lumpy-raided little horse. He was trying hard to imitate the English riding school "bob," but his stirrups were so long that when he rode over them he was in the air. The horse, of the knee joint and could not steady himself; and the horse would lurch from under him, sending him bumping back against the cantle, when the rebound would land him on the pommel. That he could steady himself by knee-pressure never seemed to strike him; and the compression of the jaw on the slightly burned cigar, the end of which was filled up with an ash, attested to the amount of enjoyment he was getting out of the ride. The memory of this picture kept me in good humor for the rest of the evening.

We hoisted sail and ran over to the mouth of the Nashwaak, where we made our camp on the beach a little above high water-mark. It was dusk when we commenced to set up our tent; and all the while we were engaged in this, the French pilot by name, who had a fort on the opposite bank of the Nashwaak. But though we were obliged by the nature of the ground to sleep with our heads to the fire, a very favorable position, I should think, for the conjuring of departed spirits, we were unmolested by the shades of any of the Frenchmen or Puritans who came to grief in that short, sharp fight.

The next morning dawned still and warm with signs of rain; and we loafed around waiting patiently for the day to show its hand. Capt. Belyea, of the deal-boat A. Gibson, a mammoth that carries 500 M. of lumber, rowed by on his way to the Gibson Mills for a deal-raft. He said a heavy N.E. rain storm was very near; and though we could not claim any previous acquaintance with him, he insisted on our going right on board his vessel and stopping till the weather fared. That's the kind of boatmen we have on the St. John.

I suppose, were I to do the square thing to my readers, I would describe the tree-embowered city of Fredericton, with its level, floor-like situation, and the village of Marysville, on the Nashwaak, a monument to the enterprise of Alex. Gibson, New Brunswick's lumber king and most successful business man, but the consideration of space forbids.

About 8 A.M. the weather fared. We broke camp and sailed over to Fredericton. All the morning our every movement was watched by an old dandy, who stood leaning against a willow on the opposite bank of the Nashwaak, looking, Horace said, "like a derelict hieroglyphic inscription from some Egyptian monolith."

As we stood waiting for our paddle to bring us to the shore, he was walking slowly toward his cabin, no doubt musing that there no longer existed any excuse for his not going to work. At the north end of the city we made fast our canoe to a deal raft and went ashore on a blind trail of one of FOREST AND STREAM'S subscribers, whom we failed to find. However, we met an acquaintance, a horse dealer, who seemed to value our society very highly, if we may judge by his unwillingness to part from us, but we could not shake off the suspicion that it was less on account of its refining and elevating influence than the number of points he could pick up about some animals in our section that he thought of buying.

We resumed pole and paddle against wind little less boisterous than that of the preceding day. We worked our canoe through a crowd of booms, and seemed to be making good headway, but a run some of them down. I remember that we were disturbed by a pair of Indians in a light canoe, and how Horace made big eyes at a young lady who came out on the balcony of a house that was very near the shore; and that is all that occurred till we reached Spruce Hill.

We were now very thirsty. Noticing three boys in the costume of Adam before the fall playing on the shore we asked if they could show us a spring. One stopped to put on his coat and all three struck a three-minute gait up the beach. We landed at the spot where they halted, and there within 2 ft. of the water's edge was a stream of ice-cold water as thick as a man's arm gurgling up out of the ground. Our guides proved to be three Fredericton school boys out on a sort of picnic of their own; and after asking us if our canoe was being N. W. it should have passed us far to the eastward, but no sooner was the tent pitched than it seemed to see and head straight for us. There is a surpassing sense of satisfaction when with very little, and perhaps indifferent apparatus,

A heavy thunderstorm was now in progress about six miles to the north. An extended experience had taught us that when one of these get started no one can accurately foretell its course; so we got up our tent and made everything snug with all possible dispatch. The canoe was being N. W. it should have passed us far to the eastward, but no sooner was the tent pitched than it seemed to see and head straight for us. There is a surpassing sense of satisfaction when with very little, and perhaps indifferent apparatus,

ratus at your command, you pit yourself against the elements and come off victorious. Thus it was that the meal of bread, tinned beef and a few oranges that we ate here, and washed down with cold water, while the rain was vainly knocking for admittance on the outside of the little tent, was one of the pleasantest experiences of the trip.

While we were waiting for the weather to clear we discussed the situation and resolved to head the canoe for home. For my part, I was heartily tired of wave-butting and current-ramming under paddle. I know this sentiment will not find an echo in the hearts of many canoeists, but I spend about forty-four weeks of the year in one kind of drudgery, and seven of the remaining eight in another sort, to which my muscular power is tested beyond its ability, and therefore I object most decidedly to making my one little week of outing of one piece with the rest of the year. For this reason a day and a half of hard paddling make a heavy enough dose for "this deponent."

Between showers, Horace took a walk down the shore. Half an hour later he came back with a complaint expressed on his countenance. I gave him a sort of out-with-it look, and he said: "We thought those naked boys who piloted us here were preparing for a swim; but they live that way. Yes, sir, it is a fact. Happening to notice a small bough camp on a little green down there, I went in, and there the three of them were stark naked. I asked them where their clothes were, and they said that they had carefully rolled them up and stowed them in a hollow log, where they would get neither dirty nor wet—they didn't propose to arrive in Fredericton that night with a bedraggled toilet. If they got dirty, they could wash themselves; but they could not do the same with their clothes."

If the outer who in his manner of life comes nearest to that of the primitive man, is the most successful, I think these boys should be awarded the prize.

About 2 P.M. when we started down river, there the three of them were getting together logs to make a raft on which to float down to the city. One, whom the rest called Rob, advocated the selection of nothing but cedar—a proposal to which the other two demurred. Just as we were opposite them, he filed the following minor report: "Cedar is the best; it is light; it is buoyant; and a raft of it would be easily managed." But his measure, like many another sensible one, was voted down by a less intelligent majority; and we saw them rolling in spruce, lacinated, hemlock—anything.

There is a craft, locally known as the punt, which is common on the St. John. It is a lapstrake boat body, with a good deal of rocker to the flat bottom, and square, scow ends, set, however, at a less obtuse angle with the bottom board than those in a scow. On our way up in the morning we had noticed that some man was the happy possessor of about 8 ft. of the bow section of one of these craft, which had been sawed off, and a straight biscuit-box stern nailed on. We had scarcely passed the boys when we saw a man and a boy out in this craft, trying to set a net. The man was standing in the stern, and the boy, facing the stern, was seated on the bow-board wielding a paddle on alternate sides with a sort of "stern all" motion, that, while not unskillful, was very funny to look at. At last they reached the desired point, and the man, balancing a killikie stone attached to about 10 ft. of rope, attempted to throw it ashore. Just as he threw it the stone slipped from the noosed rope, and the man, to recover, alighted on his feet in the water. The boy, though the single word he uttered could not be by any amount of twisting be construed as profanity, its intonation, as well as its commonly accepted meaning, were as suggestive of disgust as anything I ever heard. When the "bread tray" was relieved of the man's weight the stern flew in the air, and it spun around on its bow end, like a top in its last staggering revolution.

Luckily, we were assisted in the stifling of our laughter by what might be styled a diversion. We were going about a six-mile gait with the wind on our port quarter. I was reclining amidships with my back against a blanket roll. Chancing to glance under the main boom, I saw directly ahead, and within thirty feet, a boat with a whole sail sack for a sail, and a grinning boy as pilot. There was a time to think of the risk of the boat, and to the left, etc. The Squall lifts like lightning; it was "hard-a-lee, quick," and Horace responded without the usual preliminary wriggle of the tiller in the opposite direction that most persons give when confronted by a quick order. Had our knife-edged outwater rammed that squat stern fairly, the dinners of both crews would have been shaken up some. A little below the "stern all" boat, and just up to a wharf and the undersized strolled up to the post-office to mail a pack of postal cards. Queen street (the principal thoroughfare) looked dull and drowsy. Pedestrians were scarce, and carriages an unknown quantity. The wind had taken one of those sudden drops so common on showery days, and about the only sounds that could be caught without effort were the "drifting" of the wind on the water, and the "drifting" of the wind on the water. The principal thoroughfare looked dull and drowsy. Pedestrians were scarce, and carriages an unknown quantity. The wind had taken one of those sudden drops so common on showery days, and about the only sounds that could be caught without effort were the "drifting" of the wind on the water, and the "drifting" of the wind on the water. The principal thoroughfare looked dull and drowsy. Pedestrians were scarce, and carriages an unknown quantity. The wind had taken one of those sudden drops so common on showery days, and about the only sounds that could be caught without effort were the "drifting" of the wind on the water, and the "drifting" of the wind on the water.

All at once a vague, indistinct memory of a musical air came wafting through my mind; then like a flash it stood out sharp and clear in the form of a single line: "He was a little tin soldier." It was a line from the song that came floating through the window down street a few minutes before which I had unconsciously caught. The melody is a queer, mellow, and a queer melody, but that mine had played me a scurvy trick, so I spent the remainder of the walk in self-abasement by recalling the details of how a young man of the sentry's size and build had once laid me on my back three times in five, "side blows." L. I. FLOWER.

[TO BE CONCLUDED.]

BROOKLYN C. C.

AN important meeting of the Brooklyn C. C. was held at the residence of Mr. Frank L. Dunnell, 188 Madison street, on Feb. 12. Capt. Joseph Rudd, Jr., presiding. The date of the annual regatta was selected for June 27, when sailing races will be held for unlimited, junior and canoe yawl classes. A committee composed of the officers and house committee was appointed to take charge of the hoisting sail competition on June 6. Com. Rudd presented the club with a handsome trophy, to be known as the Brooklyn C. C. sailing trophy, which will be a challenge cup for perpetual competition. It is in the shape of a birch bark canoe on a fancy ebony base, with small silver plates on the sides for the names of the winners.

The meeting then became a social session and an enjoyable evening was spent. It was the third winter rally, as the meetings are called, the two preceding being held at the club house, on Montague street.

Mr. Dunnell opened the evening's entertainment with a lantern slide exhibition, showing some new views of the last meeting of the American Canoe Association, which was held at Jessup's Neck, L. I., last summer, as well as some taken last spring in the West Indies. Messrs. Dwight Holbrook and Jerome W. Simpson of the Yonkers C. C. played several duets on banjo and piano. Arthur W. Hurst sang several solos, and many camp choruses were joined in by all present. In the rear parlor was an artistic exhibition of canoe and camp pictures, loaned by Messrs. S. R. Stoddard, of Glens Falls, N. Y., and Lafayette W. Seavey, of New York city, and numbering in all nearly one hundred. Here were shown the evolution of the canoe, from the aboriginal solid tree trunk canoe, through the dugout, the dugout canoe, the dugout canoe, the beautiful little clipper of the present, with its white sails and fancy totem, with its captain sitting balanced far out on his sliding seat, the latest canoeing wrinkle. At a late hour supper was served, after which "pipes and tobacco" was whistled and another hour passed pleasantly.

The evening's entertainment was in charge of Messrs. F. L. Dunnell, M. C. Brown and W. S. Dunsen. Mr. Dunsen, the manager of the club, among those present were Com. L. S. Palmer and Capt. W. J. Stewart of the Isthmian C. C. of Newark, N. J.; T. S. Oxholm and H. L. Quick of Yonkers; W. S. Elliott; W. H. Warren, Thomas G. Buddington, Charles P. Weekes, H. C. Ward, D. A. Nash, of Brooklyn; C. V. Schuyler of Arlington, N. J.; W. H. Cammeyer, R. Lipton, J. Drew Dunnell, James W. Dunnell, Paul E. Varnum, and others.

At a late hour the evening's entertainment came to an end with the announcement that at the next rally an informal talk on field and camp accidents would be had.—Brooklyn Eagle.

ST. LAWRENCE RIVER SKIFF, CANOE AND STEAM LAUNCH CO.—We have received the spring catalogue of the St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., the successors to the business established by Dr. Bain some years since. The catalogue contains a large line of boats of all varieties, from a pleasure launch down to the smaller rowers, including skiffs, canoes, yaws, and sneakboxes. The firm makes a specialty of St. Lawrence skiffs, both for racing and for fishing and pleasure use. The catalogue is very well illustrated by the lines of the boats.

BOATS AND THE WORLD'S FAIR.

MR. FREDERICK L. OLMSTED, landscape engineer of the World's Exposition, has been suggesting some of the possibilities lying within water transportation by means of "omnibus boats" plying on the lake, and mentions the good effects possible in a gathering here in actual use specimens of the boats of all nations and tribes. He remarked: "I asked Mr. Burgess if he would be willing, upon a commission from the directory, to build a simple boat suitable for the purpose and provide all its outfit. He replied in effect, that he would do so, with much interest and pleasure. The plan for such a boat having been prepared by Mr. Burgess, in conference with us, and approved by the directory the boat would be built under the supervision of Mr. Burgess, and, after trial next summer, and, having been improved in any manner that trial should suggest to be desirable, would be the type and model in all respects of the entire fleet of omnibus boats for the Fair. Contracts would then be made with the boat-builders and manufacturers of electric plants for furnishing them equal in all respects to the model. The cost of such boats would, Mr. Burgess thought, be under \$1,000 each, or less than the price of a good hackney coach carrying four.

"Small canoes, more especially of the type commonly used by our canoe clubs, which there are now great numbers in the United States and Canada, might also be admitted to the waters. They would be small, would have but one, or at most two, occupants, would be propelled by the paddle, the paddler looking forward. But this would not be safe except with skilled canoeists. I should propose that no one be allowed to use the smaller canoes except under the supervision of the Association. You know that this association meets every year, when large numbers of elegant canoes are brought together.

"Venetian gondolas and many other curious and interesting boats to be propelled by sculling, not by rowing, would be admissible.

"That is all I need say about the practical boat service of the interior waters of the Exposition, but I wish to add that it would seem to be most desirable to make a display of certain other marine features, especially to obtain from Spain a full-sized specimen of the kind of craft in which Columbus made his voyage. This would be to all men interested in maritime affairs an object of great curiosity.

"I would be interesting also to secure an exhibition of various sorts of quaint foreign water craft in contrast with our own. I mean such as Malay proas, catamarans, Arab dhows, Chinese sampans, Alaskan war canoes, the hooded boats of the Swiss lakes, and so on. All these are small. They could be kept aloft near the big warship if desired without being in the way of our omnibus boats, and all could be procured readily and at no great cost."

MARINE AND FIELD CLUB REGATTA.—A joint canoe regatta of the Marine and Field and Manhattan Athletic Club will be sailed off the former club's station at Bath Beach on June 20. Mr. W. F. Elliott, director of canoeing of the M. A. C., will have charge of the arrangements.

A. C. A. MEMBERSHIP.—Central Division: Rowell M. Johnston, Albany, N. Y.; N. G. Dannel, E. A. Leet, Ticonderoga, N. Y. Atlantic Division: Edmund C. Hill, Trenton, N. J.

WINTER CAMP-FIRES.—The usual Friday camp-fire will be held at 19 West Twenty-fourth street, on Feb. 20. Mr. F. L. Dunnell will give an exhibition of lantern views.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

A. S. F., Little Falls, N. Y.—You are right about the tracks. B. L. D.—You can doubtless dispose of your dogs by advertising them in this paper.

CONSTANT READER.—Questions to be answered must be accompanied by your name and address.

J. H., Manchester, N. H.—Please inform me of the name and address of the owner of the red Irish setter champion Chief? Ans. Max Wenzel, 89 Fourth street, Hoboken, N. J.

N. T. L., New York.—Will you kindly let me know, at your earliest convenience, whether there has been a new law passed prohibiting spring duck shooting on Long Island? Ans. No.

W. H., Colchester, O.—Will you please give me the pedigree of pointer bitch Fanchon. She is about three years and six months old and is said to be registered. Ans. She is not registered.

J. A. D., Thessalon, Ont.—The rods you inquire about are well thought of by many people who have used them, but of course they do not please every one. You had better write to the manufacturers for their testimonials.

D. B. M., Lockport, N. Y.—There is a scheme on foot to stock the county with quail. I am requested to write you and find out if possible the address of some reliable persons of whom I can purchase live quail. You will confer a favor if you will let me know at your earliest convenience. Ans. See our advertising columns.

W. B., Mahanoy City, Pa.—Can you procure a patent for any part of a gun on drawings and model of the part to be patented, or must I produce drawings and model of gun complete? Ans. If it is a part to be applied to a gun we presume only drawing and model of part patented is shown. Write to Commissioner of Patents, Washington, D. C., for circular of information.

OLD SUBSCRIBER, Staten Island, N. Y.—Could any of your readers inform me of some village or small town in Georgia or the Carolinas, or the neighborhood of some such place, where it would be pleasant to reside, where there would be some bird shooting (preferably quail), where the people are genteel and hospitable and where the climate would be tolerable if one wished to spend the summer or part of it?

E. S., Manchester, N. Y.—When you take the cars to go into the North Wood of the (the Carthage and Adirondack R.R.), which is the best point to stop at, and how far will you have to go from the R. R. to find plenty of deer? Can wagons be procured to carry camp equipments, etc., as far as wanted, and are there places where parties can camp and not be molested? Ans. From Oswegatchie station, 39 miles from Carthage, you can go 6 miles to Fine, and thence by boat to Cranberry Lake, which is said to be the best hunting ground in the neighborhood. There is a hotel at Cranberry Lake. Mrs. E. J. Bishop keeps it. Better write her for information. There is plenty of room to camp in this region we are told.

L. R. S., Scanton, Pa.—In your paper of two or three weeks ago appeared an article by T. B. Wilson, of West Va., with a note by the editor. Now as you have been there, would you be so kind as to write me in regard to the trout fishing to be had there, and are the reports of T. B. Wilson to be relied on? I am looking for just such a place as that appears to be, but wish to be sure before going, so anything will be thankfully received. Ans. Mr. Wilson's statements as to game we know to be trustworthy from personal experience. As to the trout fishing his accounts are corroborated by several correspondents who have fished the streams. Their communications will be found in past issues of FOREST AND STREAM. The region is full of interest for the sportsman and naturalist, and the trout are always glad to share the bait with visitors.

BARON L. DAMMERZ, Germany.—The Standard Natural History gives a description and figures of three species of American hares. We have no true rabbits—i.e., burrowing members of the family Leporidae—in America. The "rabbit" or "cottontail" of our literature is *Lepus sylvaticus*. We have also in eastern New England and the North a larger hare, *L. americanus virginianus*, and in the South and West many other kinds, in all more than twenty species and varieties. We doubt if any of our hares would be available for breeding in enclosures, though possibly the Western jack rabbit (*L. campestris* and allied forms) might prove so. Certain coursing clubs are said to be experimenting in this direction in the West, we do not know with what success. The Indian troubles are over. They were brought about by mismanagement and bad faith on the part of the U. S. Government.

C. H. B., Boston.—I should like a little advice through your valuable paper in regard to stocking some territory in northern Massachusetts with some species of hare other than the indigenous cottontail "rabbit," which is already very plentiful there. I am told that the Eastern white hare has already been tried, but has not multiplied, perhaps owing to the northern location or to some undiscovered enemy. Would you advise trying them again or experimenting with the English species, which I am informed are very plentiful in some parts of New Jersey? If any of our hares can obtain the animals? Ans. We would suggest trying the Eastern hare again. It is common in northern Massachusetts and in parts of New York and Pennsylvania, and would be more likely, we should think, to do well than any other species. Experiments with the European hare in this country are reported, not to have been satisfactory. See answer to Baron L. in this issue.

1st Angler with broken rod;

"Where do you get tackle that will stand such fishing?"

2d Angler;

"At Abbey & Imbrie's, 18 Vesey Street, New York, they are the only people who make first-class tackle at a reasonable price."

NOTICE TO LIMIT CREDITORS.

To the Creditors of the F. L. Sheldon Company:

Notice is hereby given that on the tenth day of February, 1891, an order was made by the Chancellor of the State of New Jersey, that the creditors of the F. L. Sheldon Company present to the undersigned, the receiver thereof, and prove before him under oath, to his satisfaction, their several claims and demands against said corporation within two months from the tenth day of February, 1891, and that in default thereof, such creditors shall be excluded from the benefit of such dividends as may hereafter be made and declared by the court upon the proceeds of the effects of the said corporation, and notice is hereby given to all the creditors accordingly. GUNNERS.

Gunners, read this and practice till you can hit anything that hops, runs or flies. One pound of No. 1 shot gives you 120 rounds with your own gun. Practice limited only by shooters enthusiasm. Our pneumatic auxil- iary gun barrels can be inserted in any ordinary breech-loading shotgun in a moment, converting your gun into an air gun to practice with. By pulling trigger of your gun precisely as if using shells, a single pellet of No. 1 shot is discharged that will break any o'ay pigeon or kill small game at short range. No fire, smoke or noise, and no trouble to load; can be used anywhere. Will teach you to hit with centre of load and kill neatly instead of crippling. Such practice is invaluable to any club shooter or sportsman. When ordering give gauge and length of your gun barrels. Sold by dealers or samples sent on receipt of price, \$3.50; 10, 12 and 14 gauge only.

ANSWERS TO CORRESPONDENTS.

FISH HATCHERY FOR LAKE ONTARIO.

A BILL for the establishment of a fish hatchery in the State of New York, near the St. Lawrence River, has been reported by the Committee on Merchant Marine and Fisheries to the committee of the whole House, with a recommendation for its passage provided that the U. S. Commissioner of Fisheries shall first be satisfied that the State of New York has taken efficient measures for the regulation of fishing and the protection of spawning fish in the waters of northern New York.

A letter communicated to the Senate by Commissioner McDonald is made a part of the report of the committee. This letter refers to the extensive drainage area which would be benefited by the establishment of a hatchery near the St. Lawrence, to the great decline in the number of whitefish in Lake Ontario as compared with other lakes of the same chain, the magnificent results of artificial propagation of whitefish by the States of Michigan, Ohio and Wisconsin, the Canadian government, and later by the U. S. Fish Commission. The Commissioner also directs attention to the necessity of conducting such work under Government auspices, because the benefit will be a public one. The practical extinction of the Atlantic salmon in Lake Ontario is mentioned, and in this connection an instructive report by Messrs. Whitcher and Vening is introduced because of its graphic account of the former abundance of salmon in Wilmot's Creek, the deadly means employed for their destruction, and the consequent extermination of the fish. The Commissioner states that the same agencies which destroyed the salmon of Wilmot's Creek have depleted all the salmon streams of the State of New York draining into Lake Ontario and the St. Lawrence. Obstructions in the rivers have prevented the salmon from reaching their spawning grounds and made natural reproduction impossible. "It is entirely practicable to restore and maintain the whitefish and salmon fisheries through fishcultural work, systematically and persistently pursued," The Commissioner goes on

to say that this work must be supplemented by concurrent regulation of the lake fisheries by the United States and Canada, and by the enforcement on the part of New York of legislation providing for the unobstructed ascent of the salmon to their spawning grounds. He places the cost of a station, which will be adequate for the purpose, at \$20,000, besides the expense of the site and water privileges, and estimates for its annual running expense the sum of \$9,000. This hatchery should provide for the development of 100,000,000 whitefish eggs and 1,000,000 eggs of salmon, together with trough accommodation for a million salmon fry and an extensive system of ponds for rearing salmon to a size which will insure their safety from destruction by other fish.

LIVE GAME FOR STOCKING.

MUCH indignation has been aroused over a reported attempt by Mr. Austin Corbin of this city to stock his New Hampshire game preserve with live deer captured in Maine and Quebec. As it is forbidden by the statutes of both to capture deer at this season of the year Mr. Corbin's agents are clearly in the wrong, and if they persist in their purpose should be punished. Aside from its bare illegality, however, there is nothing in the enterprise which appears to warrant the expressed indignation against it. Mr. Corbin's scheme of establishing a great game preserve, stocked with buffalo, elk, deer and other species, is one which commends itself to all who are interested in American big game. If the laws of a State where deer abound as they do in Maine make no provision for the capture alive of specimens for stocking purposes, the laws are in so far defective.

The same principle applies here that holds with respect to live quail for stocking. The purpose is laudable; it should be possible of accomplishment by lawful means. Maine might very well provide for the capture alive of a certain specified reasonable number of deer each season, their taking to be duly supervised by agents under authority of the Game Commissioners. Such transportation would not appreciably affect the native stock. Similar provisions for transplanting quail and prairie chickens and Chinese pheasants and other game birds, all under reasonable limitations, might profitably be inserted in the game laws of States and Territories where the supply is large. In short, this is a form of public-spirited enterprise which should be encouraged.

THE NEW YORK GAME BILL.

IN another column are noted several changes which have been made in the game bill now before the New York Legislature; among them is one, the importance of which has been urged in these columns, restoring the original composition of the Board of Fish Commissioners by retaining the present number, five, instead of three. In addition to the alterations mentioned on page 107 numerous verbal changes have been made which do not alter the purport of the several sections, but strengthen the original provisions by the use of more explicit terms. The codifiers have taken advantage of study of the printed text to make the measure more definite in phraseology and more secure in its effect.

As a matter of course comments on the bill have been mainly in the nature of adverse criticism, for those who have taken occasion to speak of it have chiefly been those who have advocated changes. It was not to be expected that where so many interests are concerned and where there is such latitude for honest differences of opinion, any measure would escape criticism. It would be unfortunate, however, if because of these criticisms the public has failed to appreciate how well the codification commission has done its work and what an admirable measure the bill is, in conciseness, clearness and arrangement. The codifiers have brought order out of chaos; they have substituted for an inexact, unintelligible and contradictory "mess" of legislation a succession of sections which are consistent, readily understood and definite in their meaning. Whatever may be the dissatisfaction with different provisions, the codifiers deserve and should receive generous credit for the work done.

As we have already suggested, the game and fish laws of numerous other States should be treated in the same way; and we hope to see the example of New York extensively followed. To codify means to render intelligible and harmonious; which means to make more effective; which means better game and fish protection.

DEMORALIZATION IN MAINE.

WE invite careful reading of the communication from Mr. Manly Hardy, relating to the demoralization which now prevails in Maine with respect to the game laws. The story told by Mr. Hardy is in brief this, that visitors from other States have killed game out of season to an outrageous extent; and have enjoyed practical immunity in doing so; that the people of Maine, contemplating this wanton destruction, have wearied of striving to save the moose and deer for legitimate use, and have adopted the plan of killing out of season to satisfy their wants. This is a startling condition of affairs, and one well deserving immediate and careful consideration, that if possible the remedy may be provided.

It is quite obvious that the lawlessness of visiting sportsmen furnishes no justification for the course pursued by the Maine residents. Two wrongs do not make a right. If men from Boston and New Haven and New York have killed game out of season and left it to rot, they deserved punishment; but their failure to receive their desserts afforded no warrant to others to join in the illicit destruction. That some burglars go unpunished does not justify other thieves, nor do sensible people whose houses have been robbed adopt the plan of evening up by breaking into their neighbors' houses. It was the duty of Maine citizens cognizant of these outrages to bring their perpetrators to justice, or failing in that, to provide better machinery for effective execution of the laws.

All this, we say, is obvious, and must have been thought of by Mr. Hardy. But after all is said, the condition—whether reasonable or unreasonable—remains; and our correspondent has done a public service by picturing it. We hope to lay before our readers more facts shedding light on the case, to present all sides of the question, and to discuss it thoroughly and impartially, in the trust that such discussion will help toward preparing the way for a better state of things.

THE NATIONAL FISH COMMISSION.

IT is a subject of sincere satisfaction that the Senate Committee on Fisheries, after a prolonged and exhaustive investigation of the affairs of the United States Fish Commission, has reported that none of the charges preferred against Commissioner MacDonald have been sustained. The report concludes with this by no means uncertain endorsement of the conduct of the affairs of the Commission:

In view of the great importance to the country of the work of the Commission, and the urgent necessity for its continuance, we ask a careful examination of the testimony presented, believing that it is sufficient to convince all fair-minded persons that there is no just cause to criticize the policy of the Commission or the course of the Commissioner in the matter of administering the affairs of the office, but on the contrary he deserves commendation for the conscientious manner in which he performed his work.

This is precisely the sort of report expected by those who knew anything of the National Commission. The charges preferred against Col. MacDonald and his associates bore every evidence of prompting by a combination of personal enmity and political greed for patronage. The attack was initiated by discharged employees, it was carried on by politicians eager to convert the Commission into a part of the political machine. That the schemers have been defeated means the continued efficiency of the Commission. Col. MacDonald is to be congratulated on having won this vindication and commendation, but vastly more has the country at large reason for thankfulness that the national fishcultural interests have not been sacrificed to political greed.

The volume of travel to Florida this year is very large, and the tourist whose baggage includes rod or gun, or who has a four-footed companion's comfort to look after, in encountered at every turn. If one may believe the railroad folders and guides, game and fish were never in greater plenty than now. The drum fishing season has opened well; one native fisherman paddled his dugout to the wharf at St. Augustine last Friday with a catch of seven drum as the reward of a day's fishing.

The deaths within a week of one another of Gen. H. H. Sibley and Col. Thos. A. Picton have removed two of the circle of writers who were best known to a former generation of readers of sporting literature. Both were contributors to the *Spirit of the Times* in Frank Forester's day.

The Sportsman Tourist.

AT THE DEPOT.

THE night express is late, and still prevails
The storm. Far up the frowning mountainside
It rages in its anger, power and pride,
Then, stooping like an eagle, fierce assaults
The groaning pines and hemlocks in the vales.
The air is thick with snow, and far and wide
Resounds aloud the unabating tide
Of storm. Deep in the woods, between the gales,
The yeeping foxes scold the bitter night,
While I my wrapping furs the more enjoy,
And pace the sheltered platform, as a boy
Goes forth to hail the winter with delight.
But hark! Now clicks the key, and through the gloom
Breaks the fierce headlight like the day of doom!

S. NELSON MCADOO.

HENRY HASTINGS SIBLEY.

BY CHARLES LANMAN.

[From the forthcoming revised edition of "Haphazard Personalities."]

THE name of Sibley has been familiar to me ever since I was a boy of ten years, when I first met Henry H. Sibley at the house of his noted father Solomon Sibley, in the city of Detroit. About twelve years afterward, when he visited New York for the purpose of purchasing Indian goods, of the noted firm of Suydam, Jackson & Co., I not only gave him the prices and boxed up the goods, but remember to have marked them for a region that seemed to me at the time on the other side of the world.

And then again, in 1845, when spending "a summer in the wilderness" of the upper Mississippi, I found my Detroit friend in a log cabin at the mouth of the St. Peters River, performing the duties of an Indian trader. Not only did we have some pleasant talks about dear old Michigan and our many Wolverine friends, but he took me to see the Falls of Minnehaha and St. Anthony, also furnished me with a horse and an Indian guide to take me to Crow Wing, further up the Mississippi. I also purchased of him, at the time, a Mackinaw blanket, large, blue and fine in texture, for use in my prospective camp life—probably one of the specimens I had packed up for him in Pearl street, New York, and which, though now changed by the dyer to a bright crimson, I have often utilized in later years for the sake of the old times.

After another turn of the wheel of fortune, when Mr. Sibley was seated in the National Congress as a delegate from Minnesota, it became necessary for me to "take his life" for my Dictionary of Congress; and as he is at this present writing a remarkably healthy old man, I am reminded of a bit of advice, which he gave me in Washington, to the effect that the drinking of a glass of water every morning immediately after leaving one's bed was a very beneficial habit.

The career of Mr. Sibley as a Western pioneer is in keeping with the progress and present condition of the extensive and splendid region of our country, with which his name will ever be honorably identified. He was born in Detroit in 1811, and after receiving a good education became fixed with a desire to live and labor in the wilderness, and it was not long before he joined the American Fur Company and was assigned to duty at the Sault St. Marie and at Mackinaw. Having made his mark by his abilities, the managers of the company decided to send him to look after their affairs on the Mississippi River. His first stopping place was at Prairie du Chien in 1834, between which place and his Ultima Thule, at the mouth of the St. Peters, the distance was 300 miles, with only one log cabin to break the monotony, and over which he traveled on horseback with an Indian guide. After spending some ten years in doing what he could for the fur company he was compelled by circumstances to turn his attention to matters more closely allied to civilization than the purchasing of furs. As the immigrants tumbled into the new Territory of Minnesota Mr. Sibley was elected its first delegate to Congress, and then when the State Government was organized he was elected its first Governor; he also served as a Brigadier General in the war for the Union, and in 1862 commanded the forces which succeeded in suppressing the noted outbreak among the Sioux Indians. At a banquet which was given to the General and ex-Governor in 1884 the leading speaker, C. K. Davis, summarized his career in the following words:

"From the beginning in all that was intended for our well being, for the cause of education, for public morals, for social benefit, for our municipal advancement, for our chamber of commerce, for our railroad system and for private benefactions, in all acts which demanded integrity, benevolence, business talent and tact and nerve; in all these he has been a leader and an originator. Such debts can never be paid by aught excepting our abounding and inadequate gratitude."

That a man of noble physique and indomitable energy, like General Sibley, should have had a fondness for the sports of the field, forest and prairie, was quite natural. Because of his reputation as a sportsman he has long been known in the West as "Hal a Dacotah" and certain published recollections from his pen, entitled "Hunting on the Western Prairies" and "Buffalo Hunting," are full of information and highly interesting. He was a devotee of field sports from his boyhood, and it was this mania which induced him to cast his lot on the frontiers of civilization. While hunting for the buffalo and other wild animals he had many narrow escapes from injuries and death, and yet the greatest danger to which he was ever exposed came from the assault of a favorite deer-hound, one of a pack to which he was devotedly attached.

Several Indians on one occasion, to use the language of a friend, had dropped into his office to ask counsel of the pale face warrior, whom they regarded with awe and veneration, when the savage dog evinced a desire to attack the intruders. In attempting to quiet the brute, Gen. Sibley awakened the latent tiger-like nature of the hound, and with the premonitory symptoms only of a low growl and fiery flash of the eyes, he sprang at his master. The assembled "braves" fled precipitately, and left the owner to subdue the hound or become a victim to his ferocity as the case might be. Grasping a long iron poker, which he kept conveniently near to be used in case of emergency, Mr. Sibley struck the dog a heavy blow

across the shoulders, but instead of disabling the hound, he succeeded merely in still further exasperating his dangerous antagonist. Determined to conquer at all hazards, he seized a heavy oaken chair, which fortunately was of the most substantial kind, and as the maddened beast prepared to spring, dealt him a terrific blow, following up his slight advantage and striking as fast and forcibly as circumstances would permit. For some time the combat continued, with the utmost fury on one side and deliberate courage and coolness on the other, until the hound, utterly subjugated, retreated to a corner, and his owner advanced and patted him on the head in token of reconciliation. An instant of fear or hesitation would doubtless have resulted in the terrible laceration if not death of the owner. Mr. Sibley ever regarded this as one of the narrowest escapes of his life, and when the conflict was over could but marvel at his own daring in assailing a beast scarcely inferior to the panther in strength and courage. The stout oaken chair was shattered in the savage fight, attesting the desperate nature of the conflict. Not long after he had another encounter in the same manner and place, and demolished another of the oaken chairs, but this was the last difficulty he experienced with the hound, who was ever after completely at his master's command.

The long-continued and intimate intercourse that Gen. Sibley had with the Sioux and Chippewa Indians gave him an influence with them which was almost unexampled. He always treated them with respect, but never yielded to their whims, and it was undoubtedly true that his first conflict with a Sioux hunter had an important influence in securing the respect of the Indians. The incident occurred soon after Mr. Sibley had reached the wilderness, and was to this effect: He was out upon a duck shooting expedition, and having killed not less than eight birds out of a passing flock with his double-barreled gun, he was suddenly startled by the report of another gun in his vicinity, when a stalwart Indian came out of his ambush and proceeded to pick up the game the white man had killed. Mr. Sibley said nothing, but approached the Indian, coolly took all the birds as his property, and left the Indian to his own contemplations. He nursed his wrath to keep it warm, and was wont in after years to relate the incident to his people, but was careful never to cross the path of the duck hunting white man.

During the forty-three years that have passed away since General Sibley entertained me in his cabin in the shadow of Fort Snelling, the great domain with which he has been so honorably identified has had a truly marvelous career. The spot where he traded with the Indians, together with the neighboring post of St. Peter, now contain not less than 300,000 inhabitants, and the States of Minnesota and Wisconsin are to-day perfect paragons of cultivated beauty and the homes of unexampled prosperity and intellectual contentment and peace. And as General Sibley was the man who built the first stone residence on the banks of the upper Mississippi it seems to be the most natural result that, at this present writing, the people of Minnesota should be planning for the erection of a marble monument, in a prominent locality, as a tribute of their regard for the most eminent pioneer of their Commonwealth.

P. S.—General Sibley died at his home in Minnesota in February, 1891, and the press commemorated his long and useful life with earnest and loving testimonials.

THE CHARMS OF INDIAN RIVER.

ROCK LEDGE, Fla., Feb. 3.—*Editor Forest and Stream:* No one has seen Florida who has not visited the Indian River; and Rock Ledge is the gateway to the whole region. Here come the tourists, the sportsmen and the health seeker, and all find themselves satisfied and well rewarded. The orange appears here to have found its home, undisturbed by enemies, either of climate or of the insect world, and offers the grower a sure and abundant return. The pineapple is already yielding fabulous profits to those who have gone into its culture. Along the ridge known as Rock Ledge, the hammock densely wooded with oak and the tall palmetto runs close to the water edge, where the wayfarer can sit in the cool shade at all hours of the day, or can stroll for miles along the trail, which follows the indented line of the shore. This old Indian trail, now a beautiful path, has without doubt been a highway for many generations of red men, and before them of the Mound Builders, whose remains are scattered all along the river. New vistas appear at every turn, while from behind the cottages appear the groves heavily laden with the golden fruit. On the broad bosom of the river appear all sorts of craft, steam and naphtha and sail, while the number of steamers plying the whole length of the river proclaim the fact that here at least they are still unvexed by railroad competition.

So far as the tourist and the sportsman are concerned there need be no hurry for the railway. If you look toward the other shore the reports of guns tell of the sportsman's success among the ducks which swarm along the river. The venison upon the table, with an occasional steak of manatee, with the showing of a panther skin seven feet long attest the supply of game in abundance. Those who desire to shoot ducks go over to the Banana River, where good shooting is assured.

An example of the intelligence of water fowl is shown at Titusville, where for several years the shooting of ducks has been prohibited on the river along the city's front, and where, as evening comes on, thousands of ducks come swimming in toward their sleeping place, until the water for many rods from the shore is literally black with them. Rock Ledge must shortly pursue a similar plan and protect all water fowl in front, as the birds add greatly to the attractions for visitors, who do not care for shooting them, but who like to watch their graceful movements.

Indeed, Florida must at once proceed to the enactment of proper laws if the game of the State is to be protected from extinction. There are so many who call themselves sportsmen, who kill for the sake of killing without care or thought of the future, that it will be but a few years before the wonderful abundance of game in Florida will be a thing of the past.

It is devoutly to be hoped that the coming session of the Legislature of Florida will enact proper laws for the protection of game and the prohibition at all seasons of the killing of birds of plumage and song. Even now there are long stretches of the Indian River from which the heron and egret have fled and are seen no more,

To those who are expecting to visit this region, the present hotel accommodations, which are of the best, add largely to the delightfulness of the sojourn. Rock Ledge now offers ample entertainment for all comers. The Hotel Indian River is delightfully situated a little way from the brink of the river with a grove of tall oaks and palmettos in front and a small fleet of all sorts of boats from a canoe to a schooner, giving ample opportunity for all sorts of recreation on the water, while an orange grove of forty acres affords the tourist the opportunity to study the delicious fruit at its very best. D. W. W.

A THANKSGIVING CLIMB.

EVERYONE was going to the lake for a Thanksgiving shoot. Canvasbacks, mallards and teal were just waiting to be filled with lead, so reports ran, and there was no reason why I should not enjoy myself. But I had been there before, many a time, and experience taught that, should the day be clear the ducks would rest complacently in the edges a mile or two from the shore, and should it be cloudy and the waves choppy the five miles of sportsmen that lay along the marshy brink would have all the fun they desired without any assistance. Hence I took to the mountains and hence this yarn.

It was 9 o'clock when we set out, a clear, sharp, bracing morning. Over the summits of that mighty range, that stands, a fortress, between the great inland basin and the rolling prairies, a faint suspicion of the dawn came stealing, and through those yawning chasms, rent by upheavals and worn by the glaciers and torrents of millenniums, the breath of winter came sweeping down upon the sleeping valley. From the light, the warmth, the comfort, we went facing both the winter and the dawn. There were three of us, T., the banker, C., the lawyer, and myself. T. was sure that we would run across a bear. He carried a large navy revolver. C. had heard that there were eight deer near the forks of the cañon. His weapon was an old Winchester. I pinned my faith to willow grouse and fool hens, so it is needless to relate what I carried for self defense.

A walk of two miles brought us to the mouth of Slate cañon. We turned. Below lay the city, the faint white smoke lazily crawling from a few chimneys; beyond a pale haze overhung Utah Lake, and fainter yet across the water the purple hills that fringe the great desert caught on their utmost battlements light lances from the rising sun. And then we went into the darkness. The massive walls closed behind us. We were alone with Nature.

Oh, these cañons of the Rockies—eternal, yet ever new, ever marvelous! I love them and I dread them. There is a time in June when their rugged sides are veiled in blue and yellow, white and green; when the wind sings softly among the nodding wild flowers; when the fierce torrent has dwindled to a babbling brook and the buzzing of the bees mingles with the notes of the birds. Then they are lovely. And in mid summer, when the white coats of the sheep glisten like pearls amid the upland emerald, when the pipe and the horn awaken the slumbering echoes, they are beautiful. And again, beneath soft Indian-summer skies, when every shrub and tree flaunts the oriflamme of war, they are sublime. But in winter they are awful. The trembling vine has fallen from the bare, black rock. The leaves are driven down upon the plain. There is no song of bird, nor hum of bee, and the unchecked wind, glancing from cliff to crag, shrieks with the death wail of the Valkyries. Naked and somber the massive walls rise thousands of feet on either side, and the light that shines above, yet never reaches those dark, cold depths, is but a ray of hope eternally eluding the up-looking spirits of the lost.

As we walked up the cañon we saw a blaze just ahead, and on reaching the spot found a surveyor making a mineral location. Silver is supposed to be silver since the last session of Congress, and an impetus has been given to prospecting all over this Territory and Colorado. By the fire we took our first rest, and as I filled my pipe the surveyor remarked:

"You had better put that up, for you'll need all your breath before you reach the top." As he was rapidly emptying a sack of Durham, I did not follow his advice, though within an hour I found that smoking and walking could not be indulged in at the same time and at such an altitude. Higher we climbed, the surveyor with us, and all along the way were the posts of claims where many a man had sunk his all, and posts of other claims where men hope yet to make great fortunes. At length the surveyor turned back, telling us that we were about 2,000ft. above the town and that we must climb 4,000ft. more before we could reach the peak that was our goal. Still no sun and still no game. Along the narrow trail, over sharp rocks and huge boulders, we went in Indian file. Tom was ahead, and as he stepped into a little level spot, bush-covered and warmed by the rays that stole down through a cross cañon, he pulled his revolver and fired. It took about five seconds to get the shells into my gun, and as I stepped up the word "pheasants" fell upon my ear. Now I had supposed the pheasants of this part of the Wasatch to be the *Pedioetes*, but as no flight followed the report of the revolver I knew I had met something else in the bird line. I could hear them running amid the thicket in the dry leaves, and the way they hid themselves was a caution. Only one luckless wight was slow and heedless of the danger. He lifted his head from behind a sheltering log, and as I saw the ruff upon his neck I thought that I had met with my old friends that I first saw upon the Orange Mountain, before that beautiful range of hills was covered with the stately mansions and villas that I am told are there to-day. But the browner color proclaimed this ruffed grouse to be of the variety *umbelloides*, and in spite of his name and of old associations I dropped him. T. drew him while I hunted in vain for the remainder of the bevy.

The delay brought to our party two boys who had followed us all the way from town. One carried a 10-bore and his shells were loaded with buckshot. The other had a new rifle which he kept in his case, and had a deer jumped within 10yds. of him it would have been out of sight before he could get his traps unlimbered. A mile more was without incident. We were amid the huge aspens, and mountain mahogany and laurel were abundant. At length we reached a snowbank and at its base a little spring. Here we flushed more young grouse, and the birds started off on a half walk and a half fly, after the style of a wild turkey. All blazed away, though I had the only luck in scoring a dead bird. Stopping a while to examine the mineral formation, I heard the

crack of firearms just ahead, and running up found the rifle and the revolver getting in their work on another bunch of grouse, and five victims were added to the bag. Half-past 10 brought us to the forks, and, to our sorrow, we took the right hand branch. For half an hour we had walked, half skated up the bed of a frozen brook, and there our progress was stopped by an ice cascade a hundred feet in height. We were in a veritable *cul de sac*, and it was hard to get out, for the ground was frozen and it was almost impossible to obtain a foothold. But by patient continuance in well doing and by passing up our effects from one to another, we reached the summit of a little ridge, and from that point had easy traveling for a few hundred yards to the edge of the snow line, where we halted for lunch. While we were resting C. brought a porcupine out of a pine tree, and was as proud of his exploit as though he had killed a silvertip. It was now an easy matter to reach the top of the main divide, where our two uninvited comrades left us and went down Flobble Creek in search of deer.

My game pockets being heavily loaded I lagged behind the rest of the party, and just as T. passed over the crest I heard seven shots fired in rapid succession. He surely has his long-coveted bear. But no, down the hill comes a porcupine as large as a hog. I salute it with both barrels, and it stops just long enough to scratch its smarting hindquarters on the rocks and then down hill again, T. after it loading as he ran. Two more shots and then his shout of triumph, at which I sat down to enjoy the magnificent prospect while he once more made the weary climb. He reported that there were five bullet holes and numerous shot marks on the breast, that its lower jaw was shot off and that its entrails were dragging, and yet the cripple kept on until a close shot between the eyes settled the business.

We were on the divide, but the peak was yet hundreds of feet above us. We had a warm climb up the south side, and I had to stop for breath every fifty paces. Near the top I noticed a side cañon with its precipitous sides covered with spruces, and telling C. that it was just the place for pine hens, we went to the brink and were on a level with the tops of the trees. Two birds flew just before us, and soon C. blazed away at an old stayer. He missed it, but the report raised a tremendous tumult. It seemed as though every tree had been alive, and the birds now sought safety on the further side of the cañon. I managed to drop one, and it rolled down hill, leaving me nothing but feathers and the blood stains on the snow. It would have been an hour's work to have got it, so, for aught I know, it is rolling still. But those birds were not spruce grouse, they were the genuine *Centrocercus*—the sage hen—that, leaving natural diet, had come to the mountain tops for a Thanksgiving dinner.

It was not comfortable to stand in knee-deep snow and shoot at birds that would be lost as certain as they were hit, so a last effort brought us to the crest. Such a prospect I have never beheld in the length and breadth of the land. We were 6,000ft. above the city at our feet, and 11,000ft. above the sea level. Below lay Provo, and as train after train passed by they seemed like toys, and the houses were toys, and the great farms were checker-board squares. And beyond the town, it seemed within rifle shot, Utah Lake stretched up and down the valley for forty miles. We saw Lehi, American Fork, Provo, Springville, Payson, Benjamin, the smoke of the great Tintic mining camp, and scores of little settlements. Northward we looked into the valley of the Great Salt Lake. Westward, over Utah Lake and its further hills we saw the peaks of Nevada. To the far east the mountains of Colorado serrated the horizon and, thirty-five miles to the south, Nebo, monarch of Utah, raised its white and lordly head to a height of 13,600ft., while at its western foot nestled the fertile Juab valley. Such a glorious panorama would have repaid days instead of hours of toil. But we had to leave, it was already 2:15 and the descent was a difficult matter. It took six hours to get down those four miles, and it was about as trying a trip as it has been my luck to experience. Just before reaching the spruce trees I met with a fall that made me useless save as a bearer of the spoils. So C. took the gun, T. the rifle, and I brought up the rear. Some hunters had fired a clump of dead pines about 200ft. below the summit. There we took a second lunch, and for an hour we had splendid shooting. T. managed to bring down two hens with one shot from the rifle, and while C. was not an expert, he secured quite a bag. One old hen seemed to bear a charmed life. T. saw her in the top of a dead tree about 50yds. away. A rifle shot failed to disturb her. Then the revolver was used, and while the seven balls cut the limbs all about her she was still untouched. C. now came up, and though I advised him to get nearer, knowing that his shells were loaded with No. 9 shot, he blazed away at the same distance. The feathers flew and the bird flew, too, and that ended our sport. By the way, all the birds were drawn as soon as shot, and hence when eaten they had neither a sage nor a resinous flavor.

Dark found us at the head of a little cañon whose bed in spring is a torrent, and for three hours we felt our way down. Below we could see the flash of guns at the edge of the lake and long after the report came faintly up between the hills. At length it was over, and we reached a farm house, a well and a road, and at 8:30 we sat down to our dinner. For a couple of days three cripples limped about the streets of Provo, and when asked what was the matter, a point to the summit was a sufficient answer.

That was ten days ago. The snow that then was high up has come down and the mountains are white to their feet. Winter is here, not the harsh, Eastern winter, but it is winter just the same. I cannot endure it, so to-morrow I saddle my pony and start southward for the cañon of the Southern Colorado, for the valleys of the Virgin and of the Santa Clara, to that land—

"Where falls not rain, nor hail,
Nor any snow; but it lies
Deep-meadowed, happy, fair
With orchard, lawn and bowery hollow,
Crowned by the summer sea."

PROVO, UTAH. SHOSHONE.

MR. EDGAR SMITH, of Maine, who was hurt on a horse railroad in Boston last December, has been discharged from the hospital after six weeks' confinement there, and has gone home. He is at the present time on crutches and not very lively, but we are glad to know that he will be able to superintend his fishing camps at Round Mountain Lake the coming season.—M. (Boston, Feb. 22).

IN THE REGION ROUND NICATOWIS.

XIV.—THE RETURN TO NICATOWIS.

MONDAY again there was thick fog although we were up at sunrise, hoping to be off before the weather could remember what day of the week it was and make up its mind to rain. All our Sundays were pleasant, but on other days we had to take our chances.

When finally we did leave our island and head up Penobscot Brook it was with no little difficulty that we were able to keep the channel, for the water had risen until it stood within 2 or 3 in. of the tips of the moose-ear leaves and was so spread out among side channels and logans that it was almost impossible to follow the winding thoroughfare or to find the carry if we strayed from the stream.

The carry was exceedingly wet, so that, if the description of it had been left till our return, it must have received even a worse name than has been given it. Father engineered a side track past the wettest place, where, by the aid of the setting-pole and by stepping just as I was directed, I managed not to overtop my rubber boots; otherwise it might have been called wading, or it might have been called swimming.

The food question was as perplexing as ever. We had with us only part of a meal of broiled pickerel and we knew Gassobeis would be too high for either trout fishing or duck shooting. But on the way across the carry Father came upon a flock of spruce partridges. We do not count these as game, we do not usually even throw stones to scare them; above all would we disapprove of shooting such a foolish bird with anything but a rifle, cutting its neck off in the good old-fashioned way. But in the present instance the rifle was far ahead, the shotgun handy and it was a question of dinner. Father ran back with the gun and soon, with more of the feeling commonly known as "resignation" than I had previously felt on the trip, I listened to the well-known bang, bang, bang of the old gun, for spruce partridges are commonly accounted as fit only for sable bait, and never before had we been brought so low.

We were two hours and a half crossing the carry with only two loads apiece, and before we got over the sun, which had been struggling with mists and clouds, came out. Gassobeis was at least a foot higher than when we had left it. We followed the right shore closely, hoping to see a birch partridge which we could exchange for one of our spruce grouse, until it became necessary to turn, in order to keep a straight course through the narrows toward the outlet. The canoe had just been pointed out when Father and Jot, almost at the same instant, sighted a deer swimming quietly from the right to the left shore of the narrows.

It was a lovely chase. The deer was on the base of a right triangle; we, with about four times as far to go, on the hypotenuse. If the deer was not alarmed, we could gain; if frightened at us, we must lose ground which we could never recover, for the deer would get ashore before we were within rifle shot. What little breeze there was drew toward us; on the other hand, we were heavily loaded. The men sprang to their paddles without a word—no excitement, no haste, no great exertions; yet the canoe sped forward under the quick, clean strokes. The deer, too, swam well, but not very rapidly, and did not appear to see us, or seeing, not to notice us, until, when quite near the shore, yet too far off for a shot from a canoe, we saw the head turn toward us on the water and gaze curiously at us. The canoe was turned bows on, the paddling almost ceased. The deer began to swim again more rapidly. It was not far to the shore now. On the moment up sprang the men, off came the coats, and then there was pulling indeed. This rush was the crisis. The water boiled behind the paddles, the canoe leaped with great bounds; loaded as she was, she flew through the water. The deer, too, was swimming fast, with a few strokes would have touched bottom, and then, with two bounds, a shake of a wet hide and a flirt of a white tail, would have cleared the bushes on the shore, safe from pursuit; but the onrush of the canoe was so sudden, the light shirt sleeves of the men and their unexpected rising so startling, the chase so hot, that the fugitive turned and began to swim away from the shore. The canoe shot inshore, lost headway, struck hard on a sunken rock. The deer was swimming with great leaps, shoulders out at every stroke—ten rods, eleven, twelve; it was the deer's turn now. The instant we struck Father sprang to his feet with his rifle. There were two sharp echoes from the hills, and our deer chase was over; but we were sorry that we had taken the poor, silly, useless, little lives of the spruce partridges.

That afternoon as we stayed at Gassobeis, we could hear the wind howling above the trees, and we knew that there was a zephyr blowing on Nicatowis. It was better to be where we were. We picked some berries, hunted out our hidden stores, and were pleased to find them in very good condition—except our best hats, which, having been left in the dark so long, now appeared in a new light, Father's straw decorated with a multitude of rosy spots, and my black felt adorned with a full coat of green mould. Father left his at Pistol Green later, but I had to wear mine down on the cars—it was that, or a faded red felt, or a Tam O'Shanter that had seen so much of the world that the button was all worn off the top.

Toward night we heard again that mysterious sound, which rose from the earth and vanished—we knew not whence coming nor whither going; and again in the morning it went abroad. More than anything else I ever heard, it possessed me with a sense of indefiniteness and mystery. No animal crying in the night, no melancholy bird could have touched a chord that sympathized so nearly with that primitive feeling which gives rise to superstition; their voices might be unfamiliar or unrecognized, but there is not one among them, bird or beast, with which I am not intimately familiar, which I have not handled in the body or seen in life, and toward them I can bear no deeper feeling than curiosity. None of the noises of the woods could have made the same impression; for I could account for them. It was none of the sounds made by men in their ordinary woods' vocations. Because it was unaccountable it gave an un-kin feeling, such as one might have toward a creature without a soul, for it seemed to dwell in a region apart by itself, away from the realities of the woods, unless the gnomes are real and make such noises in their burrowings. But what kept me from doubting my own senses was that we heard it with such regularity, morning, noon and at nightfall.

Our stay at Gassobeis was entirely uneventful. We

did not see even a duck. When we went down Gassobeis Stream we noticed the change of color that had taken place. The bog showed more bronze than formerly; the withe-rod berries (*Viburnum dentatum*) hung in blue bunches; the wild raisins (*Viburnum undatum*) were a soft purple; the black alder berries glowed vermilion, and the scattering swamp maples were deeply dyed "all in a robe of darkest grain." We ran all the dams and the quick water below the last without having to get out and without striking on the rocks, which much surprised Father, who had never seen so much water on Gassobeis Stream. The stream is gradually growing up to weeds and bullrushes and needs to have another drive of logs run down it to clear the channel, else in a few years canoeing on it will become very difficult.

When we reached Nicatowis there was a strong wind blowing. We worked along the left shore to Page's camp, took dinner there, and in the afternoon crossed the carry to the Upper Sabao, about thirty minutes' walk on a road that in ordinary years would be excellent and even in this was very good. So far as we could see it from the end of the carry, Sabao is a beautiful lake. Had the weather been better for the week or two past, we should have carried across and gone down this and the next two or three lakes.

When we got to Page's camp where we had left our canoe we thought it was blowing too hard to put out. So, not wishing to camp on the chips about an old lumber camp, we waited for the wind to subside; for we had seen in the morning, when we came out of the mouth of Gassobeis Stream, an ideal camp-ground—an opening on the left shore, under tall trees, on greensward as we thought, with a white beach in front, which our imaginations and the sunlight together made of sand. It was an altogether delightful spot.

We waited patiently for our opportunity. The wind lulled at last and we pushed off. A little way out and we wished we had not started. Westward everything grew black. Passadumkeag Mountain was shut off from view by an inky cloud, and the same black curtain overhung the sky. The lake was ebony and ivory under the shadow of the approaching squall, every wave-crest gleaming preternaturally white. If that squall struck us the Lady Emma would leave her bones on the rocks; or if we were borne back into Coombs Brook, there would be the rain. We pulled—for the shore and our delightful camp ground. It was not far: we reached the shore, tumbled our load out on the beach—it was gravel instead of sand—fossed it up over the bank, and in less time than it takes to tell it, had all snug and the tent laid over it, weighted down with heavy rocks. But think of our disappointment; instead of the beautiful grove we had seen under the morning sunlight, was an old hemlock-bark peeling and landing, cut up by roads, a side hill at that, so full of stones that it couldn't be much fuller, while the tall trees, weakened by the removal of so many of their neighbors, often dead themselves, made refuge under them impossible. It began to patter great drops. For lack of any better shelter we all sat down under the side of a bark pile to await the result with fortitude. We waited and it did not come; it even ceased to patter. When we looked out the squall was going round us. Well, we were there, and it was useless to pack up again on uncertainties. So we at last found a place where, by considerable digging, enough stones were removed to bring a little of the original ground to the surface, built a fire near the foot of a dead stump, made a great bed of hemlock boughs, and we had a camping good enough for our not over-tender consciences to praise considerably. It was snug and cosy among the hemlocks, and we felt so rich with the addition of the rubber bag, provision box, and all the other articles which we had left at Gassobeis during our stay at Machias; that we would not have envied a billionaire his gold shoes and gold umbrella. Where else but in the woods can one so easily rise to, so long maintain, that high, heroic temper of Henry before Agincourt, who in night and weakness and adverse circumstances "would not wish himself anywhere but where he was." Where else can one repeat with fuller meaning the prayer of Agur: "Remove me far from vanity and lies; give me neither poverty nor riches; feed me with food convenient for me."

XV.—A NICATOWIS ZEPHYR.

A loon cried in the night, not his halloo but his hoarse *haw, haw*, and we knew that we should have wind. We intended to get up early and be off before it rose; but when we turned out in the morning the wind had evidently been up all night. It calmed later and we hurried off. We did not stop to make haste slowly, but did the best we were able to reach the long point that forms part of the Nicatowis Upper Narrows. Half-way across and it sprang up again. It was not a tempestuous wind, it did not raise a sea, but it "pressed down upon the deep," as Virgil says, and when it was heaviest our two good paddlers had all they wanted to do to hold their own. But a wind never is continuous in its force, and in the lulls we gained.

I notice that poor paddlers pull a drawing stroke, reaching forward too far and bringing the work entirely on the muscles of the arms, straining the stomach if they work hard, which they seldom do. Those who sit in chairs do the same. But watch a man who is "strong on the paddle," and you will see that he does not reach very far forward nor exert himself until he has brought the blade back nearly opposite himself; then he throws himself upon it, pulls with the hand that is lowermost, and pushes with the other until the strong maple bends beneath him. He uses his whole body, and when paddling hard, springs from his knees. To learn to paddle well one must either sit up on the thwart or paddle Indian fashion on one's knees, though few white men learn to do the latter. It costs too many hours of bitter pain of cramp and numbness. For the low canoe chairs so much in vogue I see no use. If the bowman wishes to paddle, shoot, or fish, he wants greater freedom of movement than can be had in a chair 6in. high with a tall back to interfere with his elbows, and for passenger's place in the second band there is nothing so luxurious as a seat made of the blankets folded flat and square inside the rubber sheets, with a cushioned back made by drawing down in front of the middle bar one end of the tent which is usually spread out over the load to protect it from water.

That was a day. By hard work we got in under the high sandbank on the upper side of the point, and drew up the canoe, waiting to see what the weather would be. At times it almost blew our hats off; then we would talk

of venturing out; the sun was shining, and yet half a dozen times a scud of cloud was driven over us and it spit rain. We picked berries and waited, waited and picked berries, until finally, when it had become evident to our unwilling minds that no canoe could cross Nicatowis on that day, we reembarked and worked our way back to the Short Carry, keeping close under the shore to prevent being blown off.

The Short Carry is not a necessity, but a great convenience; it is, therefore, more welcome than the long carries which we cannot avoid when not inclined to burden bearing. It crosses the neck of the long point which forms part of Nicatowis Upper Narrows. This point is like the Irishman's barn, which was "a thousand feet long and one foot wide," and it swings out into the lake full two miles, like a toll gate across the straight water route to Gassobeis. Usually it is easier to paddle around the end of it than it is to carry the load across the narrow neck, with the extra trouble of unloading and reloading; but in windy weather the Short Carry, so called to distinguish it from the Long Carry past Nicatowis Falls, is a great convenience.

It was sunny and quite comfortable on the upper end of the carry—one might think the halcyon brooded there to make such a calm; and only forty rods away, at the other end, the wind was blowing and howling as if a legion of evil spirits were after it. Unfortunately we could not camp on the comfortable end, it was so rocky; and Providence seemed to think us old enough sheep to take care of ourselves, for it made no effort to temper the wind at the other. But we were glad to be delivered from fear of falling trees; here were only second-growth birches and poplars which no tempest could uproot. Though we searched the woods for several rods on both sides of the carry, the only camping place we could get was a small spot in the middle of the carry near a poplar tree engraved with initials and the significant word "Windbound," showing that others also had been imprisoned here without being confined. Even this best place of all was so rocky that we could not pitch our tent with the usual upright fork for a front pole, instead of which we were obliged to use two forks braced against the ridge pole from either side. It rained a few times while we were getting our tent pitched and our luggage under shelter, and then the draft across the carry caused an eddy round the corner of the tent and drew the smoke into our eyes so that it was unbearable: it was a poplar fire, too—add to previous notes that, for pungency, the smoke of a poplar fire, what little there is of it, will out-rank everything else except the smoke of cedar bark.

We easily remedied this fault of the fire by making a wind screen of green trees which diverted the smoke; we chinked the cracks under the canvas with boughs; we dug the superfluous stones out of our bed; and then I picked and laid a great bed of hemlock and cedar boughs, deep and fine, such a work of art that it consumed the better part of two hours in the making; for, being permitted to make the beds in ordinary weather, the family sometimes enjoys sybaritic luxury in its cubicular arrangements.

It still blew, and the wind increased rather than abated. If the best canoe man in the country, in the best canoe, could have come across from Darling's shore to ours, it would have been as much by his good fortune as by his skill. We were snug and comfortable and, in the main, contented to be where we were; for if any one became a little restless in camp, he straightway regained his delight in the land by going to the end of the carry and looking out upon the angry lake, across which, as Jot said, the wind was "blowing enough to bang the apostles."

FANNIE PEARSON HARDY.

FACTS FROM THE NORTH WOODS.

Editor Forest and Stream:

I send you the following facts for the benefit of those of your readers who may be interested in the welfare of our woods and the proposed scheme for a State park, for which there seems to be the most imminent necessity.

It was my good fortune last summer to accompany my friend the State Forester on a round trip of some 150 miles by trail, our object being to form as clear an idea as possible of the lumbering and condition of the country within the proposed tract, it being that portion of the Adirondack wilderness lying within nearly a dozen townships and containing the source and principal water sheds of the Hudson River, besides the Ausable Region and that tract known as the Cold River Country.

Our route lay from Keene Valley, Essex county, N. Y., through the notch to Van Hoovenberg's, thence to the "Deserted Village" via Indian Pass, and so on to the Preston Ponds and down Cold River, returning by way of Lake Colden, Mt. Marcy, and the Ausable Ponds.

Before I attempt a more detailed account of the present condition of the country, a word in regard to the lumbering and its effect upon the region may not be out of place. Where they have lumbered around the small ponds we found the water greatly diminished, and in many cases great stretches of marsh have been formed. The effect of lumbering in the case of mountain streams has been to form a sediment upon the stones, the water becomes discolored and often unfit to drink, and this, too, where but a short time ago these streams were in fine condition, the clear water running over moss-covered rocks and a gravel bottom. Where the lumbermen flood the stream and "drive," it not only gullies out the bed of the stream to a great extent, tearing away the banks and otherwise injuring its natural beauty, but, as a rule, since there is no shade left all fishing is destroyed, and the sunlight striking the bed of a brook left in such a condition, with even the moss gone, evaporation is so rapid as to so lessen the water supply that unless the stream should head where there was an abundance of green timber it would actually dry up during the summer.

Where there is an abundance of hard wood timber the cutting of spruce would be hardly noticeable, but lumbering solely among soft timber is a far different thing, as soft timber affords a great deal of shade. So much so that there is usually a heavy growth of moss in such places, especially on the mountain sides. The soil where spruce grows is very light, the roots growing near the surface. The result of cutting heavily in such timber is that the smaller trees left as a rule blow down, and the sunlight let in kills the moss.

Finally the disastrous effect of dams erected at the outlets of the larger lakes is to raise the water, killing the timber along the shore line, and producing large areas of marsh land.

Beginning with the headwaters and the great water sheds of the Hudson, no better example of the destruction of our forests can be found than on the tract known as the Calamity Brook Tract, lying on a gore east of Township 47, Totten & Crossfield's Purchase, through which Calamity Brook flows. This once superb stream now lies robbed of all that once made it beautiful.

For nearly five miles it has been heavily lumbered, and its once green banks are now yawning chasms of sand, gullied out by the driving logs, many of which lie stranded along the dry bed of the brook.

Continuing by trail through the Calamity Brook tract we reached Colden, a beautiful little lake of some sixty acres in area and one of the highest reservoirs of the Hudson. Lake Colden is situated in the valley between Mt. McIntire and Mt. Colden, and near the divide between the St. Lawrence and the Hudson River. The snow stays later in this portion of the woods than in almost any other.

The side of Mt. McIntire heavily timbered is covered with a rich growth of moss holding a large amount of water that gradually filters out, thus keeping up the water supply for the upper Hudson in case of drought.

Leaving Lake Colden we continued along a branch of the Opalescent River, which empties into the east branch of the Hudson, draining the water shed of Mt. Marcy and Skylight. There is no finer stream in the woods to-day than the Opalescent. There is something so thoroughly primeval about it. The intense green of the moss, its deep flumes and the sparkling purity of its emerald water make it to me the most charming of all streams. So far it has escaped, but being on this gore it will undoubtedly fall a prey to the lumbermen.

In Township 46 and 47, Totten & Crossfield's Purchase, below Lake Sanford, where the lumbermen have been at work for some years, the region is almost a barren waste. Through this region the upper Hudson now runs its sluggish course, half choked up with logs.

Lake Henderson, but a few years ago in fine preservation, to-day long stretches of green scum and bog land cover about 60 acres of its area, whereas its entire shoreline is fringed with the white skeletons of trees killed by the raising of the water by the lumbermen.

Lake Sanford lies in much the same plight. A dam has killed its entire shore line.

Continuing up the Opalescent we get into Township 45 and on to Mt. Marcy. From the summit of this mountain—the highest in the State—a clear idea of the surrounding mountains is obtained—Mt. Haystack, Saddle Mountain, The Gothics and Basin Mountain, etc., a superb range, all situated in Township 48. Looking in a northerly direction across a sea of primeval forest we overlook Township 12, known as the Old Military Oract. Big Slide Mountain, Table Top, Bear Mountain and the best part of the McIntire range are all on this tract.

The tract is nearly all primeval forest and comprises an area of over 38,000 acres, of which the State owns 19,000 acres. As the tract is all primeval forest with the exception of a few hundred acres in the northeast corner and the timber being in fine condition, it would naturally be a fine acquisition to the State park.

The Ausable Ponds lie below us in Township 48, a region famous for its wild picturesqueness. The eastern part of Township 45 is still in a fine state of preservation. This includes many brooks and the headwaters of the Ausable River. The western half of Township 45, particularly around the Boreas Ponds, is not only unattractive but unhealthy, owing to the flooding of the country by the lumbermen.

In the northern part of the township lies an important watershed of the Hudson. The greater part of the 44th Township is a barren waste from lumbering. Continuing in a southerly direction to the 30th Township we find that two-thirds of it has been so heavily lumbered that no timber of any kind except scrubby "popples" and bird cherries will thrive. The Boreas River, one of the important branches of the Hudson, runs through this township, and the lumbermen are already building a big dam on this river within this township and will endeavor to get out the few logs still in existence. East from the 30th Township we have Township 27—Totten and Crossfield's Purchase—containing a group of lakes, all of them reservoirs of the Hudson.

This township has been heavily lumbered, and is in fact a lumber center. There is an abundance, however, of hard wood in this tract.

North from Township 27, Totten & Crossfield's Purchase, lies Township 28, Totten & Crossfield's Purchase, on which are Newcomb Lake, Catlin Lake and Rich Lake, besides several small ponds, all of them reservoirs of the Hudson. On this township can still be found white pine that in most parts of the woods has become extinct.

The timber here is principally hard wood—birch, beech and maple—very large and of fine and majestic growth, with here and there a mixture of soft woods, such as pine, hemlock and spruce.

In the southern part of this township the Adirondack Railroad Company has been getting out the merchantable timber—spruce, pine and hemlock—and have heavily lumbered this section. All other parts of the township are still in a primitive state.

Northwest from here lies Township 50, Totten & Crossfield's Purchase. Here there is also an abundance of hard wood, with a mixture of spruce, hemlock and pine.

The easterly portion of this township is still in a fine state of preservation.

The westerly portion has been lumbered some, but is still in an attractive condition. In the Cold River country there is an abundance of white pine and spruce in the strip of land between Macomb's Purchase, taking in the side of Mt. Seward and the valley of Cold River.

This section of the country is one of the most secluded and wildest tracts in our northern wilderness.

Perhaps no section of our North Woods at the present day contains more deer or better fishing—around Mt. Seward what few panthers that remain find a safe retreat. I have it on good authority that the lumbermen are now negotiating to lumber this Cold River country. If this happens this now wild and beautiful tract will in a few years be a thing of the past.

F. BERKELEY SMITH.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Ad.*

Natural History.

PELICAN AND CATFISH.

COCOANUT GROVE, Biscayne Bay, Fla., Feb. 8.—I don't know whether this incident should be recorded under the head of "Angling Notes," "Bird Notes," "The Sportsman Tourist," "Fishculture," "Natural History," "Sea and River Fishing," "Economic Ornithology," "The Trap," "Big Horns" or "Obituary Notices," and I expect that nothing less than a convocation of departmental editors can decide the matter. However, the pelican, a bird of sporting proclivities, interested in angling as a fine art, went a fishing, and set an economical trap. In it he caught a catfish with big horns. Or, possibly it was the catfish that caught the pelican. At any rate, each had the other when I found them, and the result was fatal to both.

For several years a couple of patriarchal pelicans have fished for a living just off the end of my wharf. I have repeatedly begged their lives of sporting tourists, and so accustomed them to my presence that I could row within an oar's length of them without their taking flight. I have often watched their operations with curious interest, and was really much attached to the solemn looking couple, who, with their smooth pates and beard-like pouches, reminded me of feathered caricatures of Father Time. Yesterday, on going down to the beach, I discovered one of my pelican pets drifting helplessly toward land. When he came within reach I found that he was dead, while in his pouch, with its head completely closing the bird's throat, was a catfish still alive and measuring fourteen inches in length. Its horns stuck out through each side of the pelican's pouch, and thus the unfortunate bird had been unable to either swallow or reject its unwelcome prey. The pelican's pouch was also torn and perforated in a number of places, showing that the struggle between would-be-swallower and wouldn't-be-swallower had been a long and desperate one. The fish died a few minutes after being removed from the trap into which he had fallen. The bird measured 7 ft. 5 in. from tip to tip of his extended wings, and, from his general appearance, was evidently a patriarch of his race.

Now, Mr. FOREST AND STREAM, as you know all about fowls and fishes, please tell me if catfish always prove thus fatal to the pelicans that catch them? Also, can a pelican, plunging down from his aerial observatory, discriminate between the many kinds of fish swimming beneath him? If so, why did not my pelican thus discriminate, and shun the pernicious cat? O. K. CHOBEE.

SONG SPARROWS REARING KINGBIRDS

ALTHOUGH it is a common breeder I did not have a set of eggs of the kingbird (*Tyrannus tyrannus*) in my collection. So, knowing of a nest of this bird my brother and I repaired to it about 9 P. M., June 24, 1890. After a good climb my brother reached the nest, which was placed in the fork of a horizontal limb about 35 ft. above the bank of the Menominee River. As it was quite dark, he could not decide as to how far incubation had advanced, so we took the nest and eggs, and with the sounds of night in our ears and the gloom of a hot summer evening hanging over us, we returned. The eggs were placed in a cigar box to be prepared the next day.

At noon I opened the box intending to blow the eggs, but to my surprise saw before me a gaping, squirming young kingbird. Wishing to save the bird if possible, I decided to hunt up a suitable nest in which to place it when evening came, but did not do so until the next day at noon, when I found another youngster had burst his prison walls. The weather was very warm, the temperature of the room, which had no fire, being about 80° Fahr.

That evening I searched for a home for my charges, but found nothing better than a song sparrow's nest which I was watching, the eggs of which would hatch in a few days. So the little waifs were consigned to the tender mercies of foster parents and, fortunately, were accepted. On June 27 a cowbird egg that was in the nest hatched. One sparrow egg did not hatch, the other hatched June 29. As I needed them as specimens, and considered it best for the kingbirds, I removed the sparrow and cowbird. The old birds found abundant food in some currant bushes and a couple of strawberry beds near by. I noticed that much of the food consisted of a yellowish green larva about 1 in. long, which they found in abundance on the currant leaves.

By July 10 the young kingbirds were very fat and well fledged. As animal life was too abundant in their home, I sprinkled sulphur over them and about the nest; and as I raised one to put sulphur under it, both flew out of the nest with a little cry to the opposite bank—the nest being in the side of the bank of a brook. With a little care I succeeded in inducing them to stay until I had gone; but the next morning I found that they had left home to see the world. I saw nothing more of them until the morning of July 23, when I found both parents and the kingbirds near their nesting place. I first saw the kingbirds (now fully feathered) sitting on the top board of a fence crying for food, while both parents were busily trying to supply the demand. One parent flew upon the fence near a kingbird, which, with gaping mouth, rushed up so fast that the little sparrow had to retreat until the big baby paused; when the little parent stood up on tiptoe, as it were, and deftly deposited a fat grub in the big yellow throat and then darted away to the strawberry beds. I was very much amused to see how busily the little sparrows worked. They would run rapidly about, stopping here and there to scratch nimbly, and finding something about every two or three minutes. Once one flew up between the two kingbirds, which flew up so close that it had to fly to one side of them or be knocked off the fence.

While I was watching them, a kingbird that had a nest in an orchard near by came down several times and, with angry cries, attacked the frightened youngsters so fiercely that they had to beat a hasty retreat: although they would come back in a few minutes.

Several times they flew up into the air, capturing insects in true fly-catcher style, and showing that they had become expert in the use of their wings. After watching them for over half an hour, one sparrow flew off out of sight, followed in a minute or so by the other. In a few minutes the kingbirds went in the same direction, as if they knew where to go or were in the habit of going to some particular place. They went at least eighty

rods, over orchards and buildings, and probably much further. Some two weeks later my brother saw the family again. The sparrows were trying to feed the kingbirds something which the latter seemed to dislike, as they would back away in evident disgust. Apparently the sparrows, true to instinct, were trying to feed their children seeds.

During the time I saw the kingbirds they behaved and made sounds like all young kingbirds, and did not show one sparrow characteristic. REUBEN M. STRONG.
WAUWATOSA, WIS.

WINTER RAIL ON LONG ISLAND.—The Cedars, Oakdale, L. I.—About Jan. 20, after our meadows had been covered with 6in. of snow, while I was looking for black ducks I passed a very pleasant five or six minutes in the company of a very fine specimen of the Virginia rail. His actions would lead one to think that he felt very lonely. As he ran out from the cover of some tall sedge grass on to a large mud flat made by muskrats while building their winter homes, came to within 8ft. of where I was standing, seeming to wish to have an interview with me. He was a cunning little fellow. First he would cock his head to one side, then to the other, and his actions were comical to behold. He really seemed very inquisitive. He was very pretty with his deep red breast and long curved bill, and while standing up so proud he looked not unlike a small woodcock. After admiring the little fellow's antics all my curiosity was satisfied, I made a move closer to him. He was gone in the twinkling of an eye into the cover which gives them such a safe retreat. I think I can put up a Virginia rail any day with the aid of my setter dog, but if I had an old dog I owned one year ago I am certain I could put up one or more. He surpassed anything I ever saw on rail, annoying me very much when beating the meadows for English snipe. If he came upon the scent of a rail he would not leave it until he put the bird up or brought him to me alive and with the greatest care in his mouth. I have brought to bag over him the coot, clapper, king, sora, Virginia and yellow rails. The little black rail he flushed several times, but the bird was such a tiny little fellow I let him go on his way rejoicing. The game laws for Suffolk county as framed by the three Commissioners is as perfect as any sportsman could wish. I thank these gentlemen who have labored so hard in our interest, and hope the law will get through the Albany mill and not be tinkered with again.—ALFRED A. FRASER.

DO COONS PREY ON RABBITS?—*Editor Forest and Stream*: I was very much surprised to learn of the new fact that coons have taken up of catching rabbits, as described in Mr. Lathrop's letter to *FOREST AND STREAM*, Feb. 12. Coons are eccentric creatures, no doubt, but before we accept Mr. Lathrop's conclusion in the matter of their preying upon rabbits I think we should examine his practices closely to see if his observations have been made with that thorough minuteness the importance of the subject demand, for it is a death blow to formerly-received theories of abstinence while in a state of hibernation, etc., if we are to believe that coons spend the long mid-winter nights in carnivorous orgies. Mr. Lathrop's argument is based on a case of circumstantial evidence. He saw rabbit tracks, he found a dead rabbit, which had met with a violent death, he saw other tracks of the murderer but, unfortunately, he did not see the deed performed, nor did he capture the murderer. Such being the case, and as long as this state of things exists, I think we must consider Mr. L.'s article "not proven." In other words, I don't believe a coon made the tracks Mr. L. saw. What they were—mink's, skunk's or wildcat's—I will not attempt to say, but, as Mr. L. can neither produce the coon nor the tracks, I think we had better leave the case as it stood before his discovery and not try to convert "Old Zip Coon" into a greyhound.—B.

EIDER DUCK ON THE NIAGARA.—Buffalo, N. Y., Feb. 16.—*Editor Forest and Stream*: Perhaps you can make use of the inclosed clipping from to-day's *Times* regarding an eider duck shot on the Niagara River near Buffalo a few weeks ago. The fact is of considerable interest to local gunners and scientists: "I learn through the *Times* and other papers that an eider duck was killed on the Niagara recently by John Storck, and the notices would lead me to believe that it is the first eider duck ever shot near Buffalo. Such is not the case, although in point of fact the bird is such a *rara avis* that it is practically unknown to the majority of the people. The duck in question is the king eider (*Somateria spectabilis*) and a most beautiful male in full plumage. Both this bird and the common eider duck are noticed in Dr. Bergtold's 'List of Birds of Buffalo and Vicinity,' and are credited to the late Professor Linden. They are both rare, accidental summer visitors to this region. Dr. J. A. Allen has noted a large 'irruption' of the king eider on Lake Erie near Buffalo in November, 1879. At least eighteen were then shot. Rev. Mr. Langille also notes the eiders in his book as being occasional visitors to our water front. Mr. Storck should donate his fine specimen to the Society of Natural Sciences.—D."—EBEN P. DORR.

THE SWIFT FLIGHT OF DUCKS.—I read with interest the last paragraph of Mr. Hough's Chicago letter in your issue of Feb. 12, in regard to the speed of wildfowl on the wing. I have had no experience with the four species of ducks named, but I have often shot (behind) two species here in Massachusetts that are fast growers, the long-tailed duck, locally "old squaw" and "quandie" (*Clangula hyemalis*) and the blue-winged teal. The man who can score two out of three off of either—single birds behind time on an appointment to loo'ard—"knows it all" as to the holding on or ahead question. If any of your readers have done for them what Dr. M. has done for the species he names, it would no doubt gratify many to hear of it through your columns.—F. C. BROWNE (Framingham, Mass.).

WILSON'S SNIPE IN RHODE ISLAND.—Providence, R. I.—On Saturday, Feb. 14, the writer started 10 Wilson snipe on a salt water marsh very near the city, and killed 8 fine birds over a dog, although the day was raw and windy. Gunners here think these birds must have wintered in this locality. Please give your opinion.—F. L. G. [It is quite probable that the birds wintered there. Snipe do not necessarily go south in cold weather provided any

ground remains open where they can feed. Thus there are several records of snipe having been found in Wyoming and Colorado in the dead of winter, when the thermometer had been standing at—15° to—30° Fahr., but they remained by warm springs which did not freeze and where it was always possible for them to obtain food.]

MOOSE HORN MEASUREMENTS.—Belfast, Me., Feb. 15.—*Editor Forest and Stream*: I have noted the moose horn measurements given by Dr. Parker and others, and I send you photograph of a pair of antlers which I claim to be the largest in Maine. They are of almost perfect shape. They measure as follows: Extreme breadth, measuring convex surface back of horns, 6ft. 4in. by tape line. By straight-edge in front, as shown by arrow terminals, 5ft. 4in. Palms or blades in the clear, by straight-edge, 15in. exclusive of points. If any person has a finer or larger set of antlers, I would like to own them.—C. B. HAZELTINE.

COLLIDED WITH A WHALE.—The steam yacht *Restless* arrived at Baltimore yesterday from Fortress Monroe. Capt. Stiles reports that on Sunday, when the *Restless* was heading in for Hampton Roads, near the Thimble Light, three whales were suddenly discovered ahead, and before the *Restless* could be checked one of the monsters was struck. The yacht shook all over and the ladies and others on board became excited. The novelty of the experience, however, soon commanded attention and the thought of danger was dismissed.—*Washington Evening Star*, Feb. 19.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE OTHER SIDE.

Editor Forest and Stream:

In the war time we had two kinds of war correspondents—one followed the army, was present at the engagements and wrote the truth, the other stayed at home and manufactured their news. Your correspondent "Special" evidently belongs to the latter class. We Maine people would prefer to have the truth told about us. Said a leading Bangor physician to me last week: "It makes me mad every time I read one of 'Special's' articles." This voices the feeling of most who read them. Probably no ten men who write on this subject have done so much to make people hostile to the laws and their enforcement as he has by his wholesale denunciation of our land holders and people generally.

In his article in *FOREST AND STREAM* for Jan. 16 he says: "As near as I can learn a movement will be made to repeal all fish and game laws. The movement will come from the lumber interest, and it is to be hoped it will acquire no force." Again in *FOREST AND STREAM* for Feb. 12, he says: "The opposition to opening the month of September for deer hunting is stronger among the lumber land holders than I had imagined. They will oppose such a measure with all the power they can bring to bear. * * * They are obstinate to pigheadedness about the matter and can see no difference between the true sportsman who would as deeply regret a forest fire as themselves and the worthless, thieving poacher of their own State."

Now, who are these "pigheaded" land owners who are thus held up to public infamy? They are the men who own a body of land more than twice as large as the State of Massachusetts, worth millions of dollars, and who for a score of years have allowed hundreds of non-residents to roam over it at pleasure, to catch the fish, to kill the game, to use all the wood they needed for camp-fires—in fact to use it as if it were their own with no restrictions whatever. These visitors are mostly here to kill game in direct violation of our State laws, and yet these same land owners have kept quiet. I doubt if "Special" can find an article by one of them proposing to curtail any of these privileges. I showed his article to the largest land owner in the State and he pronounced his statements in regard to lumbermen false, as also his statement of the purchase of the dam and right of flowage at Rangeley Lakes.

These land owners employ tens of thousands of our men the year round in the woods, on drives and in mills. They do more for the interests of our State in one year than all the "true sportsmen" ever will in ten eternities. Would it be very selfish, when the prosperity of our whole State depends on the preservation of our forests (for our water powers and farming interests depend on their preservation), if these land owners should wish to take means to preserve them?

And who are these true sportsmen who are so careful of our property? They are the men who for years have come here in June, July, August and September, who have killed large game and left it to rot by every stream and lakeside in our northern woods. "Special" speaks of our thieving poachers. How does it happen he has never heard of Prof. — of Yale College, who, with his companions, killed in September six moose, besides caribou, and left them to rot; and the next year killed a moose and caribou in close time besides another moose in October and had the horns seized. It is no secret, Mr. Stilwell can tell him. If he wishes to stir this thing up I will give him names of some of his near neighbors. I can give him a list of some twenty moose killed this very fall near Chesuncook by these same "true sportsmen" and left to rot; I can give the place where each lies, and deer without number have gone the same way.

He speaks of the young man shot in Waltham and slanders the people of three counties—Penobscot, Washington and Hancock—on his account. Generally when a man dies even his enemies let his faults die with him; but ghoul-like "Special" takes delight in telling all he knows and complaining of not being able to find out more. We Maine men have not done so by your true sportsmen killed in this way. "Special" has probably heard that a few years ago a Massachusetts professor, hunting with a noted Connecticut clergyman, was shot with a charge of buckshot, in August, 1883. Out of regard for his friends our Maine papers said nothing about the facts. I know the guides and the whole story; if "Special" wishes it, I can give the bottom facts.

The majority of our land owners and the men in their employ have favored observing our game laws. I have seen beef hauled seventy miles when there were moose yarded within three miles and plenty of snow for killing them; and those moose were saved—for what? The very next fall a Boston sportsman, by the help of Indian guides, killed two (his guides say three) at the same place, and refused to sell the meat as it lay for less than ten cents a pound to Mr. Rod Sunderland, the same man who had saved them, who having salt and barrels there wanted to get the meat for his lumber crews. Most of it was left there to rot.

Year after year our people have seen our game killed and wasted by the ton in close time by rich men, who, belonging outside the State, readily make their escape before their deeds are known—men who do more than the French and Indians of Canada, for these do save hides, while the others often leave hides and all, or at best give to the guides the hides they dare not carry home. "Special" may call our people all the names he pleases, but we have no class of our people who will kill for mere sport; such men come from outside.

My candid opinion, based on facts in my possession, is, that up to this year, more large game has been killed in close time in Penobscot county by parties outside the State than by the inhabitants. The visitors killed in warm weather and wasted; the inhabitants ate all they killed. This year sees a change. Finding that there was no use in saving game only as an inducement for more to come in close time to waste it, by common consent our people in the woods have killed what they needed. As far as I can learn they intend to keep on doing so. For years the sporting papers have been accusing our lumbermen of doing that of which, as a class, they were innocent, and have been shielding the real offenders. Now, these same men who have so wilfully maligned us, can thank themselves for this state of affairs. The fact lies just here: keep your true sportsmen out of our woods in close time and our own people will respect the laws; but if these gentlemen sportsmen see fit to keep on doing as they have done, and have a man like "Special" to charge their sins to us, they must not blame Maine people if we join with them in killing in close time.

MANLY HARDY.

A SHOTGUN TEST.

Editor Forest and Stream:

Permit me to show some slight experiments I have been making in regard to the manner of loading powder and wadding shells. I chose a very damp day last week, knowing I would get the worst possible results under those conditions. I had prepared a range at my place in the country, using large sheets of white paper, 86×55 inches in size and the regular penetration pads made for that purpose by Dennison & Co. The distance shot at was 40yds., against a solid outhouse. I used only Winchester shells, but prepared differently, viz., the regular Winchester factory-loaded shells with 3½drs. black powder and 1½oz. No. 6 shot; the Lyman compressed powder, as bought from the agent, Dannefelser, in Chambers street, and FFG dead shot black powder. These shells I loaded myself with 3½drs. of that fine powder, putting one No. 11 card wad over powder with a No. 12 imported felt wad over card, with 1½oz. Tatham's chilled shot, using a Von Lengerke & Detmold very thin card wad. And I think shooters make a great mistake in using too thick a wad over shot. I only crimp the shells lightly, although it does not look as pretty as the flat crimp, yet it gets there much better.

The gun I used was the Colt hammerless that I shot in the powder tests at Claremont in November last under your management. Since that test I have had Dannefelser take nearly all the choke out, so it only measured 13 instead of 15 at the muzzle by the usual gauge, and instead of my gun only being a 50 per cent. arm as at that time, I think it has been improved at least 25 per cent. since he made the change. I have now come to the conclusion that with a modified choke and the new quick powders, great deal better results will be obtained than with the full choke now used so much. They are all right with black powders, but entirely useless with the nitro and other quick powders.

Feb. 8, day damp. Pattern and penetration tests at 40yds.—Lyman's compressed, 65grs.; two cards and felt wad over powder; 1½oz. No. 6 chilled shot; thin wad and crimped lightly.—Right barrel: Penetration 200 (79½ per cent.); penetration 25 sheets (three shots). Left barrel: Pattern 209 (83 per cent.); penetration 28 sheets.

FFG. Dead Shot powder, 3½drs., one No. 11 card wad, one No. 12 imported felt wad, 1½oz. No. 6 chilled shot; thin wad over shot and crimped lightly.—Right barrel: Pattern 176 (70 per cent.); penetration 30 sheets. Left barrel: Pattern 188 (74½ per cent.); penetration 32 sheets.

Winchester factory loaded shells, 3½drs. black powder, 1½oz. No. 6 shot.—Right barrel: Penetration 135 (53½ per cent.); penetration 23 sheets. Left barrel: Pattern 163 (64½ per cent.); penetration 27 sheets. E. A. SUMMERS.

SMALL ARMS FOR CLOSE WORK.—Will some of your readers tell me about the little XL smoothbore gun, 44cal., 24in. barrel, 5lbs. weight? Will it carry the .44 Winchester rifle cartridge up to 10 or 12 rods without the bullets going end over end and flying wild? I want a very light gun that will kill a partridge or rabbit with shot, and that will also carry a bullet with reasonable accuracy at short range. The best gun for my use would be a breech-loader that would take the place of a little muzzle-loader that I once had. Single barrel, smoothbore, carrying a half ounce round ball and also good for shot, and its weight not over 5lbs. For pot-hunting in a heavy timber country such a gun, if good of its kind and skillfully used, will bring in lots of game. Some sportsmen may smile at the idea of a gun like this, but in land hunting and exploring, where everything has to be packed by main strength and awkwardness, it is a question between a very light gun and no gun at all, and a matter of entire uncertainty as to what kind of a varmint you may meet. Will some of your good hunters give me the benefit of their experience.—BACKWOODSMAN.

A SPLENDID opportunity to acquire a good paying gun business is offered in another column, where Von Lengerke & Detmold advertise their Newark store for sale. Its location is a good one, and the business can be largely increased by special attention, which Von L. & D. have been unable to give it.—*Adv.*

CHICAGO AND THE WEST.

CHICAGO, Feb. 18.—Mr. Henry J. Thayer, of the committee on acclimatization of the Massachusetts Fish and Game Protective Association, being anxious to secure some wild turkeys for Massachusetts, was anxious to learn the whereabouts of Rev. Geo. E. Gordon, late co-owner of the Koshkonong herd of wild turkeys. Mr. Gordon could not be reached at Fort Atkinson, Wis., his late address, nor could Mr. W. Y. Wentworth, State game warden, who lives at Fort Atkinson, tell where Mr. Gordon now is. Mr. Wentworth in his letter, however, states that Messrs. Peck Bros., of Chicago, owners of Koshkonong Place, own also the herd of turkeys. These gentlemen would hardly care to sell any of the birds for profit, but might do so in a movement like this, as they are public-minded men and sportsmen.

Mr. Wentworth says that Blackhawk club house has had some improvements of late. He adds that the Wisconsin Legislature will perhaps abolish the law prohibiting spring shooting. This is very largely the fault of Illinois and more especially of Chicago, and it is too bad.

Mr. U. G. Huff, of Detroit, writes under date of Feb. 16: "I have been on a skating trip around Lake St. Clair. Saw thousands of ducks and heard the big guns talking to them. The French fishermen were fishing through the 'haice' with seines. It is a shame the way they do on the Flats. I believe boating and yachting will have a boom on the Flats this spring. We are trying to have a post-office established there. I carried a Kodak on my skating trip and hope to have some interesting prints."

A characteristically pleasant and quiet little house party was given by English Lake Club last Saturday and a number went down to take part in the festivities. Mr. Abner Price, who largely projected and pushed the entertainment, is to be congratulated on its success. Cumberland Club also is about to have a winter meeting, and has issued the following manifesto:

CHICAGO, Feb. 16.—The Board of Managers have decided to give an entertainment at the club house, on Feb. 21 and 22, for the benefit of the new superintendent. Live bird and inanimate target shooting (sweepstakes) will be the order of the day. You are cordially requested to lend your presence and bring your friends, as it is desired to make this meeting a substantial one. Respectfully, H. W. Loveday, I. B. Sanborn, L. Hansen, Board of Managers. W. L. Shepard, Secretary.

Grand Calumet Heights Club is still in trouble about its site, its grounds being claimed by a land company operating south of Chicago. The following call is issued:

CHICAGO, Feb. 16.—In accordance with the constitution and by-laws of club, I am requested by the undersigned members to call a special meeting of the club on Monday, Feb. 23, at 8 o'clock P. M., at Grand Pacific Hotel, for the purpose of taking definite action as to the acceptance or rejection of the proposition as suggested in circular report of committee, dated Jan. 31, 1891; also to accept any resignations that may be offered, and to take definite action on any and all business that may come before the meeting. (Signed) Alex. C. Young, Wm. Fenny, S. E. Young, G. H. Carlson, John Critchell, James Fitzaway, Wm. L. Pierce, G. W. Lanterback, John Wain, F. B. Bissell. The presence of every member is requested.—Geo. E. Marshall, Secretary.

Feb. 20.—The legislative committee of the Illinois State Sportsmen's Association met yesterday afternoon at the offices of chairman Wolfred N. Low, Chamber of Commerce Building, to talk over matters pertaining to the proposed work at Springfield. There were present Messrs. Low, Organ, Nicholls and Pierce of the association, Dr. Bartlett of the Fish Commission, Messrs. Baird and Bortree for Fox River, Messrs. Bond and Barney for South Water street game market. Discussion really hinged on two points, that of putting game protection in the hands of the Fish Commission, and that of effecting an alliance with the game dealers of Chicago.

Col. Bond, the game dealer, moved a formal resolution which should bind the committee to favor such change in the present law as would make the fish wardens "fish and game wardens," the Fish Commission to have control; these wardens to have power to search and seize on sight without warrant (as the fish wardens now have); the law on prairie chickens to be changed from Sept. 15 to Sept. 1; English sparrows to be exempt from the present protection.

Mr. Pierce said it was very possible Dr. Bartlett might not wish to take up this joint work. Dr. Bartlett had a national and more than national reputation as a Fish Commissioner. He might not like to be asked to share that reputation in new and different work.

Dr. Bartlett spoke at some length, and with a display of tact and wisdom that certainly did him credit. He was in a trying position and knew it, yet he fairly concealed this fact from those present, and eventually evaded a responsibility which the State Sportsmen's Association should never have sought to put upon him.

"It isn't a question of more money for more work," said Dr. Bartlett. "It isn't a question of salary. I don't believe in salaries for this work, for that brings in the political place-seeking again. I haven't done any work for the money there was in it, I assure you. I have for years stood all kinds of abuse. Not a week goes by but my wife is disturbed by letters threatening me. I have been the best cursed man in Illinois, and that on both sides. Now, gentlemen, I am getting to a time of life when, if you please, I do not want any superfluous and additional damning for what I do or don't do. I feel that I should not like to shoulder the responsibility of protecting game also. I could not do it perfectly, and I do not want the blame of doing it imperfectly. If we had a regular appropriation for that purpose it would be a little different, but our fish appropriation is only \$2,000 as it is. Understand me, I am in perfect sympathy with your work. If you want to use our wardens as wardens for game also, I am perfectly willing, and I hope you will get your law passed which will give them, as game wardens, the police powers they have as fish wardens. But about the control of those wardens, and the responsibilities for their failures—please don't ask me to take that up. You would far better have a head of your own to do that. Suppose you let the Fish Commission appoint such a head, and let him take charge of the wardens' game work. We could do that, and still relieve the Fish Commission from the inevitable kicks and curses."

Mr. Nicholls then spoke in a way for which he should be complimented highly, for he showed consideration as well as discretion, neither of which qualities has been abundant in this unwise effort to cinch the Fish Commission in to do the State Sportsmen's Association's work which it itself has never done. Mr. Nicholls said, "We would not wish to raise a finger to force you into this joint work, Dr. Bartlett. Your free assent would be the only thing we cared for, and if you do not go in for it in

that way, we would not want you to take up the work at all."

Dr. Bartlett—"You all know I am in sympathy with game protection also, but my work has been all fish. Now, up to within two years ago I could do nothing even at that. I owe much of my success to the noble and unselfish practical assistance of the Fox River Fish Association. Those men have helped me actually and practically. They have given me time and money. Now we have got results to show. If you ever get results to show in game work, it will have to be thorough just such local help. You will have to put your shoulders to the wheel, even if you get a little muddy."

Mr. Nicholls said the idea was not to weaken the Commission, but to strengthen it; unless that, then nothing. He thought we could have unpaid game wardens.

Col. Bond said South Water street would raise money enough to pay its own wardens. Mr. Low said he thought South Water street ought to do that, and not brag about it either. The dealers sold game and took money in for it. It was just the other way with the sportsmen. It cost them \$5 for every bird they killed. Mr. Low favored the joint work of fish and game protection for compromise reasons mainly. There was far better chance for an appropriation so. Mr. Low spoke with his usual moderation and good judgment. He said he was not in favor of too broad a resolution or too radical an attempt at change. He thought that on compromise measures purely, and for the sake of the lower part of the State, where the chicken season by climate was earlier, the grouse season might go to Sept. 1 instead of Sept. 15. He would like to see quail open Oct. 15 instead of Oct. 1. Col. Bond agreed that even Nov. 1 would be better on quail, and said that he would agree to Nov. 1, only he didn't think it wise to tinker too much with the present law.

The formal resolution was now put, the points as amended making the Fish Commission not responsible for game protection, but only for the appointment of a head game warden, the local wardens having police powers both in fish and game. The grouse season to be Sept. 1. This resolution was carried, but on motion of Mr. Bortree was reconsidered and again opened up to discussion of the chicken date. Mr. Bortree then moved to retain the date of Sept. 15 in the resolution. There was very long talk over this, and Mr. Bortree and Mr. Baird made very able speeches in support of Sept. 15. They were for the bird and not for the man. It was agreed by all present that Sept. 15 would save more of the birds, but some thought the best interests of game legislation required a compromise, and so sorrowfully clung to Sept. 1. When the matter came to vote it was a tie between Sept. 1 and Sept. 15. Mr. Low, as chairman, cast the deciding vote for Sept. 1, saying as he did so that it was purely for compromise reasons and he was sorry it was so.

During the discussion the two righteous gentlemen from South Water street didn't exactly get up and rear and pitch in their struggle to have the date kept at Sept. 15. Col. Bond reiterated his old foolishness that no illegal Illinois chickens had come into the market this past season. Mr. Organ said, with faint sarcasm, that he was aware that no such thing as an Illinois chicken had been seen on the street since the law was passed making it illegal to sell Illinois chickens at all. Mr. Barnett, the other Daniel from South Water, also had seen no Illinois chickens. Now, these two South Water street dealers make a plain citizen tired. They are either ignorant or uncandid, of course the former. That being so, they are certainly not hustlers at their pretty trade. If they want chapter and page about some prairie chickens that were shipped last fall from along the J. & S. E. road in Illinois, before Sept. 15 and before Sept. 1, I think it no rash promise to say I can get them, and plenty more for them.

And now came the grand issue. Now came the time when something could really be done to save our game. Now came the chance to begin a work, to take the first step toward a purpose whose influence would in time have spread to other cities, and the chance for Col. Bond and his ally, Mr. Barnett, to put themselves on record as men and not as game dealers, to make for themselves a reputation which in a week would ring from one side of this country to the other, and start men in Boston and New York markets thinking who had never before looked above a page of mallard shipments. In short, the time was come to test the sincerity of the game dealers of Chicago in their professions of a desire to unite with the sportsmen in the effort to preserve the game of this country, now almost faded away, and that chiefly through the agency of these same dealers. We may as well make it brief. The dealers stuck to their colors. They showed themselves first game dealers, and after that dealers in game. God bless them and bring them plenty of these pennies that they love, these noble, sympathetic, unselfish and self-denying gentlemen of South Water street!

Mr. Low put the ball in motion by a suggestion for a motion. Mr. Baird moved that the season for legal sale of game be shortened from Feb. 1 to Jan. 1, thus cutting off only twenty days from the selling season, ten days of grace to be allowed to get rid of game on hand at close of season. Col. Bond was on his feet at once.

"You wouldn't save a bird by doing that," he said. "Boston markets would get the game we didn't get. We cannot support a measure which leaves us at the mercy of the big open markets east of us."

It was urged that the Iowa and other seasons closed Jan. 1, and it was shown that the trapping of chickens, whereby most of them are killed, takes place in the cold and snowbound month of January, when the birds are driven to the corn. It was pointed out that Chicago, always in the lead in commercial activity, ought to be in the lead in pure progress of humanity, and ought to set the example of shortening the continuous temptations of the open selling season. It was pointed out to them that the Missouri associations would at once go to work to make the St. Louis market date close Jan. 1, and it was half promised that the Massachusetts Fish and Game Association, on the strong appeal of Illinois, would at least set to work and agitate the matter for a date of Jan. 1 in Boston. It was insisted that a stand ought to be made, a first step taken, and that now was the time. I wish I could have space to give the speeches some of these men made. They were eloquent, temperate, full of argument unanswerable, full of entreaty and almost of beseeching. It was urged again and again that this was no selfish movement for the benefit of a few sportsmen, but a measure for the benefit of the

people, moreover, for the sake of the game itself, and so a matter of common right and justice. It was shown that if this infamous Chicago market was kept open all the winter, the State of Wisconsin would repeal her present laws, now found broken all the time through fault of Chicago, and throw the bars wide open for the destruction of game. Arguments of conclusive validity, eloquence of no mean sort, pleading of men who could not so plead if they were selfish—all was in vain. Col. E. S. Bond and George Washington Barnett were not to be moved, and they stuck to Feb. 1, and the pennies. The resolution, of course, was passed. Col. Bond withheld his vote. Mr. Barnett voted against it. But it means that South Water street will not join on Jan. 1. "We will see you at Springfield about that," said Col. E. S. Bond grimly.

The plain fact is, the Chicago game dealers claimed they had conceded enough without conceding to Jan. 1, but in reality they conceded nothing but an extension of the killing season two weeks, which is a concession in their own favor. The dealers have a law that suits them. They will stick to it. Their interests will govern them, not their sense of right. It is true that without the support of South Water street, the Illinois State Sportsmen's Association can do very little. In the past I have taken pleasure in laughing at the pretensions of the association at game protection, and have stood for the dealers' side, doing all possible in a small way to get the dealers a respectful and fair hearing in this matter. I am ready to say that thus far it has been fairness lost, and courtesy thrown away. There is not any real alliance, and there can never be, so long as the "concessions" of the dealers are concessions only in their own favor. The game must go.

The few noble men who represented the State Sportsmen's Association at this meeting, the very flower of that body as they are, must feel a strange sense of rebuff and discouragement to-day. They have very little behind them. They do not represent a very large class in their unselfishness and enthusiasm. They are really but very little more than so many earnest individuals, with small backing but their own honesty and sense of right. They must know that they can do little and that their meeting means really not so very much. But all honor to their pluck and good heart to them. They never before now have been so earnest and never so near success. The time is not ripe, but slowly ripening. All over the country there is spreading one of those slow, dull-motivated waves of popular conviction. The people are just beginning to see that the game is going and that it must be protected. Each year counts now. Two years more must pass before another Legislature meets, but in that two years there may be and will be a great popular movement on this very matter. Out of their humility let the State Association and all the gentlemen who met in this committee take heart of grace and try again. They are going to win in the end. The people of Illinois are going to tell South Water street to shut its doors. Another two years—Boston, New York and St. Louis standing by in aid thereto, let us hope—and we will get South Water street shut up after Jan. 1. Meantime, let us further hope, there will duly come shame and repentance to these two men.

Col. E. S. Bond.

Mr. George Washington Barnett.

They didn't do what was right.

E. HOUGH.

MR. CORBIN'S DEER.

THE bill repealing the law against the shooting of live pigeons from traps did not pass the Maine Legislature after all. The friends of the repeal made a strong fight, and it looked as though they would carry their point, but the House defeated the repeal measure by a vote of 112 to 15. There was a spirited debate in the House. The bill was strongly attacked by Mr. Hawes, of Deering. He branded trap shooting of live pigeons as on a par with cock fighting and dog fighting. "Why not revive the rat pit? The example to the children in the schools would be bad. The schools had already opposed the bill, through the influence of the Humane Society." He regarded it as an inconsistency for the Legislature to pass a law to teach gentleness and kindness to the lower animals, in the schools, and then to repeal the law against this cruelty in its worst form.

Mr. Noble, in his remarks in favor of the repeal, made a strong point. He said that the Humane Society of Portland had sent out its agents to work up sentiment against the bill. The Society had sent its agents into the schools and to the schoolmarm, hoping that the Legislature would not vote against the ladies. He could see schoolmarm with eyes suffused with tears signing this remonstrance. Yet they would go into the streets and wear feathers from bluejays, blackbirds, pigeons and all feathered tribes. Out of the fourteen ladies in a car he counted ten wearing parts of birds. He did not know how many ladies in Representative Hall were wearing feathers and birds' wings. [Sensation among the ladies in the galleries.] The next day the Senate defeated the bill by a unanimous vote.

There is a sensation among the members of the Megantic Club, and well there may be. It is understood that Mr. Austin Corbin, of Croydon, N. H., has made a contract with guides and hunter in the region of Lake Megantic to deliver him this winter fifty deer alive, and that before the Megantic Club was aware of what was going on twelve had been taken and delivered. Immediately Mr. Bishop, president of the club, has taken action to put a stop to the scheme. Correspondence has passed between him and Hon. E. M. Stillwell, the Maine Game Commissioner, on the subject. Mr. Stillwell's first letter was as follows:

BANGOR, Feb. 3.—My Dear Dr. Bishop: It strikes me that you can assist us in the inclosed matter. It is a most rascally scheme. Will you let me hear from you? Yours, E. M. STILLWELL, Fish and Game Commissioner of Maine.

The inclosed matter referred to in Mr. Stillwell's letter read as follows:

DEAR SIR: I have been informed that Mr. S. D. Ball and Jas. Parsons have contracted to catch 50 deer alive for Mr. Austin Corbin, of Croydon, N. H. They are going to commence their work as soon as they can run them down on the coast. The snow is from 3 1/2 to 4 ft. deep at Holey, Me., and with a good crust the deer have no chance. Have they any right to catch deer and send them out of the State alive in close season? Please let me know at once. Mr. Ball lives at Megantic Lake and Jas. Parsons lives at Holey. Both of the men are guides and depend upon sportsmen for their living, but it will be a poor living in the future if they go on catching deer. Yours respectfully, L. F. KINNEY.

Immediately upon the receipt of these letters, Dr. Bishop wrote Hon. E. E. Tache, Assistant Commissioner, Department Crown Lands of Quebec, informing him of what he had heard, and also stating that he thought it would be a deep injustice not only to the members of the Megantic Club, but also to the settlers about Spider Lake, if the practice of catching live deer in the close season for the benefit of private individuals was sanctioned by the Crown Land Department.

Dr. Bishop furthermore said: "If the matter has not already reached your attention, I should suggest that you will at once notify P. W. Nagle, the provincial bush-ranger for that section, and also notify Mr. W. E. Latty, our fish and game commissioner on the Quebec side of the preserves, of Ball's contemplated action."

Mr. Tache has agreed, in reply to Dr. Bishop, to do all in his power to stop this wholesale catching of deer in the deep snows of this winter. But unfortunately there is a law in the Province of Quebec that permits the issuing of a license to take deer alive, and it is feared that Ball has this permit to take 50 deer, 12 of which he has already shipped. Ball is understood to claim that he has this permit, but if it can be proven that he has taken any deer on Maine soil, he will be very severely dealt with, as the taking of deer alive is not permitted by the Maine game laws.

Pickering fishing in Maine is hard business this winter. The ice is three feet thick on many of the pickering ponds, and most of the boys are staying at home till "some other fellow cuts the holes." Then the bait is ready, and they will all go next day.

SPECIAL.

PRAIRIE CHICKENS FOR MARKET.

Editor Forest and Stream:

Perhaps not one reader of this article that resides in the Eastern States ever thinks when he visits the market of the future destiny of that noble game bird, the prairie chicken. Having lived in northwestern Iowa for more than ten years and being a great lover of legitimate hunting, I think I can interest them by describing the manner in which this noble game bird is being exterminated by a class of men terming themselves sportsmen. In nearly every small town in the sparsely settled parts of the Northwest are located the game freezers. These play a very important part, as all the birds are frozen solid before they are shipped East to market.

The freezer is similar to the cold storage warehouse of the East, only the ice pipes are thick enough together to insure a temperature far below the freezing point. The owner of the freezer is generally a hunter. Having a limited amount of money, he generally starts into business for himself. He commences in the winter by putting up ice enough to run his freezer through the coming summer. He generally has enough second-hand rigs and plug horses, so that he can hire several hunters during the shooting season, which generally commences two months before the law is out (although there are exceptions). They begin the slaughter about the 1st of July, when the young birds are about the size of a quail.

The hunters generally hunt in pairs. One drives while the other does the shooting. They use the best dogs and generally use Winchester repeating shotguns, and by using wood powder, which makes very little noise, they can kill every bird in a covey without the owner of the land knowing anything about it. When they have killed enough for a shipment the birds are packed into barrels, marked as some kind of produce and shipped by express to some of the large cities of the Eastern States. The shipper always receives a fancy price for his birds, which stimulates many to hunt who would otherwise be in some lawful business. When Sept. 1 rolls around the farmer and law-abiding sportsman start out after a bag of young chickens for their own eating. They will find that the chicken crop has already been harvested, and return home with one or two tough old birds, meantime swearing vengeance on all market-hunters. In some sections where chickens were thick two years the hunters have shot them off so close that scarcely one can now be found. If the gun clubs would spend more time in prosecuting the market-hunter and pay less attention to the city sportsman it would surely give better results, and chicken shooting would not soon be a thing of the past.

Iowa.

CLEANING GUNS.

Editor Forest and Stream:

Recently I observed an inquiry as to a good method of cleaning the shotgun. I never put away my guns, shot or rifle, after a day's shooting without first cleaning. In the morning when I start on a hunt my gun is clean. Those I now use have been in use about fourteen years, and have seen much service, and are as bright inside as they were the day I received them from the maker. It is a very simple and quick method of keeping them so. Procure four pieces of soft fine sponge, each, when dry and compressed, about two inches long, for the shotgun, and large enough so that it will require a little twisting to force them into the breech of the barrels. I am speaking of breech-loading guns. Wet one of the sponges, warm water better than cold, and squeeze it as dry as can easily be done with the hand, and force it through the barrel with the wiping rod. Repeat the operation once or twice, cleaning the sponge each time. The damp sponge will take up the burnt powder, leaving the barrels clean, then force two of the dry sponges through the barrels, and the barrels will be dry. Stitch the fourth sponge, after having first forced it dry through the barrel, so as to give it form, so as to keep the form. Saturate the latter sponge with a preparation of alcohol and best sperm oil, first shaken in a bottle. The alcohol will evaporate and leave the oil evenly and thinly distributed.

I also use sponge to clean the rifle. I do not open oil the barrels of my guns on the outside. When wet, I wipe them with the ball of my hand, but so as to leave them evenly damp.

If they rust too much, oil lightly with a preparation of beeswax and tallow, and rub.

If by carrying the guns they become bright in spots, slightly wet, or touch with tincture of iodine, and when sufficiently rusted oil and rub. By this method the barrels can be nicely, easily and cheaply kept browned.

In two items recently, "Loading," and "Rifle Aiming at Game," the compositor affixed "H. S." in lieu of H. L.

THE NEW YORK GAME BILL.

SEVERAL changes have been made in the codification bill, the more important of which are as follows: (See text in our issue of Feb. 5.)

Sections 2, 3 and 4. There shall be five fish commissioners, to be appointed at first for one, two, three, four and five years respectively; subsequent appointment to be for five years; to be paid traveling and incidental. Sec. 40. Venison shall not be possessed or sold between Feb. 1 and Aug. 15 nor between Nov. 1 and Feb. 1 unless killed in open season or in another State. Sec. 43. The prohibition of floating or jacking has been removed. Sec. 44. Hounding season is made Sept. 10 to Oct. 11. Hounding is forbidden in St. Lawrence, Delaware, Greene, Ulster and Sullivan counties. Sec. 45. Sale of moose, caribou and antelope is forbidden in close season for the possession of venison. Sec. 49. Close season for hares or rabbits is Feb. 1 to Sept. 15. Sec. 70. Close season for wildfowl killing or sale is made March 1 to Sept. 1. Sec. 71 forbids pursuit from any boat other than a boat propelled by hand.

Sec. 72 makes close season for quail Jan. 1 to Nov. 10; and in Sec. 73, as to sale, Nov. 1 is changed to Nov. 10.

Sec. 74 makes close season for woodcock and partridge Jan. 1 to Sept. 1, and makes no reference to prairie chickens. In Sec. 75, as to Sept. 1 is substituted for Sept. 15.

Sec. 77 makes close season for plover, mud hen, gallinule, grebe, bittern, surf bird, curlew, water chicken, bay snipe or shore birds Jan. 1 to Sept. 1.

Sec. 106 makes lawful length of trout of any kind, salmon trout or landlocked salmon, 14 in.

Sec. 111 prescribes 8 in. as lawful size of black bass and Sec. 114 makes the salmon length 18 in.

Sec. 161 makes close season for wildfowl on Long Island March 1 to Oct. 1, and Sec. 169 makes the hare or rabbit close season there Feb. 1 to Nov. 1.

There are numerous changes in the local provisions as to shooting and fishing.

Sec. 232 provides that action may be brought in any county where the penalty shall be incurred, or in any county adjoining, or in any county where defendant resides. But the same shall not be changed to the county wherein the offense was committed.

Sec. 248 reads: No person shall be excused from giving evidence in any civil, or criminal action, prosecution, or proceeding, under or authorized by this act, on the ground that the evidence might tend to convict him of a crime, or misdemeanor, or to establish the liability of such witness in any civil action, or to the provisions thereof; but such evidence shall not be received against such witness in any civil or criminal action, prosecution or proceeding.

Editor Forest and Stream:

The codified game bill now before the Legislature is unsatisfactory in regard to wildfowl in this part of the State. It makes the opening day Sept. 15. This should be Sept. 1. All sportsmen that take an interest and study the habits of wildfowl know that ducks such as teal and wood duck begin migrating in the latter part of August, and by Sept. 15 a great many have passed us. Section 71 prohibits shooting from any boat. Now this is the most successful way for us to shoot ducks here, especially on the marshes.

I am heartily in favor of stopping the spring shooting of wildfowl, and find that most all the sportsmen feel the same way up here, but all are opposed to Sept. 15 as the opening day, and think it should be Sept. 1.

I also think we should have the privilege of fishing through the ice in waters not inhabited by black bass, trout, salmon, etc.

I saw an article in your issue of Feb. 13 by W. H. Hart, of Hudson. It is to the point and full of good sound common sense.

GEO. M. WOOD.

WOODVILLE, N. Y.

The hearings appointed for last week were not held, the Legislature having adjourned on the occasion of Gen. Sherman's funeral. A hearing before the Senate Committee has been appointed for to-day at 3 o'clock.

THE HIGHLAND GUN CLUB of Des Moines, Ia., has recently received a valuable gift from Mr. John G. Smith, of Algona. It is a handsome collection of mounted birds. The club has acknowledged the gift by resolutions which recite: "Whereas, John G. Smith, of Algona, has presented to the Highland Gun Club his large collection of mounted birds, representing many years of labor, care and perseverance, and great expense; and whereas, the members of this club from long acquaintance hold Mr. Smith in high esteem as a true sportsman and naturalist; therefore be it resolved, that the directors of the Highland Gun Club desire to express hereby their thanks for said gift and their fraternal regard for the donor; resolved, that John G. Smith is hereby elected an honorary member of this club. Attest: WILL BURNETT, Secretary."

A GOOD BAG OF CANVASBACKS.—Judge S. H. Green yesterday returned from a duck shoot that must have been a picnic. He was shooting at Green's Lake, near Knapp's Landing, on the Washington side of the Columbia, and during a few hours' shooting, Wednesday afternoon, he slaughtered forty-one canvasbacks. This is one of the largest bags secured by a single hunter during the season. They were nice, fat canvasbacks, too, and fit to grace the festive board of any aggregation of newsgatherers. Canvasback ducks are now said to be more plentiful in some of the lakes than any other variety, although but very few were to be found a few weeks ago.—*Portland Oregonian*.

SALE OF GAME IN CLOSE SEASON.—New York, Feb. 18. —*Editor Forest and Stream:* A paper states that dozens of store-keepers have been offering game out of season. Now, I have heard this time and again and defy this paper or any one else to prove it. I know that game is sold and served out of season, but not openly. In every case reported but one it has turned out that the game was imported pheasants or hares; and generally it was: "I heard so," or "Some one said they saw it." But that does not answer for proof. I shall be pleased to receive evidence that will convict; but hearsay evidence is of no use.—WAKEMAN HOLBERTON.

MR. AUGUSTE FRANCOIS, the celebrated European gun maker, arrived in New York this week. Mr. Franco's trip is one entirely for pleasure, and it must be very gratifying to him to see his guns, which are in the best of hands here, so well liked in this country. It will be remembered that it was a Franco's featherweight ejector gun that gave such phenomenal results in the FOREST AND STREAM gun tests carried on last year.

MR. AL. BANDLE has severed his connection with the Bandle Arms Co., of Cincinnati, O., and has as yet not fully determined upon his future business, but as he has several very flattering offers from sporting goods houses both East and West, and is thoroughly experienced in the gun trade, the prospects are he will not long be idle.

MR. STUYVESANT'S DEER FENCE.—The longest board fence in New Jersey, and possibly in the country, is just being completed at Tranquillity. It incloses J. O. Stuyvesant's new deer park and will be twelve miles long. The tract is 2,000 acres. The fence is ten feet high and is made of hemlock boards an inch and a half thick. The sawmill at Allamuchy has been running constantly for a year cutting lumber for this one fence. It will cost \$20,000.—*Newark Advertiser*.

THE SPRUCE CABIN RUN CLUB.—A number of New York business and professional men have organized the Spruce Cabin Run Game and Fish Association, with preserves including 100 acres of land in Canadensis, Monroe county. The officers elected were: President, Col. E. L. Price; Secretary, Chas. G. Bennett; Treasurer, John E. Blake.

WASHINGTON WINTER.—Whatcom, Wash., Feb. 10.—We have had the most open winter that I have ever experienced, with only about twelve frosty nights since last winter. Game is quite plenty, such as grouse and deer, ducks and geese and bear.—J. G. C.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

CAMPS OF THE OLENTANGY CLUB.

Editor Forest and Stream:

The annual election of the Olentangy Club, of Columbus, Ohio, took place at its first regular meeting in January and resulted as follows: Pres., W. J. Schenck; Vice-Pres., John Staib; Sec'y-Treas., C. M. Lloyd; Trustees, Charles G. Schenck, Erwin D. Case, Valentine Kiefer, W. G. Perks and John Peirano.

The club was organized in 1884 and the purpose for which it is formed is the mutual pleasure of its members in hunting, fishing, camping and social enjoyment. The club was incorporated Jan. 3 under the general corporation laws of the State of Ohio, under the name and style of the Olentangy Club and now enjoys all the corporate rights, powers, privileges and liabilities imposed by such laws.

Ever since its organization the club has taken an annual outing, lasting from four to six weeks. During the first years of its existence the encampments were generally located on either the Muskingum or Scioto, two beautiful rivers of our own State, but as the club grew stronger, numerically as well as financially, it began to spread its wings, so to speak, and look for a more distant field of sport, where game and fish were more plentiful, a country less settled and a purer air.

In the year 1887 the club located its camp on the Manistique Lake, a beautiful body of water near McMillan station, on the Duluth & South Shore R. R., 64 miles from St. Ignace, the terminus of the above mentioned road. The following year the camp was located near the same place, on what is known as the White Fish Lake, reached by the same route. Fishing was splendid and members of the encampments enjoyed themselves for all there was in it, returning home each year in the best of health and spirits.

In the summer of '89 the club located its camp on Lake Superior, near the Pictured Rocks, a range of cliffs which may be considered as the most beautifully striking of all the scenery of the Northwest. Here we did most of our fishing in a small inland lake known as Beaver Lake, a beautiful sheet of water about three-quarters of a mile back from the shore of grand old Superior, which was reached by a well-trodden trail through a forest of towering pines. Bass, pickerel and pike were the only fish we found in Lake Beaver. Trout fishing in the small streams emptying into Superior in the vicinity of our camp was good, and contributed greatly to the enjoyment of the encampment. It would be hard to imagine a grander spot than the one chosen by the Olentangy Club.

The encampment of the club this summer was located on one of the many lakes of northern Wisconsin, known as Lake Vieux Desert. The lake is reached from State Line station, on the Milwaukee, Lake Shore & Western, over a fair road, distance about six miles. Here we found muskallonge, bass, pike and pickerel. The lake is five miles long and from two to three miles wide, and is the headwaters of the Wisconsin River. Indians as well as fish are plenty here, but were peaceably disposed, and were making the best of the berry harvest—that is, whortleberries, or more familiarly known as huckleberries. The boys also took a hand in picking berries for immediate use. They were so plentiful that four or five of us could pick three to four bushels in a few hours, which would last us several days and were considered a very healthy addition to our bill of fare. They were on being stewed very palatable and considered one of the delicacies of the camp. Many pleasant days we spent here in the way of fishing, exploring the surrounding country, visiting an Indian village, also an old abandoned Indian graveyard, located on an island near the middle of the lake. The evenings were spent around a large, bright camp-fire, listening to the events of the day.

In speaking of our camp on Lake Superior I failed to mention the route taken, which may be of some interest to your readers. From Columbus to Detroit, thence by the steamer City of Alpena to St. Ignace, Mich., thence via the Duluth and South Shore to a station called Munising; from there our camping outfit was hauled to old Munising, located on Grand Island Bay, a distance of six miles. There we chartered three sailing yachts, which landed us at our objective point after fifteen hours of struggle against head winds. The trip would have been most tedious and tiresome but for the range of the beautiful Pictured Rocks, which we passed closely by. The nearest post-office, or for that matter habitation is twenty-four miles distant, and is practically only accessible by water, so it may be seen that a camp located at that place is pretty well outside the pale of civilization.

In all probability the club will locate its camp this coming summer somewhere near Gogebic Lake, Mich., making the trip via the Great Lakes to Ashland, Wis., thence by rail to a point not yet exactly determined upon.

C. M. L.

COLUMBUS, O.

MEMORIES OF MACATAWA.

THIS is the season of the year when there being neither hunting nor fishing, the lover of field sports can curl up before the blazing fire, and in the ascending smoke of the fragrant weed he can see and live over again the experiences of the past. Not only in memory does he do this but resorts to some old note book to freshen the incidents of the past, and sharpen his appetite for the good things of the future.

Thus it happened that Izaak, Jr., turned back the leaves of the years and lived over again the experiences of a vacation taken a number of years ago. And this is what he read:

From the sooty and sultry atmosphere of St. Louis to the clear and bracing atmosphere of Lake Michigan was a consummation so devoutly to be desired that I firmly resolved to make the change, and I did it, and that is why these notes written at that charming summer resort, the Macatawa Park Hotel, situated on the eastern shore of Lake Michigan, about six miles from the city of Holland.

The hotel is located on a narrow ridge of land which extends between Lake Michigan and Macatawa Lake, and is flanked on either hand by high bluffs covered with pine, hemlock, and oak trees. The summits of these bluffs are delightful spots, as they overlook both of the lakes, and a cool breeze is always blowing. Along the shore of Lake Michigan, and but a few hundred feet from the hotel, stretches a magnificent sandy beach that for bathing purposes can not be surpassed in the whole country. The water is clear and clean, and when the great surf waves roll in it is glorious sport to battle against them.

The sand hills are also objects of attraction, and it is quite the thing to climb the steps on the wooden side and slide down the sandy incline on the other. In my youthful days I slid down the straw stack, and perhaps the cellar door, but here was sliding on a grander scale. The young ladies especially delight to glide down the sandy slope. You observe a fair maiden standing out against the clear sky and then she disappears as suddenly as if the earth had swallowed her up. You hurry up the steps to see if a fatal accident had not taken place. By the time you arrive at the summit another maiden or a bevy of maidens stand expectant on the summit in their white dresses, as if waiting for Ascension Day; but they are not going that way, and their dresses, unlike that ancient damsel's, are unprovided with puckering strings. With little hysterical screams the group jump into the sand and down the steep and sandy incline they rush. You see a gleam of brilliant hose, a shimmering of white dimity, and then there lies a heap of loveliness at the bottom of the bluff. But the sand is soft and clean, and no harm results, except shoes full of sand, and, sitting on the beach, it is the duty of the attentive beaux to remove the dainty shoes and pour out the sand, which they carefully preserve in homeopathic vials. Down one of the sand hills there is a deep furrow said to have been made by the heels of a Chicago belle as she plowed down the sandy bluff. If any one doubts this story they can have the furrow pointed out to them, as I had, and what proof, to a resident of St. Louis, can be more conclusive. Envious ladies say that the beau who emptied her shoes of the sand must have needed a flat quart bottle to have been equal to the occasion. Sometimes, however, accidents occur. A projecting root or stick may cause a sad disaster, and a steely skeleton remains thereon to serve as a danger signal to other venturesome sand skaters.

But I intend to write of my angling experiences at Macatawa Lake, one of the best fishing grounds in Michigan, if the fish are in a humor to bite. The only drawback to this place are the many excursionists who make an angler's life miserable, for I hold that the genuine angler loves solitude. He prefers the company of the loon and heron to that of gum-chewing maidens and cigarette-smoking youths. The wind through the pines and hemlocks is sweeter music to his ear than the banging of the hotel piano by the befrizzled summer belle; the lapping of the waves upon the beach gives him greater pleasure than the gurgling of liquids over the bar; and mosquitoes can be endured with a more patient resignation than the aimless crowd of Sunday school excursionists.

I arrived at the hotel in time for dinner, and having gone through with that formality, I at once prepared for a trial angling trip. Mrs. Izaak, Jr., concluded to accompany me, and retired to her room to put on her fishing attire. When she returned she was attired in a rubber ulster and carried a parasol. I mildly argued against the propriety of raising an umbrella in a boat while fishing, but to no avail. And then she wanted to know if she had not better take her knitting along, in case the fish did not bite. I replied, "Certainly, by all means," and kindly volunteered to send for the family sewing machine. I think my satire was useful, for the knitting was left behind.

We finally got safe into the boat, and in the delight of the moment my spirits visibly rose as I rowed away toward the fishing grounds, and I actually smiled to myself at the pretty figure of Mrs. Izaak, Jr., and her parasol, as she reclined comfortably in the stern of the boat. Reaching a spot where I thought we might take fish, I "heaved" the anchor overboard and prepared the tackle for business. First I had to put the minnow on Mrs. Izaak, Jr.'s hook, which operation she watched with great anxiety. "Don't it hurt the minnow to put a hook in it that way?" But I answered that it was no time to moralize when one was on a fishing excursion, and that if a man had a fish on the end of his line, and stopped to argue about the hook hurting the fish, he would lose the fish, and deservedly, too. No, when one goes a-fishing he must leave his society for the prevention of cruelty to animals at home.

By this time our lines were cast, and I settled down to the glorious expectancy of getting a bite. I had my back to Mrs. Izaak, Jr., when suddenly I heard her pole splash in the water, and my heart came into my mouth at the thought that she had the first bite. I turned my head, and, shades of Izaak, Sr., must I say it, she had let her pole fall into the water while attempting to raise her parasol. I groaned inwardly, and fixed a stony glare at my bobber, which obstinately refused to be pulled under water. With the stubbornness born of disgust, I sat and sat; the sun was well down in the western sky; the bell at the hotel was ringing for supper; a big frog set up a croak in the bushes by the shore; the—"I've got a bite," came thrillingly to my ears. The parasol tumbled into the lake, there was a struggle with the pole, a splash

by the side of the boat, and Mrs. Izaak, Jr., landed a bass at my feet to be unhooked. She looked at me with one of her old-time glances, and asked if I didn't want to borrow her parasol; maybe I might get a bite then. "Parasol be ribbed," I ungraciously murmured, as I impaled another minnow on the hook. But why prolong the story. My score was a goose egg; Mrs. Izaak's was two bass. We were both tired, and I was told that I might go alone in the morning; she "had enough of fishing."

A good supper at the hotel restored our spirits, and as we were strolling on the beach afterward Mrs. Izaak, Jr., remarked to me, in her sweetest manner, "My dear, I had a delightful time fishing this afternoon, and I think I will go along with you in the morning." But I determinedly protested against such a course. The morning air was full of malarious vapor, and it was a very rash thing for a woman to go out fishing on an empty stomach at 5 A. M. She retorted that she didn't propose to "fish on an empty stomach; she was going to fish from the boat." I saw it was useless to philosophically discuss the matter, so I dropped it.

But the next morning, at the first peep of day, I silently dressed and stole from my room to the boat house, and was soon gliding through the smooth water alone. I may be mistaken, but I hold that the true angler wants no company but himself and his bait, and, finding myself in that position, I was content with all the world. In front of me rose the blue surface of Lake Michigan, while the prow of my boat was pointed up Macatawa Lake, toward the fishing grounds. The big, round, red sun was just peeping from the eastern horizon, and the smooth surface of the water was broken here and there as some fish rose to gather in a helpless fly returning from an all-night spree. The whole scene was a delightful one, and if the fish would only bite—aye, there's the rub. But the fish would not bite. For two hours I strove to lure one to take a nice fat minnow, but all in vain. I tried trolling with spoon bait, but with no better success. The fish appeared to be all "independent bolters," and seemed determined not vote the regular ticket. About three miles up the lake, however, I had a little better luck, and succeeded in catching about a dozen bass, none of them of large size, but still large enough to afford considerable sport.

I had taken no lunch with me, and my inner man began to assert his rights in so marked a manner that I turned my boat, and a vigorous twenty minutes' row brought me back, when I reduced the profits of the hotel considerably. To my great surprise, Mrs. Izaak, Jr., met me in a smiling manner, and inquired how I liked to "fish on an empty stomach." Then and there we compromised, and hoisted a flag of truce. On my future excursions she always accompanied me, but I struck the line at the parasol, which was left at home. We took considerable fish, but the largest did not weigh over two pounds, and the smallest—well, we did not weigh them. I am aware this is a strange story for a fisherman to relate, but it is a true one, and therein lies its virtue. As the youthful pa of his country remarked, "I cannot tell a lie—unless there is money in it."

But all the anglers were not as unsuccessful as myself. I saw black bass weighing six pounds taken from the very spots where I had fished. On the day I left the lake a little girl hooked a twenty-pound muskallonge, which was safely landed with the aid of her father.

And thus the days passed on—eating, sleeping, fishing, bathing, and taking siestas on the summit of the pine-covered bluffs. What a place it is to recreate the weary man from the hurried and unrestful city. From the summit of Prospect Point I see the sun go down on the land of the badgers; away out on Lake Michigan I discern the white sail of some grain-laden vessel; on the edge of the horizon a thin line of smoke shows where some steamer is making straight for her port; a dim haze is creeping over the lake and the bluff, the songs and shouts of the campers in the valley below are faintly borne to my ears; the bright light from the lighthouse shoots out over the rippling waters; the last whistle of the about departing steamer is heard, and, with a deep sigh of regret, there comes to an end the vacation of

St. Louis, Mo.

ANGLING NOTES.

NOW is the time for the amateur to lay in a stock of feathers for next season's fly dressing. The best hackles obtainable come from the necks of the capons which are now to be found in great abundance in the markets. Of course the hackles of game cocks are more desirable, but they can rarely be had excepting by those who breed these birds, or who are so fortunate as to have friends who do so.

Hackles should be narrow, tapering to a point, and firm without feeling harsh when drawn through the fingers. Select those which are as near as possible of the same color on both sides. The most useful colors are brown, black, brown and gray furnace, that is, brown or white with a black streak down the center, and white. The latter are used for dying. The gray and brown mallard, teal, widgeon and readhead feathers can also be obtained. They are found just under the wing and on the back just above the butt of the wing. These are used in dressing the Abbey, professor, grizzly-king, queen-of-the-waters, etc. The various colored pigeon wings are also very useful and the poultry stalls are full of them. If the angler keeps a sharp lookout he will occasionally find a blue heron or crow hanging among the poultry, the wing feathers of which are very necessary.

The wood duck side feathers are very useful, but exceedingly hard to obtain; still, now and then they can be found, particularly among boxes of birds shipped from the South.

With the above list, including a few turkey tails, one can tie the majority of the flies used for trout fishing.

There are dyes sold in the drug stores that are very easily used; they have the directions printed on them and any one can dye their own hackles with little trouble. The only thing to look out for is the natural grease on the feathers. This can be removed by washing in soap and warm water or alum water. Fix the colors by adding a little vinegar to the dye and rinse in cold water. The hackles should be tied by the stems in loose bunches of a dozen, first stripping off the down.

An angling friend sends us a few specimens of close imitations of natural flies. They are dressed by himself

and would do credit to an expert. He had great success with these flies on the Willowemoc and Neversink, where he found the originals, and believes it due to their use, though the writer has a suspicion that a great deal of it was owing to his being a superb fly-fisherman and using fine tackle. Several of the imitations are almost identical with the golden-spinner, great-dun, oak-fly, beaver-kill, brow-hen and brown and gray palmers, so much so that we are inclined to doubt whether even the most educated trout would notice the difference.

It is reported that a few striped bass tempted by the mild weather have been taken on the hook in the Hudson River.

The spotted weakfish or so-called "sea trout" have developed a great fondness for large-sized phantom minnows. They also take large bass flies, and afford good sport on a stout fly-rod.

Channel bass sometimes can be seduced by these big flies, and when a good-sized "spot" is hooked the owner of a fly-rod has his hands full, and thinks there is more sport in it than catching tarpon on a bean pole.

SCARLET-IBIS.

THE NEW YORK TROUT LAW.

Editor Forest and Stream:

For nearly forty years I have been an annual visitor all over the Adirondacks, and during that time have seen more or less unprofitable tinkering with the game laws. Every section of the State wants its peculiar privilege, and the present new codification is fearfully "under fire." In the main, the laws submitted are good ones; but still I, too, have my suggestions. Make the law all over the State the same for trout fishing. Why discriminate for Long Island? We of the north don't expect to get trout in April, but should like to if we could. We are as much entitled to it as New York city sportsmen and are equally as fond of it, and I think know as much about it as they do and enjoy it as much. Another lame point in the game law: Trout in the Adirondacks spawn about Sept. 1, I mean brook trout. The season is extended to the 15th, which is an error. Lake trout spawn later.

As to transportation; had I my way, I would not allow a trout or any venison to be taken out of the woods in any shape for the next five years. Such a law, with strong restrictions in fine, would increase materially this kind of game in the woods. Make a law for the State entire; not section out here and there with certain privileges. Also stop buoy fishing as strongly as set-line fishing. One is as bad as the other; and both ought to be put under the same restriction, doubling fines for any infringement.

No, Mr. Editor, strike at the root of the matter. There is too much tinkering and child's play in this whole matter. As "J. H. R." of Canton, writes in your last issue, "Treat all alike;" and as suggested in your "Angling Notes" by "Scarlet-Ibis," the best laws always are those that are reasonably easy to enforce and so simple that all can understand. We want no technicalities and no doubts, but a law equally to be respected over the entire State, and to be enforced without partiality and no discriminations, whether on Long Island or in the dense woods.

ADIRONDACKS.

TARPON AT PUNTA GORDA.

PUNTA GORDA HOTEL, Punta Gorda, Fla., Feb. 16. —Editor Forest and Stream: The season here is some two or three weeks later than usual. The fishing season has been rather slow in coming. The first tarpon taken on the Gulf coast (so far as I have heard) was taken here in Charlotte Harbor near the Punta Gorda Hotel. A little way up the harbor the Peace River comes into the harbor, and there on the 13th inst. the tarpon was captured. Mr. C. F. Goodnow, of South Sudbury, Mass., was the fortunate angler. He went for tarpon on two days. On the first day he took a shark; on the next day he killed a splendid tarpon with the usual bass rod, line and reel, with mullet for bait, on a large hook with fourth-inch cotton cord 4ft. long for snell. The fish drew line and his cedar boat and guide nearly two miles up the river, not going all the time straight, frequently giving some slack line, but much of the way taking about 300ft. from the reel, the river not being deep nor wide, and there being more tide inward than current outward. His first leap into the air was terrible, taking up with him a very large mass of water. After thirteen leaps and a fierce battle lasting one hour and five minutes, he slowly yielded to the gaff, but came near upsetting the boat. His length was 6ft., girth 3ft. 8in., weight 162lbs. The taxidermist here has him in hand, and one of his sides may ornament New England and the other the Punta Gorda Hotel.

A Spanish mackerel was killed here yesterday, it being early for that fish, which does not appear here usually before March.

We have now taken here about one-half of the various kinds of Florida fish mentioned and so well illustrated in one of your issues of the FOREST AND STREAM about a year ago.

NELSON MERRILL.

"A BIG CATCH OF TROUT.—Portland, Me., Feb. 20.—Editor Forest and Stream: Inclosed is item cut from the Portland Advertiser: 'The Greeley explorers returned to Bangor Monday night, from Randall's Camp above the Katahdin Iron Works, where they have been the last ten days. In addition to George Greeley and party there were two gentlemen from Jersey City, Landlord Bemis, of the Crosby Inn, Belfast, and Caterer Robinson, Messrs. James Miller and S. Bourne, of Portland. This party fished eight days in all, and in addition to the fish eaten, brought home 2,706 speckled trout, none of which weighed a pound, averaging from one-quarter to one-half a pound. This is probably the largest catch of trout ever recorded.' This is an illustration of our beautiful law which allows 'inhabitants of the State' to catch trout through the ice for their own use after Feb. 1. This party goes in every year, and in their case hog should be spelled in capitals. —D.

THE DEFEST ANGLING ASSOCIATION held its ninth annual meeting on Feb. 16, at the Arena, No. 41 West 31st street, this city. The association was organized and received its charter in 1888, owns two hundred acres of land situated six miles east of Boonville, on the Utica &

Black River branch of the Rome, Watertown & Ogdensburg R. R., and is on the direct carriage road to White Lake and the Bisby Club. This association was gotten up for the purpose of making a family resort for lovers of fishing where real enjoyment might be indulged in without restraint. There are two well-stocked trout ponds on the premises, one covering an area of 10 or 12 acres and the other about 30 acres. Those afford ample sport for the members and their families. The reports read at the meeting last week show the organization to be prosperous; and at the banquet in the evening there was a merry round of angling talk and reminiscences of the North Woods.—G. A. D. DEF.

Fishculture.

FISHCULTURAL DISCUSSIONS—ETHICAL PHASES.

Editor Forest and Stream:

Your issue of Jan. 1 came to hand at a time when I was too ill to give it the usual careful perusal, but a member of the family called my attention to your editorial headed "The Status of Fishculture." The paper was at once loaned and when returned was mislaid until a few days ago, when I found nearly a page of characteristic, irrelevant matter from your Denver correspondent, containing his usual tirade of personalities. I also find a short article of my own, sent you some two months before.

I now desire more particularly to reply to your editorial. At the very start you misrepresent me by saying that you have published my communications upon "fishcultural methods in general." Had you stopped at the words "trout culture" you would have stated the whole truth. To be sure, I have stated that some other lines of fishculture—or methods, if you please—were not a success. I have generally said that they were yet in the legitimate experimental stage, which artificial trout culture passed many years ago. I am fully aware that there is extensive opposition to present methods of fishculture, and indeed to all methods, with public funds, but I do not, as you state, represent the extreme of this adverse element. On the contrary, I have for a longer period than any other American citizen been an enthusiastic champion of fishculture under all generally accepted methods, each in its turn as developed, and still continue to champion all methods which have proven a success, or which are yet in a legitimate stage of experiment, and I have myself originated some methods which have proven a success and some which have been failures.

In this connection it is proper to say that I have ever been prompt to publish my failures, in order to prevent others from traveling over the same ground and lose time and money in repeating failures. How many fishculturists can you name who have been thus honorable? On the other hand, cannot you name prominent fishculturists who for years kept up the delusion of artificial fishculture for the sake of personal gain, by the sale of eggs and fry, and when at the same time they knew it was a fascinating delusion and sure to entail loss upon the customers? And you must certainly know that several hundred people in the States of New York and Pennsylvania alone have very thoroughly tested artificial trout culture under the direction of these very persons, who sold them eggs and fry to the extent of thousands of dollars. Did you ever know any of them to receive any return for their expenditures, unless they too succeeded in selling eggs and fry? I could repeatedly fill every page of FOREST AND STREAM with reliable statements of men who were victims of these trout culturists, and who lost various sums, from a few hundred up to as high as eight thousand dollars each. I have met scores of these victims and have communications from hundreds more, and most of them were from prominent men in their respective localities.

Now, it is a fact that most of these men thought for years that they were making a success, and a quarter of a century ago the newspapers of the country teemed with accounts of their supposed success. I particularly recall the New York *Weekly Tribune* with its prodigious circulation, especially among farmers; and I was myself one of its occasional contributors, and believed I was stating facts regarding the success of artificial trout culture; and so I was, as far as the public had adequate experience, namely, successful hatching and distribution of young fry. But here all success ceased, although it required several years to develop this fact, for we all know of the slow growth of trout. But all did learn that it cost from one dollar to two and a half dollars a pound to raise them.

Now, you and your correspondent mention a few instances where parties claim there is some degree of success, although the same is not very clearly specified. I have no doubt that you have read numerous published statements concerning the successful restocking of trout streams, and have had reason to believe them, etc. Your experience is simply a repetition of that of hundreds of others about twenty-five years ago. Because of the simplicity of artificial propagation and distribution of young fry, we all at that time thought that the repopulation of the streams was an assured fact. But the result was a striking illustration of "hope deferred." The years of patient, painstaking, hopeful experiment brought no increase to the table or creel, and in all these years of experimental repetition there have been no consequential returns for the time and money expended. It is true there have been from time to time years of increased productiveness in many trout streams; but in most instances they have been in streams which have never been restocked, and the increase in every case was due to natural causes, whether in stocked or unstocked streams, and these causes are now well understood by all old fishculturists and have been repeatedly explained, even by your humble servant and in your own columns. I know of my own knowledge of numerous streams which have become so restored to their old-time productiveness, and all old trout streams would thus become restored if their surroundings were allowed to revert to old-time conditions, and they will never be restored in any other manner. I believe that all thoroughly experienced students of nature, such men as Charles Hallowell, for instance, will take this view of the matter.

Your Denver correspondent took umbrage because I said he was callow (upon this subject only), and also charged that I antagonized the views of the late Prof. Baird and others who, like him, had investigated the subject. Now, I know what Prof. Baird's views were upon the subject quite as well as the Denver man could, because for nearly three years I experimented with *Salmonidae* by his request and under his direction, and this interval included "Centennial" year, when I was with him frequently. I have a large number of letters from him in this connection. I know that within a year of his death he had nearly despaired of any adequate success with *Salmonidae*. A few months before his death a gentleman then and now in a public position at Washington conversed with him on this particular subject, and being an old acquaintance of mine, asked the Professor's opinion of my off-published views concerning the propagation of *Salmonidae* and stocking of waters with them. The Professor replied that I was a persistent and industrious investigator and that my views were entitled to respect; that he considered me a valued correspondent of the Bureau, and in the main he thought my fishcultural views were correct. A short time before this the member of Congress from my district called upon the Pro-

fessor concerning a matter of special interest to me, and the Professor voluntarily expressed himself in a similar manner to him. So much for the grandest authority ever known in this country. I am sure you will not deny that from eighteen to twenty-five years ago there were many hundreds of persons in various parts of the country engaged in trout culture, and I again challenge you to locate many, if indeed any more than a dozen persons now thus engaged, unless directly or indirectly backed with public funds. There may also be a few cases where a small business is done in connection with summer resorts, merely as a side attraction. Indeed most of the places mentioned by you and in the newspapers generally in this connection are summer resorts, and thousands of dollars of public money are thus used to boom these resorts. Some people do not think this a legitimate use of public funds. But surely were the business such a success as you claim, there would be, after all these years of experiment, hundreds if not thousands of persons engaged in it. I have no idea that any of the parties whom you think are now making a success of the business will be engaged in it five years hence, unless they can find as customers for their stock enough inexperienced persons ready to travel over the same paths that hundreds of others have marked by universal disaster. I wish right here to confidently express the belief that no other person has investigated this subject so many years and so thoroughly as myself, and I am perfectly willing to take the chances of intelligent readers (and certainly intelligent investigators) accepting my views, rather than the views of those whose stock in trade consists of invective and whose only argument is to charge with egotism those who make some particular subject a specialty. The charge of egotism in such cases is invariably the last argument of the conceited, intelligent ignoramus. Your Denver man says I have some personal grievance against him! Nothing could be more absurd. I only know him as a pioneer publisher of a frontier paper, and quite a "hustler," to use a frontier term. He has the reputation of being quite a successful "boomer" of his region, and it is so much to his credit that some well-meaning people will pardon him in his endeavor to entice tourists to his region under the impression that they will find as good trout fishing as when the region was first settled. Some of the tourists, however, have published statements to the effect that the catch there has been gradually and surely falling off. Residents of the region have written me to the same effect and have also stated that there are but very few persons in Colorado engaged in trout culture and that the business was dying out. I myself heard one of a party of tourists say they would not go to Colorado again, with the expectation of getting satisfactory trout fishing. Now, I place as much reliance upon the word of these various parties, as I would upon a person who was engaged in "booming" the region and who acknowledges his ignorance of fishculture.

The long-winded communication referred to is largely composed of old statistics of an alleged increase of shad and whitefish some years ago, and a claim that said increase was due to artificial propagation. I fail to see what this has to do with artificial trout culture, even were it reliable, which it certainly is not. I think I have already stated in your columns that for the past fifty years it has been extensively observed in the region of the Eastern shad-producing waters that there was quite a uniform fluctuation from year to year in the production, from increase to decrease alternately, there being on an average but three prolific seasons in each ten. Every shad fisherman, every dealer and every habitual consumer in these regions will testify to this fact, and, so far, the extensive propagative operations have caused no perceptible change; still, as a new departure in planting (long urged by me) has been inaugurated, there is yet hope of some success; but a "progressive" close time will have to be adopted in the Delaware River, in order to make any success above the lower third of that stream. I will remark here that fish commissions, through their organs, proclaimed the season of 1887 one of the most prolific ever known there. I was on the ground and obtained the same statistics as sent to the U. S. Fish Commission, and know it was the poorest shad season ever known. Philadelphia had to obtain much the larger portion of her supply from New York city, the season on the Hudson being a fairly good one. The fish commission statistics, especially estimates, have been and continue to be very incomplete and unreliable. I am quite familiar with that subject. The planting of a small lot of shad on the Pacific coast has been a grand success, and had the plants been repeated every year since, it is not likely that it would have made any perceptible difference in the results. It would be like attempting to create a freshet in a river with a sprinkling pot.

Now, regarding the whitefish, I have always urged thorough experimental work in their propagation and planting. This work has been intelligently prosecuted for a long term of years, especially in Lake Erie. So far, there have been no perceptible results for the great labor and expenditure entailed. Those most extensively and the longest in the fishery trade on Lake Erie are my authority for this statement. The status of the whitefish has been carefully observed by those in the trade for 40 to 50 years past, and about the same fluctuation as in the case of shad has been noted. There were seasons from 30 to 40 years ago when they were scarcer than they have ever been since; a fact which "knocks Fish Commission statistics silly." There has been for the past few years a steady decline in the catch, although the appliances and efforts for their capture were never so extensive and complete. I have been taking special pains to investigate during the past two years, and particularly during the present season. Even those fishermen who say that there may ultimately be some returns for the propagating operations, have not sufficient confidence in the work to aid even in planting the young fish, unless paid for it. Those the longest and most extensively interested and experienced declare that all propagation of lake fisheries is just so much dead loss; and I cannot understand why those at a distance, and having no adequate means of knowing the facts, should continue to brazenly dispute such authority. It is certainly an exhibition of monumental presumption. So far as I am concerned, I investigate a subject very thoroughly before making published assertions; consequently I rarely make mistakes concerning these matters, but, if I chance to do so, I am prompt to make corrections and not mislead others.

The whole issue in this discussion, on my part, has been the trout question, but you and your Denver man seem desirous of diverting the attention of your readers from the question at issue and gratuitously proclaim me as opposed to general fishculture, for which I am at the present time an acknowledged champion and have been for a longer period than any other American.

Another characteristic operation was the publishing in that nearly full page Denver communication of an idiosyncratic paragraph from the *American Angler* and peculiar to one of the editors of that journal. Himself and your Denver correspondent are in the same boat, both publishing erratic matter on a subject upon which both are ill-informed, and when the bottom is completely knocked out of their statements by the simple presentation of cold facts, which are unimpeachable, they become discourteous and grossly personal. But the *Angler*, to its credit, published my communication complete, which effectually neutralized the prefix copied in the communication referred to, but your correspondent did not have the honor to publish my communication, as it would have neutralized his page communication as well. It is unprofitable to discuss any subject with those who resort to such dishonorable practices as the publication of untruthful squibs and then carefully suppress the replies. Your Denver man seems to think me quite ill-informed

about what he evidently supposes to be modern methods of trout culture, namely, stocking with yearling trout. This method of replenishing waters is older than history itself, having been practiced from remote periods of semi-civilization down to the present time. The first waters I ever stocked with trout were with wild specimens, evidently one and two-year-olds, but there may have been older specimens, as the age of wild trout is enigmatical. I know of waters stocked in this manner from forty to fifty years ago; but this is not artificial fishculture. It is, however, far superior to using artificially hatched trout, which are not nearly so hardy, and besides, when artificially reared to a year or more, they are practically incapable of taking care of themselves. This I have personally tested and know that the method is as unreliable as stocking with young fry. If you and your clearly deluded Denver correspondent will make half the careful investigations that I have, you will learn, as many hundreds have learned by costly experience, that artificial trout culture is a fascinating delusion.

And now, in conclusion, it is to be hoped that you and others will cease misrepresenting me as opposed to fishculture in general. I believe and have for a long term of years, that trout can be made more plentiful by protected preserves, mainly of running water, properly prepared and stocked with adult wild trout, but even this method has never proved a remarkable success in open waters, such as are stocked by fish commissions.

Since this correspondence has been running in FOREST AND STREAM, I have had a large number of letters upon the subject from various parts of the country, and but a solitary one claimed that trout-stocked waters were a success, and he claimed that several streams in his region now contained trout which never had any until stocked by the State commission several years ago. It so happened that I was in the region named thirty-four years ago (then just being settled) and the few inhabitants there were enthusiastic about the purity of their waters, and claimed that they all contained "speckled trout." Several parties write that they had thought of trying trout culture, but thank me for changing their minds upon the subject. I will close by saying that I am notified of arrangements pending for a large game and trout preserve, the land being already secured; and I have been practically engaged to plan and superintend the preparation of the trout feature of the enterprise, and perhaps the whole. There will be no artificial propagation of trout. One of the parties has had several years experience in artificial propagation, but abandoned it years ago as illusory.

COLUMBUS, Ohio, Feb. 6.

MILTON P. PEIRCE.

SEA TROUT FROM SCOTLAND.

ABOUT 15,000 eggs of the sea trout (*Salmo trutta*), which were sent from Europe at the request of Shooting and Fishing have been forwarded to Mr. Charles G. Atkins, at Craig's Brook, Me., for development.

The sea trout is a migratory species, occurring in rivers flowing into the Baltic and German Ocean, and also ascending rivers of Great Britain. It is abundant in Scotland, from whence the eggs were obtained. This trout is commonly called sea trout, salmon trout or bull trout. It is the *Sco-Forelle* or *Lachs-Forelle* of Germany and the *Orlax* or *Lachtrug* of Scandinavia. The young have nine or ten dusky crossbars. Half-grown individuals have the upper part of the pectoral and dorsal fins and the hind margin of the caudal black. Adults are silvery, sometimes without spots, but usually with x-shaped spots in large or small numbers. The markings, however, are subject to great variation in number, size and shape. On the head and dorsal fin the spots are roundish when present. The caudal fin is forked in the young and slightly emarginate or perfectly truncate in the adult.

The sea trout grows to a length of about 3ft., and females 16 or 12in. long may be sexually mature. The species spawns late in the fall or in the winter, and the young run down to the sea in the spring. In the breeding season the lower jaw of the male is hooked.

The following quotation from Dr. Day's "British and Irish Salmonidae" is of interest in this connection: "Anglers find in rivers these fish will mostly take a worm if the waters are muddy, as it begins to clear a spinning bait, and when fine a fly. If hooked they often display considerable cunning in their attempts to break the line with a blow from the tail, or impetuously dart off, when a similar result ensues, should it not readily run off the reel. Stoddard observed that during the season clean sea trout give more sport than salmon to the anglers; in fact in Scotland an hour or two's white trout fishing when the fish are in the humor is esteemed good sport, as they often take a fly well, while in some places they may be taken up to 6 or 7lbs. weight; in Wales the sewin are also similarly sought after, especially of an evening, with fine tackle and a small fly. But large examples, as bull trout, appear to generally refuse bait or flies, but keltis are readily hooked."

COLORADO STATION OF U. S. FISH COMMISSION.

The new hatchery at Leadville, Colorado, had the following stock on hand Jan. 31, 1891: Brook trout (*Foninalis*) fry, 19,273; do. breeders, 149; Loch Leven trout fry, 1,277; black-spotted trout fry, 878; do. yearlings, 1,000; do. breeders, 733; rainbow trout breeders, 5; total 23,315. The number of eggs in process of hatching were as follows: Brook trout (*Foninalis*) collected, 139,199; do. from the East, 19,739; Von Behr trout (*Fario*), 99,474; total 258,412. The transfer of eggs and fish from their temporary quarters to the new building was to be completed by Feb. 9. The lowest air temperature in January was 10 deg. below zero, and the highest observed at noon was 41 deg. The water temperature was uniformly 44 deg.

SALMON EGGS SENT TO FRANCE.—In January the U. S. Fish Commission shipped from Cold Spring Harbor, New York, 90,000 eggs of the quinnat or chinook salmon (*Oncorhynchus choutcha*) to France. The consignment was forwarded per steamer La Gasconne. Notwithstanding the comparative failure to acclimate this valuable fish in tributaries of the Mediterranean, the French fishculturists mean to continue the experiment in the hope of ultimate success.

WAS HE INSURED? is a question we ask almost as naturally after a man's death as after a fire; because it is coming to be recognized as much a matter of business prudence to insure one's life as it is to insure against loss by fire. There are many good business men in the world, and it might be a matter of wonder where they all insured their lives did not the annual reports of the companies call attention to the immense business done by some of them. Here is the New York Life, for example, whose report appears in another column, with an annual income of thirty-two million dollars, with assets to the amount of one hundred and fifteen millions, and carrying over five hundred and sixty-nine millions of insurance on its books. It paid over thirteen millions to policy holders in 1890, and wrote a hundred and fifty-nine millions of new insurance. This company carries about fifteen per cent. of all the insurance in force in American companies, and does about nineteen per cent. of the new business. Its success is the result of superior management, and is well deserved. —*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circular of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Napt," "Glean," "Dick Swiveller," "Seydlitz" and other competent authorities to be the best treatise on the subject extant.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

THE NEW YORK DOG SHOW.

THE Westminster Kennel Club's fifteenth annual show opened under very favorable conditions on Tuesday last. The proverbially good weather which this club nearly always enjoys has not deserted them on this occasion, and consequently throughout the day and evening the aisles were crowded, and an interested gathering of exhibitors, and those drawn by curiosity, could always be found round the judging rings, of which there were four in the center of the hall, forming a square. The new hall is vastly superior in general appearance to the old barnlike structure we have been accustomed to for so many years, still there were many exhibitors present who loudly proclaimed the fact that they wished the old building had never been touched, especially those whose misfortune it was to be buried in the basement, as it was impossible to bench all on one floor. There were many complaints, as might have been expected, from the pointer, setter and spaniel men because they had been "lowered" in more ways than one. Those exhibitors have come to think that they form the most important part of a show—but they don't, and as a part of the whole they must take their chances.

Miss Whitney was the first to commence judging at 10:10 A. M., and visitors and the *cosmopolitan* were soon engrossed with the merits of the St. Bernards Sir Bedivere and Alton. They both had many admirers, though of course Bedivere's reputation could not be denied and he had the popular vote, but he did not win by a very big score. All the St. Bernard men can think of were grouped round the ring and anxiously followed the decisions. Mr. Huntington was also early to work with the greyhounds, being in Ring 1, and had an opportunity himself to see what it feels like to be a judge, and, as we surmised from his remarks to us, he did not find it such easy work after all. The new dog Gem of the Season won well in his class. The Bulldog Club were *en vidence* in Ring 4, and such a display of bulldogs has never been got together before in this country, thanks to this energetic club. This good old breed will no doubt come to the front and stay there. Their souvenir catalogue is quite a valuable one, and is well and tastefully arranged.

In Ring 3 Major Taylor got to work on his English setters, but judging from remarks made he hardly seems to have been so successful in his awards as usual, many known cracks having to be contented with a lower seat. One of England's greatest dogs, Sir Tatton, could do no better than c. and Count Howard had to succumb to a dog whose superiority is hardly visible in any point. Mr. Hoey started to do the fox-terriers in the afternoon and was therefore unable to get through the first day. In fact, the judging all round has not gone with the usual expedition, a good deal of time being unavoidably wasted in getting the dogs into the rings from downstairs and elsewhere. Otherwise everything progresses systematically and one of the busiest men is Mr. Mortimer, whose task is necessarily an arduous one. Mr. Mayhew will finish his classes Wednesday morning, as he could not begin till late on Tuesday afternoon.

There are few innovations this year if we except the heretofore much needed letter-cards to distinguish the different dogs while in the ring. Each handler is given a large lettered card, corresponding with a letter in the catalogue opposite the dog's name, allowing visitors to at once be able to see which are which in the ring. Some of the stewards of rings were particular in seeing that all were furnished with their cards, others did not take the trouble to bother with them. It should be understood implicitly that they must be used, and we hope other shows will follow suit. The attendants this year are decked out with blue jerseys and cap and seem a much superior order of men to those of last year. Among those whom we noticed busily engaged as ring stewards and in other duties were Messrs. F. R. Hitchcock, H. B. Cromwell, Thomas H. Terry, J. Breeze Smith, and J. Pearson, J. H. Winslow, Winthrop Rutherford and others.

MASTIFFS.—CHALLENGE—Dogs: 1st, Wyoming Kennels' Sears Monarch. *Bitches*: 1st, Flour City Kennels' Lady Colous. *Open*: 1st, Flour City Kennels' Lord Chancellor; 2d, Mrs. C. E. Wallace's Merlin; 3d, Taunton & Winchell's Beaufort; 4th, R. P. H. Durkee's Melrose Prince. *Very high com.*, R. Exley's Exley's Chief. *C. D.*, Arthur's Olaf. *H. A.*, Taylor's Sir Minton. *High com.*, J. Massey's Minton Minor. *E. L.*, Kimball's Elskom. *Com.*, P. R. Simmonds's Macduff. *Mrs. B. E.*, Spitz's Armahus. *G. T.*, Gray's Duke of Norfolk. *Bitches*: 1st and 4th, Flour City Kennels' Lady Dorothy and Com. O. Own Daughter; 2d and 3d, F. T. Underhill's Duchess and Edda. *Very high com.*, Elm Kennels' Cassandra. *E. D.*, Hay's Countess. *J. E. R.*, Boudreau's Baby Bunting. *PUPPIES UNDER 18 MONTHS.*—1st, Trimont Kennels' Pluto; 2d, R. Exley's Exley's Chief; 3d, F. T. Underhill's Ontare Brenda. *Very high com.*, C. E. Greenman's Rex Carolus. *G. W.*, Glazier's Ingleside Princess. *E. L.*, Kimball's Elskom. *Fulton*, John Kennels' Beatrix. *Jr.*, H. H. E. Bacher's Caswell III. *A. C.*, Grayson's Dagger. *Miss W. M. K.*, Kech's Willie. *F. H. F.*, Mercer's Canfrid. *Com.*, J. Weir's Caesar W. *J. B.*, Heffer's Jack's Pride and Red Monarch. *NOVICE.*—1st, Flour City Kennels' Caution's Own Daughter; equal 2d, Caumsett Kennels' Hans Sachs and R. Exley's Exley's Chief. *Very high com.*, Miss Dora E. Hall's Pluto H. *Com.*, Caumsett Kennels' Froh. *J. W.*, Flowerfelt's Lion.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Dogs: 1st, Wyoming Kennels' Elmer; 2d, E. H. Moore's Beau Monarch. *Bitches*: 1st, Elmwood Kennels' Manon; 2d, E. H. Moore's champion Miranda. *Reserve*, Wyoming Kennels' Lady Wellington. *OPEN*—Dogs: 1st and very high com., Wyoming Kennels' Sir Bedivere and Lothario; 2d, E. H. Moore's Alton; 3d, J. H. Hunt's Don H.; 4th, E. H. Moore's Lord Melrose. *Reserve*, C. A. Houck's Kinglinton. *Very high com.*, R. Potter's Heifred. *C. A.*, Pierce's Sir Marmaduke. *E. L.*, Boucher's Lillian. *Lady*, Zerkow's Superbus. *Mrs. A. G.*, Gorham's White Chief. *W. A.*, Thomas's Brnie. *High com.*, J. Gosford's Prince of Orange. *J. F. Hall's* Marquis of Staforth. *T. I.*, Mara's Lakmond. *Dr. H. M.*, Beck's Bruno. *Com.*, Chas. Giller's Jersey Ben. *Dr. R.*, Taylor's Ajax. *C. B.*, Johnston's Friesland Vizer. *V. Petrola's* Count St. Vincent. *F. Linck's* Rihn. *G. Greiner's* Grover. *Bitches*: 1st, 2d, 4th and very high com., E. H. Moore's Lady Selma. *Lady*, Sweeney's Moore's Lady Melrose and Corrette; 4d, Wyoming Kennels' Plevna. *Reserve*, Elmwood Kennels' Zenith. *Very high com.*, Mrs. D. P. Foster's Princess Jura. *High com.*, Miss E. E. Stinen's Lady Rosemont. *J. F. Hanley's* Duchess II. *Com.*, L. Robert's Lady Laton. *F. Schoop's* Miss Bellina. *Halfway Brook Kennels'* Belle of

Halfway Brook. *PUPPIES.*—Dogs: 1st, Mrs. G. W. White & Son's Marc Antony; 2d, Mrs. J. M. Nicholson's Norma Joseph; equal 3d, C. Pfeiderer's Roland, Jr. and Mrs. J. M. Nicholson's Mount Sion Guy. *Reserve*, Mrs. J. M. Nicholson's Noble. *Very high com.*, Col. J. Knapp's Jr. Dots. *Petrola's* Count St. Vincent. *Thos. M.*, Burke's Clavdian. *Shirley's* Prince. *High com.*, G. C. Loeb's Rector. *Central Kennels'* Jlimmon. *Thos. M.*, Burke's Gopert. *L. Robert's* Whitefriar. *F. Linck's* Roller. *Bitches*: 1st, D. Mann's Uarda; 2d, E. H. Moore's Arline; 3d, high com. and com., Halfway Brook Kennels' Segrid, Karen and Sally Gow. *Reserve*, C. Pfeiderer's Princess Olga. *Very high com.*, J. F. Lutz's Princess Elena. *High com.*, W. A. Gordon's Queen Marath. *P. Mallende's* Rose. *C. Pfeiderer's* Princess of Wales. *S. Schumacher's* Sieglinde. *Com.*, J. George's Nellie Bly. *L. Robert's* Lady Ventry. *C. W. gner's* Ridgewood Laura.

ST. BERNARDS.—SMOOTH-COATED—CHALLENGE—Dogs: 1st, Wm. C. Reick's Hector; 2d, W. F. Tilton's Beauchamp. *Reserve*, C. F. Barney's Nevil. *Bitches*: 1st, D. Mann's Cleopatra; 2d, Wentworth Kennels' Thibse. *Reserve*, C. D. Cooke's Wanda. *OPEN*—Dogs: 1st, John Poug's Watch; 2d, D. P. Foster's Leicester; 3d, Elmwood Kennels' Belknap; 4th, John Keegan's Patrol. *Reserve*, T. M. Burke's Duke of Sparta. *Very high com.*, I. A. Settle's Victor Van and Contoocook Kennels' Parson. *High com.*, John A. Keane's Noble. *John McCarty's* Mac. *Com.*, Ridgewood Kennels' Alpine Guide. *M. Martin's* Pasha and John Brombach's Montreux. *Bitches*: 1st, 2d and reserve, Contoocook Kennels' Empress of Contoocook. *Burton Belle and Nora*; 3d, 4th, 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 15th, 16th, 17th, 18th, 19th, 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 32nd, 33rd, 34th, 35th, 36th, 37th, 38th, 39th, 40th, 41st, 42nd, 43rd, 44th, 45th, 46th, 47th, 48th, 49th, 50th, 51st, 52nd, 53rd, 54th, 55th, 56th, 57th, 58th, 59th, 60th, 61st, 62nd, 63rd, 64th, 65th, 66th, 67th, 68th, 69th, 70th, 71st, 72nd, 73rd, 74th, 75th, 76th, 77th, 78th, 79th, 80th, 81st, 82nd, 83rd, 84th, 85th, 86th, 87th, 88th, 89th, 90th, 91st, 92nd, 93rd, 94th, 95th, 96th, 97th, 98th, 99th, 100th, 101st, 102nd, 103rd, 104th, 105th, 106th, 107th, 108th, 109th, 110th, 111th, 112th, 113th, 114th, 115th, 116th, 117th, 118th, 119th, 120th, 121st, 122nd, 123rd, 124th, 125th, 126th, 127th, 128th, 129th, 130th, 131st, 132nd, 133rd, 134th, 135th, 136th, 137th, 138th, 139th, 140th, 141st, 142nd, 143rd, 144th, 145th, 146th, 147th, 148th, 149th, 150th, 151st, 152nd, 153rd, 154th, 155th, 156th, 157th, 158th, 159th, 160th, 161st, 162nd, 163rd, 164th, 165th, 166th, 167th, 168th, 169th, 170th, 171st, 172nd, 173rd, 174th, 175th, 176th, 177th, 178th, 179th, 180th, 181st, 182nd, 183rd, 184th, 185th, 186th, 187th, 188th, 189th, 190th, 191st, 192nd, 193rd, 194th, 195th, 196th, 197th, 198th, 199th, 200th, 201st, 202nd, 203rd, 204th, 205th, 206th, 207th, 208th, 209th, 210th, 211st, 212nd, 213th, 214th, 215th, 216th, 217th, 218th, 219th, 220th, 221st, 222nd, 223rd, 224th, 225th, 226th, 227th, 228th, 229th, 230th, 231st, 232nd, 233rd, 234th, 235th, 236th, 237th, 238th, 239th, 240th, 241st, 242nd, 243rd, 244th, 245th, 246th, 247th, 248th, 249th, 250th, 251st, 252nd, 253rd, 254th, 255th, 256th, 257th, 258th, 259th, 260th, 261st, 262nd, 263rd, 264th, 265th, 266th, 267th, 268th, 269th, 270th, 271st, 272nd, 273rd, 274th, 275th, 276th, 277th, 278th, 279th, 280th, 281st, 282nd, 283rd, 284th, 285th, 286th, 287th, 288th, 289th, 290th, 291st, 292nd, 293rd, 294th, 295th, 296th, 297th, 298th, 299th, 300th, 301st, 302nd, 303rd, 304th, 305th, 306th, 307th, 308th, 309th, 310th, 311st, 312nd, 313th, 314th, 315th, 316th, 317th, 318th, 319th, 320th, 321st, 322nd, 323rd, 324th, 325th, 326th, 327th, 328th, 329th, 330th, 331st, 332nd, 333rd, 334th, 335th, 336th, 337th, 338th, 339th, 340th, 341st, 342nd, 343rd, 344th, 345th, 346th, 347th, 348th, 349th, 350th, 351st, 352nd, 353rd, 354th, 355th, 356th, 357th, 358th, 359th, 360th, 361st, 362nd, 363rd, 364th, 365th, 366th, 367th, 368th, 369th, 370th, 371st, 372nd, 373rd, 374th, 375th, 376th, 377th, 378th, 379th, 380th, 381st, 382nd, 383rd, 384th, 385th, 386th, 387th, 388th, 389th, 390th, 391st, 392nd, 393rd, 394th, 395th, 396th, 397th, 398th, 399th, 400th, 401st, 402nd, 403rd, 404th, 405th, 406th, 407th, 408th, 409th, 410th, 411st, 412nd, 413th, 414th, 415th, 416th, 417th, 418th, 419th, 420th, 421st, 422nd, 423rd, 424th, 425th, 426th, 427th, 428th, 429th, 430th, 431st, 432nd, 433rd, 434th, 435th, 436th, 437th, 438th, 439th, 440th, 441st, 442nd, 443rd, 444th, 445th, 446th, 447th, 448th, 449th, 450th, 451st, 452nd, 453rd, 454th, 455th, 456th, 457th, 458th, 459th, 460th, 461st, 462nd, 463rd, 464th, 465th, 466th, 467th, 468th, 469th, 470th, 471st, 472nd, 473rd, 474th, 475th, 476th, 477th, 478th, 479th, 480th, 481st, 482nd, 483rd, 484th, 485th, 486th, 487th, 488th, 489th, 490th, 491st, 492nd, 493rd, 494th, 495th, 496th, 497th, 498th, 499th, 500th, 501st, 502nd, 503rd, 504th, 505th, 506th, 507th, 508th, 509th, 510th, 511st, 512nd, 513th, 514th, 515th, 516th, 517th, 518th, 519th, 520th, 521st, 522nd, 523rd, 524th, 525th, 526th, 527th, 528th, 529th, 530th, 531st, 532nd, 533rd, 534th, 535th, 536th, 537th, 538th, 539th, 540th, 541st, 542nd, 543rd, 544th, 545th, 546th, 547th, 548th, 549th, 550th, 551st, 552nd, 553rd, 554th, 555th, 556th, 557th, 558th, 559th, 560th, 561st, 562nd, 563rd, 564th, 565th, 566th, 567th, 568th, 569th, 570th, 571st, 572nd, 573rd, 574th, 575th, 576th, 577th, 578th, 579th, 580th, 581st, 582nd, 583rd, 584th, 585th, 586th, 587th, 588th, 589th, 590th, 591st, 592nd, 593rd, 594th, 595th, 596th, 597th, 598th, 599th, 600th, 601st, 602nd, 603rd, 604th, 605th, 606th, 607th, 608th, 609th, 610th, 611st, 612nd, 613th, 614th, 615th, 616th, 617th, 618th, 619th, 620th, 621st, 622nd, 623rd, 624th, 625th, 626th, 627th, 628th, 629th, 630th, 631st, 632nd, 633rd, 634th, 635th, 636th, 637th, 638th, 639th, 640th, 641st, 642nd, 643rd, 644th, 645th, 646th, 647th, 648th, 649th, 650th, 651st, 652nd, 653rd, 654th, 655th, 656th, 657th, 658th, 659th, 660th, 661st, 662nd, 663rd, 664th, 665th, 666th, 667th, 668th, 669th, 670th, 671st, 672nd, 673rd, 674th, 675th, 676th, 677th, 678th, 679th, 680th, 681st, 682nd, 683rd, 684th, 685th, 686th, 687th, 688th, 689th, 690th, 691st, 692nd, 693rd, 694th, 695th, 696th, 697th, 698th, 699th, 700th, 701st, 702nd, 703rd, 704th, 705th, 706th, 707th, 708th, 709th, 710th, 711st, 712nd, 713th, 714th, 715th, 716th, 717th, 718th, 719th, 720th, 721st, 722nd, 723rd, 724th, 725th, 726th, 727th, 728th, 729th, 730th, 731st, 732nd, 733rd, 734th, 735th, 736th, 737th, 738th, 739th, 740th, 741st, 742nd, 743rd, 744th, 745th, 746th, 747th, 748th, 749th, 750th, 751st, 752nd, 753rd, 754th, 755th, 756th, 757th, 758th, 759th, 760th, 761st, 762nd, 763rd, 764th, 765th, 766th, 767th, 768th, 769th, 770th, 771st, 772nd, 773rd, 774th, 775th, 776th, 777th, 778th, 779th, 780th, 781st, 782nd, 783rd, 784th, 785th, 786th, 787th, 788th, 789th, 790th, 791st, 792nd, 793rd, 794th, 795th, 796th, 797th, 798th, 799th, 800th, 801st, 802nd, 803rd, 804th, 805th, 806th, 807th, 808th, 809th, 810th, 811st, 812nd, 813th, 814th, 815th, 816th, 817th, 818th, 819th, 820th, 821st, 822nd, 823rd, 824th, 825th, 826th, 827th, 828th, 829th, 830th, 831st, 832nd, 833rd, 834th, 835th, 836th, 837th, 838th, 839th, 840th, 841st, 842nd, 843rd, 844th, 845th, 846th, 847th, 848th, 849th, 850th, 851st, 852nd, 853rd, 854th, 855th, 856th, 857th, 858th, 859th, 860th, 861st, 862nd, 863rd, 864th, 865th, BLOODHOUNDS.—Dogs: 1st, Caumsett Kennels' Burgho, Jr.; 2d, Brough & Winchell's Victor. *Bitches*: 1st, Brough & Winchell's Judith. **GREAT DANES.**—CHALLENGE—Dogs: 1st, H. G. Nichols's Melac. *Bitches*: 1st, C. Meimelle's Irene. *OPEN*—Dogs: 1st, High Ground Kennels' Pascha; 2d, High Ground Kennels' Nero; 3d, J. Geitz's Turk. *Reserve*, M. Martin's Hannes. *Very high com.*, Kuchner's Canary. *Very high com.*, Dr. J. A. Marshall's Skat. *Bitches*: 1st, High Ground Kennels' Flora Florida; 2d, High Ground Kennels' Flora; 3d, M. Franch's Minckar. *Reserve*, H. A. Lawson's Fitz. *Very high com.*, T. Honegger's Ulma III. *High com.*, C. W. Dickel's Marquise. *Com.*, Prof. C. E. Strassburger's Thesa. *C. W.*, Dickel's Princess. *Puppies*: 1st, M. Podyyn's Nora; 2d, P. Correll's Nero the Great; 3d, M. Podyyn's Pasha III. *Com.*, C. H. Meyer's Roland. *Very high com.*, Dr. W. H. Shepherd's Duke T. Honegger's Oliver. *High com.*, T. Honegger's Argus. *T. Honegger's* Ucas.

NEWFOUNDLANDS.—1st, J. M. Mayer's Rover; 2d, F. Schubert's Nero; 3d, F. W. Chesebrough's Sallor Lad. *Reserve*, Mrs. R. Braive's Brunette. *Com.*, Geo. B. Ferguson's Bruno.

RUSSIAN WOLFHOUNDS.—Dogs: 1st, Paul H. Hacke's Zloem; 2d, Hornell-Harmony Kennels' Vladimir. *Reserve*, W. L. King, Jr.'s Hornell-Harmony Kennels' Vladimir. *Bitches*: 1st, Hornell-Harmony Kennels' Princess Irma; 2d, Paul H. Hacke's Prokaza.

DEERHOUNDS.—CHALLENGE—Dogs: 1st and 2d, J. E. Thayer's Chieftain and Robber Chieftain. *Bitches*: 1st and 2d, J. E. Thayer's Wanda and Ramona. *Reserve*, Dunrobin Kennels' Olga. *OPEN*—Dogs: 1st, 2d and 3d, J. E. Thayer's Douglas, Hillside Warrior and Hillside Harold. *Reserve* and very high com., Dunrobin Kennels' Duncan and Argyle. *High com.*, G. Macdonald's Alida. *Bitches*: 1st, Hillside Roma. *Hillside* Ruth and Hillside Sylvia. *Reserve*, Dunrobin Kennels' Alida.

GREYHOUNDS.—CHALLENGE—Dogs: 1st and 2d, White Oak Hill Kennels' Balkis and Highland Chief. *Bitches*: 1st, Hornell-Harmony Kennels' Harmony. *OPEN*—Dogs: 1st, A. W. Purbeck's Gem of the Season; 2d, Dunrobin Kennels' Charles Davis; 3d, No. 314. *Very high com.*, L. Van Schake's Tim. *C. E.*, Ireson's Jolly Ranger. *Hillside* O. *White Oak Hill Kennels'* Highland Chief. *Bitches*: 1st, Black. *Dolly* Dolly. *2d*, Dunrobin Kennels' Mad Terrington; 3d, White Oak Hill Kennels' Kismet. *Reserve*, H. C. Lowe's Lancashire Lass. *Very high com.*, W. H. Martin's Queen in Black. *W. B.*, Grootage's Zoe. *High com.*, Hornell-Harmony Kennels' Fannie M. *Puppies*: 1st, White Oak Hill Kennels' Highland Donald; 2d, Hornell-Harmony Kennels' Margaret. *3d*, C. E. B. Dite. *Com.*, O. T. Garland's Scotchdog, Woodhaven Kennels' Yolande.

FOXHOUNDS.—CHALLENGE—1st, Cook Kennels' Brave; 2d, Newport County Hunt's Roseville Rover. *ENGLISH.*—*OPEN*—Dogs: 1st, Rockaway Hunt's Warlock; 2d, Rockaway Hunt's Barrister; 3d, Rockaway Hunt's Songster. *Very high com.*, Newport County Hunt's Major Warlock and Rockaway Hunt's Wonder. *High com.*, Newport County Hunt's Forager. *Com.*, Newport County Hunt's Tipperary. *Challenger*, *Bitches*: 1st, W. F. Lester's Short; 2d, Newport County Hunt's Conest; 3d, Rockaway Hunt's Fitch. *Very high com.*, Newport County Hunt's Clonmel Rakish. **AMERICAN.**—*OPEN*—Dogs: 1st, Cook Kennels' Bill; 2d, Cook Kennels' Drum II.; 3d, J. M. Aven's Fox's Rock. *Very high com.*, J. M. Aven's Rob. *High com.*, Newport County Hunt's Finder. *Com.*, Newport County Hunt's Bugler. *Bitches*: 1st, Cook Kennels' Bernhard; 2d, Cook Kennels' Emerald; 3d, Cook Kennels' Joe. *Very high com.*, M. Aven's Florah. *High com.*, J. M. Aven's Nelly and Annie.

POINTERS.—CHALLENGE—Dogs (50lbs. and over): 1st, Hempstead Farm Kennels' Robert Le Diabre; 2d, L. Gardner's Duke of Vernon. *Bitches* (50lbs. and over): 1st, Chas. Heath's Revel III.; 2d, Fleet View and Reading Kennels' Belle Randolph. *OPEN*—Dogs (50lbs. and over): 1st, G. Jarvis's Lady of Kent; 2d, Chas. Heath's Graph; 3d, E. R. Bellman's Graphite; 4th, Hempstead Farm Kennels' Tony White. *Very high com.*, J. E. D. Drake's Duke of Richmond. *Bitches* (50lbs. and over): 1st, Hempstead Farm Kennels' Woolton Game; 2d, H. Hoock's Peggy; 3d, J. T. Richards' Lass of Tammany; 4th, Chas. Heath's Miss Meally. *Very high com.*, Miss H. Wooster's Duchess of Naso. *High com.*, S. Pettit's Pearl. *CHALLENGE*—Dogs (under 50lbs.): 1st, Hempstead Farm Kennels' Duke of Hessen; 2d, Chas. Heath's Lancelot. *Bitches* (under 50lbs.): 1st, J. P. Cartwright's Rosa May; 2d, E. R. Bellman's Stella B. *OPEN*—Dogs (under 50lbs.): 1st, B. M. Stephenson's Tribulation; 2d, Francis G. Taylor's Inspiration; 3d, R. O. Cornell's Roderick; 4th, Dr. F. B. Downs' Einstein. *Very high com.*, Eugene Halpin's Brackles; 5th, Dr. F. B. Downs' Ossington. *Very high com.*, J. E. D. Drake's Duke of Richmond. *Com.*, Corties, Jr.'s Celso. *Bitches* (under 50lbs.): 1st, Geo. Jarvis's Lass of Kent; 2d, L. W. White's Conover; 3d, Chas. Heath's Frivolity II.; 4th, F. E. Lewis's Lady Tammany. *Very high com.*, Hempstead Farm Kennels' Merry Legs and Geo. W. Lovell's Lovell's Miss Fancy Free. *High com.*, G. W. Trantam's Tiny. *Com.*, Hempstead Farm Kennels' Hempstead; 2d, Geo. W. Lovell's Lovell's Fritzy; 3d, Geo. W. Lovell's Boo B.; 4th, Wm. H. Hyland's Dominick. *Bitches*:

Langtry; 2d, H. D. Kendall's Dolly Tester; 3d, J. Lee Teller's Columbine.—**OPEN—Dogs** (under 45lbs): 1st, H. D. Kendall's Bathos; 2d, Woodward & Herrick's Joker; 3d, Buckthorn Kennels' Crib. **Bitches** (under 45lbs): 1st, A. J. Hatch's Blower Girl; 2d, H. Matthews's Beatrice; 3d, Hugh Stevenson's Princess. **Mab.** Reserve, Woodward & Herrick's Princess Crib. Very high com., W. Mariner's Princess Pedro. High com., C. D. Cugle's Darby Nancy and Woodward & Herrick's Duchess of Parma.—**PUPPIES—Dogs**: 1st, E. W. Roby's Cock Robin; 2d, Buckthorn Kennels' Portswold Pinch. Reserve, W. P. Dinsmore, Jr.'s Merry Monarch II. Very high com., H. E. Williams's Baby. High com., Whitington. Reserve, Wm. D. Bryson's Duffin. Very high com., John Fleming's Slavin, D. L. Billing's Protection. High com., John M. Holder's Pilot, North Fields Yorkshire Kennels' King of Hearts. **Bitches**: 1st, W. F. Hobbie's Enterprise; 2d, F. F. Dole's Queen Bendigo; 3d, Geo. House's Duchess of York.—**OPEN** (Under 30lbs): 1st, E. D. Morgan's Grand Duchess; 2d, F. F. Dole's White Duke; 3d, Geo. House's Duchess of York. Reserve, H. E. Williams's Nellie L'Estrange. Very high com., Retnor Kennels' Dusty Miller. High com., J. H. Bonnell's Ideal, Eugene D. Hays's Sailor.—**OPEN** (Under 20lbs): 1st, Miss L. Dehm's Ruby; 2d, E. D. Hays's Sailor; 3d, F. F. Dole's Little Prince. Reserve, W. Rowland's White Rose. High com., E. D. Hays's Venus II. Com., J. H. Bonnell's Duke.—**NOVICE**—1st, C. A. Stevens's Fidget; 2d, F. F. Dole's Little Duke. Reserve, Geo. E. Perry's Daisy B. Very high com., John Fleming's Slavin, Geo. P. Buntun's Wild Rose and E. D. Hays's Sailor. High com., Wm. Faversham's Sambo and Wm. Rowland's White Rose.

BASSET HOUNDS—1st, C. B. Gilbert's Bertrand. **DACHSHUNDE**—**CHALLENGE**—1st, L. & W. Rutherford's Rubenstein; 2d, Lewis & Klocke's Countess Lina.—**OPEN—Dogs**: 1st and 2d, Ed. A. Manice's Superb II. and Zuln II.; 3d, Carl Wirth's Boss II. Reserve, John B. Heffer's Royal Max. Very high com., Lewis & Klocke's Fritz K. **Bitches**: 1st, Ed. A. Manice's Joan of Arc; 2d, Chas. Pfizer, Jr.'s Kate; 3d, Mrs. Ladenburg's Tivy. Reserve, Geo. E. Perry's Daisy B. Very high com., Lewis & Klocke's Maggie K. High com., Miss L. Barnes's Bird and Dr. Lethel's Gretel. **Puppies**: 1st and com., Ed. A. Manice's Joan of Arc and Darby; 2d, reserve and very high com., Mrs. Ladenburg's Sigline, Walkure and Fricka. Very high com., C. Muller's Waldine. High com., Chas. Pfizer, Jr.'s Vic.

BEAGLES—CHALLENGE—Dogs: 1st, Somerset Kennels' Storm; 2d, H. Bennett's Little Duke. **Bitches**: 1st, Rockland Kennels' Myrtle. **OPEN—Dogs**: 1st, Pottinger Dorsey's Lee II.; 2d, Somerset Kennels' Storm; 3d, Rockland Kennels' Roy K. Very high com., Rockland Kennels' Tomboy. High com., Somerset Kennels' Bell Boy. **Bitches**: 1st, Somerset Kennels' Cloud; 2d, Somerset Kennels' Belle of Woodbrooke; 3d, Rockland Kennels' Flora K. Very high com., Rockland Kennels' Belle of Rockland and Sunset Kennels' Flossy. **UNDER 12IN.**—1st, Mrs. Mayhew's Blue Bell II.; 2d, Somerset Kennels' Muzzy. **Puppies**: 1st, Somerset Kennels' Impulsion; 2d, Rockland Kennels' Emeline. High com., Somerset Kennels' Muzzy and Rockland Kennels' Belle of Rockland.

FOX-TERRIERS—CHALLENGE—Dogs: 1st, J. E. Thayer's Ruby Mixer; 2d and 3d, Blemton Kennels' Dusky Trap and Lucifer. **Bitches**: 1st, Blemton Kennels' Rachel; 2d, J. E. Thayer's Richmond Dazzle; 3d, Regent Kennels' Blemton Consequence.—**OPEN—SMOOTH—Dogs**: 1st, L. & W. Rutherford's Raffle; equal 2d, J. E. Thayer's Russell Joker and Blemton Kennels' Blemton Valour; 3d, H. A. Carey's First Elgie; 4th, L. & W. Rutherford's Warren Col. Cody. 2d, Resolute Kennels' Emeline. High com., J. E. Thayer's Suffolk Risk, C. D. Bernheimer's Ruby Trigger. High com., J. E. Thayer's Hillside Regent, Woodale Kennels' Starden's Jack, Tullaw Kennels' Brockenhurst Quick, North Fields Yorkshire Kennels' Endcliffe Spice, Oriole Kennels' Le Logos, L. & W. Rutherford's Warren Tripper. Com., C. M. Bilings's Hillside Mix, J. B. Van Schick's Rags, Frank F. Dole's Biddy Mahone, C. D. Bernheimer's Ruby Trigger, 3d, L. & W. Rutherford's Warren Faithful and Warren Cachet. Reserve, Blemton Kennels' Tiara. Very high com., H. A. Carey's Resolute, J. E. Thayer's Rosa Canina, Blemton Kennels' Blemton Edelweis. High com., H. A. Carey's Dusky II., J. E. Thayer's Blemton Tiara, Tullaw Kennels' Emeline, Oriole Kennels' Verdict. Com., Woodale Kennels' Woodale Relish.—**PUPPIES UNDER 12 MONTHS—SMOOTH—Dogs**: 1st, Blemton Kennels' Blemton Crocus; 2d, L. & W. Rutherford's Warren Dapper; 3d, Regent Kennels' Regent Roy. Reserve, Jas. Mortimer's Suffolk Orack. Very high com., Wilton Kennels' Wilton Billy. Com., Regent Kennels' Regent Domo and Regent Renzi, James Bottoms's Dapper B. 2d, Blemton Kennels' Blemton Buttercup; 3d, L. & W. Rutherford's Warren Faithful and Warren Cachet. Reserve, J. E. Thayer's Hillside Rachel. Very high com., Regent Kennels' Regent Easter, L. & W. Rutherford's Warren Dimity. Com., J. E. Thayer's Hillside Lottery, R. S. Ryan's Linden Dainty, Woodale Kennels' Woodale Relish.—**NOVICE—Dogs** (smooth and wire-haired): 1st, L. & W. Rutherford's Warren Dapper; 2d, John E. Thayer's Hillside Regent; 3d, L. & W. Rutherford's Warren Tripper. Reserve, L. & W. Rutherford's Warren Dapper. **Bitches**: 1st, Blemton Kennels' Blemton Buttercup; 2d and 3d, L. & W. Rutherford's Warren Faithful and Warren Cachet. Reserve, John E. Thayer's Hillside Rachel.

IRISH TERRIERS—CHALLENGE—1st, Chestnut Hill Kennels' Breda Tiny.—**OPEN—Dogs**: 1st, North Fields Yorkshire Kennels' Breda Bill; 2d, The Park Kennels' Mars; 3d, Chestnut Hill Kennels' Breda Tiny. Reserve, Frank F. Dole's Biddy Mahone. Com., Thos. Pulverfakt's Adventurer. **Bitches**: 1st, The Park Kennels' Dunmurry; 2d, John D. McKonnan's Rox; 3d, North Fields Yorkshire Kennels' Exile. Reserve, Edward Lever's Kathleen. Very high com., J. B. Van Schick's Rags, Frank F. Dole's Biddy Mahone. High com., Thos. Pulverfakt's Little Maid, North Fields Yorkshire Kennels' Ballymoy, John Welsh's Erin.

WELSH TERRIERS—1st, Prescott Lawrence's Which; 2d, Hornell-Harmony Kennels' Mephisto Dick; 3d, Prescott Lawrence's T'Other. High com., Hornell-Harmony Kennels' Rowton Vixen.

DANDIE DINMONT TERRIERS—Dogs: 1st, F. R. Hitchcock's Border Wang. **Bitches**: 1st, F. R. Hitchcock's Meg of the Mill. **Puppies**: 1st and 2d, G. M. Carnochan's Heather and Janie.

REDLINGTON TERRIERS—CHALLENGE—Dogs: 1st, W. H. Russell's Tiock Tack; 2d, H. R. Childs's Strup H.; 3d, M. A. Thelberg's Qui Vive. **Bitches**: 1st, W. H. Russell's Christmas Carol; 2d, W. H. Russell's Polly Warkworthy; 3d, H. R. Childs's Sweet Briar.

SKYE TERRIERS—CHALLENGE—1st, Clifford A. Shinn's Sir Stafford; 2d, Woodbury Kennels' Lovat.—**OPEN—Dogs**: 1st, Lewis A. Spence's Rob Roy; 2d, M. H. Crier's Gladstone Boy. **Bitches**: 1st, Clifford A. Shinn's Bessie; 2d, W. P. Sanderson and C. Stevenson's Elie Deans.

SCOTCH TERRIERS—1st, North Fields Yorkshire Kennels' Kilston; 2d, A. T. Hertzler's Glencoe; 3d, Frank F. Dole's Kilbord. Reserve, Sunset Kennels' Brownie.

COYDESDALE TERRIERS—1st and 2d, Miss B. M. Clinch's Belle of Clyde; 3d, J. Parker's Nellie.

BLACK AND TAN TERRIERS—CHALLENGE—Dogs: 1st, John F. Campbell's Kaiser; 2d, Rochelle Kennels' The Senator. **Bitches**: 1st, Rochelle Kennels' Meersbrook Maiden.—**OPEN—Dogs**: 1st, Rochelle Kennels' Bloomfield Sultan; 2d, North Fields Yorkshire Kennels' Beaconsfield; 3d, John F. Campbell's Frank. **Bitches**: 1st, Rochelle Kennels' Bloomfield Sultan; 2d, John F. Campbell's Beaconsfield; 3d, North Fields Yorkshire Kennels' Meersbrook Empress. Reserve, John F. Campbell's Rochelle Grit.

WHITE ENGLISH TERRIERS—1st, John Maddox's Spring; 2d, Glenwood Kennels' White Prince.

YORKSHIRE TERRIERS—CHALLENGE—Dogs: 1st, North Fields Yorkshire Kennels' Toons' Royal. **Bitches**: 1st, North Fields Yorkshire Kennels' Toons' Royal.

PUGS—CHALLENGE—Dogs: 1st, Mohawk Indianola Kennels' Kash; 2d, M. H. Crier's Bob Ivy. **Bitches**: 1st and 2d, M. H. Crier's Vesta and Bessie. Reserve, Mohawk Indianola Kennels' BoPeep II.—**OPEN—Dogs**: equal 1st, A. G. Eberhart's Douglass II. and Mohawk Indianola Kennels' Sprague; 2d, A. G. Eberhart's Eberhart's Clasher; 3d, Miss M. E. Banister's Saxton. Reserve, Associated Fanciers' Little Jewel. Very high com., R. Schreyer's Toney. High com., Mrs. F. Seun's Fritz, Geo. W. Wambach's Lord Baltimore. **Bitches**: 1st, J. Brombach's Lady Victoria; 2d, Mohawk Indianola Kennels' Rustic Queen; 3d, Mrs. C. Wheatleigh's Yuma Yuma. Reserve, M. H. Crier's Cassina. Very high com., A. G. Eberhart's Mabel E. High com., Philip R. Simon's Lady Ashley.—**PUPPIES—Dogs**: 1st, G. Gillivan's East Lake Curtis; 2d, G. Schumacher's Jim Dandy. Reserve, A. G. Eberhart's Hippothera. **Bitches**: 1st, M. H. Crier's Little Bessie; 2d and very high com., A. G. Eberhart's Sara Bernhardt and Mabel E. Reserve, Mrs. C. Wheatleigh's Kielo. Very high com., John Kelly's Baby. High com., Buckthorn Kennels' Dinah.

BRUNSWICK FOR CLUB'S MEET.

Editor Forest and Stream:

The second annual meet of the Brunswick Fox Club took place at East Wakefield, N. H., during the second week in February. The club met on Monday, the 9th, and adjourned the following Saturday. The meeting was a fair-sized one, about twenty good lovers of the chase being present. The locality was all that could be desired for fox-hunting, but unfortunately an icy crust covered the snow, letting the hounds slump at every step, while the fox ran over it with ease. Although the conditions were very unfavorable for brilliant sport, good runs were obtained each day of the meet. On Friday, the wind having gone down, a grand race was had, the hounds finding at 7 A. M. and pushing Reynard closely till 6 P. M. This run, on such a crust, was phenomenal, and repaid every one for the trip.

No further meets of the club will be held till the field trials next November. Please allow me to state in your valuable paper that the third annual field trials of the Brunswick Fox Club will be held in November without fail, and will be arranged as perfectly as those the club has already held. The owners of crack packs in the South and West were invited to attend the last trials, and though some accepted, they failed to materialize. This year we renew the invitation and earnestly hope they will come.

On the first night of the last meet, Feb. 9, the annual election of officers was held and other business transacted. The following officers were elected, viz.: President, L. O. Dennison, Waltham, Mass.; First Vice-President, A. C. Heffenger, Portsmouth, N. H.; Second Vice-President, C. G. Greenleaf, Bath, Me.; Third Vice-President, F. H. Wilson, Brunswick, Me.; Secretary, J. H. Baird, Auburndale, Mass.; Treasurer, H. A. Stetson, Brunswick, Me.; Master of Hounds, R. D. Perry, Braintree, Mass. Executive Committee: L. O. Dennison, Waltham, Mass.; A. McDonald, Rockland, Me.; Samuel Knight, Jr., Brunswick, Me.; W. B. Stone, Waltham, Mass.; and L. E. Conant, Waltham, Mass.

Mr. Baird declined to serve another term as secretary, and pending the election of a new one, President Dennison and Vice-President Heffenger will attend to the correspondence of the club. It was voted to offer the following special prizes at the coming bench show of the New England Kennel Club, viz.: \$10 for the best American-bred foxhound dog, \$10 for the best American-bred foxhound bitch, \$5 for the best American-bred foxhound puppy, dog or bitch, under 18 months. Hounds owned or controlled by members of the club are ineligible for competition for these prizes. It was further voted that, as the club had done so much for the advancement of the foxhound, the New England Kennel Club be requested to select one of its members to judge the foxhound class at its coming bench show.

As the club is anxious to own its own hunting grounds and club house, it was voted that the admittance fee be \$5 and the annual dues for the current year \$2, but that at the next field trials a motion would be made to increase the annual dues, that a sufficient sum may be realized in a few years wherewith to make the desired purchases.

The roll of membership, which was one hundred, being full, and many desirable men having sent in applications, it was voted to increase the membership to two hundred men. The club is in a thriving condition, and its future was never more brilliant. In a few years it will own the best hunting ground, club house and kennels in the country, and fox hunters who have not joined it will have missed a rare opportunity.

A. C. HEFFENGER, Vice-Pres. B. F. C.

PORTSMOUTH, N. H.

SALISBURY AND CARDINAL.

Editor Forest and Stream:

Mr. Vero Shaw has allowed a misstatement in regard to myself to get into one of his interesting articles to the *Stock-Keeper*. He states (Feb. 6) that at the Edinburgh show eleven years ago, he "got into dire disgrace with Mr. Mason for placing Mr. W. K. Taunton's brindled Cardinal over the former gentleman's Salisbury, which, in my opinion, was a pointer-bodied and always over-rated dog."

Now for facts. Salisbury and Cardinal were shown at Dundee some time before the Edinburgh show, and Mr. Shaw on that occasion tried his level best to put the brindle first. Mr. Dalziel, who judged with Mr. Shaw, said he would hold out for a month or longer rather than be a party to such a decision, and as neither would give way Mr. Rawdon B. Lee, now kennel editor of the *Field*, was appointed referee. Mr. Lee's verdict was quickly given in favor of Salisbury, and he said he really didn't know what all the fuss was about, because Salisbury was much the better specimen. Mr. Shaw, instead of telling us why he preferred Cardinal, wrote out the following very unsatisfactory report in the *Live Stock Journal*:

"Mastiffs came next and were a grand lot; in fact the judges officially marked their books 'a very grand class.' Unfortunately, Messrs. Dalziel and Shaw could not agree about the winner, one going for the brindle Cardinal, and the other for Salisbury, who was very unwell. After considerable delay, Mr. R. B. Lee kindly consented to decide the question, and his verdict was for the fawn."

This criticism, or lack of criticism, was severely condemned at the time and went to strengthen the general belief that Mr. Shaw could not give any satisfactory reason for holding out for Cardinal. Mr. Dalziel's report in the *Stock-Keeper* set forth that gentleman's views in his usual frank way, and Mr. Shaw's report contrasts very unfavorably with it: "The renowned Salisbury, although suffering from temporary illness, is possessed of such undeniable mastiff properties, such grand proportions and so good throughout, and especially in his loins and hindquarters, where so many otherwise good dogs fail, that despite his invalid look, we thought he far surpassed even Cardinal, whose really magnificent head and front will always command admirers; but he falls off a good deal in loin and hindquarters. The judges could not agree as to which of these two should be first, and they were put aside until the afternoon, when Mr. Rawdon B. Lee kindly consented to act as umpire, and after a very careful examination of the competitors gave his fiat in favor of Mr. C. H. Mason's great mastiff Salisbury."

Eleven years later Mr. Shaw comes out in the *Stock-Keeper* and tells us what he ought to have told at the time. Unfortunately this eleven-year-old opinion is even worse than none at all, for it gives but one fault in Salisbury and not any in Cardinal. Admitting Mr. Shaw is right, and that Salisbury had a pointer body, why should he not, with a pointer body, beat a dog that was shelly in body, light in loin, flat and unmuscular in quarters, lacking in size and symmetry, and ring-tailed in the bargain? As Mr. Shaw did not see these defects in Cardinal, the inference is, that he is either a very poor judge or that he did not want to see them.

All this might influence a man's opinion, but it did not change mine about Mr. Shaw. As to the decision at Edinburgh, that is out of the question. Mr. Shaw tried to put Cardinal over Salisbury at Dundee, and I knew he would do the same thing at Edinburgh. Consequently, as I was aware what his decision would be before the dogs were taken into the ring, Mr. Shaw could not possibly have "got into dire disgrace" with me for placing Cardinal over Salisbury at Edinburgh. Mr. Shaw need not look very far to find why he got into "dire disgrace." However, I do not wish to waste the dead, and if he has changed his methods he may hereafter, if he feels like it, count me among his friends in this country.

CHARLES H. MASON.

DOG CHAT.

It is some time since Washington held a recognized dog show, and it would seem as if they are just ready for another, judging from the way the merchants of the city and friends of the club are responding to the call for special prizes. Up to the present date they are as follows: The National Beagle Club offers a suitable piece of silverware, value \$15, for the best kennel of four beagles, entered and owned by one exhibitor. Piece of suitable silverware, value \$10, for the best beagle dog, and the same for the best beagle bitch. To be competed for only by members of the National Beagle Club. The American Fox-Terrier Club offers \$10 for the best smooth fox-terrier in show, \$10 for the best smooth fox-terrier in open class, and \$5 for the best smooth fox-terrier in puppy class. Tomboy stakes: For a solid silver cup presented by the president of the American Fox-Terrier Club, added to a sweepstake of \$5 P. P., for fox-terrier bitches whelped after Jan. 1, '90, to be competed for at the spring show of the Washington City Kennel Club. C. T. Sackett offers \$15 cash for the best bulldog entered. George H. Covert, of Pittsburgh, offers \$10 cash for the best brace of Irish setters (dog and bitch) owned and exhibited by one person or kennel. \$10 cash for the Irish setter with best field trial record. H. B. Stinemetz & Sons offer a special of \$25 cash valuation, not stipulated for what breeds. Robert Holtzman offers \$10 for the best bulldog in the show. Thomas C. Chalmers offers special of stud service of Brockenhurst Quick, for the best fox-terrier bitch in puppy class, value \$15. Peter McGill offers one dozen bottles of champagne for the best setter dog, owned by a member of the Washington City Kennel Club, value \$18. F. S. Webster, secretary Washington City Kennel Club, offers \$25 cash for the best kennel of three or more field trial winning pointers entered and owned by one exhibitor or kennel. From F. W. Moses & Sons, a St. Bernard basket kennel, value \$20; from F. P. May & Co., a fine steel carving set, value \$15; from J. Maury Dove, \$5 in cash for the best English setter in open class; from A. W. Fairfax, \$5 in cash for the best pointer, open class; from R. L. Magruder, druggist, \$5 in cash for the best collie dog in puppy class; from Eastman & Bros., Philadelphia, Pa., one set bottles of perfumery, value \$10; from *Turf, Field and Farm*, New York, two subscriptions, one year each; from *FOREST AND STREAM*, New York, two subscriptions, one year each, from *Fanciers' Journal*, Philadelphia, Pa., three subscriptions, one year each, Spratts' Patent (American) limited, one elegant mahogany case of medicine and instruments, value \$25. In addition to these the club has made a challenge class for great Danes, dogs and bitches, with prizes of \$10 and \$5. A challenge class for pug bitches with prizes of \$10 and \$5, also a kennel prize of \$10 for the best four or more pugs entered and owned by one exhibitor. A kennel prize of \$10 has also been added for bulldogs, under the usual conditions. Great Danes have a special of \$5 for best dog or bitch. There is also a special of \$5 for the best collie entered and owned in the D. C. Other specials are expected which will bring the amount to something like \$750, making with the premiums a sum of nearly \$3,000.

The Maryland Kennel Club, notwithstanding its troubles, have secured an entry for their coming show of which they may well feel proud. The list of entries is as follows: Mastiffs 19, St. Bernards 61, bloodhounds 1, Newfoundland 3, Great Danes 8, Russian wolfhounds 1, foxhounds 8, deerhounds 6, greyhounds 4, pointers 48, English setters 21, Irish setters 47, Gordon setters 23, Chesapeake Bay dogs 13, spaniels 24, collies 33, poodles 23, bulldogs 23, bull-terriers 11, Bassetts 4, dachshunds 10, beagles 47, fox-terriers 45, Irish terriers 5, Skye terriers 3, Clydesdale terriers 2, black and tan terriers 2, pugs 10, King Charles spaniels 1, Glenheim spaniels 1, Italian greyhounds 3, Mexican hairless 1, miscellaneous 5; total 503. As we stated, in reviewing the prize list, there is little doubt but that the prizes have been largely for the toy and small terriers, a much larger entry would have been secured, the black and tan men complaining somewhat on this score. The bench show committee has secured, for the convenience of exhibitors who show at New York this week, the first floor of the largest storage warehouse in Baltimore, situated within two blocks of the Fifth Regiment armory, where dogs will be made perfectly comfortable until the opening of their show. Attached to the warehouse is a large yard for exercising the dogs. The committee will also provide a night watchman who will remain on the premises from 10 P. M. to 8 A. M. Dogs will be received after 10 A. M., Saturday, 23th inst.

The Mascontah Kennel Club has issued its premium list for its third annual dog show at Chicago, Ill., April 8 to 11. The show will be held in Battery D and Seventh Regiment armory, and Spratts Co. will, as usual, bench and feed, and Little's Soluble Phenyle will be used as a disinfectant. The list of premiums, as might be expected, is a liberal one. In the challenge classes for the most important breeds \$20 and \$10 are given, to fox-terriers \$15 and \$10; other challenge classes have \$10 and \$5. In the open classes such breeds as mastiffs, St. Bernards, pointers, setters and collies have \$20, \$10, \$5 and \$3. In the others, with the exception of fox-terriers, which have \$15, \$10, \$5 and \$3, the prizes are \$10, \$5 and \$3, even down to the miscellaneous classes. The specials are numerous and valuable, the specialty clubs having donated freely. The club also offers kennel prizes of \$25 for the big breeds and \$15 for the others. Black and tan men can surely not grumble at this show, for they are treated splendidly. The club gives \$25 for the largest kennel of sporting dogs entered and owned by one exhibitor, and the same for the best non-sporting kennel. The judges are: St. Bernards, Great Danes and pugs, Miss A. H. Whitney; mastiffs, Russian wolfhounds, deerhounds, greyhounds, bulldogs, terriers and all others except as below, James Mortimer; setters, field, cocker, Clumber and Irish water spaniels, foxhounds, beagles and Chesapeake Bay dogs, John Davidson; pointers, John W. Munson; collies, John H. Long. The club reserves the right to appoint other judges if necessary. R. J. Withers, M.D., V.S., is the veterinarian.

The Eastern Coursing and National Greyhound clubs will hold a meeting at the Madison Square Garden on Friday evening, Feb. 27, at 8 o'clock.

As mentioned exclusively in *FOREST AND STREAM* last week, Mr. Diffenderfer has purchased, according to reports, one of the best bitches in England, Hepsy. She has cost more than any St. Bernard bitch yet imported by something like a thousand dollars. Mr. Diffenderfer sent his kennelman, Alfred Mash, over to England last Saturday on the Elruria to bring the prize back with him. There is little doubt but that this good bitch will materially add to the strength of this Baltimorean's already good kennel of St. Bernard bitches. She is by Rhoderick Dhu, who was exported to Australia some time since. In the Derby show (where Hepsy won) report, *Stock-Keeper*, speaking of this bitch, says: "Open bitches saw a new face of Mr. Smith's; that is, a new old face, with the best head we have yet seen in a bitch; she is really good in type and quality, and fair in size for her sex, another 'lucky racket' for Mr. Smith." She is to be served by Scottish Prince, who is spoken of in the same report as the St. Bernard which will now assay Sir Bedivere's mantle in England. Hepsy also won first and two cups at Liverpool, the week after Derby. She will, we are informed, go straight to Baltimore. Mr. Diffenderfer is pursuing a good plan in filling his kennel with good bitches and leaving the stud dogs severely alone. He thus can take his pick of dogs and will therefore not be apt to fall into the error of using one dog for any and all sorts of bitches.

Vero Shaw, in his interesting "Fragments of Fancy" in *Stock-Keeper*, writing about an old-time collie says further on: "At this point, without wishing to be personal, I may be permitted—as a Scotsman—to express the fervent wish that there were a few dogs of Old Collie's type, about to counteract the Barzoi-headed, settery-coated, narrow-chested specimens which are so strongly in evidence nowadays. For my own part, having some knowledge of the climate of the Northern hills, I honestly believe that many a modern show dog would perish from the cold within a week if he were to be relegated to his proper station in life. There is no heart or lung room within the breasts of many of the modern winners, which are just as far removed from the old Cockie, Hero, Vero, and Lassie type, as is light from darkness." By the way, this well-known writer on dog subjects is now engaged on a book about bulldogs, past and present, which will shortly be published.

The Bulldog Club intend to publish in their souvenir catalogue of the W. K. C. show, an appendix containing the judge's report and the reports from the different kennel papers. This will make it very useful to the bulldog breeders for future reference, though in the case of the neophyte it may lead to confusion worse confounded, unless the judge will kindly state which is the most reliable report.

Mr. A. H. Moore, of Philadelphia, intends starting a rough-coated St. Bernard kennel during the next month. This gentleman, it will be remembered by old show goers in the early '80s, had one of the leading kennels of English and Irish setters, such well known animals as Thunder and Berkley hailing from his kennels. It is also interesting to relate that it was in having charge of these dogs that the handler, Ben Lewis, became so intimately connected with American shows. Mr. Moore spent considerable time during the show among the St. Bernards, and we may have some purchases to chronicle next week.

In view of the fact that several Welsh terriers are now being shown in this country, we think it advisable to reproduce, from *Stock-Keeper*, Mr. Moore's excellent sketch of a terrier of this breed, Brynhr Pardon, which is considered one of the most typical Welsh terriers now on the bench. His only fault is a very slight weakness in muzzle, his great points being his smartness, terrier character, coat and outline. He has won numerous firsts, including wins at Crystal Palace and Birmingham twice, winning also a special there as the best in several classes.

The pet dogs of the show as the editor of the *Times* sees them: "These animals are often the property of infatuated and idolatrous owners who insist upon worshipping their idols during the exhibition, and incubate the alleys still further by bringing in chairs for the more convenient performance of their religious duties."

Secretary C. M. Munhall advises us that the following judges have been selected for the Cleveland show in April: Miss Anna Whitney, St. Bernards, Newfoundland and pugs; Maj. J. M. Taylor, setters and foxhounds; Mr. J. H. Winslow, pointers; Mr. Chas. M. Nelles, field, cocker, Clumber and Irish water spaniels. The judge for remaining classes will be announced later. The premium list will be ready March 1.

It is hard lines when one sets out to capture a kennel prize by getting together a good team, as Mr. Symonds succeeded in doing in Irish terriers, to have the best dog worried almost in sight of the show. His Bellman, of which we spoke last week, arrived here Saturday last on the City of Berlin, but owing to the holiday on Monday could not be passed through the Customs until Tuesday. On Monday night, it is said, Mr. Dole's bull-terrier, another good dog which had come over on the same vessel, by some unaccountable means joined issue with Bellman, with the result that Mr. Symonds's dog was so injured that he died Tuesday morning, and the bull-terrier is so out put that he was unfit to show at Madison Square Garden. They intend, we hear, to try make the steamship company responsible for the loss. The loss is over \$200.

The Bulldog Club of America met at Madison Square Garden at 8 P. M., Tuesday, Feb. 24. There were present Messrs. E. Sheffield Porter, J. H. Matthews, Chas. D. Cagle, C. P. Lawshe, E. A. Woodward, Stuyvesant Wainwright, F. W. Sackett, F. F. Dole, A. Lawshe, A. J. Hatch and E. K. Austin. Both the president and vice-president being absent, Mr. J. H. Matthews was elected chairman. Report of secretary and treasurer submitted, approved and accepted. Communication read from Mr. Thayer, resigning the office of president, accepted with regret. Resolved that 30 days extension be given to the three members who have not paid their dues. Resolved that secretary take a postal card vote on the question of reducing the initiation fee to \$5. Resolved that the sincere thanks of the club be extended to Mr. J. H. Matthews and Mr. Chas. D. Cagle for the very active and earnest interest they have taken in making the club and show a complete success. Also that the club thank Messrs. Park, Porter, Matthews and Sawyer for their kind donations of silver cups. A new executive committee was elected to serve for the ensuing year, consisting of Messrs. E. Sheffield Porter, John H. Matthews, Chas. D. Cagle, H. D. Kendall, E. A. Woodward, F. W. Sackett and C. P. Lawshe. They went into executive session, and elected Mr. John H. Matthews president, Mr. E. Sheffield Porter vice-president, and Mr. Chas. D. Cagle secretary and treasurer. On motion, adjourned.—CHAS. D. CAGLE, Secretary.

At the meeting of the Pet Dog Club on Tuesday evening at the show, Miss Bannister, the secretary, was presented with a silver salver in appreciation for her untiring efforts in behalf of the club, and the services she has kindly rendered as secretary. A vote of thanks was also given to the W. K. C. for their kindness in changing the location of the pet dogs to warmer quarters.

Los Angeles, California, is to have a kennel club of its own. Several men propose forming one, having secured ample grounds. A trainer will be employed to train members' dogs. The club will secure two good stud dogs, to be owned by the club as a body, the bitches being owned individually by the members, who will see to their care themselves.

The California Kennel Club has secured the new Republican Wigwam, on the northeast corner of Eddy and Jones streets, for its coming bench show, which will be held on April 28 to May 2. This is looked upon as an admirable situation for a show. As stated before, Mr. John Davidson will judge all classes.

In the new Penn Brook Hunt at Chestnut Hill, Pa., the following officers have been elected to serve for the ensuing year: Mitchell Harrison, Master of Foxhounds, assisted by A. St. John Boycott; G. Helde Norris, Esq., Secretary, and Theodore Justice, Treasurer.

Charles J. Peshall, president of the New Jersey Kennel Club, who is under indictment on a charge of libelling A. P. Vredenburg, secretary-treasurer of the American Kennel Club, appeared before Judge Cowing in General Sessions yesterday and argued a demurrer to his own indictment. He claimed that the complainants had virtually "sneaked" into the District Attorney's office through the back way. He

THE WELSH TERRIER "BRYNHR PARDON."

asserted that the indictment failed to make out a crime and therefore could not stand. What he had done was to simply criticize the management of the American Kennel Club, and in this connection had asserted that the figures of the annual report were false and misleading. As Mr. Vredenburg was simply a clerk for an executive committee, who managed the finances of the club, he did not see how Mr. Vredenburg could maintain the claim that he had been libelled. Assistant District-Attorney Macdonald said that in his opinion it was clearly a libel to print in a newspaper the statement that an officer of a corporation has falsified his accounts. Judge Cowing took the papers and reserved his decision.—*World*, Feb. 25

It was rather ridiculous that a special of five dollars should be the only inducement to bring the noted kings of St. Bernardom, Sir Bedivere and Watch, together, and Miss Whitney did not feel very kindly toward the well-meaning but scarcely liberal gentleman who risked so little to see so much. After a few minutes' consideration Sir Bedivere received the blue ribbon amid slight applause. Watch did not show well in front, but at the same time seemed to move freer than the other dog.

That remarkable greyhound Fullerton has again won the Coursing Derby—the Waterloo Cup—at Altcar, near Liverpool. The Waterloo Cup is a stake for 64 subscribers at £25 each, a total of over £1,600, of which £500 goes to the first dog and £200 to the second. Fullerton was a red hot favorite this year, and two weeks ago the betting was 20 to 1 against any other dog. The meeting opened on Thursday last. Telegraphic advices say that the four left in the second round were T. Baxter's Button Park, by Jester—Brampton; Col. J. T. North's Fullerton, by Greentick—Bit of Fashion; G. F. Fawcett's Faster and Faster (late Pride of Oakfield), by Northern Express—Pride of Belmont, and Bovril. On Saturday the final courses took place, and Col. North's Fullerton repeated his victory of last year. In 1889 he divided with Troughend, also owned by Col. North, and but for this divide, Fullerton would have eclipsed the record of any other dog by winning three years in succession. As it is, he is only excelled by Lord Lurgan's Master McGrath, who won in 1868, 1869 and 1871. Fullerton's sire, Greentick, can, however, claim a record, having been also the sire of Troughend. In the first course of the finals Col. J. T. North's dog Fullerton defeated T. Baxter's Button Park. In the second course, G. F. Fawcett's Faster and Faster (late Pride of Oakfield) beat Bovril. This left Fullerton and Faster and Faster to run the deciding course. Fullerton was the favorite in the betting at 5 to 2 on him. He proved the winner, defeating Faster and Faster with something to spare.

Col. North's luck does not desert him yet. The Grand Duke Nicholas of Russia has presented him with two Barzois of great merit. Not to be outdone, although his crack Troughend was catalogued at an auction sale of greyhounds recently and several men were prepared to bid high for him, he was withdrawn and sent as a present to the Grand Duke. In addition to all this we hear that Col. North's dog Simonian won the Waterloo Purse, which is a stake for beaten dogs in the cup match.

At this year's show the fox-terriers, St. Bernards and several terrier breeds, toy spaniels, greyhounds, Barzois, Irish setters, Gordons and bulldogs show the most improvement as a whole, collies and English setters, deerhounds, pointers, etc., seem just about the same—at a standstill.

The Northfield Kennels sold their Irish terrier Breda B during the first day of the show to Mr. Mitchell Harrison.

A meeting of the executive committee of the two beagle clubs, held at the W. K. C. bench show, New York, Feb. 24, 1891, resulted in the harmonious amalgamation of the clubs under the name of the N. B. C. The following members participated in the above: O. W. Brooking, Hermann F. Schellhass, W. H. Child, N. F. Rutter, F. W. Chapman, Geo. Laicke, W. A. Powers. It is understood that the members of the old club shall come into the N. B. C. individually as privileged members, but should they wish to compete for club specials they must pay the annual dues now, otherwise they do not pay anything till July.

The latest news in spanielism is the forming of a partnership between the spaniel kennels of Messrs. J. P. Willey and Geo. H. Bush. They will exhibit at Pittsburgh as one kennel, and arrangements have been made with Ben Lewis to take them round the circuit. This kennel of cocker talent will be almost as formidable as the Oldham & Willey combination a year or two back, for Mr. Bush brings three good bitches into the firm and Mr. Willey's stock is well known.

The bulldog men are full of hope. They speak of such cracks as Hedgebury Lion, Selina and other celebrities as very possible visitors to this country in the near future.

Several moneyed men are coming into the club and will buy the best.

One or two of the directors of the Danbury (Conn.) Fair were of the opinion that they could do without the dog show another year on account of the expense, but when they came to discuss the subject among their fellow officers they found that there was a very strong opinion in favor of the canine division, maintaining, and rightly so, that it was one of the principal attractions of the Fair, so there will be a dog show this fall at Danbury after all.

We would recommend to those who love a dog as a companion, and especially those who are ready to admit a high order of perception and intelligence in the dog, to read Yates Carrington's "Teufel the Terrier." It is full of quaint stories of the doings of this celebrated artist's fox-terrier during its life of nine years. The pages are interspersed with pictures and photographs of the author's celebrated paintings, in which Teufel served in most cases as a model, and which tend to show what an intelligent animal he was. To read the closing chapters of his life one feels so much in sympathy with the child Dorothy and the dog's owner that you can almost feel you had known the dog in life. The price being only 75 cents puts it in reach of all.

Our prize list represents the awards made up to 2 P. M. Wednesday afternoon, the time of our going to press. The judging has dragged considerably owing to the limited number of rings this year and the somewhat late hour the judges began their work Wednesday morning.

WHAT DID IT.

I EXPECT TWO LITTERS OF FINE BRED Llewellyn setter puppies during the months of March and April. For pedigree and low price, inclose stamp to CHAS. YORKE, 9 & 11 Granite Block, Bangor, Me.—Advertisement in *Forest and Stream*.

WHAT IT DID.

BANGOR, Me., Feb. 25.—*Forest and Stream* Pub. Co.: GENTLEMEN—Will you kindly stop my ad. I have sold everything I had to sell and still the inquiries keep coming, so you must stop ad. or furnish typewriter to answer correspondence. Must say your paper is the best advertising medium I ever patronized.—CHAS. YORKE.

GORDON SETTER CLUB.—*Editor Forest and Stream*: At a special meeting of the executive committee of the Gordon Setter Club of America, Feb. 17, the following members were present: Wm. H. Clay Glover, president; Wm. J. M. Lordly, Dr. J. E. Clarke, James B. Blossom, Wm. Meyer and L. A. Van Zandt. The resignations of Mr. F. M. Bennett and Mr. J. W. Oscar were accepted with regret. Communications from Mascoutah, Duquesne, Cleveland and American Pet Dog clubs were held for further considerations. On motion of Dr. Clarke, it was resolved to donate the following specials at the coming Maryland Kennel Club Show: \$5 to second, open dog class; \$5 to second open bitch class; \$5 to fourth, open dog class; \$5 to fourth, open bitch class; \$5 to third in novice class. On motion of Mr. Van Zandt the appointment of Mr. Meyer as a stud book committee was rescinded, as such committee already existed at the time of Dr. Meyer's nomination. Communications from Mr. Harry Malcolm were read and placed in the custody of the secretary. The report of the bench show and field trials committee was received and approved. Mr. John E. Howland was elected a member.—L. A. VAN ZANDT, Sec'y. [Mr. Malcolm's connection with the club has ceased.]

PRIZE MONEY AT THE ALBANY SHOW.—*Editor Forest and Stream*: I note in your issue of Feb. 19, reference to the prize money that my black and tan terrier champion Buffalo General won at Albany two years ago, in which you say the Albany club claims they have paid all their prizes. They have not paid me. They have several times claimed this, and have asked the A. K. C. to reinstate them. Now, if they have paid me, it should be an easy matter to prove, as they would have my receipt or returned check or draft. If they have paid every one else and wish to be reinstated, I think they can afford to pay me \$8. I am as fairly entitled to my money as any one else.—A. W. SMITH.

MASTIFF JUDGING AT NEW YORK, 1891.—*Editor Forest and Stream*: New York, 1890, mastiff dogs—Beaufort, in middling condition, first; Ilford Chancellor, in blooming condition, second. 1891, Ilford Chancellor, thin, stiff as a ramrod, skin as scratchy as sandpaper, first; Beaufort in splendid condition, third. Same judge on both occasions. Are mastiff breeders expected to meet such kaleidoscopic conditions?—W. WADE.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SALES.

BROOKLYN TRAPS.

BROOKLYN, Feb. 17.—The Kings County Gun Club was not so well represented as usual on Louis Miller's shooting grounds at Dexter Park, L. I., to day, the murky, wet weather keeping many of the shooters away. In the contest for the club badge, 20 blue rocks, right and left angles, 18 ds. rise, the scores were as follows: Zirkel 8, Greiner 10, Lindstedt 12, Bieber 2, Boegel 10, Link 9, Keller 9, Lindstedt winning the club medal. Three sweepstakes at 5 blue rocks each time, all ties divided, were shot subsequently.

Feb. 18.—The east side of this city was well represented to-day at Dexter Park, where a jolly lot of shooters from the Emerald Gun Club assembled to take part in a private shoot at live birds. Nearly three score of club members and their friends were present, but only 15 men went to the traps in the principal event of the day, a shoot at 10 live birds per man. There were two prizes, a box of imported cigars and 200 shells. The day's sport began with a small sweepstake at 5 birds, in which Messrs Voss and Henry were the winners, and then followed the 10-bird shoot. The best score was made by G. S. Henry, who shot in excellent form, and, although he stood 32yds. from the traps, was the only one who killed 10 pigeons straight, 8 of them by using one barrel only. The exertions of the pot hunters on the northeast side of the fence, in trying to secure part of the few missed birds, contributed vastly to the amusement of the club's members.

Mr. Henry chose the shells as his prize, and the box of cigars went to M. W. Murphy, who killed 9 birds from the 25yds. mark, and missed his last, a very strong straightaway driver. Nearly 20 of the 150 birds shot at fell dead out of bounds, L. Pierson, J. Voss, R. Regan and J. Macsel being especially unfortunate in this respect.

Messrs. J. Sax and C. Roemmele, who had during the match indulged in a lengthy argument as to their respective shooting abilities and the efficiency of their guns, agreed at its conclusion to submit their differences of opinion to a practical test, and to allow the agents present to select the most suitable club rules for a match, to be shot under the following conditions: 100 live birds each man, Hurlingham rules, 25yds. rise, 8yds. boundary, for \$250 a side, to take place at Dexter Park on March 27.

The members of the Falcon Gun Club of Brooklyn, who went to Dexter Park to-day, had an excellent chance of testing their abilities as marksmen, for the birds were a good lot even for the old shooting grounds. Under the somewhat difficult club rules, a pigeon killed with the second barrel counting half a point only, the scores made were of fair average. J. Vagts killed 8 birds and scored a total of 7, winning the club badge for the first time in the new year. The second prize, consisting of hard cash, went to J. Bolling on a total of 6. A well-constituted team match, teams of four, 5 birds each man, followed, Vagts's side winning by the close margin of one bird.

Feb. 20.—The return team shooting match between Excise Commissioner John Schlemm and J. A. Eppig as partners against P. Leibinger and F. Lanzer was shot off to-day at the Dexter Park shooting grounds, Jamaica plank road. The conditions of the match were, each shooter to have 50 birds, gun handicap according to bore of gun, Hurlingham rules. All four shooters were in good form, although J. Schlemm had the majority of the first incomers and his partner had the misfortune to lose several of his birds dead out of bounds. P. Leibinger and partner won easily by 12 birds, 83 to 71.

The Kings County Gun Club held a shoot at Dexter Park to-day. The attendance was very poor on account of the wet, foggy weather. The contest for the club badge, seven members competed, 18 ds. rise, for the club badge. Seven members competed. The scores were as follows: Zirkel 8, J. Greiner 10, J. Lindstedt 12, H. Bieber 9, C. Boegel 10, J. Link 9, C. Keller 7.

The members of the Erie Gun Club held their postponed shoot at Woodlawn Park, Gravesend, to-day. Only nine members went to the traps to shoot for the club badge, with the usual gun handicap, C. Delester and C. P. Ray had a close race for the badge, which the former won by one bird.

At a meeting of the Wauregan Gun Club, held at the club house, Dexter Park, Long Island, the following officers were elected for the ensuing season: Pres., Edward Bernhoff; Vice-Pres., Dr. W. S. Taylor; Sec'y, C. H. Houghton; Treas., W. H. Brickner; team Captain, Mr. Fay. A regular semi-monthly shoot of the club will be held at Dexter Park on Feb. 27, and the conclusion of the regular shoot a match will be contested by Dr. W. S. Taylor and M. Fay against W. H. Brittner and C. H. Houghton. The conditions of the shooting are 25 birds each, 28yds. rise, Hurlingham rules to govern, for \$100 a side.

The last of a series of invitation team shoots will be held under the auspices of the Parkway Gun Club at Dexter Park, on Thursday, Feb. 28. The conditions of the shoot are each man to shoot at 10 birds, 25yds. rise, 8yds. boundary, modified Hurlingham rules. The trophy to be competed for is known as the Parkway cup. The Fountain and Coney Island teams are the favorites, but the Glenmores hope to get there.

FORESTER TOURNAMENT.

DAVENPORT, Ia., Feb. 21.—Editor *Forest and Stream*: The Forester Gun Club's annual tournament commenced Tuesday morning with a good attendance of shooters, the most prominent being Budd, of Des Moines, and Gringwell, of Clinton. The weather was bad for the shoot, but the boys started in with good spirits and expected to complete the programme, which would have occupied four days. But "the best laid plans of men and mice gang aft aglee." On Wednesday it was cold and disagreeable, and on Thursday came the very worst storm of the season, and it put an end to the tournament. The tournament was conducted under the revised American Association rules. The birds were in excellent condition and hard to hit. The result of the first two days' shoot is as follows:

First Day.
No. 1, 7 single live birds:
Leffingwell.....111111-7 J. Davis.....101000-3
Grim.....111111-7 Harbaugh.....101101-5
Budd.....111111-7 Kemper.....011111-6
Reese.....111111-7 Lewis.....001111-4
Stone.....111101-6 Racerster.....111100-5
Frank.....111111-6
